Marble Cake.—Three eggs, one cup sugar, one tablespoon butter, one teaspoon of vanilla, three-fourths cup milk, two and one-half cups flour and two teaspoons baking powder. Cream butter and sugar, add beaten eggs, then vanilla and milk, and flour with baking powder. Take half of this and mix with one-half cup molasses, one-half teaspoon cloves, one-half teaspoon cinnamon. For dark part put a spoonful of dark then light mixture in pan.

Apple Sauce Cake.—One and one-half cups apple sauce, one cup sugar, one-half teaspoon cloves, one-half teaspoon nutmeg, one-half teaspoon salt, one-half cup citron, one-half cup dates, one and one-half cup nuts. Cut up last three items and mix with flour. Three cups flour and two teaspoons soda.

Summer Cake.—Cream one fourth cup of butter gradually cream in one-half cup of sugar and then add one well beaten egg. Measure one and one-half cup of sifted flour and sift again with two and one-half teaspoons of baking powder. Add this alternately with one-half cup of milk to the butter mixture. Beat hard. Bake in layers in a moderate oven.

Frosting.—Beat the whites of two eggs and sweeten and beat in mashed berries. Spread between layer and top.

Molasses Cookies.—One cup sugar, one cup lard, one cup molasses, two eggs, one teaspoon ginger, two teaspoons baking soda dissolved in seven teaspoons hot water, add flour. You can make the cookies with or without eggs.—Alma Becker.

Chunk Pickles.—Soak seven pounds of cucumbers, cut in chunks one inch length, in strong brine for three days, then soak in clear water three days, drain well then take weak vinegar enough to cover and add piece of alum size of hickory nut. Cook slowly, but not boil, in vinegar for two hours. To seven pounds of cucumbers use three pounds of brown sugar, three pints vinegar, one ounce of whole spice, one ounce of cassia buds, one ounce of celery seed, heat and pour over pickles boiling hot. Let them stand for seven days and on the seventh day boil the syrup quite thick and pour over, then can and seal.

Spiced Currants—7 pounds currants; five pounds brown sugar; three tablespoons cinnamon; three tablespoons of cloves and one pint of vinegar. Pick over currants, wash, drain and remove stems, put in a preserving kettle, add sugar, vinegar and spices tied in a piece of muslin. Heat to boiling point and cook slowly one and one-half hours. Store in stone jar in a cool place. Spiced currants are a delicious accompaniment to cold meat.

MY FAVORITE RECIPES

Unripe Cucumber Pickles (Gherkins)—Wipe four quarts small unripe cucumbers. Put in a stone jar and add one cup of salt dissolved in two quarts of boiling water and let stand three days. Drain cucumbers from brine, bring brine to the boiling point, pour over cucumbers, and again let stand for three days; repeat. Drain, wipe cucumbers, and pour over one gallon boiling water in which one tablespoon alum has been dissolved. Let stand six hours, then drain from alum water. Cook cucumbers ten minutes, a few at a time, in one-fourth the following mixture, heated to the boiling point and boil ten minutes: One gallon vinegar, two sticks cinnamon, four red peppers, two tablespoons allspice berries and two tablespoons cloves. Strain the remaining liquor over pickles which have been put into a stone jar.—Annie Taylor.

Red and Green Pepper Relish.—Twelve onions, twelve green peppers, (sweet), twelve red peppers, (sweet), one teaspoon mustard seed, three cups granulated sugar and two pints of vinegar. Chop onions and peppers and let stand in boiling water for fifteen minutes. Drain and add other ingredients then boil fifteen minutes. Can.

Indian Relish—Six large cucumbers, one quart of onions, six green tomatoes, two large cauliflower, four green peppers. Cut fine. Cover with hot brine and let stand over night. Drain and add one-half gallon of vinegar, 8 cups brown sugar, one-half cup white mustard seed. Make a paste of one-half cup flour, one-half cup mustard, a large one-half teaspoon of tumeric powder. Pour in very slowly and boil for ten minutes.—Annie Taylor.

You can do better baking

Lily White has been improved. It is now milled by an absolutely new process. It revolutionizes the making of flour. It means better baking. This we guarantee. It means whiter bread, better looking, better flavored bread. It means your bread will stay moist—fresher longer. It means it will bake easier and have better texture—firm and even.

Lily White

"The Flour the Best Cooks Use"

always has been a superior flour. For years we have guaranteed it to be the best flour you could buy. It was only natural that when an improved system for making flour was evolved Lily White should be improved.

By this new method the efficiency of the protein content of the flour is increased 30%. This means free action of the yeast on 100% of the flour instead of only 70% in making delicious breads.

Result of 25 years' effort

For a quarter of a century this process has been developing. Now it is perfected. All we ask is that you try the new Lily White.

Your Grocer Has It

VALLEY CITY MILLING COMPANY
Millers for Sixty Years

—if you are well bred!

Good Manners in Play.—If you are invited to play a game, do not give as your reason that you don't play it. It is always courteous to give a reason for declination. It is a sure way of being a part of the fun your hostess has provided for you by attempting to play, unless it is injurious to your health or one you do not approve of. In case it is the latter do not voice yourself but gracefully decline and give some slight excuse.

WOMEN'S EXCHANGE

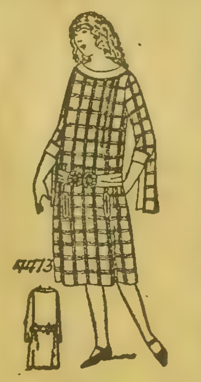
If you have something to exchange, we will print it FREE under this heading providing: First—it appeals to women and is a bonifide exchanges, no cash involved. Second—it will go in three lines. Third—You are a paid-up subscriber to The Business Farmer and attach your address label from a recent issue to prove it. Exchange offers will be numbered and inserted in the order received as we have room. —MRS. ANNIE TAYLOR, Editor.

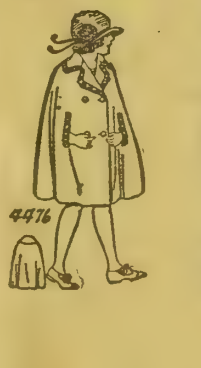
ALL PATTERNS 12c EACH,

3 FOR 30c POST-PAID

ADD TEN CENTS FOR FALL AND WINTER FASHION BOOK

THE BUSINESS FARMER
Pattern Department, Mt. Clemens, Mich.





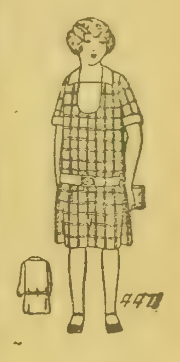
The simple dresses are always the better taste for our school girl and you will find a couple of good numbers to choose from. Brown will be the prevailing color this fall. Mrs. Coolidge, the first lady of our land, wears brown a great deal and this will have a big influence in helping to make this our main fall coloring. If brown is unbecoming there are lovely shades of dark green and greys.

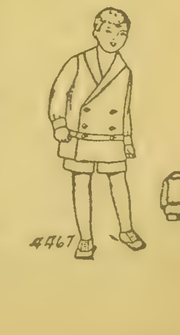
4473. A Smart Frock for the Growing Girl—Plaid gingham and linene are here combined. This style is attractive in ratine, pongee, taffeta or jersey cloth. Mustard color ratine with facings of white or green would be nice. The Pattern is cut in 3 Sizes: 12, 14 and 16 years. A 14 year size requires 3 ⅝ yards of 36 inch material. For collar, facings and girdle of contrasting material ¾ yard is required.

4471. A Simple Popular Model—This is a good style for gingham, printed voile, and other cotton goods now in vogue. The sleeve may be finished in wrist or elbow length. The Pattern is cut in 4 Sizes: 6, 8, 10 and 12 years. A 10 year size requires 3 ⅛ yards of 27 inch material. For collar and cuffs of contrasting material ¾ yard is required.

4476. A Jaunty Cape for a "Little Miss"—Practical and all together comfortable is this design. The fronts are double breasted, and rolled to form revers that meet a broad collar in notches. The Pattern is good for any of the cloakings now in vogue, also for fur, velvet and other pile fabrics. The Pattern is cut in 5 Sizes: 4, 6, 8, 10 and 12 years. A 10 year size requires 2 ⅝ yards of 40 inch material.

4467. A Smart Blouse Suit for the Small Boy—Linen, drill, pongee and chambrey as well as serge, cheviot and twill may be used for this model. The Pattern is cut in 4 Sizes: 3, 4, 5 and 6 years. A 4 year size requires 3 ⅛ yards of 27 inch material.





NEW YORK CENTRAL LINES

Fair rates and good service

This country has enjoyed railroad transportation on practically a cheaper basis than any other civilized country.—*Report of the Congressional Joint Commission on Agriculture.*

Shippers of farm products on the New York Central Lines know from experience that the quality of railroad service is of greater importance than the price.

Inadequate, inefficient freight service is dear at any price. Rates that leave no margin of earnings on railroad investment dry up the sources of new capital, without which the carriers cannot provide the new equipment and facilities their shippers must have.

This necessary margin of receipts above expenditures, so vital to the life of the railroads, is a small fraction of railroad rates. In 1922 the railroads earned the largest net income in five years, a return of 4.14% on their property investment. But a reduction of 16% in the rates charged in 1922 would have taken all this net.

The Congressional Joint Commission of Agricultural Inquiry estimated that the average proportion of freight rates to the value of goods carried was 6%. If this were reduced to 5%, a reduction so small that the consuming public would detect no difference in living costs, most of our railroads would starve.

Living rates for the railroads—insuring healthy growth of railroad facilities—are vital to agricultural prosperity.

The Children's Hour

SO MANY have requested that we hold a drawing contest that I have decided to start one with this issue. I am offering three pencil boxes for the three best drawings. Each pencil box contains four pencils and a penholder, things you will need when school starts, which in most cases will be next week. Now I will tell you about what to draw so pay close attention and be sure that you understand before you make your drawing.

September is the month of fairs in Michigan, both county and state, and nearly everyone of you will spend at least one day at some fair during this month so I have decided that our pictures will be of something that you saw at the fair. If you see two friends meet at the fair draw a picture of how they looked to you and send that, or if there were certain exhibits, such as a prize cow or horse, appealed to you, draw a picture of that; maybe you went to a show and there was a fat boy that you would like to send a picture of, or you could draw a picture of the horseshoe pitchers in action at your fair. It matters not what you show in your picture if it is something that was at the fair.

There are a few rules that you should remember and they are: Each drawing must be in black and white (no water colors); if you have black ink trace the pencil lines in your drawings but if you haven't make your drawing with a pencil only; drawings should be on a smooth, white sheet of paper, no lines or marks outside of those that are a part of the drawing; make drawings not more than five inches deep or wide; put name and address on the back of the drawings.

The contest will close Saturday, September 29th, and all drawings received after 1:00 p. m. of that day will not be entered in the contest so be sure to send yours in to arrive before that time. If you have attended a fair already this year you can send in your drawing tomorrow and it will receive as careful consideration as it would if you wait until the last day. Do not delay but forward your drawing as soon as it is done.

I hope every one of you may be able to go one day to some fair but in case you are not you may draw a picture of what you saw at last year's fair, so you can try for the prizes. If your care to you may submit several drawings and I will choose the best one to use in competition with others. Now do not forget the rules and do your best. The drawings by the winners will appear on our page so if you would like to see your drawings printed you must work hard as there are many, many boys and girls who are going to try to win. —UNCLE NED.

Hello Uncle Ned:—I thought I would drop in for a nice friendly chat this evening. The birdies are chirping so sweetly. One bird has built its nest in a Lilac bush. There are three blue eggs in it. I love the birds, don't you Uncle Ned? I will describe myself so you will know what I look like. I am 4 feet, 10 inches tall and weigh 83½ pounds. I have dark brown bobbed hair, blue eyes, and some naughty freckles across my nose. My age is between 12 and 16. The one who guesses it will receive a nice long letter from me. My birthday is May 3rd, and I am in the 8th grade. If you have a drawing contest as Myrtle Taylor suggested I will send in a picture. Well good-bye. Your niece,—Luella Marie Nelson. P. S.—I enjoyed my visit very much and may I come again some time?

—Drop around again some evening for another visit, but next time be sure to give your complete address.

Dear Uncle Ned:—Having seen in the paper where you asked me to tell you about my trip from New York to Michigan, I thought I would write again. I am sure there is nothing to tell about my trip only that I enjoyed it very much, although I was tired when I got here. We had but very few changes to make and an hour was the longest we had to wait, which was in Buffalo. We intended to spend a part of our time at Niagara Falls, but we could not make connections so that we could arrive in Flint during the day, so we couldn't go to the Falls yet. We came through Canada where we saw some of the grape country. The answer to the riddle which I put in the paper: "What time is it when you wake up in the middle of the night and scratch your head" is, five after one (Five fingers after one cooty). I think the answers to the riddles which Eva Ruth Soper put in the paper are: A negro riding on a horse with a kettle turned bottom side up on his head. And the second is a beer bottle. Also I think the answer to the riddle which Gladys Carlson put in the paper is a pig. Well I think I had better close for this time, your niece, —Miss Fairy Dunkle, R. 2, Davison, Mich.

Dear Uncle Ned:—As I have never written to you before I made up my mind that I would write for the first time, and see if my letter will be printed. I am a farmers daughter too. I have medium brown hair, blue eyes, fair complexion, and am 5 feet 4½ inches tall, weigh 128 pounds. Guess I'll let you guess my age. Do you like to milk cows? I don't suppose you do. I would rather milk cows than wash dishes, but I have to wash dishes. We live on the main road M13, and there is lots of travel. Is the weather warm enough for you Uncle Ned? My I pretty nearly roast it is so warm here. My mother and I have been picking huckleberries and red raspberries. Do you like them? I do, but I don't like to eat the raspberries for fear of eating some worms. I suppose they would help to fill up, but I don't care anything about them. Were you ever up to Kalkaska? If you haven't been you have missed a lot, because it is an awful big town, Ha! Ha! Well I guess I will close and give the rest some room. Would like to have some of the boys and girls write to me. Good bye, from your niece,—Miss Mary Drake, Star Route, Kalkaska, Michigan.

Dear Uncle Ned:—I am going to write to you as I see so many of the cousins are writing. I see that Evelyn Soper has promised a card or letter to the one who guesses her right age. I think that Evelyn will be 13 her next birthday. Meta Miller has written me some real nice letters during the past year. I am a farmer girl, 17 years old. I am 5 feet 3 inches tall, weigh 130 pounds. I have medium brown hair. (Oh yes I had it bobbed on the 23rd of July). My eyes are blue and I have a light complexion. My birthday is on the 23rd of December. Have I a twin? I have not attended school for two years, but I would be a junior in high school if I could go. I live near Oak Grove, or north of Howell. I am working in Howell 4½ days a week, but I am home the rest of the time. My letter is getting so long that it won't miss the waste paper basket if I don't close. I hope that some of the cousins will write as I will be glad to hear from them. I am reading The Hunted Woman, and like it very much. —Idah Knapp, R. 2, Oak Grove, Mich.

Dear Uncle Ned:—I bet you have been wondering where that "Katy-did" went to. Well here I am again. I like my scissors fine and sure do use them a great deal. Now maybe you and my cousins wonder what I look like so I will describe myself. I have dark brown hair, brown eyes, and I am 4 feet, 2 inches tall. I weigh 102 pounds, and was 17 years old last January, so you see I am rather small for my age. I wonder if I have a twin. If I have I surely wish they would write to me. Lawrence Chapman, of Alma, Michigan, I wonder if he has a twin. If he was about six days younger he probably would have one, Ha! Ha! I think the answer to the one riddle that Erma White asked is a road. Is that right, Erma? I don't know the other. I also think that Dorothy Postma is 13 years of age. Well now Uncle Ned, I am very interested in that drawing contest you speak of, as I love to draw. I think I better stop as it is getting late and time for good girls to be in bed. Good bye Uncle,—Katie M. Prowant, Durand, Michigan.

NEW LAMP BURNS 94% AIR

Beats Electric or Gas

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. Government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94% air and 6% common kerosene (coal oil).

The inventor, A. R. Johnson, 609 W. Lake St., Chicago, Ill., is offering to send a lamp on a 10 day's FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him to-day for full particulars. Also, ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month. (Adv.)

The Hunted Woman

By James Oliver Curwood

Michigan's Own and America's Formost Author of the Great Northwest

Copyright by James Oliver Curwood

(Continued from August 18th)

IT was no time for knife-work now. As the avalanche of brute strength descended upon him Aldous gathered himself for the shock. He had already measured his own weakness. Those ten minutes among the rocks of the chasm had broken and beaten him until his strength was gone. He was panting from his first onset with Quade, but his brain was working. And he knew that Quade was no longer a reasoning thing. He had ceased to think. He was blind with the passion of a brute, and his one thought was to crush his enemy down under the weight of the club in his huge hands. Aldous waited. He heard Joanne's terrified scream when Quade was almost upon him—when less than five feet separated them. The club was descending when he flung himself forward, straight for the other's feet. The club crashed over him, and with what strength he had gripped Quade at the knees. With a tremendous thud Quade came to earth. The club broke from the grip of his hands. For a moment he was stunned, and in that moment Aldous was at his throat.

He would have sold the best of his life for the skinning-knife. But he had lost it in gripping Quade. And now he choked—with every ounce of strength in him he choked at the thick neck of his enemy. Quade's hands reached for his own throat. They found it. And both choked, lying there gasping and covered with blood, while Joanne struggled vainly to free herself, and scream after scream rang from her lips. And John Aldous knew that at last the end had come. For there was no longer strength in his arms, and there was something that was like a strange cramp in his fingers, while the clutch at his own throat was turning the world black. His grip relaxed. His hands fell limp. The last that he realized was that Quade was over him, and that he must be dying.

Then it was, as he lay within a final second or two of death, no longer conscious of physical attack or of Joanne's terrible cries, that a strange unforseen thing occurred. Beyond the tepee a man had risen from the earth. Me staggered toward them, and it was from Marie that the wildest cry came now. For the man was Joe DeBar! In his hand he held a knife. Swaying and stumbling he came to the fighters—from behind, Quade did not see him, and over Quade's huge back he poised himself. The knife rose; for a fraction of a second it trembled in mid-air. Then it descended, and eight inches of steel went to the heart of Quade.

And as DeBar turned and staggered toward Joanne and Marie, John Aldous was sinking deeper and deeper into a black and abysmal night.

CHAPTER XXX

In that chaotic night in which he was drifting, light as a feather on the wind, John Aldous experienced neither pain nor very much of the sense of life. And yet, without seeing or feeling, he seemed to be living. All was dead in him but that last consciousness, which is almost the spirit; he might have been dreaming, and minutes, hours, or even years might have passed in that dream. For a long time he seemed to be sinking through the blackness; and then something topped him, without jar or shock, and he was rising. He could hear nothing. There was a vast silence about him, a silence as deep and as unbroken as the abysmal pit which he seemed to be softly floating.

After a time Aldous felt himself swaying and rocking, as though tossed gently on the billows of a sea. This was the first thought that took shape in his struggling brain—he was at sea; he was on a ship in the heart of a black night, and he was alone. He tried to call out, but his tongue seemed gone. It seemed a very long time before day broke, and then it was a strange day. Little needles of light prickled his eyes; silver strings shot like flashes of weblike lightning through the darkness, and after that he saw for an instant a strange glare. It was gone in one big, powderlike flash, and he was in night again. These days and nights seemed to follow one aonther swiftly now, and the nights grew less dark, and the days brighter. He was conscious of sounds and buffetings, and it was very hot.

Out of this heat there came a cool, soft breeze that was continually caressing his face, and eyes, and head. It was like the touch of a spirit hand. It became more and more real to him. It caressed him into a dark and comfortable oblivion a still brighter day roused him. His brains seemed clear. He opened his eyes. A white cloud was hovering over them; it fell softly; it was cool and gentle. Then it rose again, and it was not a cloud, but a hand! The hand moved away, and he was looking into a pair of wide-open, staring, prayerful eyes, and a little cry came to him, and a voice.

"John—John——"

He was drifting again, but now he knew that he was alive. He heard movement. He heard voices. They were growing nearer and more distinct. He tried to cry out Joanne's name, and it came in a whispering breath between his lips. But Joanne heard; and he heard her calling to him; he felt her hands; she was imploring him to open his eyes, to speak to her. It seemed many minutes before he could do this, but at last he succeeded. And this time his vision was not so blurred. He could see plainly. Joanne was there, hovering over him, and just beyond her was the great bearded face of Donald MacDonald. And then, before words had formed on his lips, he did a wonderful thing. He smiled.

"O my God, I thank Thee!" he heard Joanne cry out, and then she was on her knees, and her face was against his, and she was sobbing.

He knew that it was MacDonald who drew her away.

The great head bent over him.

"Take this, will'ee, Johnny boy?"

Aldous stared.

"Mac, you're alive," he breathed.

"Alive as ever was, Johnny. Take this."

He swallowed. And then Joanne hovered over him again, and he put up his hands to her face, and her glorious eyes were swimming seas as she kissed him and choked back the sobs in her throat. He buried his fingers in her hair. He held her head close to him, and for many minutes no one spoke, while MacDonald stood and looked down on them. In those minutes everything returned to him. The fight was over. MacDonald had come in time to save him from Quade. But—and now his eyes stared upward through the sheen of Joanne's hair—he was in a cabin! He recognized it. It was MacDonald's old home. When Joanne raised her head he looked about him without speaking. He was in the wide bunk built against the wall. Sunlight was filtering through a white curtain at the window, and in the open door he saw the anxious face of Marie.

He tried to lift himself, and was amazed to find that he could not. Very gently Joanne urged him back on his pillow. Her face was a glory of life and of joy. He obeyed her as he would have obeyed the hand of the Madonna. She saw all his questioning.

"You must be quiet, John," she said, and never had he heard in her voice the sweetness of love that was in it now. "We will tell you everything—Donald and I. But you must be quiet. You were terribly beaten among the rocks. We brought you here at noon, and the sun is setting—and until now you have not opened your eyes. Everything is well. But you must be quiet. You were terribly bruised by the rocks, dear."

It was sweet to lie under the caresses of her hand. He drew her face down to him.

"Joanne, my darling, you understand now—why I wanted to come alone into the North?"

Her lips pressed warm and soft against his.

"I know," she whispered, and he could feel her arms trembling, and her breath coming quickly. Gently she drew away from him. "I am going to make you some broth," she said then.

He watched her as she went out of the cabin, one white hand lifted to her throat.

Old Donald MacDonald seated himself on the edge of the bunk. He looked down at Aldous, chuckling in his beard; and Aldous, with his bruised and swollen face and half-open eyes, grinned like a happy fiend.

"It was a wunerful, wunerful fight, Johnny!" said old Donald.

"It was, Mac. And you came in fine on the home stretch!"

"What d'ye mean—home stretch?" queried Donald leaning over.

"You saved me from Quade."

Donald fairly groaned.

"I didn't, Johnny—I didn't! DeBar killed 'im. It was all over when I come. On'y—Johnny—I had a most cur'ous word with Culver Rann afore he died!"

Clear More Land *This Fall*—
Large Profits Next Year

IF YOU are after bigger crops and bigger profits next year, there is no more valuable work you can do following harvest than to clear more of your stump land.

The easiest, quickest and most economical way is with Dumorite, the new du Pont explosive. Dumorite has approximately the same strength as 40% dynamite, stick for stick, yet leaves no larger hole in the ground than a 20%—and you get 1/3 more sticks for your dollar. It won't freeze. Get it from your local dealer.

DAIRY and LIVESTOCK

U. S. BEEF SUPPLY CONSUMED AT HOME

GROWTH of population in the United States to a point at which the domestic market has become large enough to absorb the country's normal beef production is the chief reason why American beef is no longer an important source of supply for Great Britain, says Chas. J. Brand, marketing specialist for the Department of Agriculture, who recently studied the meat trade situation in Europe. Another factor working against an increase in our beef exports, he declares, is the lower cost of beef production in countries like Argentina which are still in the pioneer stage.

Mr. Brand points out that from 1891 to 1921 the human population of the United States increased from 62,948,000 to 107,833,000, while the number of cattle in the country increased only from 51,363,572, to 66,652,559. It is thus obvious that the growth in population has absorbed the increased beef production and the same is true of mutton. Our increased production and exports of beef during the war proved, according to Mr. Brand, that given the stimulous of a profitable market the American livestock grower can and will quickly expand his beef output, but many factors are at present diminishing his incentive to do so.

Among these factors the most important, in Mr. Brand's opinion, is the relatively high cost of beef production in the United States compared with its cost in countries now in the pioneer stage. This fact, he says, has convinced the meat trade of Great Britain that the future will see greater and greater production in Argentina, until the supply from that country overshadows that from any other source. Next in importance as sources of additional supplies are Austrailia and New Zealand.

At the present time the United States is almost exactly self-sufficient in the matter of its beef supply. As the country becomes more industrial, home consumption will be increased. Whether in that case the livestock grower will have any strong motive to engage in competition for the export trade will be determined, says Mr. Brand, by many factors, among which he cites the possibility of more efficient beef production methods coming into use, the younger age at which beef cattle are now slaughtered, and the relation of the dairy industry to cattle raising generally.

As an exporter of pork and pork products, the United States is likely to retain its pre-eminence for many years, Mr. Brand says. He believes, however, that with the rehabilitation of agriculture in Europe, our exports of these commodities, which have been very large in the last few years, will be adjusted to past-war conditions. Average shipments of American pork and pork products to the United Kingdom from 1910 to 1914 were about 450,000,000 pounds. In 1919 the total was 1,369,000,000 pounds, while in the fiscal year ending June 30, 1922, the shipments were 676,000,000 pounds. Some modifications of these figures are to be looked for, Mr. Brand says, but energetic trade development work will greatly minimize reduction.

MICHIGAN'S HIGH COW IN TESTING WORK

MR. E. M. STEWART, Inkster, Michigan, had the high cow in both milk and butterfat production in Michigan Cow Testing Association work. This cow, Detroit Pontiac Pietertje No. 391047, made 20,548 pounds of milk and 663.4 pounds of fat for the cow testing association year in Wayne County C. T. A., according to Mr. J. H. Mathiesen, cow tester. Mr. Mathiesen mentions that this cow was milked four times daily for five months of her lactation period and three times daily for five months. She was dry for two months.

Detroit Pontiac Pietertje consumed during her year's record 12,336 pounds of silage, 714 pounds of beet pulp, 3,704 pounds of alfalfa, 310 pounds of molasses, 834 pounds of oil meal, 1,614 pounds of gluten feed, 477 pounds of corn and cob meal, 1,331 pounds of ground oats, 124 pounds of cotton seed, and 862 pounds of commercial feed.

The total cost of feed was $211.42 and the total value of product was $403.25, leaving a return above the feed cost of $191.83.

In addition to having the high cow in both milk and butterfat production, Mr. Stewart also has the high herd average completed on four purebred Holstein cows. This average is 17,449 pounds of milk and 561.17 pounds of fat.

The second highest herd average went to Mr. H. W. Atwater of the West Allegan C. T. A. Mr. Atwater, with four purebred Jerseys, averaged 10.066 pounds of milk and 531 pounds of butterfat. Mr. Atwater has, for a number of years, been very carefully breeding up a small but high-class herd of Jerseys. The results that he has obtained, indicate the success of good feeding and breeding in obtaining a high-class dairy herd.

Other herds that follow in the summaries for a year's C. T. A. work are Mr. C. S. Stuart of the South VanBuren Cow Testing Association with five purebred Holsteins averaging 12,633 pounds of milk and 464.7 pounds of fat. Mr. Sam Park of the Lapeer C. T. A., with ten grade Guernseys and Jerseys, averaged 82-81 pounds of milk and 462.9 pounds of fat. Mr. A. C. Reek of the same association, with ten purebred Holsteins, averaging 12,311 pounds of milk and 441.7 pounds of fat.—A. C. Baltzler, Extension Spec. in Dairying, Michigan Agricultural College.

NO ENTRIES TO DAIRY EXPOSITION AFTER SEPT. 15

ENTRIES in the cattle classes at the National Dairy Exposition close on Saturday, September 15th. Exhibitors who are planning to show at the Exposition must have their entries in the mail not later than that date. All entries are checked up by the various breed associations and are then cataloged before the opening of the Exposition on October 5th. This makes it imperative that entries be mailed by the closing date.

Exhibitors who have not received the prize list and entry form can secure them by addressing the National Dairy Association at Syracuse.

A total of $30,700 is offered in prizes for cattle at the Exposition. The Show Association offers $5,990 on Holsteins and the Holstein-Friesian Association of America offers $2,750 in special prizes. In the Ayrshire, Brown Swiss, Jersey and Guernsey classifications, the Show Association offers $5,240 for each breed.

Prizes in all grade cow classifications have been increased to a total of $850 for each breed.

Entries in the special classes for calf club calves also close on September 15th. The Association offers $1,100 in prizes and the Holstein-Friesian Association and the American Jersey Cattle Club have each offered $500 in specials for calf club exhibits of their respective breeds.

VETERINARY DEPARTMENT

SHOULD CALL VETERINARIAN

I have ten cows and I bred four of them to a neighbors bull and they seemed to catch all right but all the way from 60 days to four months they come in heat again. I got me a registered bull and bred the same cows over three of them caught and all due next December and have bred the rest of my herd and cannot seem to get them with calf. Some come in heat every 21 days and others go from 42 to 48 days. Our local veterinary says my bull is not any good. I think he is as three of my cows are with calf from him and the man I bought him from has 18 cows all with calf from him.—F. B. McD., Lapeer, Mich.

—We can hardly do more than guess at the cause of sterility in any specific case without making a personal examination of the herd. It is likely that the trouble is due to infection of the reproductive organs. It is within the realm of possibility that the four cows bred to the neighbor's bull acquired some infection from the bull and transmitted it to the bull purchased later. It is a fact certain infections causing sterility may be transmitted from male to female and from female to male through copulation. The only satisfactory way of determining and correcting the cause of sterility is to have a veterinarian who is familiar with the diseases of the reproductive organs to make an examination of the herd.—E. T. Hallman, Asso. Prof. of Animal Path., M. A. C.

HAVE COW POX

Please do tell me what to use for my cows as they seem to have a disease in their teats. They turn black and fester up at the opening and are very sore. One had it at first but now others seem to be coming down with it. I have one cow that has warts so bad that I can hardly milk her and I have been using caster oil about two weeks but it does not seem to take them off.—V. Q., Burt, Mich.

—These cows in all probability are suffering from cow pox. The disease is transmissible from the hands of the milker from one cow to the other. It is a disease that generally yields quite readily to treatment. I would suggest that you wash off the affected part of the udder and teats with a one-half of one per cent lysol solution, dry thoroughly, and then apply zinc oxide ointment night and morning to the affected parts.—John P. Hutton, Assoc. Prof. of Med. and Surg., M. A. C.

TREATING CATS FOR LICE

I am seeking information in regards to my cats. They are covered with small white lice with dark heads. Is there a way to destroy them and not harm the cats? I have tried insect powder but did not get results.—Mrs. E. R., Davison, Mich.

—Cats being very susceptable to the toxic action of any disinfectant, makes it difficult to treat them for lice and other skin diseases. I would suggest that you try the application of sulphur ointment to the affected parts of the cats body. If it be necessary to cover the entire surface of the body, apply the ointment to about one-third of the body the first day, on the third day another third, and so on until the surface is completely covered.—John P. Hutton, Assoc. Prof. of Med. and Surg., M. A. C.

HIGH RECORD MADE BY MICHIGAN JERSEY

A MOST creditable record has just been completed by Sensational Iris 392391, owned by Chas. Kraus, Hart, Michigan. This cow started test at 5 yrs. 2 mos. of age and in one year produced 12,805 lbs. of milk and 714 lbs. of butterfat. Her average test being 5.58 per cent. Iris was sired by Noble Sensational Lad 118536, AJCC Silver Medal bull; and was out of Matie Lavinia 251084.

BULLETIN TELLS OF MANY SWINE DISEASES

THE diseases and ailments which are important factors in reducing the profits of hog raisers, particularly the old enemy, hog cholera, are described and prescribed for in a new Farmers' Bulletin, 1244, Diseases, Ailments, and Abnormal Conditions of Swine, prepared by T. P. White of the United States Department of Agriculture.

Although the ravages of hog cholera have been reduced to 60 percent below the worst years, lack of attention to herds and failure to apply all the precautions available leave it still the greatest menace to the industry. Much of the bulletin is devoted to this disease and to a number of diseases which in the time of cholera outbreak go unnoticed or are diagnosed as cholera. These other diseases include anthrax, epilepsy, gastroenteritis, necrobacillosis, pleurisy, pneumonia, poisoning, swine plague, (hemorrhagic septicemia), tuberculosis, and worms.

Many other diseases and abnormal conditions, including such common troubles as thumps, sore mouth, sunstroke, rickets, paralysis of the hind quarters, and rheumatism, are described and proper treatments are given. There are also chapters on the prevention of disease and on the causes of losses during shipment.

Copies of the bulletin may be had by addressing the Department of Agriculture, Washington, D. C., as long as the supply lasts.

JACKSON COUNTY HOLSTEIN BREEDERS HAVE BIG DAY

(Continued from Page 4)

breeders were closing out their herds but he advised all those present to stick. Mr. Harper made two significant statements in closing; one, that on his farm the only paying things were cows, hens, and sheep, and the other that old men were largely running the farms with few young men taking up agriculture. Both these conditions seemed to him to be ominous for the future. James Wells was next introduced and he described the itinerary of the group of officials present on the Jackson county tour. W. B. Burse, Secretary of the Jackson County Fair Association, was introduced and invited the breeders to begin preparing their exhibits for the coming fair.

National Official a Speaker

The last speaker was C. M. Long of Chicago, manager of field work for the National Holstein Association, who joined the party at Layton's Corners. Mr. Long has just returned from a six weeks' trip through the West, and said that dairy farming is rapidly becoming very popular in that section. He spoke of the great opportunity for Michigan Holstein breeders in the West as the dairymen there must have eastern cattle to start their herds. According to this speaker, Wisconsin breeders have advertised extensively in such states as Idaho and Utah, but Michigan has failed in this line in the past. As means for procuring publicity, Mr. Long recommended a dairy train to tour the western field, the sending of all Holstein news to the Associated Press, the use of pictures of the true-type Holstein bull and cow, in advertising matter. He particularly stressed the importance of the fair exhibit.

Immediately following the program, the Bretherton herd was inspected. There are thirty-five head in this herd, half of which are pure-bred. The next point on the tour was the farm of E. R. Perrine in Rives township. A pure-bred bull, one and one-half years old, attracted special attention. Nine men of the Rives Holstein Association bought this bull at Howell and gave Rives the honor of having the first association bull in the county. There are fifteen pure-bred females in the Perrine herd, giving an average of 385 pounds of butterfat for a lactation period. As a recognition of the work of the Rives Association in promoting Holstein raising, a committee consisting of E. R. Perrine, W. S. Wood, and Ben Smith was appointed to begin immediate selection of a Holstein exhibit for the Jackson county fair. These men are all in the Rives Association.

The party next stopped at the Darling and Behm farm in Tompkins township, where there are twenty - eight pure-bred Holsteins. Here, W. S. Wood was elected an honorary member of the County Holstein Association, although mainly a shorthorn breeder. Mr. Wood is a fair director and has been very prominent among Jackson county breeders.

On the way back to Jackson, the farm of Ben Smith, in Rives Township was visited. Mr. Smith has six pure-bred Holsteins, five of whom are descended from the same bull. His herd averaged 10,247 pounds of milk and 341.6 pounds of butterfat for the last lactation period (about a year) and his cows have surely proved that a small herd with high quality is just as profitable as a large herd of medium or grade rating.

The last stop was made at the Boardman farm in Blackman township, owned by Judge Harry D. Boardman and John W. Boardman. The milk for the Michigan Central dining cars is procured from the herd of fifty-five Holsteins on this farm. After inspecting the Boardman herd, the party broke up.

CROWD your HOGS
for the
EARLY MARKET

Keep them healthy—
Free from worms—
Their bowels active—
Fit for thrift.

Feed
DR. HESS STOCK TONIC
Conditioner—Worm Expeller

It contains *Tonics*—That give a hog a healthy appetite—keeps his digestion good.
Vermifuges—To drive out the worms.
Laxatives—To regulate the bowels.

These groups of stockholders illustrate the rapid growth in ownership of the Bell System.

A Community of Owners Nation-wide

"Who owns the company?" "What is behind it?" These questions are asked in appraising the soundness of a business and in determining its aims.

The American Telephone and Telegraph Company is owned by more than 270,000 people living in every state in the Union. Could the stockholders of the Bell System be gathered to one place, they would equal the population of a city about the size of Providence or Denver.

They constitute a representative cross-section of American citizenship. Among them, of course, are bankers and men of large affairs; for the idea of ownership in the Bell System appeals to sound business judgment and a trained sense of values.

In this community of owners are the average man and woman, the storekeeper, the clerk, the salesman, the professional man, the farmer and the housewife—users of the telephone who with their savings have purchased a share in its ownership. The average individual holding is but twenty-six shares.

No institution is more popularly owned than the Bell System, none has its shares distributed more widely. In the truest sense it is owned by those it serves.

THE AERMOTOR CO. CHICAGO

BEFORE YOU BUY A WINDMILL

Carefully consider the following facts: *A year's supply of oil is sent with every Aermotor*

The Auto-oiled Aermotor is the Genuine Self-oiling Windmill, with every moving part fully and constantly oiled.

The Auto-oiled Aermotor has behind it 8 years of wonderful success. It is not an experiment. The double gears run in oil in a tightly enclosed gear case. They are always flooded with oil and are protected from dust and sleet. Oil an Aermotor once a year and it is always oiled. It never makes a squeak.

You do not have to try an experiment to get a windmill which will run a year with one oiling. The Auto-oiled Aermotor is a tried and perfected machine. Our large factory and our superior equipment enable us to produce economically and accurately. Every purchaser of an Aermotor gets the benefit from quantity production. The Auto-oiled Aermotor is so thoroughly oiled that it runs in the lightest breeze. It gives more service for the money invested than any other piece of machinery on the farm. The Aermotor is made by a responsible company which has been specializing in steel windmills for more than 30 years.

Aermotor Towers are Towers of Strength

GOSLINGS NEED GOOD PASTURE

I would like to know if you can tell me what ailed my goslings last spring. They grew and seemed to be all right until they were about ten days old when they began to stand humped up and their wings drooped. Inside of a day or day and a half they died. Their appetite was good until about 24 hours before they died. I fed them grass, bread and milk, boiled eggs and oatmeal and gave them fresh water to drink. I gave castor oil to some of them but it did not save them and greased them for lice but it did no good either. I fed them a small amount of feed four times a day. By the time they were two weeks old they were all dead. Last year I lost the last eighteen that I hatched out. This year I lost three out of seven.—Mrs. A. W., St. Louis, Mich.

—From the symptoms given, I am of the opinion that the goslings were denied the range conditions necessary for growth and development. The intimation that grass was supplied in the ration leads me to conclude that the goslings were confined in bare runs or that little pasture was available. Poultrymen ordinarily consider that the rearing of geese or ducks is quite a simple practice because they are less susceptable to dietary disturbances, diseases, and internal parasites, as compared with chicks.

The essential requirements for rearing goslings are, plenty of shade and good pasture. The feeding method may consist of a moistened mash containing rolled oats, corn meal, bran, middlings, and moistened with either skim milk or water. This should be fed about three times daily until the goslings are nearly feathered. After they are feathered whole or cracked grain can be given. A soft feed should form the basis of the ration during the growing period.

I can understand how goslings would show a lack of ambition and stunted growth if confined in bare runs and yards. Under such conditions it would be almost impossible to induce a normal growth and under such conditions a rather high mortality is almost certain to prevail.—E. C. Foreman, Asso. Prof. of Poultry Husbandry, M. A. C.

DUCKS SUFFERING FROM SUNSTROKE

I wish you could tell me what is the trouble with my young ducks. They will draw their head around under them and fall over backwards and their heads will turn clear around and they can not stand up. When they first are taken they will turn their heads up sideways. They get worse all the time. I keep plenty of clean water for them to drink. I also have a place for them to bathe. I feed them corn meal ground feed and bran and poultry feed. They will eat when I turn their heads right side up and hold it for them. But they can not do it themselves.—B. P., Fenwick, Mich.

—The symptoms which you have described as effecting your ducklings are characteristic of the symptoms induced by sun stroke. Thousands of ducks are lost each year due to sunstroke and these losses seem to occur very suddenly.

As far as possible, the duck range should be located in a well shaded pasture and the drinking water should be given in utensils of sufficient depth to permit the duck to entirely submerge the head. This is their only method of keeping the eyes and nostrils clean, which of course is necessary in the maintenance of health.

The young ducklings should be fed wet mashes only until they are almost completely feathered after which they can be given a small quantity of cracked corn and wheat. The dry mash should consist of 40 per cent corn meal, 20 per cent oat meal, 15 per cent wheat middlings, 15 per cent bran, and 10 per cent meat scrap. This should be fed three or four times daily. Green food, of course, should be available at all times on the range. We would not anticipate any serious mortality from this system of feeding and management.—E. C. Foreman, Professor of Poultry Husbandry, M. A. C.

CHANGING TIMES

By JOHN T. BARTLETT

THE DESIRE FOR SOCIAL APPROVAL

THE instigating, psychological explanation of that great town game you've perhaps heard of—"Keeping up with the Joneses"—is what the psychologists have termed, "The desire for social approval." Human beings instinctively want to have the approval and goodwill of the people around them. The instinct of self-preservation is probably at the root of the desire.

In the caveman days, if the rest of the tribe didn't like a special individual, they severally took a stone hatchet to him.

It is human, accordingly, and it one time in racial history it was exceedingly wise, to want to have the favorable opinion of one's fellows. In standard of living, dress, manners, automobiles, and thousands of things, modern people, in their buying and conduct, are actuated to an extent by an instinctive desire to win social approval.

Right at present—the current trend only goes back a very few years—something big is happening to the desire for social approval in the farming country. This fact always has been true—the closer together you get people, the stronger motivating force becomes the social approval desire. In cities, it often moves people to rediculous lengths. Go into mountain country, many miles from the railroad, and, considering the people, you might feel that a more powerful social approval resire would be a good thing. There are many things, usually, that the lone prospector could gain from stimulating contact with the world.

On the farm, desire for social approval never has been a force which drove families to undue lengths for the sake of "appearances." That has been one aspect of the great thing we call farm independence. I notice this nowadays markedly: Not in an undue manner, farm folks are getting to have greater interest in appearances than they used to have.

The causes, I believe, are partly economic and partly psychological. The automobile is bringing communities into closer contact than they used to be, for one thing; the social approval desire tends to be stimulated somewhat. Then we have the second condition—greater farm buying power. Farmers can indulge desires in many directions closed to them a few decades ago.

WE STOPPED "HERDING SHEEP"

THE pleasant man by the side of the road—I had asked directions to Wildcat Creek—had told me the way three times, through two cross roads and three turns. I looked unconvinced still—from past sad experience with a memory none too good for many corners and turns.

"O, Shucks," said the stranger finally, "I've been herding sheep. Get down with me!"

I got down with him" while in the dirt of the road he sketched a quick road map. "You do this—and this—and this—and this—" he said. Instantly I knew the way.

A lot of us, I believe, waste much time in giving verbal directions, when a diagram in dirt or on paper would convey our idea far better and far quicker.

One of my good friends, Johnny Peebles, of Mule Valley Farm, goes far with the idea. Something goes wrong with the car, or the reaper, or something else about the place. He must send to town. He doesn't know how to describe that needed part in words, but he has learned to do this—draw a picture or two, put on it measurements if necessary. He gets the idea over in jig-time.

WHY SHOULD WE GO OUT OF OUR COUNTRY TO BUY SUGAR

(Continued from Page 4)

The tariff, under the Fordney-McCumber Bill, passed September 22, 922, is $2.20 a hundred pounds gainst all raw sugar except that coming from Cuba, which is allowed reduction of 20 per cent, making he tariff $1.76 per hundred pounds.

The Fordney-McCumber Bill only ncreased the tariff sixteen cents a hundred pounds.

The little 20 per cent reduction effectually prevents any foreign sugar outside of that coming from Cuba being sold in this country. It is a protective tariff for Cuba.

These are the facts we all should know before we can judge of what caused the increase in sugar prices n February of this year.

Let us return now to the conditions governing production of sugar in this country during last year.

At the beginning of 1922 the Fordney-McCumber tariff bill was before the United States Senate, the price of sugar was down to less than ive cents per pound. The price the beet sugar factories could pay the farmers for their beets grown in 1922 depended upon sugar prices.

If the price of sugar remained low he farmer's returns would be greatly affected by the tariff.

Because of the low price and the uncertainty of what the new tariff would offer the beet sugar factories delayed just as long as they could offering a contract to the farmer.

Contract Price Too Low

When this contract did not come out it offered a guarantee of $5.00 a on for beets grown during 1922. This was not enough to meet the competition of other crops for possession of the land consequently a very small crop of beet sugar was grown during 1922. For like reasons and because of his inability to obtain money to finance his plantings due to low price of sugar, the sugar grower of Louisiana also had a small crop.

In the fall and winter of 1922-23 he American grown sugar was quickly sold and eaten; it was practically all gone by the middle of February or the first of March.

All the sugar we now get, until ugar grown on American farms during the summer of 1923 comes on he market in October of this year, will be from Cuba.

It is significant that prices advanced rapidly after the beet sugar was gone on the first excuse that could be offered, which happened to be the report issued by the Department of Commerce. American farmers and American sugar companies did not profit by the high price now prevailing.

They have always contended their ndustry, although at the present ime only producing 20 to 25 per per cent of our needs, kept the price down while they had sugar to sell.

Those who gain from these high prices are those who have the sugar on hand. Right here is where the refining companies come in.

The sugar that has produced fortunes for its owners is all in Cuba. Fifty-three per cent of the total output of sugar grown in Cuba in 1921 was extracted by mills owned by Americans.

Of these eighty-five factories, forty-nine producing 2,331,000 tons were owned outright or by interlocking officers or directors of the sugar refining companies of the Atlantic seaboard.

The other thirty-five factories independently owned only produced 786,000 tons.

There are nine refining companies on the Atlantic seaboard handling almost exclusively Cuban sugar; six of these refining companies own these forty-nine sugar companies operating in Cuba.

Because all sugar destined for American consumption must come through there Atlantic refineries they have a tremendous control over all the sugar coming into this country.

It is easy to see who gained by this sudden increase in the price of sugar.

Through the publicity organizations these refiners maintain, they have attempted to charge the tariff with the cause of this increase.

The Fordney-McCumber Tariff Bill was passed September 2, 1922. There was no increase in the price of sugar at that time, and it surely would have occured if the tariff had anything to do with it.

The increase in the Fordney-McCumber bill was only sixteen cents a hundred pounds.

To maintain that an increase occurring five months after of nearly $3.00 a hundred pounds was caused by this slight increase in the tariff is certainly the heighth of absurdity.

Any child would know better, yet this was swallowed whole by some who wish us to believe that they wrote intelligent (?) editorials on the subject.

All the interviews and arguments placed before the American people having as a basis the elimination or reduction of the tariff means a proposal for the destruction of 1,300,000 tons of American grown sugar. How this would reduce the price of sugar is beyond the comprehension of ordinary sensible people. This might be replaced by the cheaper grown sugar from Cuba, but this does not mean any cheaper sugar to the American consumer as our experience at the present time and during 1920, when all the sugar we are going to get is in their hands, has so clearly demonstrated.

We would by this method place ourselves regarding our supply of sugar in the same position we are in regarding rubber.

Because we suddenly find that England owns all the rubber plantations and can charge us what she pleases for this important product, we have been running around in circles calling upon rich men like Firestone and Ford to help us out, and frantic efforts are being made to find some place under American territory where rubber trees can be grown so we can be free from this intolerable position of being dependent upon another country and having to pay what she dictates. The American people are not ready to place themselves in this position regarding their sugar bill.

Why should we go out of our country to buy one ounce of sugar? The American farmer can grow every particle we need and we would rather trust the beet farmer of the North, and the cane grower of Louisiana and the thirty-four independent beet sugar factories who are not affiliated with or controlled by any trust or refinery for our sugar at reasonable prices than we would the present foreign control who are making fortunes off of us at the present time.

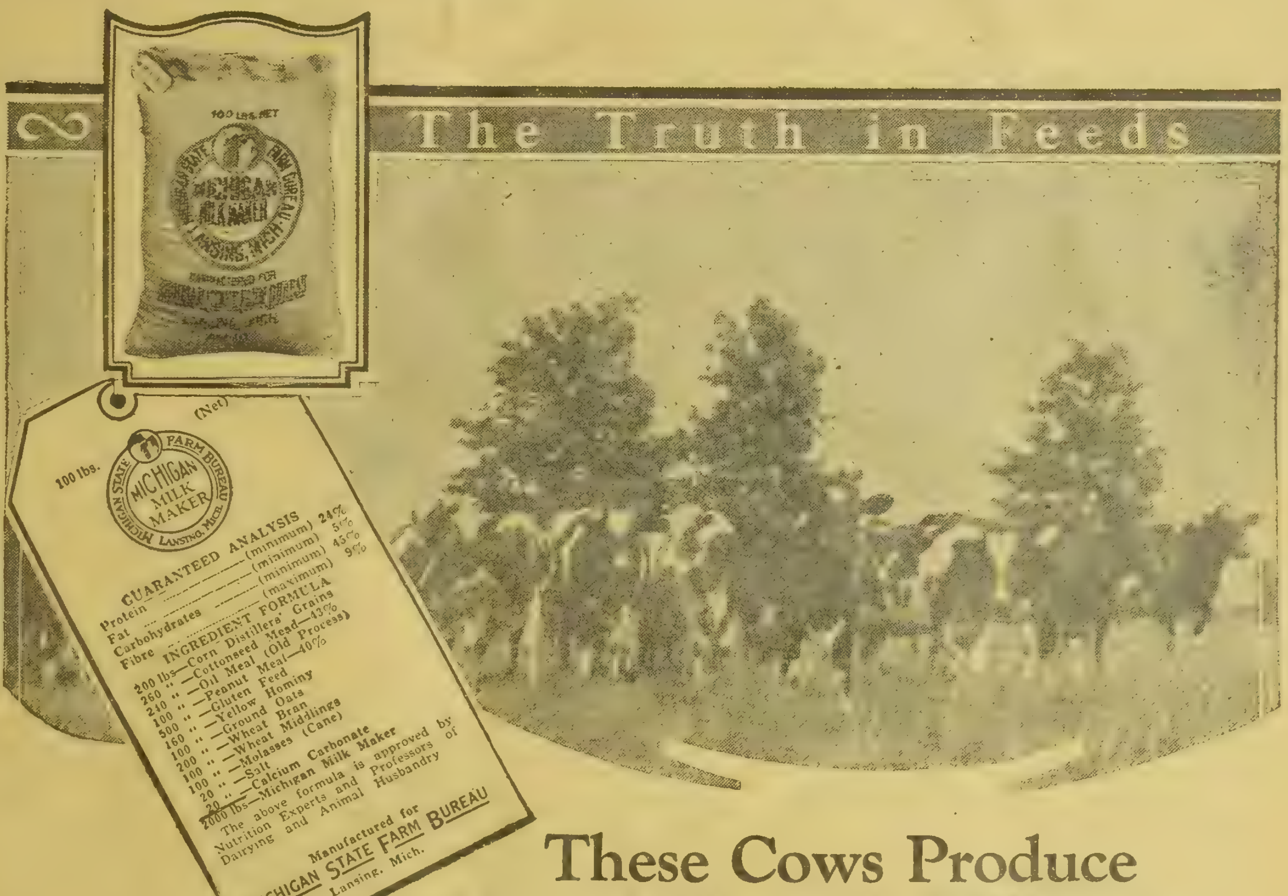
WARNS AGAINST GALVANIZED IRON UTENSILS

DO not allow food or drink to stand for even a short time in a galvanized iron vessel and do not use such utensil in making preserves or jellies or as a container for cider or other fruit juices, is a warning issued by officials of the Bureau of Chemistry, United States Department of Agriculture. Some of the zinc with which the bucket will be dissolved and will not only give the food an unpleasant taste but is very apt to cause sudden and intense illness.

A recent instance of poisoning apparently resulted from the presence of zinc in food. Twelve men at the Guam Naval Station each drank a bottle of root beer and immediately began vomiting. Chemical examination of the contents of three bottles transmitted to the Bureau of Chemistry for analysis disclosed the presence of substantial quantities of a salt of zinc in each bottle. It is the opinion of the officials that even one-half the contents of one of the bottles would have caused vomiting. The sale of bottles from this shipment has, of course, been stopped and an investigation started to definitely locate the source of the contamination with zinc.

Experiments carried on by Federal chemists with quantities of lemonade, orangeade, milk, carbonated water, Washington City tap water and distilled water held over night in galvanized iron buckets proved that zinc contamination occured in each case. The officials, therefore, warn against the use of such utensils as containers for food or drink.

Hank Pohns says: "A lot of folks get inter trouble, jest tryin' to avoid it!"



These Cows Produce More Milk with Milkmaker

THIS splendid herd of pure-bred Holsteins belongs to J. B. Strange of Grand Ledge, one of the many up-to-date Michigan dairymen who are feeding Milkmaker the year 'round. He says:

"I have used a wide variety of dairy feeds in my time. I got started on Milkmaker more or less by accident. I heard about Milkmaker and got some. My cows were on test and I wanted the best. The results speak for themselves. On this feed one of my cows produced 5,554 lbs. of milk in two months and over 93 lbs. of butterfat in 30 days.

"When my cows are in the barn I feed Milkmaker straight; when on grass, half Milkmaker and half corn and oats. Milkmaker is very palatable."

Michigan Milkmaker is a 24% protein, public formula dairy feed made by Michigan State Farm Bureau. It is Michigan's best dairy ration. The ten milk making ingredients are listed on the bag, pound for pound. You know exactly what you are buying.

How to Feed Milkmaker Next Winter At Summer Prices

You can contract your winter feed requirements of Milkmaker through the Farm Bureau, for equal monthly shipments from September through March at summer feed prices. The price is guaranteed.

The Farm Bureau buys Milkmaker ingredients in huge volume at summer low prices, mixes them at one of the largest and best equipped mills in the country and delivers Milkmaker to you every month. You pay as it is delivered. This plan enables you to buy your winter feed at the lowest prices; it insures fresh feed.

See your local co-operative association for your Milkmaker requirements. If you have no co-op., ask us how to co-operate with your neighbors in buying carlots of Milkmaker for car-door delivery. Write for our booklet on Milkmaker. The time is short. Later Milkmaker must be bought at prevailing market prices. Order now.

The Public Formula Feed

MICHIGAN STATE FARM BUREAU
Lansing, Michigan

FEED MILKMAKER NEXT WINTER AT SUMMER PRICES

MARKET FLASHES

MARKET SUMMARY

Wheat active. Corn and oats steady. Rye and beans firm. Butter and eggs in demand. Potatoes scarce. Hay firm and supply small. Good demand for poultry. Market for dressed calves firm. Cattle in demand. Hogs and sheep higher.

(Note: The above summarized information was received **AFTER** the balance of the market page was set in type. It contains last minute information up to within one-half hour of going to press.—Editor.)

FOOTE'S MARKET LETTER

BY W. W. FOOTE

PRACTICALLY all businesses of America are on an active money making basis at present and a gleam of prosperity is apparent everywhere. Agriculture, the biggest and fundamental industry of the country, has been reported to be failing at all times and the farmer has been hoodwinked into the idea that he was down and out. It is true that he is not getting a just proportion of whât he produces but he is far from being broke. Most farm products are at a profitable level at present and further improvement is undoubtedly going to develop in argicultural markets before the year is ended.

If gloomy stories about the down trodden farmer are true, how is it then that he is able to keep on producing year after year on a losing market? There are apparently thousands of prosperous farmers throughout the corn belt and other agricultural states of the union who are totally oblivious of the fact that they have failed in business. It is true that certain agricultural commodities have recently lost money and specialization has been a risky practice. But diversified farming has generally yielded good profits to the farmer.

Increased business in the mail order houses and larger output of automobiles and tractors, a large percentage of which business represents the buying power of the American farmer; savings bank deposits, which show a tremendous increase; improvements in schools, roads and rural communities in general all go to show that fundamentally the business of the American farmer is on a healthy basis and there is little fear of the purchasing power of the agricultural community in general being seriously impaired.

The great majority of our people are employed and are making good money. However, there is a general tendency to use a streak of economy in buying, this being the result of the lessons learned during the boom in 1920. Most businesses are carried on with a bit of cautiousness which only goes to put the country on a sounder footing. According to reports from the Department of Labor recently, the average weekly wage today is $27.22 or 121 percent above wages before the war and only $2.72 less than wages during the peak in 1920.

At the peak of 1920 our dollar was worth but 40.5 cents but today it has the buying power of more than fifty per cent in excess over the 1920 dollar and at the same time wages are practically as high as they ever were. Commodity prices are generelly below what they were three years ago and indications point toward further reduction all the time. A settlement in European affairs would certainly be a good tonic to all industries in America and outlet for the surplus manufactured goods and raw materials would be wider. Conditions abroad are very serious at present, Germany being in complete economic disruption and both England and France feeling the depression keenly.

The Wheat Outlook

The wheat outlook has been of a disturbing nature to the wheat farmer of the country during the last few weeks. Prices sank to the lowest levels since before the war. This decline was the result of an exaggerated estimate of the 1923 crop. Later investigations however, made the exaggeration obvious in the fact recent figures show that the whole of North America has approximately 89,000,000 bushels less wheat than in 1922. This report as well as fear of early frosts in north west Canada, has boosted wheat prices materially since the low spot a few weeks ago and more business has taken place in the wheat markets lately than for several months. Frost was reported in the Canadian north west this week but in places where wheat is so far advanced that it is out of danger. The fact that frost occurred, however, had a bullish effect on the market owing to the possibility that localities beyond the danger line would be touched. The market undoubtedly will show further strength although sharp upturns are not expected. The winter wheat crop is practically all harvested and prices are above the $1.00 mark with Chicago September wheat at $1.02½ and No. 1 Hard up to $1.08½. Much is talked about creating a wider foreign outlet for the cereal. Exports in 1922 were four times as large as they were prior to the war and while foreign credit and money is not able to take as much as they need this year, exports are not expected to fall off materially.

The infamous cotton pest of the south, namely bool-wevil, has cut deep into this year's production. The bool-vevil costs cotton planters of Dixie from half a million to a billion dollars annually. Dry weather in Texas also has decreased the yield, However, these unfavorable influences in the cotton industry have created a better market for the product and prices are generally on a money making level. There has been a strong undertone in the corn market for a good many months and recently sensational advances have carried prices to new high levels at Chicago since 1920. Contract grades of corn have reached 90c at least with No. 2 yellow making 92c this week. Outside points also report higher markets on corn. Oats are in a strong position and most gains are in fairly healthy shape.

Hogs and Cattle at New High Level

Reflecting general industrial improvement, consumptive demand for meats has been broad during the past week or two and prices for live stock have been on the upgrade for several weeks. Hogs and cattle are at new high levels for the year to date and predictions are general that they have farther to go before the year's peak will have been reached. While hogs have been losing money for the farmer during past months, they are making a little now and cattle have been profitable to feeders throughout the year. At present from $3.00 to $6.00 margins over initial costs are general for feeders to realize when they see their steers going to the scales. Countrymen are clamoring for thin lambs to go on the pastures this fall and at present are paying more for lambs of feeding flesh and killers are willing to pay for fat lambs. A buoyant undertone prevails generally in the live stock trade.

On August 6th, the $12.00 steer made his appearance at Chicago and this week they sold at $13.00 showing a full $1.00 gain in less than three weeks. Top cattle are within 50c of the practical limit last October and at present are selling $2.00 above tops a year ago. Only a few finished heavy steers are eligible to these high figures they show what killers are willing to pay for strictly choice cattle. There is a general report of scarcity of finished beeves throughout the corn belt and the premium they command over short-fed cattle will undoubtedly stimulate feeders to ripen their stock more thoroughly before marketing them. Predictions of traders at the Chicago Yards are that $14.00 steers will be here before many more weeks and some are even willing to risk money on $15.00 cattle before the year is over. The largest percentage of cattle coming consist of young stock of medium good grades. Only choice and prime steers are selling above the $12.00 mark at present with a spread of $9.25 to $12.50 representing the great bulk of offerings. Strictly common, ill-bred steers go for slaughter down to $6.50 with those on the western order under $6.00. Demand for feeding cattle has been in evidence, but at Chicago, the quality is not good enough to meet requirements and business has been handicapped. However, as soon as the run of western range cattle starts coming in large numbers, there will be more offerings and the trade is expected to improve materially. Most business done lately ranged from $6.00 to $7.25 with a few loads of well-bred, meaty steers, suitable for a short turn on corn at $8.00 and above.

Butcher Stock Market Strong

Butcher stock and bulls met stronger markets during the past week and gains of 25c were general. Most cows and heifers cleared from $4.35 to $6.85 although some prime kosher cows were eligible to $9.00 and above and strictly baby beef heifers at $10.00 to $10.50. One shipment of fancy yearling heifers sold at $11.00. Bologna bulls sold largely at $4.50 to $4.75 with the best heavies up to $5.00. Veal calves advanced $1.00 during the last six days and closed the week on a $12.00 to $13.00 basis with choice handyweight vealers at $13.25 and above. Cows of canner and cutter grade found ready outlet at $2.75 to $3.25.

Advances in hog values lifted choice 190 lb. butchers to $9.30 late in the week at Chicago and to $10.50 at Buffalo. Some traders expect $10.00 hogs before many weeks at Chicago. A year ago top hogs were selling at $9.70. The average price of hogs during the week ended August 25, was $8.10 the highest since last April. The market has gained $1.45 since the low time six weeks ago. A range of from $6.00 to $9.30 represented hogs late this week, common heavy packing sows bringing the former figure with choice lights the latter. Stronger markets on hogs and grain have been factors in advancing the lard market and recently August lard was quoted at $11.10.

Feeder buyers took lambs away from the killers this week paying from 15c to 25c more for lambs suitable to take out to the pastures and feed lots. Extreme top during the period was $14.15 against a top of $14.00 to killers. Countrymen certainly have faith in the future lamb market and predictions for the fall market are favorable, generally. Most lambs went for slaughter at $13.25 to $13.85 this week while a spread of $13.50 to $14.00 represented the feeder business. Sheep were not numerous and sold generally from $6 to $7 all week. Wool markets have been undergoing a seasonal mid-summer dullness but expectation for the fall market reflect optomism. Hide and leather markets have been dull recently but are considerable better than they were last spring.

WHEAT

After a period of weakness and inactivity the wheat market opened last week with a steady tone prevailing and higher prices seemed to be but a short distance away. This proved true and from a slow start the upward trend to prices increased in speed daily. Late last week there was considerable news in the market of a bullish nature. There was a large reduction in the estimate of the Canadian crop as well as in that of Kansas. Frost in Canada gave traders a scare and reports showed that hogs in Kansas were being fed wheat instead of corn. All this made a reduction of over 70 million bushels in the wheat available for ordinary uses. There is a growing belief that there will not be as much good wheat produced in this country as the people expect because much of the grain now coming to market is below the best milling grade. Good wheat is reported to be scarce, and this is said to apply to Canada as well as United States. Wheat is not moving freely in this state. Millers in some cases have been obliged to go outside the state to get enough grain to keep running steady. Foreign markets are becoming a little more active, and flour in England is reported to be in brisk demand. Some wheat is reaching France from Russia but nothing definitely is known about the export possibilities of Russia. Some say that we can expect to see heavy exports from that country while others say that it has little to spare. Foreigners are doing little bidding in the American market as prices have been too high but recent advances in Liverpool brings prices nearing to a working basis.

Prices

Detroit—Cash No. 1 red, $1.06; No. 2, $1.05; No. 3, $1.02; No. 2 white, $1.06; No. 2 mixed, $1.05.

Chicago—Cash No. 2 red, $1.04¾ @1.06; No. 3, $1.02@1.05.

Prices one year ago—Detroit, Cash No 2 red, $1.08; No. 2 white and No. 2 mixed, $1.07.

CORN

Corn has moved in sympathy with wheat and prices are higher. The Detroit market closed last Saturday 1½c higher than the week previous and the tone was steady. Domestic trade was good and country offerings to arrive continued light.

Prices

Detroit—Cash No. 2 yellow, 95c; No. 3, 94c.

Chicago—Cash No. 2 yellow, 89½ @90¾c; No. 3, 90c.

Prices one year ago—Detroit, Cash No. 2 yellow, 70c; No. 3, 69c.

OATS

Oats followed the trend of other grains but with reluctance. Country offerings were moderate. A bit of bullish news in the market is the forecast of probable rain over the belt which would interfere with threshing operations not yet completed as well as delay the movement to market. Cash oats were in good demand at a steady price.

Prices

Detroit—Cash No. 2 white, 43c; No. 3, 41c; No. 4, 39c.

Chicago—Cash No. 2 white, 40@41½c; No. 3, 38¾ @41.

Prices one year ago—Detroit, Cash No. 2 white, 36c; No. 3, 34c; No. 4, 31c.

RYE

Rye has been enjoying a good demand the past ten days and prices have advanced some. The Detroit market is 3½c higher.

Prices

Detroit—Cash No. 2, 75c.

Chicago—Cash No. 2, 69@70c.

BEANS

The bears were not so active in the Detroit bean market the last two weeks and as a result prices advanced. Week before last advances totaled 30 cents and last week the gain amounted to 10 cents, making the price 40 cents above that quoted in our last issue. The supply is said to be moderate and dealers report an increase in the buying.

Prices

Detroit—C. H. P., $5.40 per cwt.

Chicago—C. H. P., $5.40 per cwt.

Prices one year ago—Detroit, C. H. P., 6.50 per cwt.

POTATOES

The potato market in general seems to be stronger and higher prices are noted at several points. The supply is scarce and market firm in tone.

Prices

Detroit—Cobblers, $1.25 @ 1.31 per cwt.

Chicago—Kansas and Early Ohios No. 1, $2.20 per cwt.

Prices one year ago—Detroit, Michigan, $1.80 per cwt.

HAY

Markets show more strength. Country loadings are very small and the movement of new hay has been very light as yet, due to a great extent to the scarcity of labor. Stocks on hand are becoming depleted, the poorer sorts moving readily in the absence of better varieties and a good clearence is reported in most markets. Choice hay of all kinds commands a premium over quoted values. This strong condition will probably hold into September, when a larger movement of hay can be expected.

Prices

Detroit—No. 1 timothy, $19.50@20; standard, $18.50@19; light mixed, $18.50@19; No. 2 timothy, $17@18; No. 1 clover mixed, $17@18; No. 1 clover, $15@16.

Chicago—No. 1 timothy, $28@29; No. 2 timothy, $25@27; light timothy & clover mixed, $24@27; No. 1 clover, $22@24; No. 2, $18@19.

CROP REPORTS

CALHOUN—Farmers are threshing, grain is very good, not so much going in this fall. Soil is in good shape but weather very cold. Potatoes are not looking very good, can get no price for wheat or beans—C. E. Beardsley.

ST. CLAIR—Cold, heavy rains broke long drouth here; but they came too late to do the late planted corn much good. There was danger of frost on the nights of August 21 and 22, and it is reported that freezing occurred on lower grounds. Threshing is progressing rapidly. Very little grain remains in the fields and the farmers are shocking or hauling their oats into the barn. Oats are a very poor crop, the yield being between 20 and 30 bushels per acre. Beans were damaged by drouth and a short crop is . pected. St. Clair H. S., Agricultural Dept.

PRESQUE ISLE—Farmers are very near through harvesting, grain very poor, not even half crop. Potatoes looked fair so far but too dry to make any headway. Corn is at a standstill. New Clover that was seeded in spring is dried up nothing to be seen of it. Pastures poor. Everybody around here is so disgusted feel like quitting.—Fred Fulyetske

OGEMAW—On 21st had good rain. Harvesting done and threshing going on. Corn nearly fit to cut. All crops has been good except potatoes but rains will help them now.—Jas. Anderson.

BRANCH—There was little rain lately, very hard plowing for wheat. Corn well eared but is not out of way of frost yet and is so cold nights. Some are shipping stock. A lot of traffic, road just lousy day and night.—Will Cook.

GENESEE—Farmers are plowing and threshing oats and barley. Some have started harvesting beans and are filling their silos. Weather has been quite cold during the past week but no damage has been done by frosts yet. There is a very large acreage of beans planted this year but the average yield will not be very high.—Clarence Schwansbeck.

MONROE—Weather dry, no plowing for wheat done. Harvest about done except some oats out yet. Yields of grain fair, quality good, if weather is right a larger amount of alfalfa seed will be harvested. Corn is suffering some from drought, but it looks like rain was coming soon. Hay buyers are offering the same old prices of hay, some moving at around $12.00 baled.—Geo. L. Sype.

SHIAWASSEE—The drought of the past two months did seem very injurious to crops as grains were of good yield and of good quality. Wheat on the average gave 25 bushels per acre. Oats 50 bushels. The rains of the past weeks gave new life to corn and potatoes. Threshing is nearly all finished, farmers seem to be well satisfied with the yield but not with the prices.—D. H. Morris

PRITCHARD'S
WEATHER
FORECAST
INTERPRETED BY THE STARS

Week of September 2

DURING the early part of this week in Michigan the weather will be generally fair and sunshiny with clear, starlight nights. About Tuesday a change in the storm conditions will start the temperatures upward. By the middle part of the week residents of this state may expect the usual late summer type of weather; that is, light showers and probably thunder and lightening.

These conditions will last but a couple of days. About Thursday the temperature will begin a rapid decent and continue on a downward trend to the end of the week at which time quite unseasonably cool weather will settle into most parts of the state.

Light to heavy frosts may be expected in numerous counties throughout the northern part of the state near the close of this week.

Week of September 9

High winds and locally heavy rains will open up this week followed about Monday with an appreciable drop in temperature. This condition will not last long, however, and each day will see it a little warmer the day before.

For the balance of the week we see very little general rainfall although showers may be heavy in Michigan about 12th and 13th. Several days of cool, early fall weather—bright, sunny days and starlight nights—will follow after the unsettled condition of middle part of week.

September Warm and Wet

For the coming three or four weeks we believe Michigan weather will average warmer than normal with plenty of moisture. On the whole, however, we are expecting a moderately dry fall.

POTATO EXCHANGE ACTIVE ON STATE ISSUES

COOPERATIVE marketing aims to substitute the orderly selling of farm products for the wasteful practice of dumping these products on the market shortly after the harvest or selling them without knowledge of market conditions, grades desired and other matters, Walton Peteet told 300 delegates of 130 Potato Marketing Ass'ns., gathered at the fifth annual meeting of the Michigan Potato Growers Exchange, held at Cadillac August 15.

The Exchange reported surplus of $50,000 and voted to increase that to $100,000 during the next few years by deducting a small share from the patronage dividends it pays to its members.

Resolutions adopted petitioned the state to adopt U. S. standard grades from potatoes and to furnish shippers with loading point inspection so that potatoes are properly graded and certified at the shipping point instead of depending upon inspection at the point of delivery.

Strong For Gas Tax

A gasoline tax was endorsed for road financing purposes, the state administrative board was censured for apparently seeking to usurp the functions of the State Board of Agriculture in the administration of the Michigan Agricultural College. The Board of Agriculture was commended for the way it has discharged its duties to Michigan farmers. Railroads were called upon to conform with the law and furnish sufficient cars for coop movement and meet evident needs as determined by the experince of the seasons past.

President Henry Curtis of Cadillac, was unanimously elected director to succeed himself. J. T. Bussey of Provement, succeeds A. B. Large as director and Herbert F. Baker of Vadock, was defeated by J. D. Robinson of Levering.

MICHIGAN TAX RATE FOR 1923 TO BE CUT 75 CENTS

(Continued from Page 3)

showed an assessed value of about 61 per cent of its actual value, while rural property showed 85 per cent of that value. Later, in reply to Mr. Nagel of Detroit, he cited a number of tracts of farm land in Kent county showing by their sale prices they were either purchased recently or offered for sale at less than the assessed valuation. Nagel claimed that only in Detroit could property be bought at less than its assessed valuation.

GET YOUR COAL FREE
Special offer to Michigan Business Farmer Readers—A large, successful, 16 year old coal company, The Peoples Coal Co., 1120 W. 35th st., Dept. K, Chicago, Ill., shipping direct from mine to user, is offering this unusual opportunity to one coal user in every neighborhood who has a few hours spare time. This is its method of quickly introducing the finest grade, freshly mined, free-burning coal, which is being sold direct to user, at remarkably low prices. Man of good standing in his community can get his coal free. Write this firm today, and ask them to explain this offer.—(Adv.)

Cow hides and calf skins are converted into shoe leather by a process called tanning. This process preserves the natural oil and toughens the hide. The wear in your shoes depends upon it.
Good Tanning means Long Wear
Easier than choosing sides—
to choose the best in school shoe values
SCHOOL shoes used to be a problem for mother. Not any more. She has learned to get the utmost in value by demanding E-J's.
Endicott-Johnson, the World's Largest Tanners and Shoemakers, have specialized on children's shoes. In producing them every bit of their skill and knowledge in tanning, shoemaking and reducing manufacturing costs has been employed. Every means that will keep down prices to you without sacrificing quality has been used. And the result—shoes your boy can wear and wear; prices that mean a big saving on family shoe bills.
School days are here again. It's high time to think about shoes. Be sure to see the new E-J's for boys and girls.
The man who has no worries and knows matters at home are all right does the best work. E-J workers have everything to make them happy and contented.

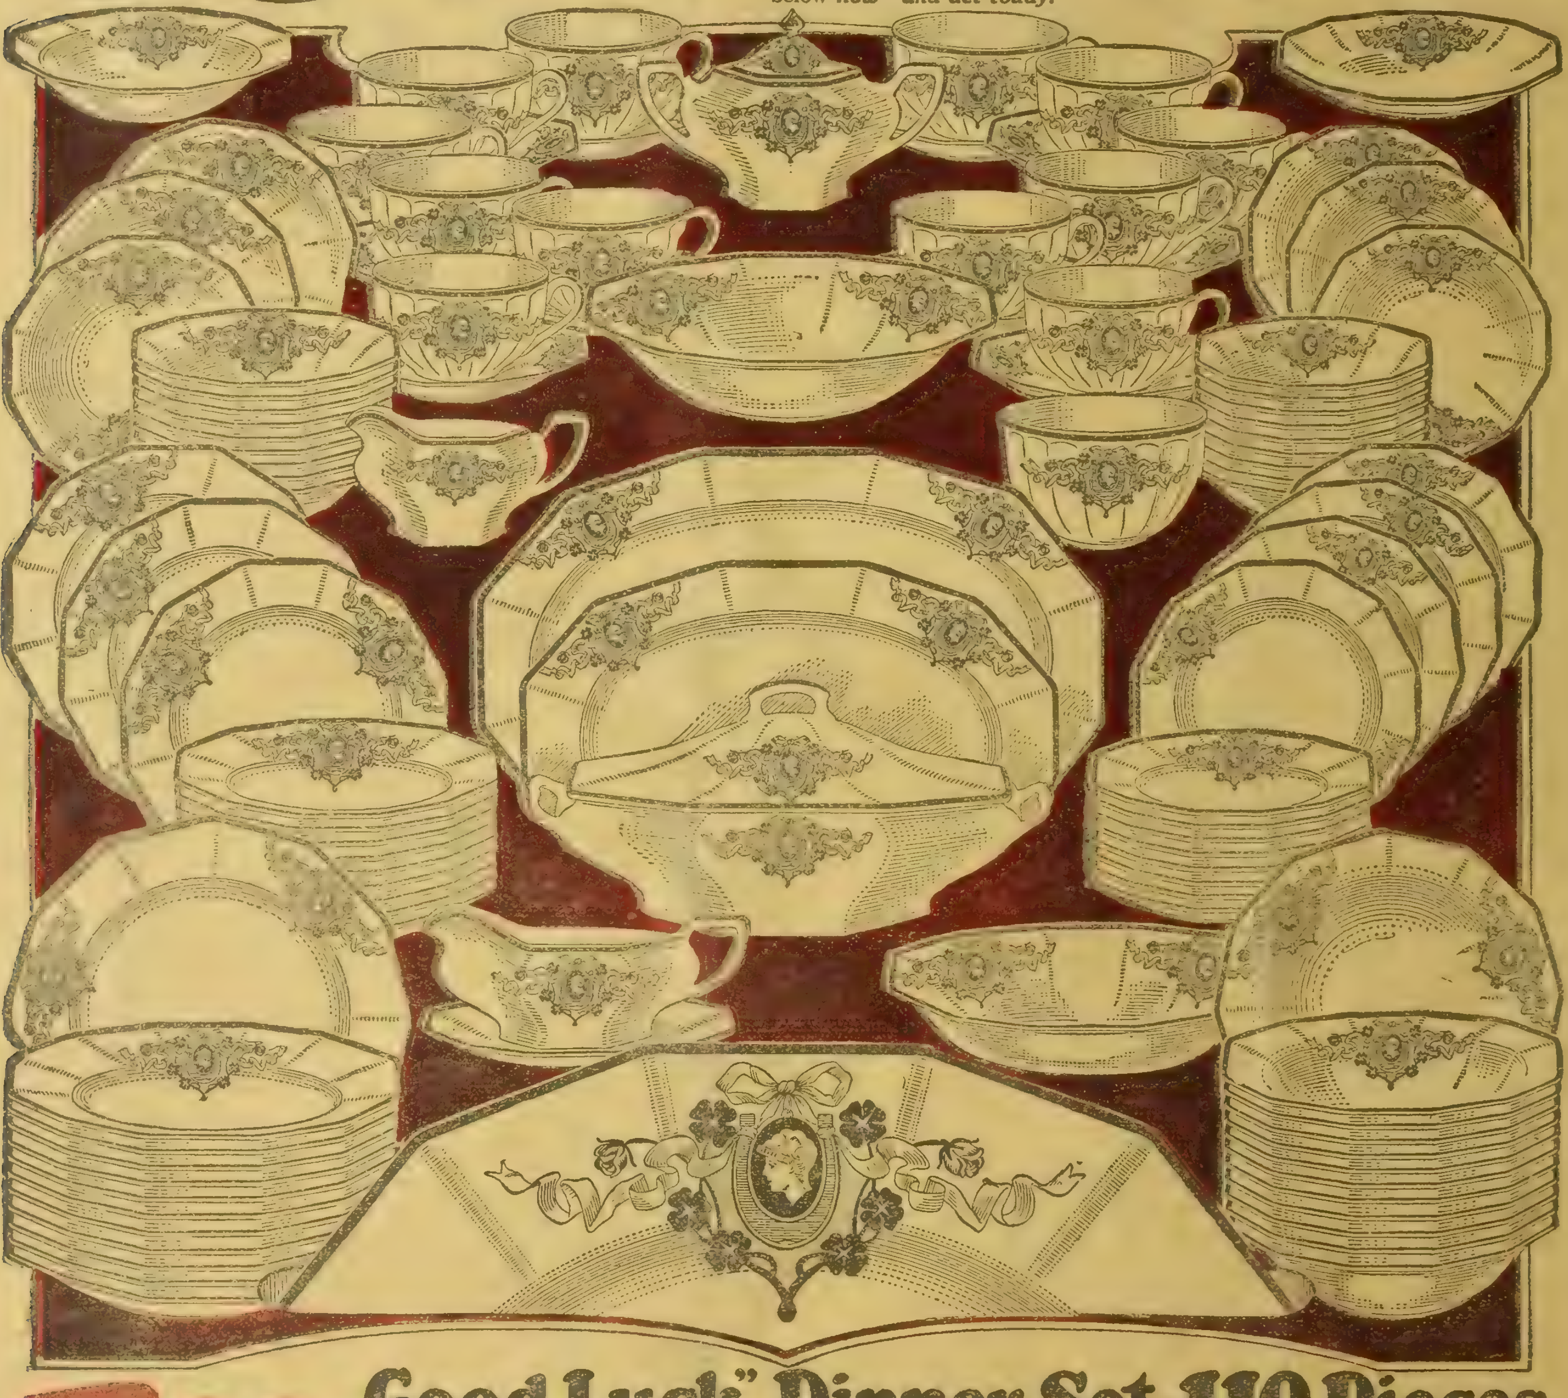
Genuine Cut Glass 7-Piece Set

As an **extra special offer** to those who *hurry* their order for the handsome 110-Piece Good Luck Dinner Set which we are offering below on such an amazing, slashed price offer, we shall include, *absolutely free,* this entire 7-piece set of GENUINE CUT GLASS: Pitcher of 2 qt. capacity and 6 tumblers of 9 oz. capacity. Each piece is pure, sparkingly clear, thin and dainty; **hand cut decorations** consisting of large floral design with appropriate foliage. A useful set for water, lemonade or other home beverage; a handsome display among your other glassware. Given ***FREE*** on this offer. But remember, this offer is entirely special. Our prices are figured at rock-bottom. A limited number of these Genuine Cut Glass Sets given free just to get new customers. Get yours while this offer lasts. Read our offer below ***now—and act today.***



"Good Luck" Dinner Set-110 Pieces

Gold Decorated Colonial Design

Madam, here's a dinner set worthy to grace the table of the most refined homes—on a simply amazing smashed price, easy payment offer. Yes, only $1.00 brings this 110-piece set to your home on trial. Now don't judge these dishes by that amazingly low price. They have that beautiful everlasting snow-white glaze that you see only in the highest grade chinaware; and that beautiful new "Good Luck" pattern with a design composed of the well known emblems which, since olden times, many have believed bring good fortune to all who possess them; and that rich, artistic Colonial design with the gold decorated edges and many-sided shape which is everywhere the choice of people with taste. *This* is your opportunity to get, on a bargain offer, a dish set that will give you wonderful everyday service and that you will be proud of. **Special Now — FREE —** *7-Piece Set of Genuine Cut Glass with hand cut decorations, if you send at once.*

$1.00 Down

Complete Service for 12 People:

This splendid set consists of:

- 12 dinner plates, 9 inches
- 12 breakfast plates, 7 1-4 in.
- 12 coupe soups, 7 1-2 in.
- 12 fruit saucers, 5 1-4 in.
- 12 oatmeal dishes, 6 1-4 in.
- 1 oval open vegetable dish, 9 1-2 inches
- 1 round vegetable dish, 9 1-2 inches
- 1 sugar bowl and cover (2 pieces)
- 1 butter dish, 7 inches
- 12 cups
- 12 saucers
- 12 bread and butter plates, 6 1-4 in.
- 1 platter, 11 1-2 in.
- 1 platter, 13 1-2 in.
- 1 covered vegetable dish (2 pieces)
- 1 gravy boat
- 1 gravy boat stand
- 1 bowl, 1 pint
- 1 cream pitcher
- 1 pickle dish

Beautiful new "Good Luck" pattern showing the Goddess of Good Luck framed in a lucky horseshoe pendant, hanging from a blue ribbon bow and surrounded by a wish-bone and six green four-leaf clovers, all emblems of Good Luck—all tied together with lavender roses by a pretty ribbon scroll. Colonial design with gold decorated edges and many-sided shape; each piece fired in the glaze and guaranteed not to check or craze. That splendid English finish is applied to the clay before firing and gives that everlasting snow-white glaze. With ordinary care will last a lifetime. Weight packed about 100 lbs.

Order by No. G7603A. Send $1 With order. $2.70 monthly. Price of 110 pieces, $29.90.

The Michigan BUSINESS FARMER

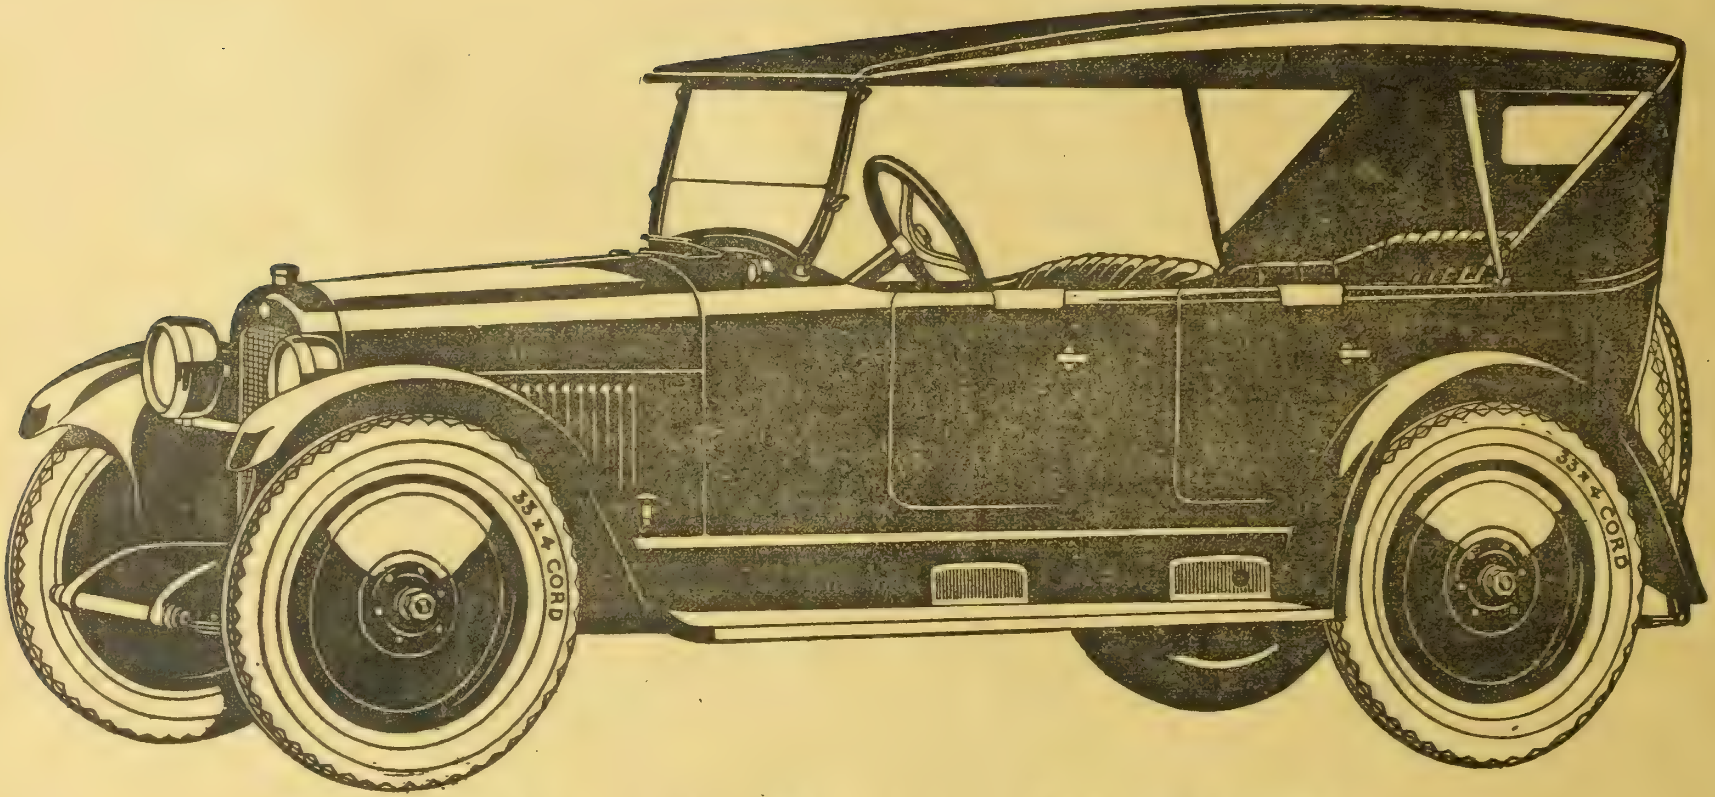
An Independent Farm Magazine Owned and Edited in Michigan

VOL. XI, No. 2 SATURDAY, SEPTEMBER 15, 1923 TERMS: TWO YEARS $1 60c PER YEAR—5 YRS. $2

When Michigan Dons the Royal Purple!

In this issue: A page of pictures showing Michigan convicts building roads and an article, "Prison Labor May Solve the Good Roads Riddle"—"Shall We Hand Pick Our Beans on the Farm?"—"M. A. C. Attacks Helme's Stand on Tuberculin Test of Dairy Cattle"—and many other interesting articles.

NASH



PRESENTS

The New Four-Cylinder Touring Car

In the development of this new Four touring car Nash focused engineering effort directly upon those elements of performance of most vital importance to the farmer.

So you find in this car a structural ruggedness and solidity well calculated to accept the sternest kind of employment without faltering or weakening.

And so aptly and scientifically is the car sprung and balanced; so ably has the motor and carburetor been refined; that upkeep figures kept from week to week will show clearly that Nash Four economy in gas and oil is a very considerable saving.

The braking system has been given even greater sureness, power, and efficiency by reason of a special Nash application of time-tried and positively proved braking principles.

In addition, Nash has included in the extensive equipment a number of new and practical features that serve to give the car even broader value as an investment.

The Nash Motors Company, Kenosha, Wis.

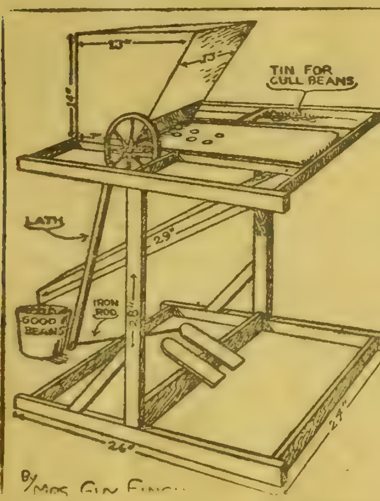
Shall We Hand Pick Our Beans On the Farm?

Readers Offer Plans for Making Home Bean-Picking Machines and Reasons For and Against Saving of Present High Cost at Elevator. More Plans and Letters from Readers Wanted

MOST women and girls on the farm would like to find some sort of work to make pin money. The manufacturers of home knitting outfits and other so-called home working machinery are flooded with business and yet we know that few of those who buy expensive outfits, costing in the neighborhood of $50 to $75, ever make even a fraction of this first cost from the material they make for re-sale to the manufacturer.

It has been our opinion for some time that beans should be hand-picked on the farm and sold by the farmer as choice, hand-picked, cutting out the expensive labor employed in the town or city elevators and keeping this money on the farm in the hands of the farm women.

There are many idle hours for all hands on the farm that could be employed in hand-picking the season's bean crop and it would result in a better controlled marketing because the beans would be more evenly fed to the markets during the winter months.



With this in mind The Business Farmer offered a prize of five dollars for the best plan of making a home bean picking machine, and several plans have already been submitted, two of which we have illustrated and appear below.

PICKING BEANS AT HOME CONTEST

IN the August 25th issue The Business Farmer offered five dollars for the most practical description of a bean picking machine that could be built by any farmer at home. Two of those sent in are illustrated on this page.

Remember it is not necessary to be an artist, simply explain how you made the outfit and draw it as simply as possible. Our own artist will make the finished drawing.

Benjamin Gerks, of Rochester, has added five dollars to the prize, making it ten dollars for the best plan and description submitted. We also offer a year's subscription, new or renewal, for every letter published, either illustrating a machine or giving experience with hand picking beans at home.

No less an authority on this subject than Benjamin Gerks, of Rochester, N. Y., says the grower can profitably hand-pick his own beans and Mr. Gerks doubles our original prize offer in order to stimulate our readers to give us their plans and their experience.

Keep Culled Beans

It goes without saying that keeping the culled beans on the farm for profitable use in feeding stock would alone repay the labor and it would seem that there is every good reason why farmers should adopt this plan, and do it this year with the 1923 crop of beans, which, if properly marketed, is sure to bring a good price.

In reading the description of the machines illustrated, kindly remember that they could be changed to meet the requirements of the material you have on hand, and there is no reason why any man who is handy with tools cannot make one of the simple sets illustrated. We hope to have many more to offer in the September 29th issue.

Plan from Mrs. Guy Finch

Having noticed your request for a simple home-made bean picker, in the August 18th issue of The Business Farmer, thought I would take a chance toward winning the $5.00 you are giving for a description of one. Am sending a rough sketch of the one my husband made about five years ago, and which has proven very satisfactory to us, and also our neighbors. It is very simple to make and can be made of any material strong enough, that is on hand. The legs of our were of an old bedstead, the balance wheel from an old cream separator, the belt from a grain bag cut in a strip 5 inches wide and sewed together. The rollers for canvas are cut from a broom handle. The hopper and other parts from thin material. The pans for the poor beans, on either side of canvas are square cake pans of the right size to fit. The hopper has a wide hinge arranged on back so it may be tipped back if necessary. A tin is fitted into the bottom part of hopper, above the bottom board, in a slanting position, to be adjusted as desired, to let the beans run out, fast or slow.

As the dimensions are given on the sketch, this will be as plain as I can make it. If it is not plain enough will be glad to answer any questions concerning same. Hoping this will be what you are looking for and satisfactory to you, am sending it in. My husband was too busy to do this, so left the job for me. A reader of Michigan Business Farmer, Mrs. Guy Finch, Berville, Michigan.

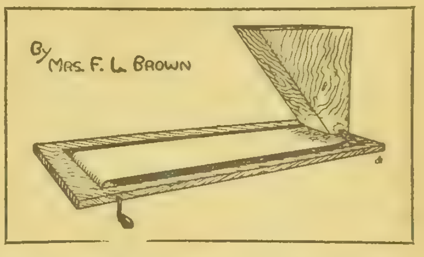
Mrs. Brown's Simple Plan

Here are directions for hand bean picker that my father made, and used to pick 50 bushels of beans one winter. A hopper holding about 2 bushels had a corrogated roller in the bottom and was elevated above and at one end of a rolling canvas table, 12 to 14 inches wide and 5 or six feet long. The hopper roller was connected with one of the end rollers of canvas table by a narrow belt and a crank on the other end roller of the table operated the whole machine. We used heavy factory double for canvas table.—Mrs. F. L. Brown, Gobles, R No. 1, Michigan.

Hand Picking Hard Job

Have been reading Mr. Gerks' articles on bean picking on the farm and am going to give my experience. Two years ago I took samples of my beans to the elevator and found they would pick 10 to 12 per cent. Realizing what a loss this meant I started to hand pick them. I soon found out what a job I had. It was impossible to work with a hand picking machine until they were cleaned through a fanning mill to remove pods and the fine particles of clay. After doing this I made better headway but the job still proved too slow and tedious and I gave it up as a bad job. I noticed that a great number of culls were flat or irregular shaped and would not roll like the perfect beans so started doing a little experimenting. I soon had a crude maching that seemed to be removing a great many culls and after taking a sample of these beans run through this machine to the elevator discovered that it reduced them from 10 per cent to 4½ per cent or a little over 50 per cent. That year I had 460 bushels and by reducing them from 10 and 12 per cent to 5 per cent which they averaged it is easy to figure what I made and cleaned them at the rate of 4 bushels an

(Continued on Page 25)



M. A. C. Attacks Helme's Stand on Tuberculin Test of Dairy Cattle

ACCORDING to a press report under date of August 26th Mr. James W. Helme addressed a group of farmers at Jackson on the previous day in opposition to tuberculin testing of cattle. Many of his statements concerning the nature of the disease were so erroneous, misleading and at variance with the findings of present day investigators that the writer feels they should not uncontradicted. Following, therefore are several statements concerning tuberculosis which should set the right in regard to his knowledge concerning this disease in case Mr. Helme's remarks have bewildered him.

First, there are three types of germs producing this disease, namely, human, bovine and avian.

1. The human type may be transmitted from tuberculous persons to other persons but is transmitted with difficulty to farm animals.

2. The bovine type is quite easily transmitted from tuberculous cattle to other cattle, to hogs, to people, especially children drinking infected milk, and possibly also to poultry.

3. The avian type is readily transmitted from infected fowls to other fowls, but not easily transmitted to farm animals or people.

Second, in making statements regarding the percentage of tuberculosis in human beings caused by the bovine type, most students of the disease quote Park and Krumwiede in America who made bacteriological analyses of 1511 cases and report as follows:

75 percent of gland cases in children is bovine.

66 percent of generalized tuberculosis in children is bovine.

18.2 percent to 26 percent of deaths from tuberculosis in children are caused by the bovine germ.

Often, too, the findings of the British Royal Commission are cited, which are to the effect that

37.5 percent of tuberculosis in children under 5 years of age is bovine.

29.5 percent of tuberculosis in children between 5 and 10 years of age is bovine.

Milk Unsafe, Meat O. K.

Third, the milk from an infected cow may be unsafe to drink but her carcass may be fit for food. Milk from a cow with tubercules in the udder is unsafe for human consumption because the germs probably will be present in the milk. Milk from a cow with no tubercules in the udder but which has tuberculous nodules in the digestive, respiratory or genito-urinary organs may be just as badly contaminated with the germs, not because they pass out of the udder in the milk, but because they get into the milk pail during the process of milking. It is difficult to keep the exterior of the body of a cow 100 percent free from the infectious discharges that may come from any one or all of the three above-mentioned body tracts. But if the hypothetical cow just mentioned were slaughtered and upon examination it was found that the tubercules in her body were not numerous, were slight in extent, walled off or calcified, and there was no evidence of the germs having gained entrance to the blood stream, her carcass could safely be consumed for food after cutting out the affected areas. The same logic would be applied as is applied by one wishing to eat an apple with a bad spot or a bunch of grapes containing a few spoiled grapes—cut out the bad spot, or throw away the spoiled grapes, and eat the remainder. Of course if the tubercules in a cow are numerous, extensive, shows evidence of acute inflamation or liquefacation, the whole carcass is condemned and rendered into fertilizer.

Tests 96% Efficient

Fourth, the tuberculin tests used in the testing of cattle are reliable. They are considered to be about 96 percent efficient when run separately, and a trifle higher when run in combination. When it is stated that the tests are 96 percent efficient it means that 96 out of every 100 reactors show visible lesions. The other 4, however, could quite possibly have invisible lesions or minute lesions located in remote parts of the body that can not be examined or detected at the time of slaughter. Any person having any experience at all in the examination of carcasses for tuberculosis must admit that there are a thousand and one places in the animal's body that he never examines.—R. A. Runnells, Assistant Prof. of Animal Pathology, M. A. C.

Prison Labor May Solve the Good Roads Riddle

Experiment Now in Full Operation Seems to Prove Success of Plan---480 Men Now Employed ---Will Mean 500 Miles of New Roads in 1924 Says Governor Groesbeck

THE Sphinx gazing over the sands of the Sahara never faced a greater problem than the riddle which confronted the officials of the state of Michigan when the 1923 legislature adjourned without providing adequately for the construction and maintenance of the good roads program which the people of the state of Michigan had in 1919 given their approval at the polls.

No one blamed the legislature for keeping "hands off" this problem. On one side was the great popular sentiment, both from rural and city owners of automobiles and trucks, for a carrying out of the paved road program, while on the other side stood the overwhelming sentiment of the people that taxes must be lowered.

The politicians did not know which way to jump, and no one was there to tell them. Even the gasoline tax which was offered as a possible solution because it taxed the man who used the roads according to the use he gave them, went down to an inglorious defeat when it was vetoed by the governor.

Then in the midst of the black clouds which seemed to overhang the whole road building program in Michigan came forward a ray of light in the suggestion that the state's great prisons, already overcrowded, be called upon for their wasting labor to work directly in the interests of the people of the state, who were being taxed that these men might be properly confined, during their period of reconstruction.

Employing Convict Labor

All manner of plans have been perfected for employing the labor of the thousands of men who are serving their terms in the state prisons. Contract labor, usually employed in manufacturing work for which the prisoners found little call when they left the prison walls, was once a favorite method of employing this labor. It was neither profitable to the state nor beneficial to anyone except the profiteering contractors who secured the contracts through political connivance.

Several of the southern states have employed convict labor on the roads, and at least ten years ago the writer recalls having visited a prison camp in Florida where practically all of the prisoners were colored men and he vividly remembers the surly overseers with their blacksnake whips and rifles slung across their shoulders, watching the men, many of whom were working on the roads with a huge ball of iron and a chain around their leg. This picture of modern slavery recalled "Uncle Tom's Cabin" and from recent developments it would appear that the conditions in these southern prison camps can scarcely be called better today. How different is the present experiment of employing prison labor on the roads being constructed by the State Highway Commission of the State of Michigan!

Michigan's Experiment

At the present time there are 460 prisoners engaged in road-building on the following state highways: At the new Hudson camp on Grand River Avenue, State Highway Route M-16, there are 145 prisoners engaged in the work of grading, laying concrete, running all machinery, and caring for the needs of the camp.

At the Grand Blanc camp on the Dixie Highway, in Genessee County, the work is being done entirely with prison labor, and early in this month there were 285 men employed on the nine miles of which two and one half miles have already been completed, and will compare favorably with the best contract road construction in the state.

A small group of thirty-eight prisoners are engaged at Galesburg on the Camp Custer road where they are completing two and one half miles.

This marks only the beginning of construction work by prison labor on the roads of this state. Already the state has found it possible to increase the pay of these trusty prisoners from $1 to $1.25 per day and yet this compares with the $5 to $7 per day which contractors have had to pay for similar labor, and for which the state has been charged plus a profit to the contractor.

Prisoners Like it

A visit to any of the convict camps above will surprise and delight anyone who is interested in the reconstruction of men during their period of confinement.

It is obvious that any prisoner is anxious to leave the gray walls of the prison confines such as at Jackson, Ionia or Marquette, and join a group of men in a military camp doing construction work and moving on from time to time in God's open country.

When you consider that the larger proportion of the men now confined in Michigan's state prisons are from the larger cities, principally Detroit, it is not hard to understand how these men are softened and receive a new perspective on life from the open country in which road building is done. It makes for better discipline in the state institutions, because it is a mark of honor to be allowed to go out and work in one of the prison road camps.

Practically every man employed in the work is a trusty, although the camps are guarded and the men checked in night and morning, which procedure is hardly different than is employed in the United States army or navy.

Every convenience is afforded the men and the efficient management of the camp is largely in the hands of men with army experience, so that the camp takes on all the appearance of a millitary post and they are swarming hives of industry.

Governor Pleased With Results

Although the plan of prison labor did not get well under way until early in August, sufficient progress has been made to date to prove that the plan is a practical one and most of the tax payers of Michigan are glad to see it adopted and are commending Governor Groesbeck for his distinct interest in it, because there have arisen any number of discouragements connected with it which would have weakened a less determined man in his desire to see it made a success.

Expansion of the highway construction program to 500 miles of new pavement to be completed during 1924 is now being planned by Governor Groesbeck and Frank F. Rogers, state highway commission. Such a mileage of new pavement will be double that ever contemplated in the past.

Included in this paving program will be M-29, from Lansing to Charlotte, and M-14, from Lansing to Mason. These are two of the most congested trunk line highways leading to and from the state capitol.

The biggest job to be included in the 500-mile program for next year will be the Grand River road, known as M-16. When paving work now in progress along this route is completed this year there will be left unpaved about 80 miles, of which approximately 30 will be between Lansing and Detroit, and 50 between Lansing and Grand Rapids. This highway will have some relocations between Lansing and Grand Rapids which it is said will shorten the distance between the two cities at least 12 miles. This entire state boulevard, which will run from Detroit across the state to points on the east Shore of Lake Michigan ,will have a right-of-way 100 feet wide with a 20 foot pavement in the middle. It is said all the needed right-of-way has been obtained for this work.

Another one of the longer stretches to be paved next year will be about 30 miles running through Lenawee and Washtenaw counties. The remainder of this huge program will consist of shorter gaps to connect present pavements and improved state trunk line and federal aid roads.

A Thousand Prisoners for Road Work

At least a thousand state convicts will be put to work on this highway construction next year. The governor and state highway commissioner estimate that the state can build at least 200 miles of paving next year with the prisoners and its own organization. The other 300 miles will be let to private contractors.

That the cost of paving being done this year by state convicts will radically reduce the cost of such highways to the state, will be shown conclusively when the repaving now being done on M-10, the Dixie highway, in Genesee county, is completed, says the governor. The state now has close to 500 convicts at

(Continued on Page 27)

Why the "Farm Hand" and His Family Are Going Back to City to Live

By THE "FARM HAND'S" WIFE

THERE are thousands of "farm hands" like this one throughout the country. He is going back to the city this fall and so are many of the others, some will return at a later day and others will not No doubt his employer had to "count his pennies" but if this farmer had followed the rules laid out in the agreement to the best of his ability his "farm hand" would have stayed by him and done his part. "Encourage them into taking a real interest in your business by showing them that you are interested in them," is the motto of some of our most successful farmers and it seems to be a pretty good rule to go by. If the "hired help" is the valuable kind they will soon show it under this kind of treatment. If they aren't the right kind you don't want them. What's your idea?

MY HUSBAND returned to a farm in March of the present year, after working four years in a factory. He returned joyously, as one coming home after an enforced absence, for farming is to him the profession above all others; the profession that combines interest and pleasure and profit and health; in short the profession in which one lives a full and delightful life while earning a good living. I will admit that I believe the definition is correct, in theiry. A farm should combine all these things, and life on a farm should be a delightful life.

We do not own a farm but we continue to hope that we shall sometime own one. We even dare to hope that our farm will be a sample of the nearest thing to paradise that an earthly home can be.

In the meantime, however, until we can squeeze from the amount of money which the high cost of living demands enough to somehow start for ourselves, we have come back to a farm as members of that class, now all too scarce, called farm labor. Perhaps I may be able, in this short article, to tell to the farmers who read it some of the many reasons why farm labor is scarce and dissatisfied and unreliable; why it does not stay put.

My husband is a man who loves his family and desires their comfort and happiness. He does not want his wife to get along with a house which has no sink and no bath and no heating or lighting systems. He does not want our three children to grow up without good advantages for education and the ability to associate with refined people. Still less does he want any other man to give himself or his family the things they should have.

He wants a bank account made from the surplus of money he earns, not the uncertain bonus his employer hands shim as a gift but which would never be given unless earned. He wants to start his two sons and his daughter with chickens, or pigs, or lambs, himself; not to have his employer give them something from those owned on the farm. He desires to put all his interest and his work into his employer's farm and he feels that if he does that his employers can afford to pay him enough so that nothing we receive from the farm will be in the farm of charity and we shall be as independent as the owner himself. He does not want his employer to "give" him a vacation, cr take him "on a trip." He feels that he earns a vacation, which he is perfectly willing to take at the time when the farm can spare him without suffering for need of his services.

There are on the farm where we are now living, and on which the owner also lives, ninety head of stock, cattle, horses, swine; and numerous fowl, chickens, ducks, geese, and turkeys. None of these are ours, nor do we want them. They belong to the owner of the farm. If, however, by his care and feeding and fore-thought, my husband saves more of the young pigs or chickens than the owner has been able to save before; if he works constantly and intelligently to improve the dairy stock and to cull out the unprofitable ones; if he makes feed carriers and other devices hitherto not used; all these things should make him a more valuable man, and, when he has proved himself capable and willing to increase the profits of the owner, the owner should, in turn, increase his salary or pay him a commission, and also let him know that his interest is noticed and appreciated.

The agreement when we came to this farm was that we were to have the use of a horse and buggy, the privilege of attending church services in the village two miles away on Sundays, house rent and milk free, feed for our hens, and in the fall 200 pounds of meat. All needed repairs on the house were to be begun at once. The money salary was $100 per month. It sounded good. Rent in town was high, food was high, the houses we were able to afford were few and offered very limited opportunity for gardens or for raising poultry; two things we have always had.

So we came to the farm. I shall never forget that March day. My husband left at about ten o'clock in the morning after we had packed most of the goods, to fetch a team from the farm to haul the goods out there. At twelve, when I was still gathering up things, the gas man came and took out the meter. From then until after three the children and I waited in the house with no heat except that furnished by a small krosene heater. As I was obliged to go to other rooms for things not yet put up, the doors could not be kept shut and the room was uncomfortably cold. When the teams came, for the employer came too and drove the second one, they took

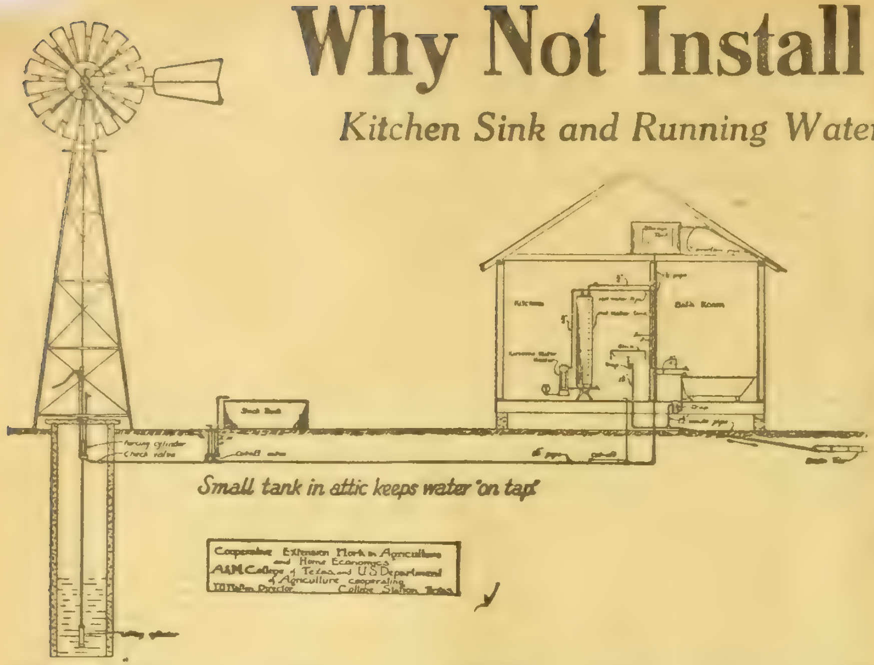
Why Not Install a Home Water System?

Kitchen Sink and Running Water Saves Many Steps and Cost of Installing is Small



Small tank in attic keeps water "on tap"

Cooperative Extension Work in Agriculture and Home Economics
A&M College of Texas and U.S. Department of Agriculture cooperating
T.O. Walton Director College Station Texas

MANY folks do not think of a farm home water system as a means of increasing the efficiency of the housekeeper, but are inclined to think of it as a luxury, if they think of it at all.

A kitchen sink with a waste pipe and running water at the faucet will save more work than a seat on the cultivator, and in many instances will not cost any more.

Probably the carrying in of fresh water and the carrying out of waste water is the most burdensome task the average farm woman has. A little discussion of a few of the simple ways of developing a water system may give some folks ideas that will put them at this important job.

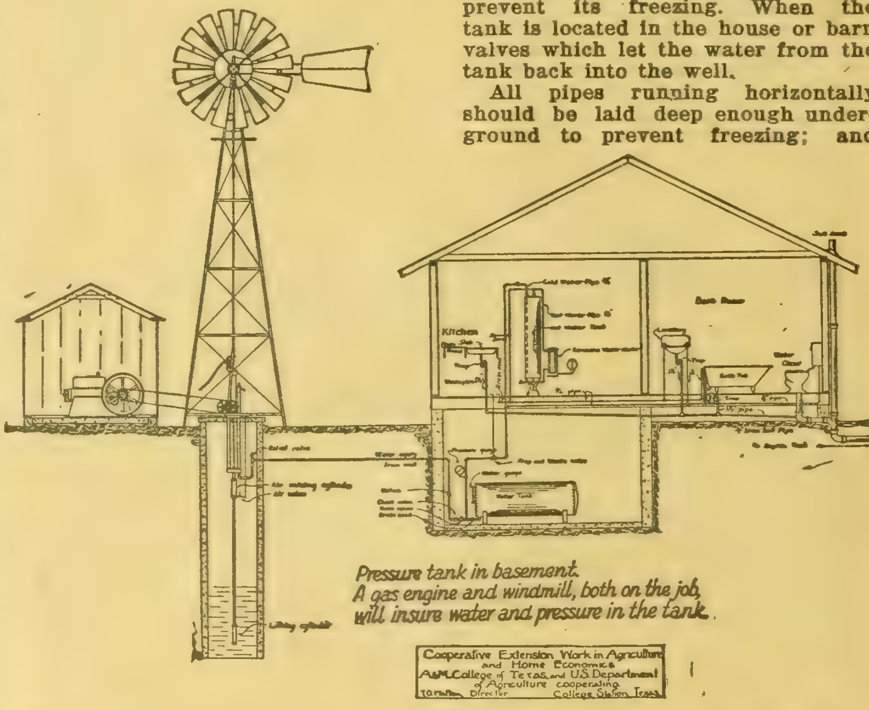
Many farmers have a windmill, or a gas engine, and an elevated tank to supply water at the barn and have never thought of piping the water into the house. It is a comparatively easy matter for them to lay a pipe to the house and run water into a kitchen sink. It is surprising how much this one convenience will lighten the house work.

For those who do not have an elevated supply tank a few of the numerous ways of arranging one will be mentioned. The most common, probably, is the galvanized iron tank on a wooden tower. A more permanent tank can be built of concrete. A concrete tank to hold water from the ground up makes a very good reservoir if properly constructed. The supply may enter from the bottom and eliminate danger of freezing. Such tanks should have a good foundation, that is, should start 18 to 24 inches below the ground level, and should be well reinforced. The water from some wells in the State seems to destroy poor concrete. It is therefore well to use nothing but good concrete for this kind of work, such as one part cement, two parts of sand, four parts of gravel or crushed stone.

Utilizing Nearby Hill

A concrete tank built underground on a hill high enough to give adequate pressure makes an excellent reservoir. It tends to keep the water warm in winter and cool in summer. Where there is a convenient hill a wooden or metal tank may be placed on it also, and save the expense of a tower. A very useful reservoir for use near the house is one of concrete with a cooling room and milk-cooling trough below the tank; with the water fresh from the well running around the milk pails and thence to the hogs or horses.

A tank may be placed on top of a concrete or masonry silo so as to give a good pressure, unless the house is on higher ground than the silo. In order to keep the cost low, sometimes the elevated tank is put in the attic of a onestory house. This does not give as much pressure as is desirable, but is far better than not having running water. It has an advantage over the outdoor tank in that there is very little danger of its freezing. Only a small tank of two to four barrels capacity should be put in an attic, on account of the weight. It should be placed over a partition so it will be well supported it should have an overflow large enough to keep the tank from running over.



Pressure tank in basement.
A gas engine and windmill, both on the job, will insure water and pressure in the tank.

Cooperative Extension Work in Agriculture and Home Economics
A&M College of Texas and U.S. Department of Agriculture cooperating
T.O. Walton Director College Station Texas

A good arrangement to have rainwater handy is obtained by placing a good big tank under the eaves of the house as high as possible, and piping the water to the kitchen. For piping water from an elevated tank into the house a ¾-inch pipe is generally used. It gives a good flow if the tank is 10 feet or more above the faucet in the house and not too far away. Under some conditions it will pay to use a 1-inch pipe.

The pipe from the pump to the tank is usually 1 ¼-inch where the ordinary size pump is used. Sometimes to keep the cost of pipe down on a pipe line 1,000 feet or so in length, 1-inch pipe is used by pumping the water slowly through it. In running water from the well to the tank it is just as well to pump the water in and let it out through the one pipe in the bottom of the tank and this usually saves some pipe. A check valve should be used at the well to prevent the water from leaking back. Some prefer to run the supply pipe over the top of the tank to avoid trouble with leaky check The tank is sometimes put in the barn loft and covered with hay to prevent its freezing. When the tank is located in the house or barn valves which let the water from the tank back into the well.

All pipes running horizontally should be laid deep enough underground to prevent freezing; and where the pipe is brought up to a hydrant or into the house a valve should be put in, which in freezing weather may be used to cut the water off from the tank and which permits the water to leak out of the exposed pipe through the valve. Freezing of the pipe from the elevated tank to the ground may be prevented in the usual winters of this climate by packing paper or straw in a box built around the pipe. Some farmers extend the pipe a few inches up into the tank and attach a shut-off valve operated by a lever with a wire from it. When the section of the pipe where it attaches to the tank may be drained and prevent troublesome freezing there.

A water system without a reservoir may be had at a very small cost where the water in the well or cistern is not more than 14 or 16 feet below the floor of the house. A pitcher pump may be placed at the kitchen sink and a pipe run from it to the water in the well or cistern. If the lift is rather high the pump cylinder may be placed under the floor of the house to decrease the suction lift. When the well is not near the house and the water must be drawn through a long horizontal pipe, the possible vertical suction lift will be correspondingly less on account of the increase of friction by the long pipe.

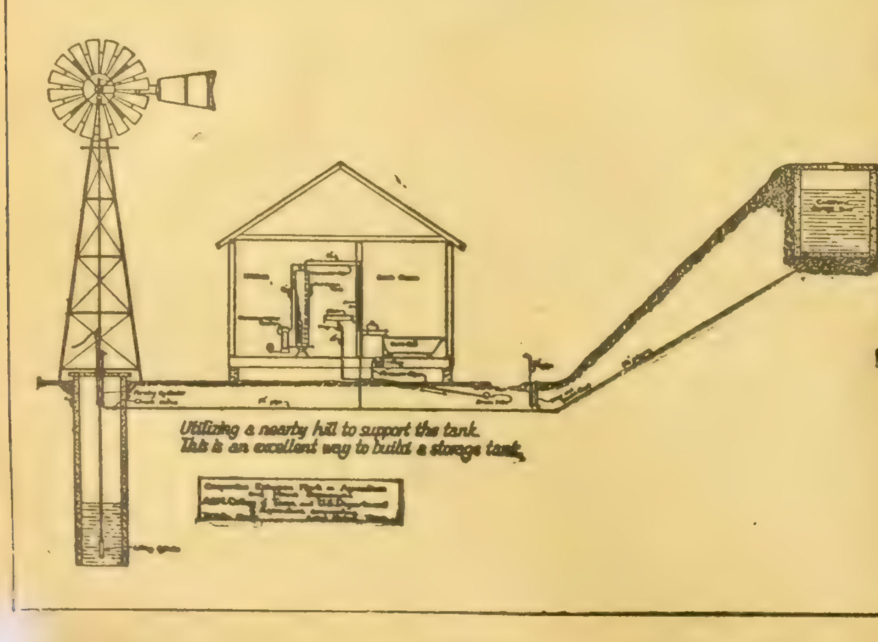
Disposal of Waste Water

The waste water from a kitchen sink may be handled in any way that dish water is disposed of; however, it is better to run it into an underground drain so it will not keep a wet spot in the yard. The waste pipe should be 1½ inches in diameter and should have a trap in it just below the sink. The trap consists of an S-shaped bend in the pipe which holds a little water and prevents obnixious odors coming from the waste pipe. The waste water should be carried 20 or 30 feet from the house in a tight-jointed pipe. It may then be emptied into open jointed drain tile and used for subirrigation a garden. Where only the water from a kitchen sink is emptied into the underground tile about 50 or 100 feet of 4-inch tile will be enough; the larger amount being necessary in tight soil.

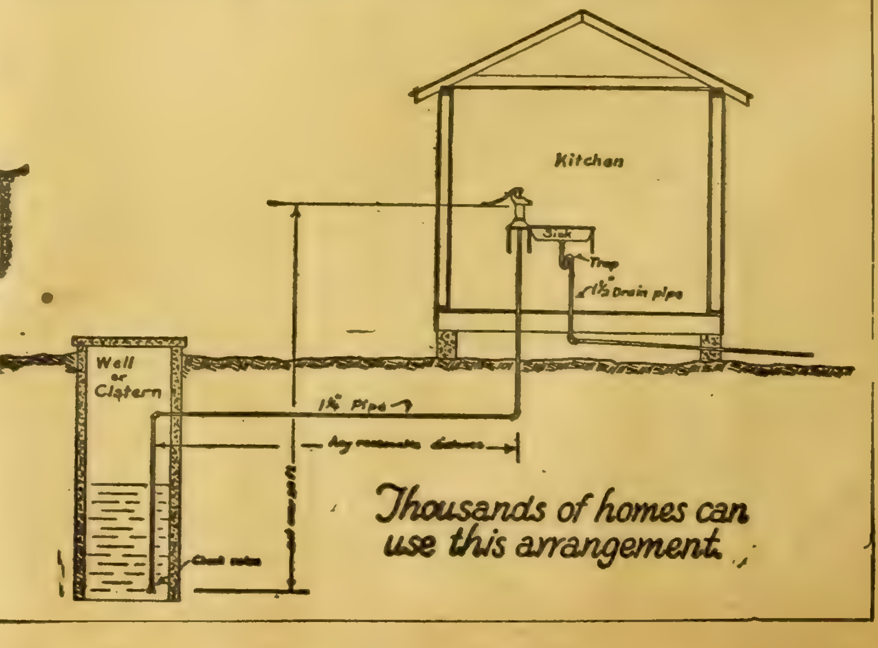
When a complete set of plumbing fixtures are used, including a water closet, a septic tank must be used for the disposal of the sewage. A septic tank sewage disposal system is not expensive, and should not block the installation of a complete set of fixtures in the house.

A good feature of any water system is a hot-water heater. This usually includes a 30 to 50-gallon galvanized iron tank capable of withstanding a high pressure. Where natural gas is available the tank is omitted. The heater may be used with almost any kind of fuel. Where a wood or coal cook stove is used regularly a water front may be placed in it to heat the water in the tank. In this climate, where the cooking is done on a kerosene or gasoline stove most of the year, it is better to have a kerosene or gasoline heater for the hot-water system, separate from the cook stove.

If you do not now have running water in your house, the installation of some of the systems mentioned may keep your boys and girls from moving to town at the first opportunity, and will certainly leave the housewife more strength and time for work in the garden, milking the cows, and her various other regular duties.—Farm and Ranch.



Utilizing a nearby hill to support the tank.
This is an excellent way to build a storage tank.



Thousands of homes can use this arrangement.

Farmers Service Bureau

(A Clearing Department for farmers' every day troubles. Prompt, careful attention given to all complaints or requests for information addressed to this department. We are here to serve you. All inquiries must be accompanied by full name and address. Name not used if so requested.)

PAY TUITION

In this district the parents have had to pay tuition for the year of 1921-1922. The tuition for 1921 was $60, district paying $50 and parents $10; for the year 1922-1923 the district paid $60 and the parents $15. We have read that the district is supposed to pay all. Our director informed us that he had looked up the school law and that the district was supposed to pay up to $60 and no more. I want to know if there is any way we can compel this district to reinburse us for the tuition money we have already paid out? There are seven children from this district attending high school.—W. V. B., Plainwell, Mich.

—The non high school districts must pay the tuition up to the actual cost of the same in high school districts but not to exceed sixty dollars a year. This applies to eighth grade graduates.—T. E. Johnson, Superintendent of Public Instruction.

GROUNDS FOR SUIT

On March 28, 1922, my husband bought a team for $235 paying $100 down and giving a note for balance with article purchased written on the face of note. When the note came due, December 1, 1922, he asked to have it renewed, he paying the accrued interest. The bank refused to accept the interest. The man who sold us the team wanted his money or the team. He took the team and also kept the $100 we paid down. We would like to know if he can legally do this as we are just starting farming and we cannot afford to lose this money if we can possibly recover it? When the team went we had no means of traveling except on foot, nor any way to get our winter's wood to the house.—Mrs. C. C. W., Sandusky, Mich.

—The man who sold you the team could not recover the team and also keep the $100. I think you had better consult a lawyer, with a view to starting suit for the recovery of your $100.—Asst. Legal Editor.

SELLING VINEGAR

Can you tell me how to test vinegar so as to know when it is right to sell? How do you color vinegar to make it a nice color? Ours is too light?—A. I., Mt. Pleasant, Michigan.

—We presume you refer to cider vinegar. "Cider vinegar" is construed to mean vinegar derived by the alcholic and subsequent acetous fermentation of the expressed juice of apples, the acidity, solids and ash of which have been derived exclusively from apples and which contains not less than 4 per cent of absolute acetic acid. Cider vinegar which, during the course of manufacture, develops in excess of 4 per cent acetic acid, may be reduced to a strength of not less than 4 per cent and sold as "cider vinegar" without having the product regarded as adulterated. Before selling, every manufacturer or producer of cider vinegar must brand each cask, barrel or keg, or other container, with his name, place of business and the words "Fermented Cider Vinegar."

In order to determine the acetic acid content it is necessary that a representative sample be taken and the usual chemical method employed for the determination of acetic acid. Without standard glassware and standardized chemical reagents it is impossible to make this test. Ordinarily the home is not equipped with sufficient apparatus or chemicals to do the work. There are on the market so-called hydrometers which indicate the strength of vinegar; however, they are notsufficiently accurate to be depended upon.

This Department in the past has endeavored to give this service when individuals submit home made vinegar and ask for the acetic acid content. We shall be glad to do the work for you.

The color of vinegar ordinarily is dependent upon raw material and manufacturing processes. In other words, in the average vinegar establishment color can be obtained by varying the details of manufacture and either light or dark vinegar be produced. When produced in the home this is difficult to control and usually home made vinegar is lighter colored than that manufactured in vinegar facturies. For use in the home, vinegar may be colored any desired color. Sugar coloring or caramel coloring may be used to produce the desired shade. However, section 6 of the vinegar law, C. L. 6463, reads as follows:

"No vinegar shall be sold or exposed for sale in which foreign substances, drugs ar acids shall have been introduced. No vinegar shall contain and artificial coloring matter, and all vinegar shall have an acidity of not less than four per cent by weight of absolute acetic acid. If vinegar contains any artifical matter, or less than the required amount of acidity, it shall be deemed to be adulterated."

Under this section, it is illegal to color vinegar for sale in this State and it is one of the duties of this Department to prevent such practice and to enforce this particular section of the vinegar law.—W. C. Geagley, State Analyst.

ESTATE SHOULD BE PROBATED

I am a reader of the M. B. F. and sure think it a grand paper. I wouldn't think of being without it and as I know you have a Service Bureau for your readers and answer all kinds of questions I would be very much pleased if you would answer the questions I am going to ask you.

My mother-in-law died 2 years ago July 16th leaving no will and six sons as her only heirs, and at the time of her death she had her farm rented on shares to her oldest son until April 1, 1922. The mother was to have done the general housework for her son and what help he hired to help him on the farm. After the mother died the son hired a housekeeper and went on farming, in the fall harvested the crop and continued staying on the farm keeping the housekeeper all winter. Can the son make the heirs pay this housekeeper or must he pay her himself as long as he hired her? After April 1, 1922, the son made no arrangements with the other heirs in regards to renting the farm for another year but went on farming just as though the mother was alive, using everything about the farm as he pleased and planting crops wherever he liked selling the cream, the returns from which he used for keeping the house. The cows belonged to the mother, the furniture in the house all belonged to the mother, which the son has used ever since her death. The home being furnished complete by the mother. Now as long as he made no arrangements to stay and work the farm and use everything can he do so as long as the rest of the heirs allow him to? Can't they collect rent for a furnished house since April 1 ,1922? There is about five acres of woods on mother's farm.

At the time of the mother's death there was wood enough on hand cut which has lasted until about December 1, 1922. How about wood he cuts for his own use? Can he cut wood for his own domestic use or cut any green wood without consent from the other heirs? I also understand that the son made arrangements with his brother, one of the heirs, a year ago and the two worked the mother's farm together the son getting a certain share. Can the son do this without consent from the other four heirs? What share could the brother hold in such a case? The son also gave the housekeeper what chickens she raised there on the farm and sold the chickens belonging to the mother. The son never gave account of what has been raised or sold on the farm since mother died. The property has never been probated yet. The housekeeper married one of the sons and they continued staying on the farm.—Mrs. H. B., Williamsburg, Mich.

—The rights and obligations of the mother under the lease would become, upon her death, the rights and obligations of her estate, or heirs. Her agreement to do the general housework would have to be carried out by the heirs, and if the son hired a housekeeper, all the heirs, himself included, would have to pay their share of what was a reasonable amount for such services, up until the termination of the lease, April 1st, 1922. After that he would have to pay her himself. The heirs would be entitled to the rent due the mother under the lease.

So long as the other heirs do not object, he could stay on the farm after April 1st and cultivate the land, but would be liable to the others to pay a reasonable rental for the use of such farm and house. The wood cut for his own domestic use would be taken care of in the rent. For any wood cut above that amount, he would have to account to the rest of the heirs. The son and his brother could work the farm under an arrangement of their own, so long as the other heirs did not object, and in that case would both be liable for the rent.

The estate should be probated as soon as possible so the rights of the respective heirs could be legally determined.—Asst. Legal Editor.

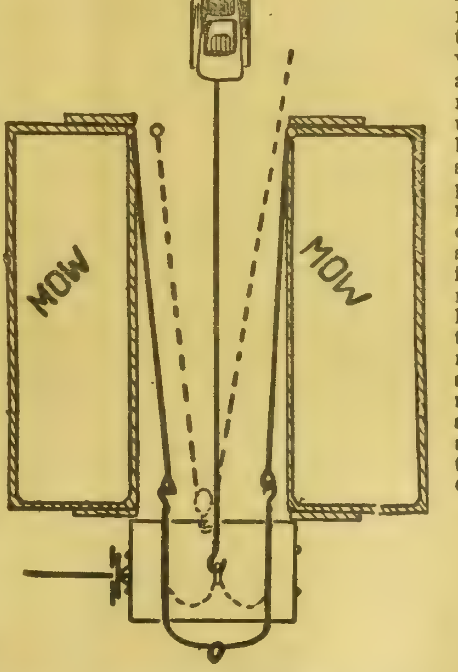
HAVE WILL PRODUCED AT ONCE

I saw by your paper where you help people. I would like to know, does a will ever outlaw? When my father died seven years ago he left my mother a joint deed of their farm. She sold the farm and moved to town. She died, it will be four years the 23rd of next August. She left a will to my only brother for all her property. My only sister and myself didn't get a thing. The will has never been read only as I went to see if she had a will. Their lawyer has the will. He told me he didn't have any will or papers of hers. He told me that twice, and I had been told by my cousin that she saw it in his office. I told him what she said and he finally went and got it and cut it open and read it just to me. I didn't see what it said, but he read it this way. Her property and personal had all been left to my brother, she said she had not forgotten the girls but wanted my brother to have it because he had always lived with her. Now the will has never been read in public, nor been probated. The farm she sold was sold on contract and isn't paid for yet and it isn't on record in my brother's name. I have thought it over a lot and just thought I would drop you a line and see what you had to say. If this outlaws, how is it then? —Reader from Southern Michigan.

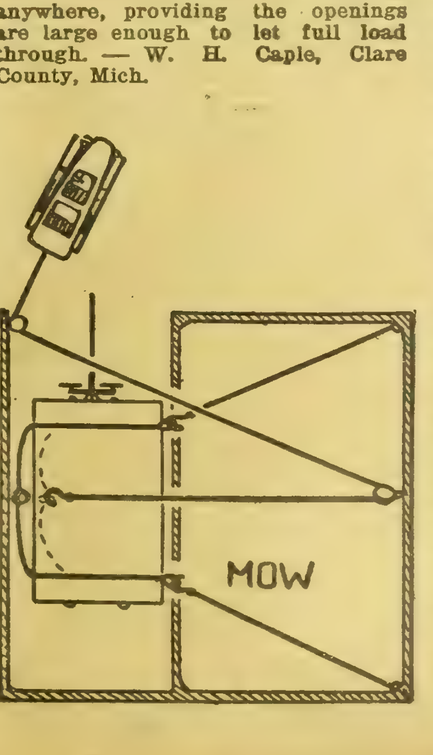
—Complied Laws of 1915, Sections 13776 and 13778 provide that every person, other than the judge of probate, having custody of any will, shall within 30 days after he has knowledge of the death of the testator, deliver it to the probate court or to the executor, and that every person who shall neglect to do this, without reasonable cause, shall be liable to each and every person interested in such will in the sum of $10 damages for each and every month that he shall neglect to deliver the will, after 30 days from the death of the testator. I would petition the probate judge to notify the person having custody of the will to produce it at once so it may be properly probated.—Asst. Legal Editor.

How To Save Time When Unloading Hay

TAKE a piece of three-quarter inch rope long enough to lay across your wagon twice. Place one end across the front end of the wagon about three feet from the end if you use a loader and four feet if you do not. Have the two ends extend over the side of the rack about three feet while the center of the rope which is on the other side of rack should extend over at least five feet. You have a large ring in the center of the rope and one on each end. This makes your sling. Then get two ropes long enough to reach to the farthest posts from the side of your wagon over which the two rope ends hang (see drawing). Put a grab hook on one end. This hook is to hook into the ring in the center of your sling over the top of your load in the drawing. When you drive in to unload hook the two long ropes, which have been fastened to the posts, to the ends of your sling, fasten the hook of the hay rope into the ring in the center of the sling and hitch your team, tractor or auto to the other end and roll the load off the wagon. You then unhook the slings from the long ropes, unfasten the long ropes from the post and draw them out. They come very easily if you do not place knots in the ropes. Your second load rolls off next to the first and so on until you reach the back of the now, then roll the next loads clear back. If you are filling the driveway of your barn a straight haul will do, if filling the sides fasten your ropes as shown in the drawing. On the straight haul when the hay is piled too high for you to haul load off with success you can fasten one end of the pull rope high up in the barn and use a pulley in the center (see dotted line in drawing).



I used by automobile to do the hauling in place of team as it was so much faster. From the time the team stopped at the barn until they were ready to start for the field again it has taken us less than two minutes; that is to fasten the ropes, unload the hay and place the slings back on the wagon again ready to start, or less than one minute to place the load in the barn after the ropes were fastened. We timed ourselves on four loads—they were short hauls—and we made four trips in one hour, with one team and two men loading. We placed over two hundred tons of hay in one barn by this method. Use a third man in the mow. When you get the idea, by a little practice you can change the ropes about and place the hay most anywhere, providing the openings are large enough to let full load through. — W. H. Caple, Clare County, Mich.



Jeff Peters As A Personal Magnet

A Complete Short Story by O. HENRY *America's Greatest Short Story Writer*

Copyrighted, 1920, by Doubleday, Page & Co.; published by special arrangement with the Wheeler Syndicate, Inc.

JEFF PETERS has been engaged in as many schemes for making money as there are recipes for cooking rice in Charleston, S. C.

Best of all I like to hear him tell of his earlier days when he sold liniments and cough cures on street corners, living hand to mouth, heart to heart with the people, throwing heads or tails with fortune for his last coin.

"I struck Fisher Hill, Arkansaw," said he "in a buckskin suit, mocassins, long hair and a thirty-carat diamond ring that I got from an actor in Texarkana. I don't know what he ever did with the pocket knife I swapped him for it.

"I was Dr. Waugh-hoo, the celebrated Indian medicine man. I carried only one best bet just then, and that was Resurrection Bitters. It was made of life-giving plants and herbs accidently discovered by Ta-qua-la, the beautiful wife of the chief of the Choctaw Nation, while gathering truck to garnish a platter of boiled dog for the annual corn dance.

"Business hadn't been good at the last town, so I only had five dollars. I went to the Fisher Hill druggist and he credited me for half a gross of eight ounce bottles and corks. I had the labels and ingredients in my valise left over from the last town. Life began to look rosy again after I got in my hotel room with the water running from the tap, and the Resurrection Bitters lining up on the table by the dozen.

"Fake? No, sir. There was two dollars' worth of fluid extract of cinchona and a dimes' worth of aniline in that half-gross of bitters. I've gone through towns years afterwards and had folks ask for 'em again.

"I hired a wagon that night and commenced selling the bitters on Main Street. Fisher Hill was a low, malarial town; and a compound hypothetical pneumocardiac anti-scorbutic tonic was just what I diagnosed the crowd as needing. The bitters started off like sweet-breads-on toast at a vegetarian dinner. I had sold two dozen at fifty cents apiece when I felt somebody pull my coat tail. I knew what that meant; so I climbed down and sneaked a five-dollar bill into the hand of a man with a German silver star on his lapel.

" 'Constable,' says I, 'it's a fine night.'

" 'Have you got a city license,' he asks, 'to sell this illegitimate essence of spooju that you flatter by the name of medicine?"

" 'I have not,' say I. 'I didn't know you had a city. If I can find it tomorrow I'll take one out if it's necessary.'

" 'I'll have to close you up till you do,' says the constable.

"I quit selling and went back to the hotel. I was talking to the landlord about it.

" 'Oh, you don't stand no show in Fisher Hill,' says he. 'Dr. Hoskins, the only doctor here, is a brother-in-law of the Mayor, and he won't allow no fake doctor to practice in town.'

" 'I don't practice medicine,' says I, I've got a State peddler's license, and I take out a city one whenever they demand it.'

"I went to the Mayor's office the next morning and they told me he hadn't showed up yet. They didn't know when he'd be down. So Doc Waugh-poo hunches down again in a hotel chair and lights a jimpson-weed regalia, and waits.

" 'By and by a young man in a blue necktie slips into the chair next to me and asks the time.

"Half-past ten, says I, 'and you are Andy Tucker. I've seen you work. Wasn't it you that put the Great Cupid Combination package on the Southern States? Let's see, it was a Chilian diamond engagement ring, a wedding ring, a potato masher, a bottle of soothing syrup nad Dorothy Vernon—all for fifty cents.'

"Andy was pleased to hear that I remembered him. He was a good street man; and he was more than that—he respected his profession, and he was satisfied with 300 per cent profit. He had plenty of offers to go into the illegitimate drug and garden seed business; but he was never to be tempted off the straight path.

"I wanted a partner, so Andy and me agreed to go out together. I told him about the situation in Fisher Hill and how finances were low on account of the local mixture of politics and japal. Andy had just got in on the train that morning. He was pretty low himself, and was going to canvass the town for a few dollars to build a new battleship by popular subscription at Eureka Springs. So we went out and sat on the porch and talked it over.

"The next morning at eleven o'clock when I was sitting there alone, an Uncle Tom shuffles into the hotel and asked for the doctor to come and see Judge Banks, who was the Mayor and a mighty sick man.

" 'I'm no doctor,' says I. 'Why don't you go and get the doctor?'

" 'Boss,' says he. 'Doc Hoskins am done gone twenty miles in de country to see some sick persons. He's de only doctor in de town, and Massa Banks am powerful bad off. He sent me to ax you to please, suh, come.'

" 'As man to man,' says I, 'I'll go and look him over.' So I put a bottle of Resurrection Bitters in my pocket and goes up on the hill to the mayor's mansion, the finest house in town, with mansard roof and two cast iron dogs on the lawn.

"This Mayor Banks was in bed all but his whiskers and feet. He was making internal noises that would have had everybody in San Francisco hiking for the parks. A young man was standing by the bed holding a cup of water.

" 'Doc,' says the Mayor, 'I'm awful sick. I'm about to die. Can't you do nothing for me?'

" 'Mr. Mayor,' says I, I'm not a regular preordained disciple of S. Q. Lapius. I never took a course in a medical college,' says I. 'I've just come as a fellow man to see if I could be of assistance.'

" 'I'm deeply obliged,' says he. 'Doc Waugh-hoo, this is my nephew, Mr. Biddle. He has tried to alleviate my distress, but without success. Oh, Lordy! Ow-ow-ow! !' he sings out.

"I nods at Mr. Biddle and sets down by the bed and feels the Mayor's pulse. 'Let me see your liver—your tongue, I mean,' says I. Then I turns up the lids of his eyes and looks close at the pupils of 'em.

" 'How long have you been sick?' I asked.

" 'I was taken down—ow-ouch—last night,' says the mayor. 'Gimme something for it, doc, won't you?'

" 'Mr. Fiddle,' says I, 'raise the window shade a bit, will you?'

" 'Biddle,' says the young man. 'Do you feel like you could eat some ham and eggs, Uncle James?'

" 'Mr. Mayor,' says I, after laying my ear to his right shoulder blade and listening, 'you've got a bad attack of superinflammation of the right clavicle of the harpischord!'

" 'Good Lord!' says he, with a groan. 'Can't you rub something on it, or set it or anything?'

"I picks up my hat and starts for the door.

" 'You ain't going, doc?' says the Mayor with a howl. 'You ain't going away and leave me to die with this superfluity of the clapboards, are you?'

" 'Common humanity, Dr. Whoa-ha,' says Mr. Biddle, 'ought to prevent your deserting a fellow-human in distress.'

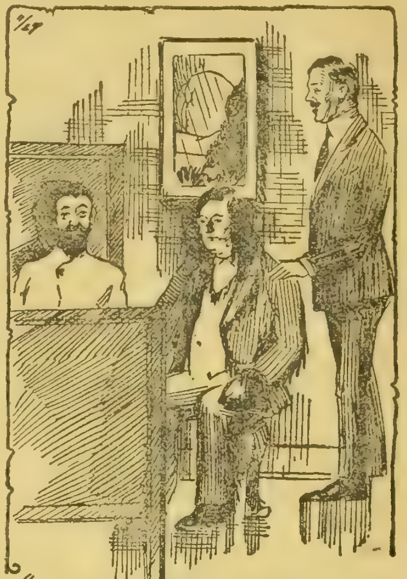
" 'Dr. Waugh-hoo, when you get thru plowing,' says I. And then I walks back to the bed and throws back my long hair.

" 'Mr. Mayor,' says I, 'there is only one hope for you. Drugs will do you no good. But there is another power higher yet, although drugs are high enough,' says I.

" 'And what is that?' says he.

' "Scientifio demonstrations,' says I. 'The trumph of mind over sarsaparilli. The belief that there is no pain and sickness except what is produced when we ain't feeling well. Declare yourself in arrears. Demonstrate.'

" 'What is this paraphernalia you speak of, Doc?' says the Mayor. 'You ain't a Socialist, are you?'



"YOU'RE UNDER ARREST, DR WAUGH-HOO, ALIAS PETERS," SAYS HE.

" 'I am speaking,' says I, 'of the great doctrine of psychic financiering—of the enlightened school of long-distance, subconscientious treatment of fallacies and meningitis—of that wonderful in-door sport known as personal magnetism.'

" 'Can you work it, doo?' asks the Mayor.

" 'I'm one of the Sole Sanhedrims and Ostensible Hooplas of the Inner Pulpit,' says I. 'The lame talk and the blind rubber whenever I make a pass at 'em. I am a medium, a coloratura hypnotist and a spiritous control. It was only thru me at the recent seances at Ann Arbor that the late president of the Vinegar Bitters Company could revisit the earth to communicate with his sister Jane. You see me peddling medicine on the streets,' says I, 'to the poor. I don't practice personal magnetism on them. I do not drag it in the dust,' says I, 'because they haven't got the dust.

" 'Will you treat my case?' asks the Mayor.'

" 'Listen,' says I. 'I've had a good deal of trouble with medical societies everywhere I've been. I don't practice medicine. But, to save your life, I'll give you the psychic treatment if you'll agree as mayor not to push the license question.'

" 'Of course I will,',' says he. 'And now get to work, doc, for them pains are coming on again.'

" 'My fee will be $250.00, cure guaranteed in two treatments,' says I.

" 'Alright,' says the Mayor. 'I'll pay it. I guess my life's worth that much.'

"I sat down by the bed and looked him straight in the eye.

" 'Now,' says I, 'get your mind off the disease. You ain't sick. You haven't got a heart or a clavicle or a funny bone or brains or anything. You haven't got any pain. Declare error. Now you feel that pain that you didn't have leaving, don't you?'

" 'I do feel some little better, doo,' says the Mayor, 'darned if I don't. Now state a few lies about my not having this swelling in my left side, and I think I could be propped up and have some sausage and buckwheat cakes.'

" 'I made a few passes with my hands.

" 'Now,' says I, 'the inflammation's gone. The right lobe of the perihelion has subsided. You're getting sleepy. You can't hold your eyes open any longer. For the present the disease is checked. Now, you are asleep.'

"The Mayor shut his eyes slowly and began to snore.

" 'You observe, Mr. Tiddle,' says I 'the wonders of modern science.'

" 'Biddle,' says he, 'when will you give uncle the rest of the treatment, Dr. Pooh-pooh?'

" 'Waugh-hoo,' says I. I'll come back at eleven tomorrow. When he wakes up give him eight drops of turpentine and three pounds of steak. Good morning.'

"The next morning I went back on time. 'Well, Mr. Riddle,' says I, when he opened the bedroom door, 'and how is uncle this morning?'

" 'He seems much better,' says the young man.

"The mayor's color and pulse was fine. I gave him another treatment, and he said the last of the pain left him.

" 'Now,' says I, 'you'd better stay in bed for a day or two, and you'll be all right. It's a good thing I happened to be in Fisher Hill, Mr. Mayor,' says I, 'for all the remedies in the cornucapia that the regular schools of medicine use couldn't have saved you. And now that error has flew and pain proved a purjurer, let's allude to a cheerfuller subject—say the fee of $250. No checks, please, I hate to write my name on the back of a check almost as bad as I do on the front.'

" 'I've got the cash here,' says the mayor, pulling a pocket book from under his pillow.

"He counts out five fifty-dollar notes and holds 'em in his hand.

" 'Bring the receipt,' he says to Biddle.

"I signed the receipt and the mayor handed me the money. I put it in my inside pocket careful.

" 'Now do your duty, officer,' says the mayor, grinning much unlike a sick man.

"Mr. Biddle lays his hand on my arm.

" 'You're under arrest, Dr. Waugh-hoo, alias Peters,' says he, 'for practising medicine without authority under the State law.'

" 'Who are you?' I asks.

" 'I'll tell you who he is,' says Mr. Mayor, sitting up in bed. 'He's a detective employed by the State Medical Society. He's been following you over five counties. He came to me yesterday and we fixed up this scheme to catch you. I guess you won't do any more doctoring around these parts, Mr. Fakir. What was it you said I had, doc?' the mayor laughs, 'compound—well it wasn't softening of the brain I guess, anyway.'

" 'A detective,' says I.

" 'Correct,' says Biddle. 'I'll have to turn you over to the sheriff.'

" 'Let's see you do it,' says I, and I grabs Biddle by the throat and half throws him out the window, but he pulls a gun and sticks it under my chin, and I stand still. Then he puts handcuffs on me, and takes the money out of my pocket.

" 'I witness,' says he, 'that they're the same bills that you and I marked, Judge Banks. I'll turn them over to the sheriff when we get to his office, and he'll send you a receipt. They'll have to be used as evidence in the case.'

" 'All right, Mr. Biddle,' says the mayor. And now, Doo Waugh-hoo,' he goes on, why don't you demonstrate? Can't you pull the cork out of your magnetism with your teeth and hocus-pocus them handcuffs off?'

" 'Come on, officer,' says I, dignified. 'I may as well make the best of it.' And then I turns to old Banks and rattles my chains.

" 'Mr. Mayor,' says I, 'the time will come when you'll believe that personal magnetism is a success. And you'll be sure that it succeeded in this case, too.'

"And I guess it did.

When we got nearly to the gate, I says: 'We might meet somebody now, Andy. I reckon you better take 'em off, and—' Hey? Why, of course it was Andy Tucker. That was his scheme: and that's how we got the capital to go into business together.

What would YOU do
if you received
a check for
$100,000
in the mail?

For the best letter of not over 250 words from a reader telling what he or she would do with a gift of $100,000 we will pay $5 and give a one year new or renewal subscription for each other letter published. Write plainly on one side of paper and sign your full name and address which will not be used in publication if you so request.

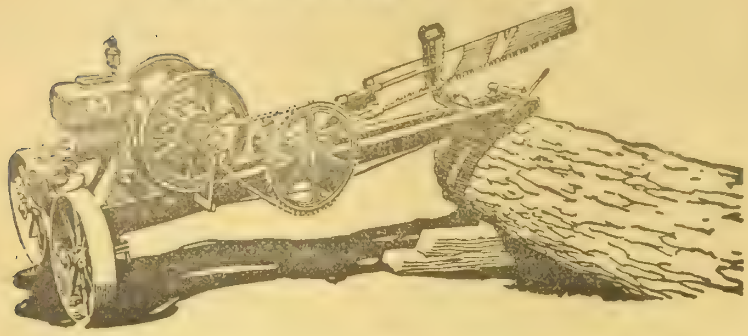
HERCULES
DRAG SAW OUTFITS



A Money-maker (*for any farmer*)
from the word GO!

With this outfit in your wood-lot, you have a private gold-mine. Quick cash, and big money, wait for you if you can rent timber-cutting rights anywhere near you. The HERCULES Drag Saw is a money-maker PLUS, anywhere trees grow.

Wherever fuel is scarce or dear —and that's everywhere to-day!

You can get important money for all the cordwood you can cut! Cash in on the need for fuel! Go into the cordwood business this winter. A HERCULES will pay for itelf in a single season, and bring you big wages besides.

Men have cut twenty cords of wood on 50 cents worth of fuel!

V. H. Elrod, of Fillmore, Ind., cuts four cords of stovewood an hour with his 7-h.p. HERCULES, burning only two gallons of gasoline in a ten-hour day. It can't go wrong, even in unskilled hands. A smart boy can learn to run it in an hour's time. The bitterest zero day, the deepest snow, won't hamper wood-sawing with this outfit.

Write us for full particulars. Let us show you why it will pay you to own a HERCULES Drag Saw, a HERCULES BUZZ SAW Rig, or some other HERCULES money-saver. Any of these outfits will also do all kinds of heavy chores about the farm. Ask us for details and special autumn offer through your nearest dealer.

OUR $1000 ACCIDENT POLICY

If there is any paid-up subscriber to The Business Farmer who is not insured under our $1000 Accident Policy, issued by the North American Accident Insurance Company, for Seventy-five cents (75c) per year, it is their own fault!

Any person from 16 to 70 years of age can be insured and our only requirement is that your subscription be paid in advance for one full year or more from this date.

This is a genuine policy in a good company. It operates in Michigan under the auspices of the State Insurance Department, the same as every insurance company doing business in the state.

We will gladly send an application blank and further information to any reader who requests it. Address: Insurance Dept., THE BUSINESS FARMER, Mt. Clemens, Michigan.

THE PEACEMAKERS

A SERMON BY REV. DAVID F. WARNER

THE PEACEMAKERS

TEXT: "Blessed are the peacemakers: for they shall be called the children of God." Matthew 5:9.

THESE are days when our hearts are anxious and expectant; when human emotion is tense; and when our concern for world peace is so ardent as to demand our best diplomacy, editorials, sermons, and prayers. But a vicious teaching and a repudiation of human brotherhood goes wickedly on.

Some had hoped that human culture had made war intolerable; but no. It was hoped again that Socialism might provide a congenial means for propagating the "olive branch of peace;" but often, where Socialism is most at home there militarism raises her bloody head highest. Others thought that our peace propaganda,—such as conventions, tribunals, and treaties—would avert any impending war. But did it? And why not? And why are they now telling us that the doorsteps of The Hague Peace Palace may yet be drenched in human blood? When are we to hear the cry for a vital Christianity as sounded by our late President and in a recent call from the heart of Woodrow Wilson? Not yet awhile when a foreign statesman of prominence is telling American leaders that Mr. Wilson's ideals are premature and we ought yet to be guided by the doctrine of self-interest and the suggestion of "America First."

But we are still to depend on Christianity to obliterate warfare. Why? Because Christianity stands for loving your neighbor as yourself, and for doing unto him as you would have him do unto you. It stands for justice, not injustice; for humanity, not inhumanity; for peace, not war.

However, we have witnessed, recently, a strange anomaly. Nations that supposedly, are enlightened and Christianized, are in deadly combat, and the Christian's God, rather than being invoked to prevent the strife, is being implored for victory. But is God at variance with himself? Impossible. And this carnal strife has robbed our Christianity of much of its life and vitality. Surely, the imps of darkness must have gloated over this gigantic exhibition of human strife and pain! Then, what is the matter with our Christianity? Just this,—it lacks "peacemakers."

Who is our beatific peacemaker? Not he who has only nature's lovely gift "to pour oil on troubled waters." Not he who is passive and does nothing to provoke resistance. These "do nothings" little know that they are giving the devil more time to mobilize and strengthen his forces. He, however, is the peacemaker of our text who has climbed the flight of the Beattitudes and has taken his redoutable position high on the exalted table-lands of the Kingdom. Here, unentangled by the things of this world, he is given a true outlook on all its strife, and is in a position to see the way out. His new perspective gives him that unbiased instinct of brotherhood which qualifies him to bring the world a message of peace and good-will. Now, brother, you who have climbed this beatific ascent are Christ's pacific "light of the world" and Paul's "bond-servant" to work out this peace and fraternity. If you are not doing this you are giving the world a stage-play; and this is hypocrisy.

When worked out, what will this peace do? It will help to put the world into right relations with God. That we are at cross-purposes with Christian ideals is the cause of all our strife. God purposes in Christ to bless the world with love and harmony thru us. But we, in our intoxicated zeal for the promotion of our own ends, are out of joint with his divine plan of Christian brotherhood. God was in Christ reconciling the world unto himself, and he is yet as the "mind of Christ" becomes incarnated in men. Otherwise, men are too capricious.

It will give a heavenly atmosphere to church life. And God knows we need more of this fragrant spirit. War is said to be hell. But war, we know, is selfishness. Then selfishness is hell. But is there an inferno in the church? Have we arrogant selfishness and hypocrisy there? This is a clue, follow it. What, universal peace? Never, as long as we have unfriendly rivalry and strife in and among the churches; and in your heart and mine. Never mind Balaklava, Waterloo, Gettysburg, and the Argonne. Study well the battle-ground of your own heart. There you may win your greatest laurels.

It will neutralize the spirit of literal warfare. "Do you want to know the cause of war,—the cause of the murder in Europe, the cause that will bring war to America if it ever comes? It is capitalism, greed, the dirty hunger for dollars. Take away the capitalist and you will sweep war from the earth. Take it away today and the war in Europe will stop to-morrow. Take it away and the world will have seen the end of barbarism." These were the reported words of Henry Ford a few years ago. But a recent reporter represents Mr. Ford as having had a change of mind. If this be true whence comes this spirit? Out of the essence of self-interest and unholly profit in the instance of war; and out of the poisoned thought and vicious propaganda that the American soldier is our "greatest pacifist." We know better. The verdict of history and the teaching of experience is, that carnal soldiery kills and crumbles nations. But the Kingdom of Heaven is yet at hand, and some day God will show what he can do with nations as he is showing today what he can do with individuals.

Mr. Bryan asks, "Why do not nations as well as individuals apply the law of love brought to us by the Man of Nazareth?" And Mr. Bryan knows. Because many individuals are not applying it. A nation is but an aggregation of individuals politically organized. The writer believes that most individual soldier combatants would fraternize and become brothers if let alone. But other individuals (political rulers) will not let them. So, peace and brotherhood, traced to their deepest and lasting dependence, are only found in the heart of the individual.

The world has never been able to work out the problems of right and wrong nor to keep out of the wrong. In the recent war there has been a colossal and practical acknowledgement of this. Then what an appeal to Christianity! The Christian only has had committed to him the duty and glory of bearing to the world the law of love, the message of justice, fraternity, and peace. And, methinks if Christians had done their duty, that long ere this the night of war might have given way to the bright, new day. Yet, now, the peace movement is stronger than ever before, notwithstanding a pose of "preparedness," a "citizen soldiery," and other "big stick" signs of the times. And let peacemakers keep busy that Christianity may be vindicated for the sake of now and eternity.

What is the reward of peace-making? We shall be called the "sons of God." No, not by the world. By it we shall be called impractical, and even "degrading" and "silly." But this is only the judgement of man. That does not matter so long as God says we are his sons. To enter the sonship of God, and enjoy eternal harmony and peace, is ours thru becoming a peace-maker in all the areas of life. Blessed are those who enter into the spirit and temper of the Great Peacemaker.

LIKES SERMONS

I note among the many good articles in the Business Farmer the excellent sermons now being published.—J. T. Daniells, Clinton County, Michigan.

THANK YOU!

....We can always rely on your paper to guide us in selling our farm produce and when to sell. Thanking you for the good work of your paper, I remain yours truly, Chas. Arnold, Delta County, Mich.

UNCLE RUBE SPINACH SAYS

MORAL SWASION—AS SHE IS

YOU know, friends, I don't never hardly like to enter into any kind o' argiment. I'd ruther keep out of it 'cause I'm a peaceable minded sort of old cuss 'at don't like to squabble aroun' an' make a fuss—kinda like quietness an' ever'thing but jest the same—while I didn't intend or expect to say much 'bout the lickker bis'ness an' would of kept my jaw shut if preachers of the gospel hadn't took a notion to shoot into the gen'ral mess. "Cut out the Volstead Act" sez one noted Divine. "It's humuliatin' an' debasin' men can not have laws to correct their brothers' appetites"—or words to that effect. Give them Moral swasion," says this angel-like minister. "Moral Swasion"—course I don't know jest what he means by it—"is the only way to reach men's souls" (soles might be better). An' then this here feller goes on an' tells how alcohol is a sort of a necessity. Tommyrot and then some—Mr. Senator Couzens notwithstandin' the preacher, reformers an' every other class of would-be reformers, have had five hundred years an' more to work the Moral Swasion Act. Five hundred years folks, to make people quit wantin' drinks with 5 per cent alcohol into it. If moral swasion has been worth a darn nobody be hollerin' for 5 per cent stuff. Now after five hundred years of preachin' an' everything that human mind could do to stop the awful curse of liquor.

Take it in any shape, watch the affects of it, in fact, jest see what the stuff'll do to a home an' send me the man that'll say't 5 per cent beer, wine, anything 'at contains alcohol is good for the human system.

Dear, good friends, sometime I may go down to the depths of that region of eternal darkness—none of us know jest where we're goin' to land when we ship from here but this I know—if I do land down in that awful place it will not be 'cause I've advocated 5 per cent beer nor any other drink containin' alcohol.

An' more'n that if I do take a jump down there I ain't goin' to be alone. I'll meet a whole lot of the 5 per-centers, preachers included. An' why should'nt they be there?

To make it a perfect place we've got to have all kinds of folks. 5 per cent preachers'll be jest as good as any to start things goin' cause there'll always be enough of others for the preachers to try the moral swasion act on. Allus has been an' allus will be.

Now good folks, jest look'it here for a minuit. If the preachers of this great land of ours believe in moral swasion why don't they try it on bandits, hold-up men, murderers—male an' female—grafters, loan sharks, prize fighters an' anything besides the lickker business.

Five hundred years of moral swasion an' yet folks hanker for alcohol! Now five hundred years is a long time, aint it folks? An' its been more'n five hundred years, too.

Preachers may preach, talkers'll talk an' th world'll go on. But folks, when any 5 per cent drink is sold out on market openly—well then the devil'll laugh.—Cordially UNCLE RUBE.

TO THE FARMER BOY

Father and son how grand they look.
Planning and working together,
They're farmers too and give to the world
The best of their life's labor.

What would we do in this grand world of ours,
If the farmers, the ones who feed us,
Would follow the course, the trend of the times
And hie to the city and leave us.

We bow and kow tow to the Earl and Duke,
Assumed nobility of the race,
But I'll take off my hat to the farmer and son
When I meet them face to face.

Then let us wake up to the truths of life,
And place honor where honor is due,
Or the broad shouldered boy who is following the plow
Will not deign to notice you.

What then would become of the lives that live,
When the strengthening arm is gone,
Then take off your hat in reverence
And keep the farmer boys at home.

L Baker, a subscriber.

CHEVROLET

for Economical Transportation

OF

Farm Products

Transportation is the big problem of today in manufacturing, merchandising and farming.

No matter what you make, grow or stock, it brings no profit until moved to the place of sale.

Modern, progressive farmers, being also business men, now depend on fast economical motor transportation to save time, save products and get the money.

Chevrolet Superior Light Delivery, with four post body was built especially for farm needs. Although not a heavy-duty truck, it has the space and power for a big load, which it moves fast at a very low cost per mile. Its engineering features are modern and complete: powerful motor, electric starter, standard transmission—3 speeds forward and one reverse, demountable rims and extra rim, etc.

For heavy work, Chevrolet Utility Express Truck at only $550, chassis only, offers remarkable value. Fits any standard truck body.

Prices f. o. b. Flint, Michigan

All-Steel Body with Baked Enamel Finish

Tough steel of ample thickness to withstand hard usage around the farm. Enamel, baked on—literally fused into the steel body at a temperature of 450° F.—a process that is possible only with an all-steel body—guaranteeing permanence to the lustrous finish of the Overland touring car.

Triplex springs (Patented) which give great riding ease, an immensely strong rear axle, a powerful, dependable engine that returns 20 miles and more to the gallon of gasoline—

These are *added* values which combine to make owners call the Overland "the most automobile in the world for the money."

WILLYS-OVERLAND, INC., TOLEDO, OHIO
Willys-Overland Ltd., Toronto, Ont.

Roadster $495, Red Bird $695, Coupe $750, Sedan $795; f. o. b. Toledo. We reserve the right to change prices and specifications without notice.

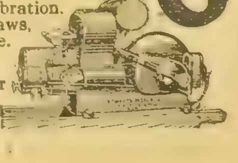
My Engine Will Do the Work of 6

Write now for facts about this wonder engine. Same engine gives 1½ to 6 H. P. Gasoline or kerosene. Portable, light, and free from vibration. Requires no anchorage. Easy starting—no cranking. Pumps, saws, grinds and does all chores. Plenty of power for every purpose.

Low Factory Price—Free Trial Offer

Tremendous value. Thousands of satisfied users. Write now for details and free trial offer on this amazing engine.

Edwards Motor Co., 334 Main St., Springfield, Ohio



Michigan has a Bountiful Fruit Crop

FRUIT AND ORCHARD

Edited by FRANK D. WELLS

THE FUTURE FOR THE GRAPE

DURING the past three years the high prices received by grape growers for the fruit has resulted in a large increase in the area devited to vinyards. Nurserymen have been unable to supply the demand at times. And the end is not yet.

A trip through what is known as the Michigan grape belt, shows that many acres will next spring be added to the already large number planted to vines. In this district, which may be rather roughly located as extending from Grand Rapids to Indiana and from about Kalamazoo to Lake Michigan the grape is rapidly becoming the leading product. The peach which made these counties famous has taken a secondary place. Raspberries are losing in favor compared with the vine. This does not mean that other fruits are being neglected, but the area given to them is not increasing at a ratio to equal the grape.

There are reasons for this besides the unprecedented prices for grapes. Diseases among raspberries have been causing considerable loss, besides no little anxiety and uncertainty regarding the future. Will it be possible to control these troubles or will the growers meet the fate of those in Ohio and New York, where many have given up raising this fruit? The labor problem, too, is serious. It is difficult to get pickers enough during the hot days of June and July. Then there is the transportation and the marketing. These have been discouraging factors in berry growing, till now the comment heard everywhere is that "There's no money in berries!"

Grapes offer some advantages over raspberries. More time is required to get a vineyard into bearing, but it continues profitable much longer. Work among the vines is less disagreeable than among the brambles. The harvest is in the cool days of autumn. The wages are more attractive since skilled labor is at a premium. Grapes are not as perishable as strawberries and raspberries, so can be handled and sold at smaller loss. All of which appeals strongly to the producer.

To be sure the grape has its enemies. There are insects and diseases. But those known to the grape belt are kept fairly under control. There are others that may some day come, among them the much dreaded phil-loxera, but they are still in the future.

There is a revival of interest in the peach, but the diseases and the winters are discouraging factors. The land suitable for this tree is limited and much less in area than that which can profitably be used for the grape. So the vineyard is encoaching upon the orchard.

East of the grape belt the number and size of vineyards have increased somewhat, but have probably not kept pace with the orchards. Nevertheless, a large addition to the yield of this fruit may be expected in a year or two, though at that it will be insignificant as compared to West Michigan.

Now what about the future? That is the question which the prospective vine grower is asking. Is there too much planting? Will there soon be an overproduction? An important point, deserving careful attention.

Unless some potent enemy arises, some insect or disease, there will be a larger increase in production, and that within two or three years. Will the demand be large enough for the supply?

First of all let it be asserted that Michigan grapes are as good as any in America and better than most. (The California man will not agree to this, but then he will not admit that his state ever had an earthquake.) The market for Michigan grapes is extending. A letter received this summer by a fruit buyer in West Michigan from a broker in Scranton, Pa., may be taken as illustration. Formerly it was stated the market there wanted California and New York grapes, but now it was not satisfied with anything except Michigan fruit. So he wanted to be supplied with it. This is only one. How many more such markets there may be east of the Rockies no one knows. But the country should be full of them.

As a wine grape Michigan fruit is claimed to be better than that from California. However objectionable the use of wine may be, the fact remains that thousands of tons of grapes will every year go to the press. Will the product cause more harm than the poison of pre-war days?

The use of pure, unfermented grape juice is increasing. There seems to be no reason why it should soon decrease. Juice factories are numerous in the grape belt, and there is also the home product. In thousands of families it is a part of the regular canning, as well as the regular plums or peaches.

As a dessert fruit the grape has not begun to be appreciated. Where is there a better table grape than the Michigan grape, grown anywhere between Port Huron and Muskegon?

There are enough who want grapes to eat up all that Michigan will grow for years to come. If the fruit becomes too cheap for profit it will be because producer and consumer are not brought near enough together. Here is the real problem. Isn't it the real problem with all the fruits? Not overproduction, but underconsumption. O, well, that is the hardest nut of all to crack.

WILL SPRAY TREE NEXT TIME

IN your Aug. 4th paper, page 18, column 4, is a little article, "Blight in Apple Trees." Well, I had a tree that acted that way and I nearly cut it to nothing, then one day I discovered some bugs and I started to pick them off and then the blight quit spreading. If I have any more trees that blight or bug as I call it I will spray instead of prune.—E. B. S., Woodville, Mich.

The constable of Milk Corners received by post six Rogues' Gallery photographs, taken in different positions, of an old offender wanted by the police of the big city. Two weeks later he sent this message to the city chief of police:

"Got five of the men. Am going after the sixth tonight. Hold reward."

What the Neighbors Say

THAT GAS TAX AGAIN

THE M. B. F. for August 4th contained a letter by Mr. Ralph H. Jones under the heading "Gas Tax Unjust," also you had an editorial on the same subject headed "17 States Have Gas Tax." Now I do not see how Mr. Jones as a farmer can take the stand that he does. His test of machines that use gasoline indicates that he is the operator of a good fair sized farm, provided that he has not other business that is responsible for the machines.

The gas tax law that the Governor vetoed may not have been a good one in its make-up but that does not seem to be the point with Mr. Jones for he clearly indicates that he is against the gas tax in principle.

Means of communication and means of transportation have had a very large part in the progress of civilization. Most changes were slow in motion and no great changes took place in the life of one generation of men. But the automobile has come up in fifteen years from being a rich man's plaything to a universal means of transport.

Canals and railroads at the time of their building received much help from public sources. But their operation expenses have been paid as well as the profits from the receipts of the office. The operating expense includes the up-keep and replacements on tracks, road beds, canalways, locks and soforth.

As it stands today automobile traffic is heavily subsidized as such. Certainly Mr. Jones will not dispute the statement that the automobile should pay its way and not live off of other business. Probably there is now not a single state in the union in which there is not now some long distance bus lines operating in many cases in competition with the railroads. An advertisement in a late date popular weekly says in part, "Three billion people travelled one billion miles last year in fifty thousand motor busses. Though still an infant, bus transportation already boasts an invested capital of one hundred million dollars." That hundred million dollars does not include one dollar for cost of right of way or road bed or tracks. True license fees are a feeble attempt to tax according to probable wear upon the roads.

Mr. Editor, your list of states having gas tax included seventeen, among them Florida, Idaho, Oregon and South Carolina have a three cent tax. A few days ago I saw in a carefully prepared article the statement that the estimated income from auto license taxes and gas taxes for 1923 would be about half the estimated road expenditures for this year. Our road laws enacted up until the last few years have nearly all been clearly based on the theory that the public roads were a community necessity and mostly an asset or liability, depending upon their quality. Public roads were a social institution built and kept up by taxes levied more or less pro rate according to property values and nearness to the improvement. Some roads were built and maintained at state expense wholly or in pare as a social benefit to the state as a state.

Present road building programs in many cases bear but slight relation to the primary needs of the inhabitants of the section through which the road runs. People always have, and especially so since the war, been more interested in trying to push the tax off onto the other fellow, rather than to have any just tax system devised and put into working order. The farmer has largely by his own help had the value of farm land increased out of all proportion to its earning power. Just as truly "watered" as the stock value of the railroads and many industrials. But the difference is that the other fellow's "water" helps him making rates for service, that is increasing the earnings while the only net result of the water in farm values is to increase the farmers' tax. For a while it sort of fed his vanity and increased the size of his air castles and enhanced their colors, but the cold facts of the "morning after" show but little beyond increased taxes, while the market situation is entirely beyond his controll.

The farmer has sweat his old shirt till the color is most gone but he has to let go of some of that rare product which we all possess more or less of but are great misers for sometimes called mental sweat. You can always tell the community that sweats very much mentally. They have co-operative enterprises that are supported. A little politics will help. But when it gains too large a place it gets worthless.—H. C. Matheson, Box 597, West Palm Beach, Florida.

THE FARMERS ARE GETTING READY

DEAR EDITOR—Sometimes it takes considerable preparation in getting started. This preparation work is now pretty well under way. We have had several years in observing corporate greed in the political saddle, using its wealth, lobbies and kept press, to secure legislation favorable to their interests, but correspondingly detrimental to the people in general and the farmers in particular.

The Esch-Cummins law, the Fordney-McCumber law and other measures were passed at the request of exploiters, and for their benefit.

They tell us that our government cannot help the farmers in a legislative way. The exploiters of the people have got too much the upper hand for that. The sad affair of the Federal Reserve Board is still fresh in our mind, and the millions that the privileged class made through the defiation of the farmer class will not soon be forgotten.

The law of supply and demand is being more and more set aside through the constantly increasing power of monopoly. Illustrations of this we have in the manipulations of the markets by the bond and oil companies, the packers, the steel trust and other concerns of the same class.

Thus we have to buy in a market that is high and sell in a market that is low. Monopolies have been built up by perferential tariffs, concessions and other special privileges to such an extent that they can not tell us at what prices we must buy and sell. No government can change such a situation as long as it is controlled by monopoly. The child cannot dictate to the father.

We must have a government responsive to the people and not only to a privileged few. The farmers, the laborers and the people in general are entitled to a hearing in the halls of Congress just as well as the moneyed class.

Sometimes we have been sleeping when important public questions were decided, but as a matter of self-preservation we must hereafter keep awake and go at the matter in dead earnest. We are going to stir as a class in a movement which is right. We can get along without flattery, but we cannot get along without justice. Those who so long have been interfering with our welfare, better show forth fruits, meet for repentance before it is too late.

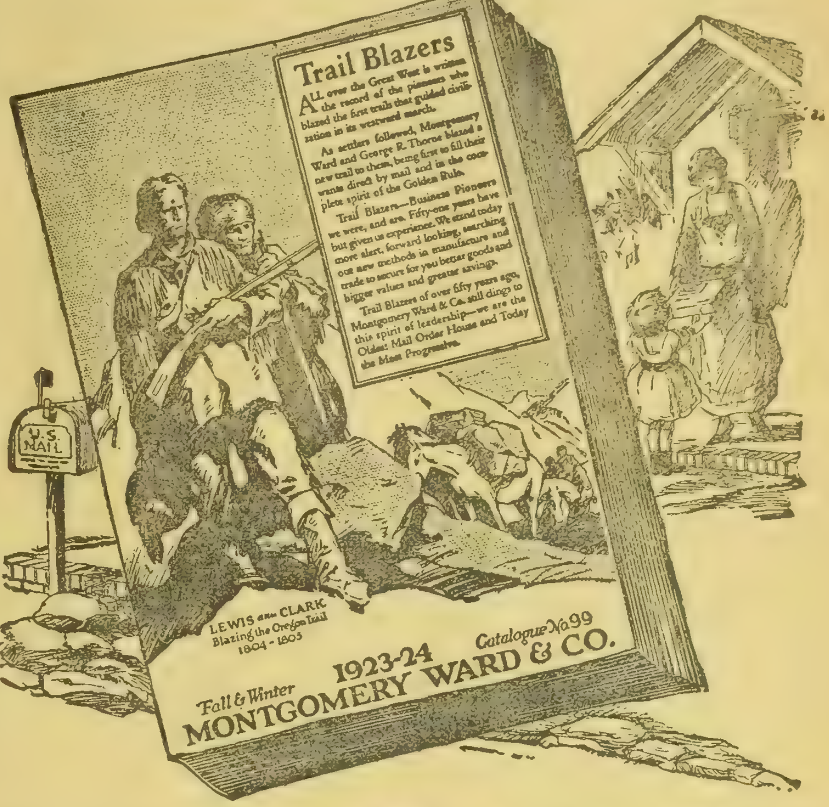
Although special interests yet control the daily press with but a few exceptions, it no longer holds true that the majority of the people are reactionaries. On the other hand the rank and file of the voters are now fairly well informed as to the leading issues of the day.—A. J. Raftshol, Leelanau County, Mich.

ROAD WORK

DEAR EDITOR—I would like to know how the people in general feel about the way the county road commissioners expend the county money. Everyone knows the men they hire to work on the road don't do one day's work in four days, yet they draw their five and one-half dollars or more a day and laugh at how much time they can get in, doing to little and still draw full pay. I don't doubt but they do as much for this money as the commissioners, but isn't their some way of making them all earn at least half what they get? One man with a tractor and truck would do more work in one day than the man with a team does in a week.—D. T., Williamston.

Montgomery Ward & Co.

The Oldest Mail Order House is Today the Most Progressive



Trail Blazers

All over the Great West is written the record of the pioneers who blazed the first trails that guided civilization in its westward march.

As settlers followed, Montgomery Ward and George R. Thorne blazed a new trail to them, being first to fill their wants direct by mail and in the complete spirit of the Golden Rule.

Trail Blazers—Business Pioneers we were, and are. Fifty-one years have but given us experience. We stand today more alert, forward looking, searching out new methods in manufacture and trade to secure for you better goods and bigger values and greater savings.

Trail Blazers of over fifty years ago, Montgomery Ward & Co. still clings to this spirit of leadership—we are the Oldest Mail Order House and Today the Most Progressive.

Your Copy of this New Fall and Winter Catalogue Is Waiting for You

One copy of this new complete Catalogue is here—waiting for you merely to fill in the coupon below with your name and address.

Your copy of this Catalogue is waiting—to bring into your home the lowest prices of the year, to bring to you and your family an opportunity for saving so important that you can not afford to miss it.

This Book Keeps Prices Down

You too may as well save money on nearly everything you buy. Ask for this Catalogue and see for yourself the lowest price, the right price to pay. You do not need to pay more.

In our work of "keeping prices down" we have searched the markets of the world. Over Forty Million Dollars' worth of goods have been bought at the lowest possible prices and the savings are passed on to you.

And with this saving, with these low prices, there is also an assurance of dependable quality—Ward Quality. We sell only the kind of goods that stand inspection and use—the kind that will hold your patronage. We maintain the standard of Ward Quality no matter how low the price.

Everything for the Home, the Farm and the Family

FOR WOMEN: This book shows the best New York Fashions, selected in New York by our own New York Fashion Experts. And everything is sold without the usual "fashion profits." This book will be a delight, a matter of style news, and a saving to every American woman.

FOR THE HOME: Carpets, furniture, bedding, electrical devices, everything new for home use, everything used in decoration and to make the home modern and complete. And the prices always mean a saving.

FOR THE MEN AND THE FARM: Everything a man uses or wears, from tools and hardware and famous Riverside Tires, to virgin wool suits—often one-third less than prices you are paying.

The coupon below brings this new, complete Fall and Winter Catalogue to you and your family—entirely free.

Montgomery Ward & Co.
Chicago Kansas City St. Paul
Portland, Ore. Fort Worth

Your Order will be Shipped in Less than 48 Hours

Our new perfected system of filling orders is now over a year old.

And our records prove that during the past year nearly all orders were shipped in less than 48 hours.

48 hour service is our promise to you. But we do better than our promise—because most of our orders are actually shipped within 24 hours.

So you can order from Montgomery Ward & Co. and feel sure that nearly every time your order will be shipped in less than 48 hours, and most frequently within 24 hours.

RELIABLE ADVERTISERS
We will not knowingly accept the advertising of any person or firm who we do not believe to be thoroughly honest and reliable. Should any reader have any cause for complaint against any advertiser in these columns, the publisher would appreciate an immediate letter bringing all facts to light. In every case when writing say: "I saw your advertisement in The Michigan Business Farmer!" It will guarantee honest dealing.

"The Farm Paper of Service"

USING PRISON LABOR TO BUILD ROADS

IT behooves every thinking reader to digest the facts and figures given in the article on the employment of convict labor on the state roads of Michigan in this issue.

It may be that a solution has to this dilemma been reached of such far reaching effect that the road problem in Michigan will eventually be solved by it.

For countless years prisoners in our state penal institutions have been employed on labor, most of which, up to recent years, was in competition with the labor employed on the outside or was of such a nature that it taught the prisoner little and was thus of little value to anyone, except the profiteering contractor who played politics to get it.

Good roads are of greater general benefit to all people, than any other single expense of government, unless it be that of education. The employment therefor of the thousands of prisoners who would be confined at less profitable work, means the release of common labor to the farms and other channels where it is much more needed. It means that without taxing unmercifully the property of the state, a paved road system may be maintained which will link every corner of Michigan.

If the plan works as successfully as it apparently has started out in Michigan it will doubtless be extended into other states and may mean a solution to the whole national problem of good roads and their maintenance.

It is, in any event, an interesting experiment and Governor Groesbeck and the state highway commissioner, Frank Rogers, are to be congratulated on the deep interest they have taken in the subject and the zest which they have shown in making it a success against the usual number of obstacles and discouragements which have presented themselves in making the theory work out on a practical basis.

Only a Chinaman does not believe in good roads! Good roads mean increased property value, better education, a means of keeping the young folks in the rural communities, and uniting all corners of the commonwealth into one.

Particularly will the farmers of the state of Michigan watch this plan because they have been most interested in knowing the solution of this problem which means so much to them, and which, while beneficial from the standpoint of bringing them nearer to market and inceasing their enjoyment of the better things of life, still had arrived at a point where they must seriously consider the cost.

As we recall it, the Appian Way was built with prison labor, but that can hardly be held against it inasmuch as it is still standing, some 5000 years later!

THEY WHO ARE THE GOVERNMENT

WE get accustomed to thinking of the Government as something at Washington or Lansing, which taxes us unmercifully, gives us too much protection, watches too closely our morality and sits generally as a parent or a policeman, in our daily lives.

President Coolidge, when he was officially notified, at Northampton, Mass., of his nominatoin as the candidate of his party for the office of Vice President, used the following words in closing his speech of acceptance, July 27, 1920:

"We have been making counsel together concerning the welfare of America. We have spent much time discussing the affairs of government yet most of the great concourse of people around me hold no public office, expect to hold no public office. Still in solemn truth they are the government, they are America. We shall search in vain in legislative halls, executive mansions, and the chambers of the judiciary for the greatness or the government of our country. We shall behold there but a reflection, not a reality; successful in proportion to its accuracy. In a free republic a great government is the product of a great people. They will look to themselves rather than government for success. The destiny, the greatness of America lies around the hearthstone. If thrift and industry are taught there, and the example of self sacrifice oft appears, if honor abide there, and high class ideals, if there the building of fortune be subordinate to the building of character, America will live in security, rejoicing in an abundant prosperity and good government at home, and in peace, confidence and respect abroad. If these virtues be absent there is no power that can supply these blessings. Look well then to the hearthstone, therein all hope for America lies."

Mr. Coolidge was visualizing humble homes, but filled with simple faith and love and respect and honor—homes representing the common people of this great country; the people who are the government.

"At night returning, every labor sped,
He sits him down, the monarch of a shed;
Smiles by his cheerful fire, and round surveys
His children's looks, that brighten at the blaze;
While his loved partner, boastful of her hoard,
Displays her cleanly platter on the board."
—Goldsmith.

COMMON FOLKS

LINCOLN once said, "God must have loved the common folks,—he made so many of them." Sometimes we get to thinking that the rich in worldly goods are those who receive the greater share of the world's blessings, and yet very often when we visit the home of a neighbor we see how little he has to envy the city man of wealth.

Recently we visited a farm which borders the shores of Lake Huron. It is only a small farm of forty acres, and the family who operate it are anything but rich in the sense of gold and silver, but in those things which go to make for contentment and happiness, Henry Ford himself might envy them their possessions!

From their front porch one can see the green water of Lake Huron sparkling in the morning sun, and at night they are lulled to sleep by the wash of its waves along the graveled shore.

We sat down to their table heaped with good things to eat and watched them enjoy it because it was seasoned with a sauce for which John D. Rockefeller would gladly pay them a thousand dollars a bottle if he could pour it over the food that is served him on silver plates. The name of that sauce is "Hunger sauce" and it cannot be obtained in the most expensive food shops, but our friends enjoy it at every meal and yet their supply of it never seems to diminish.

Emerson once wrote an essay on "Compensation." When all is said and done, we sometimes wonder that men will struggle and strive as they do to surpass each other when the God of compensation must sit back and smile at their fallacy.

Have you ever envied Henry Ford? You shouldn't. Because I know he must often envy the things you possess!

A FRIEND IN NEED

POSPERITY and peace may bring arrogance and the other products of greed which lead to embroilments and finally to war. The sight of even an enemy in great distress will, in contrast, bring forth the best in human nature and those characteristics which we commonly express as "Christian."

Japan, which the jingoist would have us believe is our mortal enemy, waiting only for the opportunity to jump at our throat, was within the past two weeks visited by what will undoubtedly prove the greatest catastrophe in our time. The greatest cities in Japan laid low by an earthquake and how many thousands of lives were swept into the chasms or burned in the fallen cities is yet to be told. Navigators report that a whole island has sunk into the sea and at another point a volcanic island has risen from it. Nature is proving what puny things men and the things of men are after all.

The news of the catastrophe to Japan had no more than reached our shores before the American Red Cross and similar agencies were sending relief ships and contributions were being accepted in every city in the United States for the suffering Japanese.

Misery thus brings sympathy and sympathy is after all the greatest pacifier in the world!

We, of this generation, witnessed a human earthquake in Europe, the awfulness of which is not yet wiped away and rumblings of its possible reoccurence still haunt us. Better would it have been if some nations could have been swept by the natural catastrophe which visited Japan. They would have lost no more property, probably no more lives and they would have received the sympathy of the world which would have brought peace and contentment.

And after all what is there in the world for either men or nations than peace and contentment, which means happiness,—the supreme goal of all!

HENRY FORD IS HUMAN

LAST year, at the Michigan State Fair, Mr. Ford in his splendid exhibit had a full size locomotive which must have recalled to him a keen desire of his boyhood, for what boy has not wished at some time in his life above all other things to pull the throttle of a railway locomotive?

This year, in the Ford exhibit, Mr. Ford personally supervised the installation of a standard locomotive, gay in polished Japan and nickel. It was mounted on roller bearings and from early morning until the last gate was closed at night, a never-ending stream of boys climbed the steps of their heart's desire and pulled the throttle which set the wheels of the locomotive spinning. Some even more brazen than the others who knew the inside workings of the locomotive cab, reached up and pulled the whistle, thus scaring the daylights out of envious sisters who were looking on!

We do not give Mr. Ford credit for being a super-man, but we do believe that few men in history who arose to such power as he possesses ever retained their touch with common people and common emotions.

Henry Ford is a grandfather but he remembers the desires of a boy. Perhaps that accounts for a good many of the broader principles of humanity which he has introduced into the everyday conduct of his business.

THE 1923 STATE FAIR

ALTHOUGH the figures have not yet been officially announced it is expected tha tthe 1923 Fair at Detroit surpassed in attendance any former exposition and will thus maintain its position of having the largest attendance of any fair held in the United States.

Naturally the bulk of the attendance at the Michigan State Fair is from Detroit and its environs, which means that three-fourths of the people in attendance are not country folks, but it is probably a good thing that the city people get an idea of how their food is produced and why it costs them at least part of what it does when they go to the store to buy it.

The lottery wheels were conspicuous by their absence this year and we heard no complaints of the shows on the midway. They looked rather hopeless and helpless to us, like a rattlesnake without its fangs, or a polecat without its odor. What is the midway after all without an Egyptian dance, a wild man from Borneo, or a Scot Cardiff giant? Barnum was right when he said that the American public liked to be humbugged. So this year's State Fair must have sent a lot of folks away disappointed.

There is a continued improvement in every department of the Stat Fair, and this means something when the high standard of improvement year by year is contemplated. The State Fair as a state owned property now invests its profits entirely in its improvement and has a fine line of permanent buildings that undoubtedly will compose the finest group of state fair buildings in the world if Secretary Dickinson, the man who is largely responsible for it, lives long enough.

Taken all in all, you folks who didn't come, missed something and perhaps you had better be making plans now for next year!

THE TAX PROBLEM

WE believe the greatest problem before the American people today is the problem of taxation, says the Shenandoah, Iowa, Sentinel Post.

Two sane methods of relief are open. First discourage new government fads and fancies which add unnecessary laws to our statute books with increased numbers of employes and more government overhead. Officialism spreads like the green bay tree if left to its own course, so trim it down to essentials.

Second, see that all property pays taxes equally, which it does not do at present. Under our present existing laws any person is at liberty to convert his property into non-taxable bonds and thus escape all forms of taxation.

The necessity (if it ever existed) for tax exempt bond is past and the day is here when no such loophole as this should remain to enable those most able to pay to escape taxation.

Every dollar that tax-exempt bonds absorb cuts two-ways—it doubles the tax on other people and removes a dollar from the industries which need it for expansion and development.

PUBLISHER'S DESK

D. F. BUSH, OF MINNEAPOLIS

I AM writing to ask information in regards to the honesty of the Western Sales Agency, Phoenix Bld., Minneapolis, Minn., managed by D. F. Bush. They ask a $7.50 fee with the description of your property and a per cent when the property is sold. Will you please inform me if they are fakers or a reliable company?—An Old Subscriber, Levering, Mich.

—We will not accept the advertising of D. F. Bush in the Business Farmer, altho it has been offered to us many times and we see it appearing in several Michigan papers. He may be honest, but he works the old scheme of advertising under the caption "Wanted to buy a Farm," when as a matter of fact he wants to sell you, $7.50 worth of possibilities. He gets his cash in advance, but you may be warming your hands by the stove a good many winters before you sell your farm. If this type of so-called "farm agencies" were as successful in selling farms as their advertising matter leads you to believe, they would make Henry Ford look like a piker and they would not need to ask for the $7.50 in advance, their commissions would be plenty and then some.

Lets see—ten times $7.50 is $75, ten times $75 is $750, ten times $750 is $7500 and yet it ought not to be so hard to find a thousand farms for sale in the United States, had it?

AN INSURANCE SCHEME EXPOSED

DEAR Mr. Slocum.—We read in the Publisher's Desk in The Business Farmer some of the shrewd practices of unscrupulous men to defraud people and get their hard-earned money away from them. It is unnecessary to say that the farmer has hard enough sledding without being taken in by the many schemes we read about in The Business Farmer. I for one am thankful that The Business Farmer is good enough, and fearless enough to expose and publish these evil practices, for the farmers of Michigan to read. If every farmer or person who has been "bit" or has been the victim of unfair dealings, would write The Business Farmer, telling of the scheme worked upon him, perhaps others would read of it and not get taken in by the same trick.

Here is one that was worked on myself and many other farmers of this section, by an insurence agent. He meets the farmer, introduces himself as the authorized agent of the ——— Insurance Company of ———, telling the farmer of the great advantages and saving that his company has over other companies. After a long and windy argument and most convincing talk, he gets the poor farmer whom he wishes to do something for (?), to sign an application for his insurance policy. The farmer sees no bylaws, not one in a hundred ever reads them, and he is influenced and led by the agent whom he has confidence in, that he is telling him the true facts in regard to his insurance.

This agent who wrote me up, as well as many others in this territory informed us that if we took out a five-year policy, paying for it in advance that that would be all we would be required to pay for five years, that would be absolutely all we would have to pay, the insurance costing us a good round sum. In just a little over two years, we were notified of another assessment nearly as large as the original five-year payment. We interviewed some insurance men, wrote the company, also the Commissioner of Insurance, and they informed us that the assessment must be paid. "Didn't you read your bylaws?" Why no, never saw them till the application was sent in and the policy sent to me, then we never read them. Who does?

Can The Business Farmer give its readers any rule to go by so that they won't get "bit?" I had some correspondence with Mr. McRae, with whom we have made our acquaintance thru the good old Business Farmer. Wishing to sell my farm, I answered his ad but did not remit the $10 listing fee. It pays to read the Business Farmer. Please find enclosed one dollar to apply on my subscription.—H. E. Root, Van Buren County.

OLIVER OIL-GAS BURNER

DO you or any of your readers know anything about the Oliver Oil-Gas Burner, manufactured by The Oliver Oil-Gas Burner & Machine Co., 21st & Pine St., St. Louis, Mo.? They have a burner which you put either in a cook stove, heating stove or furnace using coal oil. Their advertising matter surely recommends them but before buying one I should like to know what others have found out about them.

Another thing I wonder if you could find out for me is this: In 1902 we bought of the Detroit Engineering Co. a sewing machine called "The Matron." With it came a repair list and guarantee for five years, but no address of maker anywhere. The machine is in fine condition yet but I cannot just find the right needles to fit it and nowhere can I find "The Matron" machine listed.

—We have had several inquiries lately regarding oil burners for stoves and furnaces. Our readers ought to form a pool and give others the benefit of their experience. I will gladly reprint them on this page and will use neither name nor address.

The Detroit Engineering Company is not listed in the Detroit telephone directory so we have no way of finding out where you can buy parts for "The Matron."

THE OLD CONTEST WINNER SCHEME

"I AM enclosing a letter which I received from the Radio Message and by the reading of it I am at a loss to know the meaning of it, as I have entered no contest to my knowledge that is connected with the Radio Message, so think it a "fake" way to get subscriptions to the Radio Message. If it is all right, and I have won as a contestant would like the benefit of the radio set so I am asking your advice on the matter as I have but 10 days to send the remittance of $3.00 for the Radio Message."

Here is the letter our reader received, I am giving space to it, because it is a scheme with which I would like to make the readers of my desk familiar:

Dear Friend:

This must be your "Lucky Day" for we have taken over the names of Prize Contestants and you get the offer of a radio set.

The Radio Set will be sent you upon receipt of the enclosed memorandum signed by you with your present address and your yearly subscription to the Radio Message. No further obligation on your part.

It will be necessary for you to claim the Radio Set within ten days from the time you receive this final notification or you will have no further claim on same. If you are not satisfied we will return the remittance in full.

Congratulating you upon the pleasures you will enjoy from "listening in" every day and evening to the World's Greatest Music, Bands, Orchestras, Songs, Lectures, Plays and Entertainments on your own Radio, we remain Yours very truly, The Radio Message.

—Of course, it is just a catch-penny scheme. Our reader was in no contest or if she was, the prize was to have cost her nothing. The last time we heard of this scheme it was being worked up in Montreal, Canada, and that time it was for a beautiful set of silverware for which the victim was asked to send 99 cents, simply to pay the postage and packing on the wonderful prize they had won. The U. S. post-office authorities issued a fraud order which stopped some of the mail at the border, but thousands of dollars poured into the office, even after the Canadian inspectors had closed it up and the schemer had flown to parts unknown with his ill-gotten gains.

First Mortgage Real Estate Gold Bonds

Were Federal first mortgage bonds not entirely worthy of the preference they enjoy they would not be Michigan's most eagerly sought real estate security.

More an tter Wheat

For forty years farmers have proven that Royster Fertilizer grows more bushels of wheat per acre, makes plumper kernels, and more straw. Ask your County Agent, or the Royster Farm Service Department, what analysis to use on your land, and then insist upon Royster's to guarantee yourself the highest quality materials and manufacture. The name "Royster" on a bag is like "sterling" on silver.

Experiments in Indiana by Perdue University in ten counties resulted in an increase of 11.6 bushels of wheat per acre, showing a profit of nearly 200 per cent. on the money invested in fertilizer. Fertilizer differs like seed potatoes differ. Insist upon Royster's to get the utmost satisfaction. F. S. Royster Guano Company, Toledo, Ohio.

LIME THE LAND

SOLVAY brings better, greater crops the first harvest. SOLVAY makes sour soil sweet and releases all fertility the land contains to hasten growing crops to full maturity.

Most farm lands need lime, and none is better than Solvay Pulverized Limestone—high test, non-caustic, furnace dried, and ground fine to spread easily.

Every farmer should read the Solvay Booklet on Liming —sent FREE on request.

(Continued from August 18th)

In his eagerness Aldous was again trying to sit up when Joanne appeared in the doorway. With a little cry she darted to him, forced him gently back, and brushed old Donald off the edge of the bunk.

"Go out and watch the broth, Donald," she commanded firmly. Then she said to Aldous, stroking back his hair, "I forbade you to talk. John, dear, aren't you going to mind me?"

"Did Quade get me with the knife?" he asked.

"No, no."

"Am I shot?"

"No, dear."

"Any bones broken?"

"Donald says not."

"Then please give me my pipe, Joanne—and let me get up. Why do you want me to lie here when I'm strong like an ox, as Donald says?"

Joanne laughed happily.

"You are getting better every minute," she cried joyously. "But you were terribly beaten by the rocks, John. If you will wait until you have the broth I will let you sit up."

A few minutes later, when he had swallowed his broth, Joanne kept her promise. Only then did he realize that there was not a bone or bruise in his body that did not have its own particular ache. He grinned when Joanne and Donald bolstered him up with blankets at his back. But he was happy. Twilight was coming swiftly, and as Joanne gave the final pats and turns to the blankets and pillows, MacDonald was lighting half a dozen candles placed around the room.

"Any watch to-night, Donald?" asked Aldous.

"No, Johnny, there ain't no watch to-night," replied the old mountaineer.

He came and seated himself on a bench with Joanne. For half an hour after that Aldous listened to a recital of the strange things that had happened—how poor marksmanship had saved MacDonald on the mountainside, and how at last the duel had ended with the old hunter killing those who had come to slay him. When they came to speak to DeBar, Joanne leaned nearer to Aldous.

"It is wonderful what love will sometimes do," she spoke softly. "In the last few hours Marie has bared her soul to me, John. What she has been she has not tried to hide from me, nor even from the man she loves. She was one of Mortimer FitzHugh's tools. DeBar saw her and loved her, and she sold herself to him in exchange for the secret of the gold. When they came into the North the wonderful thing happened. She loved DeBar—not in the way of her kind, but as a woman in whom had been born a new heart and a new soul and a new joy. She defied FitzHugh; she told DeBar how she had tricked him.

"This morning FitzHugh attempted his old familiarity with her, and DeBar struck him down. The act gave them excuse for what they had planned to do. Before her eyes Marie thought they had killed the man she loved. She flung herself on his breast, and she said she could not feel his heart beat, and his blood flowed warm against her hands and face. Both she and DeBar had determined to warn us if they could. Only a few minutes before DeBar was stabbed he left off his rifle—an accident, he said. But it was not an accident. It was the shot Donald heard in the cavern. It saved us, John! And Marie, waiting her opportunity, fled to us in the plain. DeBar was not killed. He says my screams brought him back to life. He came out—and killed Quade with his knife. Then he fell at our feet. A few minutes later Donald came. DeBar is in another cabin. He is not fatally hurt, and Marie is happy."

She was stroking his hand when she finished. The curious rumbling came softly in MacDonald's beard and his eyes were bright with a whimsical humour.

"I pretty near bored a hole through poor Joe when I come up," he chuckled. "But you bet I hugged him when I found what he'd done, Johnny! Joe says their camp was just over the range from us that night FitzHugh looked us up, an' Joanne thought she'd been dreamin'. He didn't have any help, but his intention was to finish us alone—murder us asleep—when Joanne cried out. Joe says it was just a devil's freak that took 'im to the top of the mountain alone that night. He saw our fire an' came down to investigate."

A low voice was calling outside the door. It was Marie. As Joanne went to her a quick gleam came into old Donald's eyes. He looked behind him cautiously to see that she had disappeared, then he bent over Aldous, and whispered hoarsly:

"Johnny, I had a most cur'ous word with Rann—or FitzHugh—afore he died! He wasn't dead when I went to him. But he knew he was dyin'; an' Johnny, he was smilin' an' cool to the end. I wanted to ask 'im a question, Johnny. I was dead cur'ous to know why the grave were empty! But he asked for Joanne, an' I couldn't break in on his last breath. I brought her. The first thing he asked her was how the people took it when they found out he'd poisoned his father! When Joanne told him no one had ever thought he'd killed his father, FitzHugh sat leanin' against the saddles for a minit so white an' still I thought he 'ad died with his eyes open. Then it came out Johnny. He was smilin' as he told it. He killed his father with poison to get his money. Later he came to America. he didn't have time to tell us how he come to think they'd discovered his crime. He was dyin' as he talked. It came out slobberingly, Johnny. He thought they'd found 'im out. He changed his name an' sent out the report that Mortimer FitzHugh had died in the mount'ins. But Johnny, he died afore I could ask him about the grave!"

There was a final note of disappointment in old Donald's voice that was almost pathetic.

"It was such a cur'ous grave," he said. "An' the clothes were laid out so prim an' nice."

Aldous laid his hand on MacDonald's.

"It's easy, Mac," he said, and he wanted to laugh at the disappointment that was still in the other's face. "Don't you see? He never expected any one to dig into the grave. And he put the clothes and the watch and the ring in there to get rid of them. They might have revealed his identity. Why, Donald!"

Joanne was coming to them again. She laid a cool hand on his forehead and held up a warning finger to MacDonald.

"Hush!" she said gently. "Your head is very hot, dear, and there must be no more talking. You must lie down and sleep. Tell John good-night, Donald!"

Like a boy MacDonald did as she had told him, and disappeared through the cabin door. Joanne levelled the pillows and lowered John's head.

"I can't sleep, Joanne," he protested.

"I will sit here close at your side and stroke your face and hair," she said gently.

"And you will talk to me?"

"No, I must not talk. But, John——"

"Yes, dear."

"If you will promise to be very, very quiet, and let me be very quiet——"

"Yes."

"I will make you a pillow of my hair."

"I—will be quiet," he whispered.

She unbound her hair, and leaned over so that it fell in a flood on his pillow. With a sigh of contentment he buried his face in the rich, sweet masses of it. Gently, like the cooling breeze that had come to him in the hours of darkness, her hand caressed him. He closed his eyes; he drank in the intoxicating perfume of her tresses; and after a little he slept.

For many hours Joanne sat at his bedside, sleepless, and rejoicing.

When Aldous awoke it was dawn in the cabin. Joanne was gone. For a few minutes he continued to lie with his face toward the window. He knew that he had slept a long time, and that the day was breaking. Slowly he raised himself. The terrible ache in his body was gone; he was still lame, but no longer helpless. He drew himself cautiously to the edge of the bunk and sat there for a time, testing himself before he got up. He was delighted at the result of the experiments. He rose to his feet. His clothes were hanging against the wall, and he dressed himself. Then he opened the door and walked out into the morning, limping a little as he went. MacDonald was up. Joanne's tepee was close to the cabin. The two men greeted each other quietly, and they talked in low voices, but Joanne heard them, and a few minutes later she ran out with her hair streaming

about her and went straight into the arms of John Aldous.

This was the beginning of the three wonderful days that yet remained for Joanne and John Aldous in Donald MacDonald's little valley of gold and sunshine and blue skies. They were strange and beautiful days, filled with a great peace and a great happiness, and in them wonderful changes were at work. On the second day Joanne and Marie rode alone to the cavern where Jane lay, and when they returned in the golden sun of the afternoon they were leading their horses, and walking hand in hand. And when they came down to where DeBar and Aldous and Donald MacDonald were testing the richness of the black sand along the stream there was a light in Marie's eyes and a reliance in Joanne's face which told again that world-old story of a Mary Magdalene and the dawn of another Day. And now, Aldous thought, Marie had become beautiful; and Joanne laughed softly and happily that night while Marie and DeBar talked for a long time alone out under the stars, and came back at last hand in hand, like two children. Before they went to bed Marie whispered something to Joanne, and a little later Joanne whispered it to Aldous.

"They want to know if they can be married with us, John," she said. "That is, if you haven't grown tired of trying to marry me, dear," she added with a happy laugh. "Have you?"

His answer satisfied her. And when she told a small part of it to Marie, the other woman's dark eyes grew as soft as the night, and she whispered the words to Joe.

The third and last day was the most beautiful of all. Joe's knife wound was not bad. He had suffered most from a blow on the head. Both he and Aldous were in condition to travel, and plans were made to begin the homeward journey on the fourth morning. MacDonald had unearthed another dozen sacks of the hidden gold, and he explained to Aldous what must be done to secure legal possession of the little valley. His manner of doing this was unnatural and strained. His words came haltingly. There was unhappiness in his eyes. It was in his voice. It was in the odd droop of his shoulders. And finally, when they were alone, he said to Aldous, with almost a sob in his voice:

"Johnny—Johnny, if on'y the gold were not here!"

He turned his eyes to the mountain, and Aldous took one of his big gnarled hands in both his own.

"Say it, Mac," he said gently. "I guess I know what it is."

"It ain't fair to you, Johnny," said old Donald, still with his eyes on the mountains. "It isn't fair to you. But when you take out the claims down there it'll start a rush. You know what it means, Johnny. There'll be a thousand men up here; an' mebby you can't understand—but there's the cavern an' Jane an' the little cabin here; an' it seems like desecratin' her."

His voice choked, and as Aldous gripped the big hand harder in his own he laughed.

"It would Mac," he said. "I've been watching you while we made the plans. These cabins and the gold have been here for more than forty years without discovery, Donald—and they won't be discovered again so long as Joe DeBar and John Aldous and Donald MacDonald have a word to say about it. We'll take no claims, Mac. The valley isn't ours. It's Jane's valley and yours!"

Joanne, coming up just then, wondered what the two men had been saying that they stood as they did, with hands clasped. Aldous told her. And then old Donald confessed to them what was in his mind, and what he had kept from them. At last he had found his home, and he was not going to leave it again. He was going to stay with Jane. He was going to bring her from the cavern and bury her near the cabin, and he pointed out the spot, covered with wild hyacinths and asters, where she used to sit on the edge of the stream and watch him while he worked for gold. And they could return each year and dig for gold, and he would dig for gold while they were away, and they could have it all. All that he wanted was enough to eat, and Jane, and the little valley. And Joanne turned from him as he talked, her face streaming with tears, and in John's throat was a great lump, and he looked away from MacDonald to the mountains.

So it came to pass that on the fourth morning, when they went into the south, they stopped on the last knoll that shut out the little valley from the larger valley, and looked back. And Donald MacDonald stood alone in front of the cabin waving them good-bye.

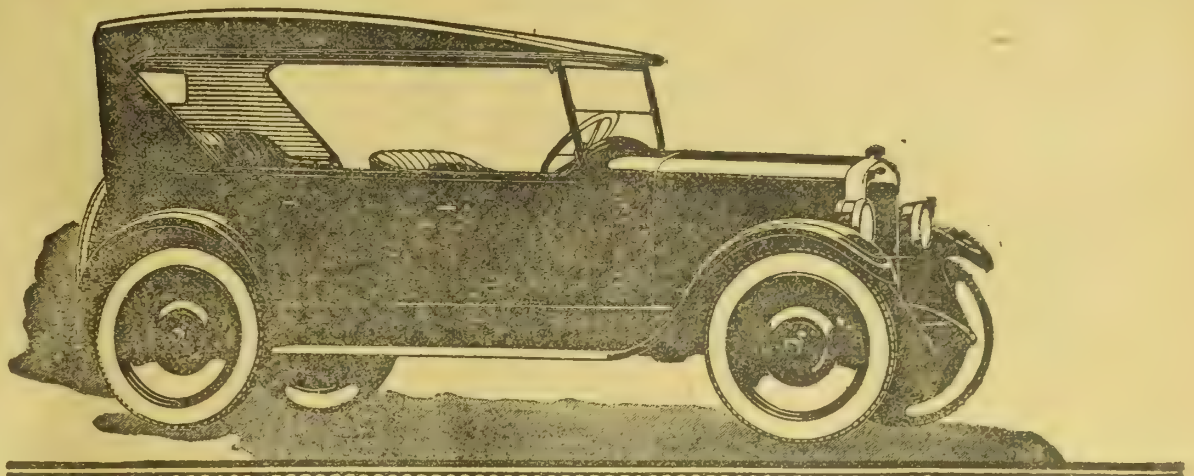
THE END.

OUR BOOK REVIEW

(Books reviewed under this heading may be secured through The Michigan Business Farmer, and will be promptly shipped by parcel post on receipt of publisher's price stated.)

"Heroes of the Farthest North and Farthest South" by J. Kennedy Maclean. The romance of exploration in the ice-capped extremities of our globe has always held the imagination.

Mr. Maclean's story is not merely a chronicle of names and dates, but a story replete with heroism, adventure, and thrill. ($1.75.) Thomas Crowell Co.



Announcing the 1924
Oakland "6"
Brand New and True Blue

Embodying Exclusive Features of Engineering Design and Superior Coachwork Never before Associated with Cars of Moderate Price

This True Blue Oakland was deliberately planned to be the most perfectly balanced, the most accurately engineered and the finest built light-six in the world.

Two years have been devoted to its design, manufacture and test. Two years—plus the wealth of Oakland experience gained through many other years of exclusive light-six manufacture and the limitless resources of the General Motors Corporation in money, machinery, materials and men.

From axle to axle—it's new! It embodies features of mechanical superiority—of beauty and comfort and performance—heretofore unheard of in cars of its price! Every single part—from the new engine to the new bodies—was designed and built to fit and function in perfect harmony with every other part.

And because it has been so carefully designed, so soundly built and so thoroughly tested—Oakland places upon it, without hesitation, the same written 15,000 mile engine performance guarantee and the same Mileage-Basis gauge of value that have proved the quality and the value and the excellence of Oakland cars for years!

Four-Wheel Brakes—Brand New Engine—New Bodies—Centralized Controls—Disc Steel Wheels

The finest light-six is now also the safest! Four-wheel brakes are on the True Blue Oakland! But four-wheel brakes—remarkable as they are on a car of Oakland's price—are only one of the many improvements and refinements built into this new and true blue car!

It has a brand new engine—smoother, quieter and more powerful than even its highly successful predecessor, the Six-44.

Its beautiful new blue bodies—built by Fisher—are wider, deeper, and more luxuriously upholstered. The top is permanent, accommodating a distinctly new type of door-opening side curtains comparable in snugness and utility to the door of a closed car.

A satin-wax finish stamps the open models with an individuality never before attained in cars so moderately priced.

Instruments are grouped on a single glass-covered panel, indirectly lighted. Controls are centralized on the steering wheel. Disc steel wheels are standard equipment, at no added cost.

See this new Oakland—see it at once! Come with a critical mind—because the more exacting you are, the more quickly will you realize that no other light-six in all the world approaches it in dollar-for-dollar merit.

Roadster Touring Car Sport Roadster Sport Touring Business Coupe 4-Passenger Coupe Sedan

OAKLAND MOTOR CAR COMPANY, PONTIAC, MICHIGAN
Division of Oakland General Motors

A Fleet of "True Blue Travelers"
—of which the 1924 Oaklands are exact counterparts—is engaged in a nation-wide demonstration! With thousands of miles of test service already on their speedometers—they are out to demonstrate, at first hand, the high quality of Oakland construction, and the remarkably efficient performance buyers may expect from their True Blue Oaklands.

The Children's Hour

Address all letters to the Children's Hour as follows:

UNCLE NED,
The Business Farmer,
Mt. Clemens, Mich.

Dear Uncle Ned:—I would like to join your merry circle. I like to read the Children's Hour very much. We live on the farm of 80 acres. We have three horses, thirteen pigs, thirty-eight head of cattle, many chickens and two dogs. Last year we had two kittens and they burned by the fire. Someone set fire to the barn and outer buildings. My dad had just bought a new harness and saddle for me to use with my pet pony which is called "Chief". I often ride on him. We picked fifty quarts of huckleberries last Sunday. Do you like them? Did you ever go to hunt for a deer? I will go this fall and do hope I will have good luck and get a deer. I lived in Frederick, Maryland and go to school there, but spend my summer in Michigan with my parents. I have a little sister and I am pals with mother and dad. I like Michigan very much but have to travel a great deal about 42 states as my parents are show folks and it means getting about. I am 14 years old the 12th of February. Have I a twin? Will some one of my cousins write to me? I will answer all their letters. Wish you would have a drawing contest for I would like to enter it. Will close for this time. Your nephew—John Davis, R. 1, Rose City, Michigan.

—Write and tell us about some of your travels, John. I am interested.

Dear Uncle Ned:—I have never written to you before. My father has taken the M. B. F. for a number of years and every summer when I come home from school I read them. We just came up here to upper Michigan about a year ago and as I have been home during my vacation only I have became acquainted with a few people as yet. Our home is at a summer resort on one of the most beautiful lakes in upper Michigan. There are three resorts on White Fish Lake. We live near another lake also which is much larger. It is Manistique Lake. This resort is the most beautiful place in the summer time but when winter comes the teams drive over the tops of the fence posts and mail boxes in the country, and in the forests it is even worse. I have spent one winter here and I have seen enough snow to last me the rest of my life. Altho the winters are terrible cold and there is so much snow, the beautiful summer with the picnics, fishing, swimming, boating and such sports quite overbalance the unpleasantness of winter. I am home only twice during the winter, the rest of my time until summer vacation is spent at a town about fifty miles away. I will graduate from Manistique High School next June. Manistique, as you probably know is on the north shore of Lake Michigan. I am between sixteen and twenty years of age. My hair is black and I wear it bobbed. My complexion is dark. I am five feet tall. I would like very much to hear from young people of my own age. My parents and two brothers are leaving soon for a time and I will be left alone with my little brother and younger sister to care for the home until my parents return. I shall be very lonesome indeed unless someone will spare a few minutes of their time now and then and write to me. I will close with love to Uncle Ned and all the cousins.—Pauline Painter, Curtis, Michigan.

—So you do not like the winters where you live but think that the summers more than make up for the unpleasantness of winter. Have you ever noticed that some people are like that? When you first become acquainted with them there are so many things about them that you dislike but after you know them for a while you discover they have so many good points that you forget your dislike for them. I have often had this experience, haven't you?

Dear Uncle Ned:—Altho I do not live on a farm I am interested in the farms. I used to live on a farm. This year my mother and I went to a cherry orchard to pick cherries. They had horses and one day I drove home and unhitched it. That is quite a lot for a girl living in town. I thought that was quite a treat. Of course a girl on a farm would think nothing of it, but girls in town like animals also. For pets I have a dog, his name is Fip. He will play hide-and-go-seek with my brother and I. I also have a cat but I guess she is going to die for she is sick. I think the answer to the riddle one of the cousins wrote is "kitten". The riddle was was what walks like a cat, looks like a cat and acts like a cat? They said they would write a letter to the one guessing right. I hope I receive the letter. I think the answer to the riddle Doris Scott wrote is "A well". I hope I receive the card. I think the answer to Etta Bannister's riddles are: 1st. A pocket may be empty and yet have something in it when it has a hole in it. 2nd. Add the letter S to nine equals six (SIX). Well I hope to see my letter in print. Here is a hint to the girls on the farm. Invite a friend from town to come to your farm for a few days and show them the things on the farm. I'm sure they would enjoy it. Well as my letter is getting long I will close with a riddle. The one who guesses the answer right will receive a letter from me. What has holes in it and yet holds water? My age is between ten and fifteen. The person who guesses it correctly will also receive a letter. Well I hope my letter is not too long to be printed. Love to all. —Blanche Ward, Mesick, Michigan.

—The girls and boys living in the city who do not enjoy going to the country are few and far between. Some of them say that they would not care to live in tthe country but we all notice they like to visit some friend or relative who lives on a farm, and my, what an appetite they get after they have been out in the open air for a few days.

Dear Uncle Ned:—Tap, Tap, Tap! May I come in? I won't stay long, not long enough to take my hat off. I have been over to the park today to see the animals. There were two wild cats there. Imagine meeting one of those savage beasts out in the jungles. I have been told they will run from a person rather than fight, but it hardly seems possible. The state has put in a park at the Cheboygan lake near here. Resorters go there during the summer to fish and hunt, also for boat riding and bathing. I am a sophomore in high school. I live on the farm during the summer vacation. That time always comes with a welcome. Not that I dislike school, but because I love to be in the country. I have often wondered who first oorganized the Children's Hour and who some of the first members were. If there are any left will you please write to me? Your letters will be appreciated. There I saw Uncle Ned scowl because my letter is getting long. Will some and everyone write to: —Lela Mercer, Onaway, Michigan.

—Members of the Children's Hour are boosters, not knockers, so do not stop to knock but just walk right in and make yourself to home. Drop in again some day Lela, when you can take your hat off and stay a little while.

Dear Uncle Ned:—Why hello, hello! My but is seems good to be back with you all again. I suppose you are rather surprised to hear from me again, aren't you? Well I was giving all others a chance to write. Say our school starts the fourth of September and we have nine and one-half months of school this year instead of only nine months. We are going to have a new school building here, but I do not think there will be any school in it this year as they only started working on it last Tuesday or Wednesday. We will have school in our old building during this school term. We have been having some quite cold weather, but it has been some warmer today. I only wish this weather would stay like this all winter. Say Uncle and Cousins, what what do you all think about girls wearing knickers and having bobbed hair? Well, I think knickers are all right in their places, like going hiking or camping, but when it comes to wearing them on the streets I don't like them. Bobbed hair I think is perfectly alright. Say now speak up, one and all and give your opinion of them, don't be afraid of hurting any ones feelings. Well, I guess I will give a little idea of what Sidnaw is or looks like.

Well, it is a small railroad junction where both the Duluth, South Shore and Atlantic, also the Chicago, Milwaukee, and St. Paul railroads cross each other. It is about two hundred in population. There is one hotel, one lunch room and ice cream parlor, (an ideal hotel and restaurant), one pool room, two stores, also Standard Oil station, also a handle factory. Mr. Henry Ford has camps about three miles south of Sidnaw, that run during winters, but close during the summers, although he keeps men working during the summer but they don't stay at the camps. Mr. Ford has had five special apartments made for him and his friends to stay when they come up to visit. Mr. Ford, Mr. Edison and Mr. Firestone and their wives were up here last week and stayed a day or two. This makes about the third time Mr. Ford was up here. Say, but it surely is nice out there. I guess my letter is getting rather long, and as I am lonesome, won't the girls and boys, one and all, write to me as letters sure are a lot of company. Hoping you do so, I remain as I always did and always will, Your niece.—"Peggy" or Alma Powell, Sidnaw, Michigan.

—Well "Peggy", it was fine of you to tell us about Mr. Ford's camps. I quite agree with you regarding knickers and bobbed hair. Come again.

My Dear Uncle Ned:—Well here I am back again. My sister and husband from Utica, New York, were up here a week and then they took me back with them. We left here July 7th. It was about 6:30 a. m. It certainly was a lovely day for driving. You know how nice it is in the morning about six. So cool and it had rained in some places the night before, as the roads were not a bit dusty. We arrived in Detroit about a quarter to nine in the evening. We were quite tired of riding all day so just as soon as we could we went to bed. The next morning we got up early and got things ready to start for the long trip to Utica. Louis, my brother-in-law's brother took us in his car to the boat, as my brother-in-law took his car to the boat about three o'clock. While we went on about five p. m. We had a lovely stateroom on the fourth deck. We walked around on the boat until seven and then we ate our supper. We bought some cards on the boat. I sent some to my parents, and some to my nieces and nephews, and I sent one to you Uncle. Did you get it? Hope you did. There was nice music on the boat which I enjoyed very much as there is nothing I like better than music. We walked around on the boat that evening for a long time. It was about nine when we retired. We arrived in Buffalo about a quarter to ten the next morning. We certainly enjoyed the trip from Buffalo to Utica. It was just a beautiful day. The scenery in New York is something wonderful. We arrived in Utica about nine thirty p. m. We spent a few days in Utica visiting friends and my brother-in-law's parents. We started back on Thursday the 12th, and stayed over night in Batavia at the Richmond hotel. The next morning we started for Buffalo which we reached at 12 that noon. From there we went to Niagara Falls. Have you ever been there? We were there about a half hour, took pictures and had a nice time. We then went back to Buffalo and got on the boat. We had a lovely trip coming back. We arrived in Detroit the next morning glad to be back in dear old Michigan again. I think New York State is very nice but I think Michigan is the best of all. Don't you Uncle? I spent three weeks with my sister and her husband and came back with my brother and his wife the second of August. I had such a wonderful trip and enjoyed it real well. Now after such a nice vacation I'm ready to start to school and work. I will be in the ninth grade this year. Well its getting pretty late so guess I will close. Love to Uncle and all the cousins. Your affectionate niece,—Eleanor D. L. Stovel, Hubbards Lake, Michigan.

P. S.—Please excuse me for taking up so much space. I won't write so a long letter the next time.

—My, what an interesting letter. I am sure all of the cousins will forgive you for taking so much space. Yes, I received your card and was pleased to get it. Thank you. I too, have seen the Falls and think they are beautiful.

Dear Uncle Ned:—I will write to you once more. I wrote before but it is quite a while ago since I have, so I thought I would write again. We still take the M. B. F. and enjoy it very much. I thought of something that I would like to do, so I'm going to tell you about it, and maybe it can be done if this letter doesn't visit the waste paper basket. Will all of the Arnold's write to me? If they can, also if they are my age or older. I am 14 years old, my birthday is the twenty-fifth day of September. Have I a twin? I had a twin before, her name is Mildred Dommer. I passed the 8th grade country examinations at the Mt. Clemens High School last May. I saw the Michigan Business Farmer building nearly straight across from the High School. I could have called on you Uncle Ned, if I would have thought of it, but I suppose I had different things on my mind when I left school. I got out early enough to go. Am sorry I never thought of it. I live on the East Jefferson road and we have a good road all the way to Mt. Clemens, also to Detroit. We have a loud speaker for our radio, the tube set and crystal set both work very loud on it. I am glad now because every one can enjoy it. I wish you all could hear it. We can hear from Kentucky, New York, and all different places far away from here. There is an awful lot of static in the air. My brother says he will be able to hear better when winter comes. My brother made the radio all by himself, but of course he bought the parts. It looks like a chinese puzzle to me. Who can guess this riddle? "I have a wife, her name is Elizabeth, she has two kids, what have I? The one who guesses it will receive a letter from me. I hope all of the Arnold's will read my request, if they do I will be very much pleased. With love, from your niece,—Rose M. Arnold, R4, Box 474, Mt. Clemens, Michigan.

—Your suggestion is very good and I hope you let me know how many letters you receive from the "Arnold family." I do not wonder that you enjoy the radio. I do, and I believe every one else does if they have ever listend to one. I have a tube set but no loud speaker. I use the phonograph for that purpose and it works very satisfactorily.

Dear Uncle Ned:—I have been much interested for sometime in your Children's page and I thought my letter might interest some other boy or girl. We live on a farm of 120 acres on the shore of Lake Michigan. It is a beautiful place in the summer but in winter it is very cold. I would like to know how many cousins have Indian playmates? Our school numbers 30 pupils and two-thirds of them are Indians and I like them very much. We have sheep and shorthorn cattle. We have four horses. I have four pet lambs. I am twelve years of age and in the eighth grade at school and third grade in music. I think the answer to Doris Margaret Scotts riddle is "A well". Here is a riddle: Why is a newspaper like a lazy dog? I hope you will print this. Your niece—Irene Miller, R. 1, Box 5, Good Hart, Mich.

Dear Uncle Ned:—I have never written to you before but I have always been very much interested in the boys' and girls' department. I live three miles from the school which I attended. I say attended because I graduated this June. There were 56 in my class; mostly girls. When departing from the school we left a trophy case in remembrance of the class of '23. I have light hair and light blue eyes, and I have neither brother nor sister so you see I have my own way as far as mother will let me. Will some of the older cousins please write to me? Well Uncle Ned I must say good-bye.—Helen H. Bland, R6, Holland, Michigan.

Teaching Your Dog To Carry

CARRYING is one of the most popular accomplishments of every trained dog. It is useful too. Canine messengers were of great value during the war, and every year many lives are saved in remote places by dogs that have been taught by their owners to carry letters, etc.

Puppies learn more readily than mature dogs. For that reason begin training early. Begin when he is teething; his gums are sore, and he gets considerable relief from holding things in his mouth. At this period of life he will often "mouth" hard objects, for no other purpose than to help nature develop his teeth. It is instinct. Certainly dogs will learn carrying at any age, but it is far easier to teach them when they are teething.

A glove is the very best thing to begin with. Drawing it through his mouth makes his gums feel better, and secondly, the scent of his master one the glove makes it more interesting.

Movement interests animals of all kinds more than anything else. Even an object unattractive in itself will secure a dog's notice, if thrown a little distance, with a gesture for him to get it. Sometimes a pretense to race him for the object will awaken the desired response; and it is very natural for him, when he reaches the object, to grab it up in his mouth.

Talk to the dog very kindly, and success will be achieved much sooner, while he is learning. When you begin to use various articles, he must understand your caution of "Gently, boy," etc. I read of a dog's bringing a freshly laundered collar to his master without soiling it. It had fallen from a desk into the waste basket, and this observant dog knew that it did not belong there, and that it was something that he should handle with care.

The way to train a dog to go after things alone, or to do any trick without your supervision, is to go through the performance with him exactly many, many times always using the same words to start the things. In this way, with patience on the part of the trainer, a smart dog may be taught to take a basket and go alone for some article. Generally, too, he will know whether he has been given the usual thing. If you have the merchant instructed to put what you want into the basket, the dog, if well taught, will do his part and bring the basket back to you.

You should teach the carrier dog not to give up his package or message to any stranger. Have some person with whom your pet is not acquainted start to take the object from the dog's mouth, then change his mind. Let this be repeated a few times; then come up yourself, take the object (as though you valued it) and praise the dog. This method was first recommended by Bruette, of the greatest "dog-ologists" of this country. A dog, like a person, dislikes being fooled, and clings to the person who seems to appreciate his efforts.

KETCHEM SPOKE AT MONROE FARM BUREAU-GRANGE PICNIC

THE Monroe County Farm Bureau -Grange picnic held at the Raisinville Grange hall, August 23, was a real success. With games and sports for the youngsters, a baseball game and quoit pitching for the men, the day was well spent. The ball game between Ida and Frenchtown Grange was won by the former by a large score. The old folks had to take a back seat when the quoit pitching contest was won by two youngsters both under fourteen years of age. This contest was won by Tracy Knapp of Raisinville and Verlin Barr of Raisinville, each receiving a pair of steel quoits as a prize. R. Halburstead and A. Halburstead, both of Monroe, won second place in the contest. The attendance was around a thousand.

By far the most important part of the program was the address by Hon. J. C. Ketchem, Congressman from the fourth Mich. District and former Master of the Michigan State Grange, also a member of the Farm Bloc in Congress.

Mr. Ketchem soon warmed up to his subject so that it was necessary for him to remove his coat although the weather seemed a little cold to most of the audience. He minced no words whatever but spoke direct from the shoulder. He told his hearers that he did not believe in class legislation for the farmer or anyone else. He does believe, however in the legislation already enacted to put the farmer on the same plane with other lines of business. It is a deplorable fact that agriculture has fallen to its present condition. The American farmer must join hands with his neighbors in the cooperative movement in marketing or descend to the state of peasantry as we now have it in the older countries of Europe. Agriculture produces annually $77,000,000,000 worth of farm products and employs 27 per cent of our total population. Should the agricultural industry descend to the state of peasantry it would be the greatest calamity that this nation has ever been called on to face.

Another important point brought out by Mr. Ketchem in regard to our farms is the subject of home ownership. With home ownership goes the stability that is necessary to maintain a democratic government such as we now have. Statistics show that only 10 per cent of the population of New York city own their own homes. 40 per cent of the total population including both city and rural districts own their own homes which shows that the percentage of home ownership runs very high in the country. The number of people in the country if negroes and indians are included, who came from native born parentage is nearly 90 per cent while the number of native born white of native parentage is 66 per cent. These facts should be a source of comfort to any red blooded American as it is the home owners that are the ones upon whom any nation must depend in time of strife. This one fact alone makes it well worth what it will cost the nation to put the farmer back on his feet regardless of what the cost may be.

In viewing the economic condition in which the farmer finds himself, pig iron and corn were two comodities chosen to represent industry and agriculture. In 1914 it took 18 bu. of corn to buy one ton of pig iron. During the war period 27 were required, during deflation period 47 bu. and today 29 bu. are required to buy the same amount of iron. Summing up all these facts we find that the farmers dollar compared to other industries, is only worth 71c. The farmers economic condition will not improve until his dollar is as valuable as any other.

In summing up the whole situation it was pointed out that co-operative marketing properly managed is the solution to the whole trouble. Farmers must learn that it is foolhardiness to produce more than the market wants and then dump the whole thing within a few days after harvest. Orderly merchandising throughout the whole season and producing only what the market will absorb is the solution to the whole trouble.—F. H. Dexter, Sec'y-Treas., Monroe County Farm Bureau.

"We Serve Michigan"

Geographical isolation makes the Railroads of Michigan a transportation system like that of no other state. Most of our traffic either originates or ends in Michigan.

Bridge the Great Lakes with car-ferries and tunnel under the mighty connecting rivers, though we may, such accomplishments merely better our service to you; we are Michigan Railroads more than transcontinental traffic lines. Our train schedules are for Michigan, not for New York and San Francisco.

To a degree greater than any other state, Michigan's welfare, and the welfare of her Railroads, are therefore one and inseparable. *You* cannot fall back on trans-continental lines for emergency help; *we* must always rely on you for our chief support.

We can prosper only together.

Because of this mutual dependence, the twenty-four Railroads operating in Michigan have formed this Association with the purpose of strengthening the relations of the Railroads with the People of the State, by providing you with a clearing house for the exchange of ideas, relative to the transportation problems so vital to the prosperity of our Peninsular State.

We invite your suggestions toward bringing about a better understanding and closer cooperation between the Public and the Railroads. Communicate with this Association.

The Farm Home
A Department for the Women

Edited by MRS. ANNIE TAYLOR

DEAR FOLKS—Now is the time to plan your fall sewing and all the new patterns are in. Give your dress a little tho't this fall and it will be money saved to have picked the right style suited to your type.

Remember Hallowe'en is next month and what could be nicer than to plan a party for this fun loving night. Any questions upon this or any other home subject I will gladly answer. Do write me, I want to help you.

Your Friend,
Mrs Annie Taylor

Address letters: Mrs. Annie Taylor, care The Business Farmer, Mt. Clemens, Michigan.

SEPTEMBER

The goldenrod is yellow,
  The corn is turning brown,
The trees in apple orchards
  With fruit are bending down;

The gentian's bluest fringes
  Are curling in the sun;
In dusty pods the milkweed
  Its hidden silk has spun;

The sedges flaunt their harvest
  In every meadow nook,
And asters by the brookside
  Make asters in the brook;

From dewy lanes at morning
  The grapes' sweet odor rise;
At noon the roads all flutter
  With yellow butterflies.

By all these lovely tokens
  September days are here,
With summer's best of weather
  And autumn's best of cheer.
—H. H.

SEEN AT THE STATE FAIR—

WHERE shall I begin? So many lovely and wonderful things for us all. The many beautiful helpful departments were all there. The woman's building, always a great attraction to me had so many wonderful hand made articles that would fit into the best or the most humble of homes. Laces made by hand. I marveled at it all. Embroidery work of the most difficult kind, they were all there; hanging row on row, vieing for first place on the premium list.

The baby exhibit, held wonders for our future race and it seemed to me the crowd never tired of looking at the measuring of so much beauty and health as was displayed in that big glass room with a competent doctor and nurse in charge.

From there I strolled over to the Art building and those of us who were interested in making and painting pretty articles for our homes, could find out a lot of new ideas and ways to make them for the attendants there were pleasant instructors, who wanted to help and please.

The main building had a great many display rooms showing the wrong and right way of living and fixing up the home to make it easier for our work. I saw a new kitchen stove demonstrated for the farm home that looked just like our city gas stoves and had powerful heating qualities. It was an oil burner.

The sewing machine department had a demonstrator showing how to hemstitch with a very simple attachment; also how to darn on the sewing machine. I brought one of these. They seemed to do the work nicely and fast.

For those of us who have electricity the building given over to display electric appliances, contained appliances too numerous to mention. Everything for the home was there.

I am sure the school work was a revelation to some of us. It was to me. In the Educational building the "Hot Lunch" idea was demonstrated; also the cold-pack method done by the Girls Canning Clubs.

The only thing I was disappointed in was the poor way the "Household and Kitchen Food Products" were displayed. I had to climb up on the case in order to see the display of baked goods. Maybe next year we might have at least a lower shelf. Next year I want to see more of the names of my readers on the cards telling me they are interested in their own State Fair.

NEXT YEAR GARDEN

NOW is the time to think and plan and order our fall garden. Maybe some of my readers will feel I have said too much about gardening, but in this new country of ours, we need a little coaxing to realize that the beautiful gives back to us so much more than we put into it. The work is well spent for the results we get, and I feel sure that looking at a bright clump or row of flowers will create a certain amount of happiness for the beauty that it gives out and the lesson we learn bringing a wonderful bed of flowers forth, even if it is only wild flowers.

For those who wish lovely Crocuses, Daffodils, Tulips and Hyacinths, order your fall bulbs now, if you want to be sure of the best stock. Early orders are never unwise. You can have plenty of time to prepare for the stock, and are doubly sure of getting what you want. I am ordering my bulbs today and I know I receive more pleasure from my flowers than the amount of work I put on them. Read our personal in the last issue and know what one woman did to make extra money. Fall is the time for planting these flowers.

A KIND DEED EACH DAY

I WAS talking to a neighbor the other day and he was telling me how his mother taught them, a family of twelve, to do a kind deed each day. I am wondering how many of us try and live up to this golden rule. This neighbor of mine has tried to live up to the rule until, he says that if the kind deed has not been done before twelve o'clock he gets nervous and restless. It is a wonderful thot that has a hold of human beings to such an extent that we become uncomfortable until the deed is done. I must confess I did not try and live up to this rule, but I am now, and I just feel that I must pass this same thot along to you my readers.

USING OLD FLOUR SACKS FOR CLOTHING—

AN interesting phase of the flour milling industry of certain parts of China is the manufacture and various uses of the flour sacks. The cloth for the bags is made and cut in the correct sizes at the mill and the pieces are then sent out to the homes of the country people of the district who sew them together. The finished bags are then stamped with a dye that is easily washed out. The bags are given as a commission to the dealers, who wash them out and sell them to the town people for use as clothing. The dealers rarely sell the bags with the flour as only very small amounts of flour are purchased at one time by the Chinese.

Mothers Problems

ASKING PERMISSION

"HEY, Bob, come on down in the swamp and catch frogs!"

"Sure! Just wait till I ask Mother."

"Hmph! Do you have to ask your mother before you can do anything? I never ask mine. If I'm not home when Mom wants me she knows I've gone somewhere."

"I know, but Mother says she always likes to know where I am, and then she doesn't worry. She always lets me go wherever I ask, and it only takes me a minute to hunt her up, so I don't mind."

"Probably not, but—say, I'll beat you to the old oak tree!"

* * *

Which boy is your son like—Bob or his companion? Does he ask your permission to go out of sight of home, or do you fret and worry and wonder when he is too long away?

Asking permission means more than begging mother's consent: it means informing her of the proposed jaunt or visit. It means quieting any needless alarms that might arise should the time away be unusually long. Boys are thoughtless. they cause a great deal of unnecessary worry merely because they don't realize how easy it is for mothers to worry. Perhaps you cannot cure the thoughtlessness, but you can make it second nature for them to run in and tell of their proposed plans.

Begin when the children are very little. Never allow them to run over to a neighbor's without first asking your permission. Impress them with the fact that you only want to know where they are in case you should want them immediately. Make it a habit with them to ask your permission to leave the home-yard. Then even though they are old enough to look out for themselves, even though they are not tied so tightly to Mother's apron-strings, they will let you know where they are going and often relieve you of many anxious moments.

Asking Mother's permission to go somewhere is not babyish; it merely shows that a boy has been taught how to be thoughtful of his mother.

WHEN SCHOOL IS OUT

IT is as natural for children to run and play and laugh and shout as it is for kittens to frolic. If strong and healthy they are full of good spirits, and good spirits demand an outlet. For the little child who has never known the restraint of school, who has been able to spend hours and hours in play and exercise, the confinement of the school-room is a severe strain. If he is at first shy, there will be no let-down of account, during recess periods. From the time he leaves home in the morning till he returns at night, every nerve and every muscle is held in check. THAT is why, when school is out, many a little beginner comes home cross and disagreeable and as full of noise as a machine-shop.

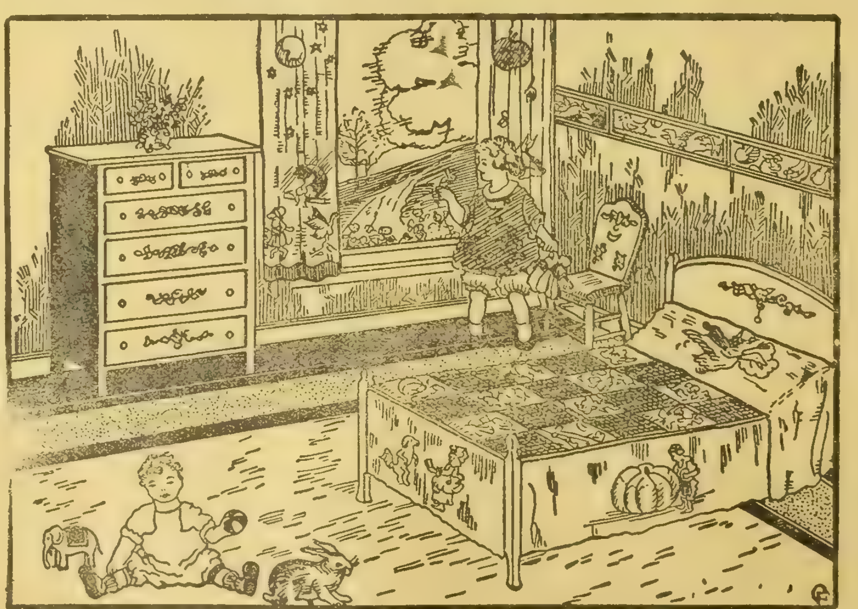
It is trying on the mothers who have to hear the noise and quiet and soothe the apparently out-of-sorts child, but when school is out is one of the many times when patience must be exercised continually. Then must a mother strive to get the child back into his normal state of mind. Sometimes a glass of milk and slice of bread and butter will "sweeten him up" like magic, for, the chances are, not being used to eating lunch with other children, he will slight the dinner he carries, and his stomach will be craving food, and when there is hunger, there is seldom good nature.

If it is found that he will not play nicely with his younger brothers and sisters, separate him from them for a time. In his heart, he thinks they are the finest children anywhere, but at school he has been a "beginner," looked down upon by the older children, and it pleases him to treat the "little ones" the same way. He'll soon be glad to play with them on any terms, if only he can play with them!

As for his voice, stuff your ears with cotton! The young animal in the civilized child must assert itself. Let him "holler like a wild Indian" till his pent-up energy is exhausted.

Don't bewail that school is teaching him all sorts of bad habits. It is merely holding a wild young thing in check, and at home he is "letting off steam."

Attractive Quilt Design for Children's Room



What little boy or girl would not be delighted to be tucked to bed under a nursery quilt like this, to dream about Boy Blue, Little Bo Peep, and the rest of the Nursery Folk so dear to the heart of every child? The gool old nursery jingles can be told in other ways than by words, and what better place to tell a needle-and-thread story than on a little boy's or girl's very own bed set?

These quilt blocks can be furnished for outline embroidery, on good quality linen finished white muslin in three designs. Nursery Rhyme Series, 12 assorted designs. The blocks are nine inches square and ten stamped blocks, combined with ten plain blocks of pink or blue sateen, makes a 36x45 Baby Quilt or Crib Blanket. Ten blocks 50c; 30 blocks (Sufficient for both crib blanket and full-sized quilt), $1.00. Address: The Business Farmer, Pattern Department Mt. Clemens, Michigan.

Can Any Reader Answer Our Subscriber With More Information?—I enjoy the Home Department in M. B. F. very much. I like the cooking recipes. I am asking about a little information about flowering bulbs. This spring I planted twenty-eight healthy looking gladiola bulbs and five of them rotted in the ground. The large bulbs I planted about six inches deep and the smaller ones about four. I prepared the soil by digging holes and putting in two pails of good rich dirt from near the manure pile. I have watered them as often as they needed it, but some did not grow as well as I thought they should and some rotted in the ground. I planted them the last week in April.

I am going to plant some crocus, tulip and hyacinth bulbs this fall and would like to know what kind of soil is best suited for them, how far apart they should be, and all about the care of them, also how to store Canna bulbs for winter. Will try to return the favor Mrs. Wm. Hoffman.

—The best soil for the Gladiolus is a medium loam. It appreciates good fertility, but seems sensitive to any manure in contact with the bulbs. Manure is good if applied in the autumn previous to planting. The best fertilizer for general use is one that would be called a potato fertilizer, rich in potash, and phosphoric acid, both chemicals being useful in the proper formation of good bulbs. Bonemeal is also extensively used. Liquid manure, when the buds are

forming seem beneficial. Gladioli are not hardy and require a little protection against frost in our northern states. Planting should be after all danger of frost is past. A well planned succession in planting is advisable. The depth to plant is determined by the character of the soil. In the lightest soil seven or eight inches is not too deep, but in a heavy clay four or five inches would be a sufficient depth. There are two reasons why bulbs should be planted as deep as the character of the soil will permit. First, the Gladiolus is moisture-loving, and in deep planting its roots are in the cooler moisture soil; Second the soil acts as a support, no other support for the stem being necessary ordinarily. In the fall before frost remove the bulbs, leave the stems on. Store in an airy place to dry thoroughly. After several weeks the stock can be cleaned by removing stems and the old bulb, leaving new stock for next year. You should get from one to six new bulbs off of old one each year.

Crocus—Must be planted in an open place where they can get the sun in order to have them flower. New bulbs are produced above the old ones each year and the plant becomes higher and higher in the soil. They should thus be transplanted every third year. A layer of sand to place the bulb on insures good drainage and keeps the bulb from rotting. They can be grown in ground near trees and should be planted in clumps to be attractive. Plant about four inches in ground.

Hyacinth.—Treat the same as Crocus. They, of all the bulbs, need protection in winter. Plant six inches deep. Tulips, like the Hyacinth should be planted six inches or more in rich sandy loam and a good plan is to put them in rows about four inches apart. Plant in early October. or before frost.

Cannas—Digging and Storing.—When the tops are killed by the frost, the roots can be dug in the morning, and if the day is sunny, they can be left to dry. They must be stored where they can be kept warm, for if they are cold and damp, they decay. They may either be buried in sand or soil, although sand is preferable. If a green house is available he roots may be stored under the benches. It is really unnecessary to wait until the tops die down, because the beds may be wanted for fall bulb planting, in which case let the Cannas grow as long as possible and then dig them.

"To My Son"—Can you tell me where I can obtain a copy of the motto that has appealed to so many mothers the past few years, "To My Son" by Margaret Johnston Grafflin? For a time it was on sale at stores where these mottos were sold but am now unable to find them. If any of our readers can advise me I will very much appreciate it. or if you can do me the same favor.

The lines of the first verse are:

"Do you know that your soul of my soul is such part,
That you seem to be fibre and core of my heart?
None other can pain me as you dear, can do
None other can please me or praise me as you."

Thanking you in advance.—Katherine.

—The motto can be obtained thru the Detroit Library and the book of poems is called "Heart Throbs." The second and third stanzas are:

Remember the world will be quick with its blame,
If shadow or stain ever darken your name.
"Like Mother, like Son", is a saying so true.
The world will judge largely of Mother by you.

Be yours, then, the task, if task it should be,
To force the proud world to do homage to me.
Be sure it will say when its verdict you've won,
She reaped, as she sowed, Lo! This is her son.

WOMEN'S EXCHANGE

IF you have something to exchange, we will print it FREE under this heading providing: First—It appeals to women and is a bonifide exchanges, no cash involved. Second—It will go in three lines. Third—You are a paid-up subscriber to The Business Farmer and attach your address label from a recent issue to prove it. BEFORE YOU BUY A WINDMILL

Carefully consider the following facts: *A year's supply of oil is sent with every Aermotor*

The Auto-oiled Aermotor is the Genuine Self-oiling Windmill, with every moving part fully and constantly oiled.

The Auto-oiled Aermotor has behind it 8 years of wonderful success. It is not an experiment. The double gears run in oil in a tightly enclosed gear case. They are always flooded with oil and are protected from dust and sleet. Oil an Aermotor once a year and it is always oiled. It never makes a squeak.

You do not have to try an experiment to get a windmill which will run a year with one oiling. The Auto-oiled Aermotor is a tried and perfected machine. Our large factory and our superior equipment enable us to produce economically and accurately. Every purchaser of an Aermotor gets the benefit from quantity production. The Auto-oiled Aermotor is so thoroughly oiled that it runs in the lightest breeze. It gives more service for the money invested than any other piece of machinery on the farm. The Aermotor is made by a responsible company which has been specializing in steel windmills for more than 30 years.

Christ take any pains to say a sympathic, appreciative work? On the contrary, it often appears that the Christian feels it his duty to say that which is discouraging or disagreeable, deeming everything else flattery, and of evil. We little know how near to despair our neighbor may be even though he masks it with smiles. An adverse remark may fell him to the ground, whereas he might rise on wings of hope because of our appreciation. There is always something good one way. Say (Prov. 16;20) something to lessen the sting of criticism if that seems to be needful. Remember that just praise is a smile of God, and loving criticism, his guarding hand.

RECIPES

Chopped Pickles—Four quarts chopped green tomatoes, two-thirds cup salt, two teaspoons pepper, three teaspoons mustard, three teaspoons cinnamon, three teaspoons allspice, three teaspoons cloves, one-half cup white mustard seed, four green peppers, sliced and two chopped onions, and two quarts vinegar. Sprinkle alternate layers of tomatoes and onions with salt, and let stand over night. In the morning drain, and put in preserving kettle, adding remaining ingredients, using enough vinegar to cover all. Heat gradually to boiling point and boil one-half hour.

Green Tomato Relish—One peck green tomatoes; four lemons; 6 pounds or one and one-half pounds sugar and one-half pound corn syrup; four or five pieces of ginger root, more if desired. Wash and cut tomatoes into pieces; slice lemons very thin; put all into acid proof kettle and cook until clear.—Elvis Alford.

Peach Conserve—25 nice yellow peaches and one pound of white grapes, ten red plums, one pineapple, one orange, one-fourth pound of almond meats. Cut each fruit in small pieces, cook all together for about one-half hour. Measure and allow three-fourths cup of sugar to every cupful fruit. Cook very gently about twenty minutes, then add the nut meats cut in pieces; continue to cook slowly for two hours or longer. Pour in glasses and seal when cool.—Mrs. H. C.

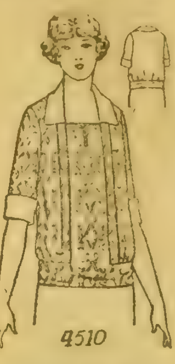
Potato Puffs—Mix together one pint mashed potatoes, one teaspoon salt, one teaspoon black pepper, yolk of two eggs. one-quarter cup milk or cream, one tablespoon butter, one tablespoon onion juice and one cup of walnuts cut fine. Shape in small balls. dip each in beaten egg, roll in crumbs and fry brown in deep fat. One tablespoon chopped parsley may be added before shaping if wished.—Alma B., Augusta, Michigan.

Three Egg Angel Cake—Take one cup of sugar, one and one-third cups flour, one-half teaspoon of cream tartar, one-third teaspoon salt, three teaspoons of baking powder, two-thirds cup scalded milk, one teaspoon of vanilla, whites of three eggs. Mix and sift the five ingredients four times, add the milk slowly while still hot stirring constantly. Add vanilla and fold in the whites of eggs beaten light and stiff.—Alma B., Augusta, Michigan.

—if you are well bred!

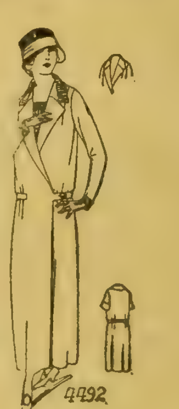
You will not laugh or talk loudly. Modulate your speaking voice until it is low and sweet for your hearers. Never monopolize the whole conversation. Maybe the other fellow has something worth while to tell you.

AIDS TO GOOD DRESSING



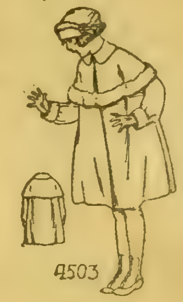
4510

4510. A Smart Blouse—Figured silk was used for this model with faille in a contrasting color for cuffs and collar. Velveteen and moire are also good for this style. The Pattern is cut in 6 Sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38 inch size requires 2⅞ yards of 32 inch material. For collar and cuffs of contrasting material ½ yard 40 inches wide will be required.



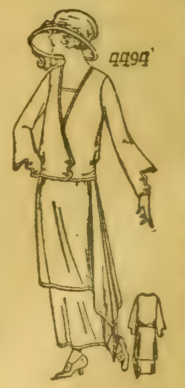
4492

4492. A Stylish Dress Coat—This fashionable model will develop well in kaska cloth or ni satin. As illustrated soutache braid was used for trimming on collar and cuffs, a vest of embroidery in Oriental colors makes a very attractive finish. The Pattern is cut in 6 Sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38 inch size requires 3¾ yards of 54 inch material. To make the vest of contrasting material requires ¼ yard 9 inches wide or wider. The width at the foot is 1⅞ yard.



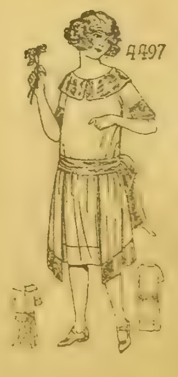
4503

4503. A Simple Practical - Coat Style—Broad cloth, polo cloth, heather mixtures, tweed or velvet as well as other pile fabrics are good for this model. Fur, braid or or braiding will be suitable for decoration. The Pattern is cut in 5 Sizes: 2, 4, 6, 8 and 10 years. A 6 year size requires 2¾ yards of 40 inch material.



4494

4494. The Latest Expression of a Smart Style—The new tiered skirt and side drapery, topped by a smart blouse is here portrayed. Satin in a pretty shade of brown was employed to develop this style, with a finish of bias self bands. The model is also attractive for crepe weaves, taffeta, and broad cloth. The Pattern is cut in 3 Sizes: 16, 18 and 20 years. An 18 year size requires 6¼ yards of 40 inch material. The width at the foot is 1¾ yard. To make the concealed part of the skirt of lining requires 1¼ yard, 32 inches wide.



4497

4497. A Becoming Frock for the Growing Girl—Youthful lines, and popular style features are expressed in this model. Crepe satin with facings of the satin side and the dress portions of the reversed side, is here pictured. This is a pretty style for voile and organdy. It may also be developed in one material with embroidery or braid for decoration. The Pattern is cut in 4 Sizes: 8, 10, 12 and 14 years. A 14 year size requires 4⅝ yards of 40 inch material. Without tunic, bertha and cuffs 1⅝ yard less is required. To trim with contrasting material as illustrated requires 1⅛ yard 40 inches wide.

4506 A Popular Style for the "Little Man"—One could have this in jersey weaves, in flannel or serge; It. is also a good model for linen, seersucker and gingham. The Pattern is cut in 3 Sizes: 2, 4 and 6 years. A 4 year size requires 2¼ yards of 36 inch material.

VALLEY CITY MILLING COMPANY - GRAND RAPIDS, MICHIGAN

WHY THE "FARM HAND' AND HIS FAMILY ARE GOING BACK

(Continued from Page 4)

until about five loading. Then, there being no convenient place for us to ride, my husband suggested that the children and I walk ahead. The roads we had to travel at that season of the year are mud, deep, clinging mud. Our two-mile walk through it might be taken as a symbol of the discomforts and disappointments to follow.

We ate our supper that night in the kitchen around the kitchen table, and for weeks after the kitchen was, for the greater part of the time, the only comfortable room in th house. We found that the room off the kitchen which we wished to use for a dining room had no pipe hole, so we could not put our coal heater in it. The sitting room was down a sort of hall from the kitchen and opened into the dining room at a door clear at the farthest corner. A fire in it would have to be very hot indeed to make the dining room comfortable. So we did the only thing left; put up the heater along with the cookstove in the kitchen.

The agreement which the farmer made with my husband promised that the kitchen drain which was out would be fixed as soon as the ground thawed in the spring. It has never been fixed at all. Once or twice I have suggested to my husband that he might tell the farmer that if he did not want to have it done we would do the work ourselves and he could allow the time, but my husband had already made suggestions which were not followed and so at last, in June, he put in a pipe which runs along on top of the ground and empties into the pig pasture which lies just beside our yard. The windows all over the house needed to be puttied but my husband has found time to do only one. The rain comes in and is making spots on the walls in every room except the kitchen. It ruined the ceiling of the dining room and there is a large piece of paper loose and partly hanging. Both the farmer and his wife promised to get new paper but haven't. They both asked about the screens, but our house has only one screen door that is not ragged, and the windows are partly covered with old netting. I cannot keep out the flies.

The only horse among sixteen that I can drive is crippled so badly that I would rather walk than drive it, and when my husband suggests taking one of the others when he is going to drive the owner nearly always makes some excuse for taking the lame one. Neither of us drive unless we have so much to carry that we must. When we walk to church and Sunday School the children come home cross and tired.

When we came the working hours were to be from five in the morning to seven at night, and the owner counted himself as one of three men who did the work. Oweing chiefly to his own tardiness and irregularity, the men were all late to all meals most of the time during the first month we were here. Instead of getting supper for all of us at seven I often got supper at seven, waited until seven-thirty for my husband to come in, and then gave the children their supper and put them to bed, while I waited until my husband came in, sometimes as late as eight-thirty or nine. I do my cooking on a gasoline stove and each reheating of food uses more fuel and adds to our expenses. After the first month my husband began quitting at quitting time—seven o'clock—always being at the barn at five in the morning, though the other two men continued to be late. When he was there first he had all the feeding of the cows to do alone before milking, which was very hard as all the food had to be carried to the cattle.

One morning the owner told my husband to stay at the barn nights until all the chores were done and Jack reminded him of their agreement as to hours, and declared that he would quit at seven as a general rule or quit for good. The owner made excuses but, finding Jack firm, agreed that they would usually quit at seven. But the injustice of his demand added to our resentment on account of his failure to repair the house.

It is now mid-summer. All the horses are at work in the fields nearly every day. The farmer or his wife go to town about once a week and Jack can go on Saturday night after seven. If I need anything at any other time I can walk after it. Getting to town so infrequently as we have and do costs money in various ways. In town I could buy fresh meat as I used it; here I have to get ham or bacon or canned meats, all of them expensive. In town we used gas for cooking and lighting, here the gasoline for cooking and kerosene for lighing comes to considerable more.

We are finding life on this farm, to which we came with so many hopes and plans, nothing more than a discouraging failure. Jack started in with enthusiasm, with desire to earn his money and please his employer. He started with real knowledge and ability to do his work well. He is an honest, upright, sober, intelligent man, who desires and intends to make farming a life work.

There are farms all over the country needing such men, and I am sure there are in towns and cities many men like Jack, who feel that they can succeed on a farm if they can only get a good opportunity.

It seems to me that it is up to the owners who are complaining about the inability to secure or keep farm help because of the longer hours on the farm and the higher wages in the cities and towns, or to the government, itself, to offer such men the sort of living conditions, the commission on profits they help to make, and the appreciation, which will enable the farm laborer who has it in him to become a real farmer to get a start in farming without the money investment for land and stock and equipment which a family man working for wages finds it impossible to make.

The factory worker and the railroad employee and the majority of all town and city workers are living in conditions similar to those of their neighbors, who are for the most part their fellow-workers. The Unions help them to get justice, and they live in comfort with some, at least, of the modern conveniences. Most of them have some time to call their own and can use it for trying out on a small scale some hobby, such as chicken raising, gardening, etc. On the other hand many of the men, both married and single, who go to the farms as laborers, find the hours so long and the conditions which they thought they would like, so unsatisfactory, that they are giving up their desire for a farm life and are returning to the factories. Unless these conditions are changed the problem of sufficient help on the farms will grow worse until the government finds the solution one which it must undertake in order to produce sufficient food for the nation.

We are going back to the city this fall. The house in which we live would be very uncomfortable in winter. The garden, which we got in late because Jack was so busy, yielded hardly anything so we need not stay to harvest it.

Time flies—and is especially fleet when you owe a note due in thirty days.

Following the crowd will never get you out of the rut of mediocrity.

The world owes you a living, but you will have to collect it by labor.

INVENTS NEW LAMP

Said to be Whiter and Cheaper Light than Electric or Gas.

WASHINGTON. Patents have been granted by the Government to a lighting engineer by the name of Johnson, on a new lamp for burning ordinary kerosene oil. This lamp produces a vapor from the oil which makes a blue flame that incandesces a mantel, and thus creates a very strong, soft, pure white light. As it consumes only 6% oil mixed with 94% air, it is exceedingly economical. Said to be very simple to operate, odorless, noisless, and dangerless.

F. H. Johnson, 609 W. Lake Street, Chicago, Ill. He also wants local distributors and has a very unique selling plan to offer agents. He is even offering to give one free to the first user in each locality who will help introduce this new light.—(Adv.)

GREAT FALL SALE!
Building Material and Supplies at Bigger Savings than Ever—

Buy now! Save!
Thousands of genuine bargains like these are now ready for you in this great fall sale. America's choicest stocks of high-grade, fresh, new materials embracing every needed article to build, improve and equip the home and farm. These amazingly low prices are the natural result of carefully planned purchases, which were made by us just at the right time to secure every possible buying advantage. And our savings are your savings. Mail coupon now, or better—order direct from this announcement.
HARRIS BROTHERS COMPANY

Barbed Wire Snap!! $1.40 REEL
Bought by us at less than cost of manufacturing. Made under rigid inspection. 12 gauge open hearth steel wire with 4 point barbs, ⅝ in. long spaced 3 in. apart. 58 pound reels contain 700 feet; 112 lb. reels, 1,400 ft. Coated with special formula weather resisting paint.
No. SA-200, Price, per reel $1.40
112 lb. reels $2.75

Poultry Netting
No. SA-300 Made of 19 gauge Bessemer steel wire heavily galvanized; 2 inch hexagon mesh in two heights. Bales contain 150 lineal feet. 36 inches high, per bale $2.40
72 inches high, per bale $4.75

HogFence
No. SA-6, Made of No. 11 top wire and No. 14 intermediate wire and stay wires. Spaced 6 in. apart, 3, 3½, 4, 4½, 5½ and 6 ins., spaced from bottom upwards. Barbed bottom.
26 in. high, per rod 24c
32 in. high, per rod 30c

FARM MECHANICS

PURITY OF WATER SUPPLY

I have a never-failing well about 18 ft. from back door. My sink is 9 ft. east and 14 ft. south from back door. Is there any way a pump by the sink can draw water easily from this well; is deep, cold and delicious water; has not been cleaned out in years. The last cleaner said when he got through with it there was still 6 ft. of mud in the bottom of it. Another cleaner said he might be able to clean it in a dry season, when water is correspondingly low. We have had no illness from this water and it is certainly good. Should anything be put in it to make it doubly safe? How close to a well is it safe for an outdoor toilet? Ground is level.—Enquirer, Michigan.

—Whether or not water could be pumped as you suggest depends entirely upon the distance of the permanent water level below the pump if installed as described. Twenty-five feet is about the practical working distance; that is, the maximum distance that a pump cylinder can be placed above the water and have it work properly. If the vertical distance from the pump cylinder to low-water level in the well is not greater than this a pump could be put in as you suggest.

It is impossible to say whether or not the water from your well is pure; some of the coldest, sparkling water is contaminated. From a sanitary standpoint the location of the well near the back door is bad, as refuse is likely to be thrown out here, especially where the house is not provided with a sewer system, that is likely to find its way into the well as seepage. This of course need not necessarily be true, as precautions can be taken in the disposal of dishwater and other house waste that prevent any of it finding its way into the well.

No definite distance can be set down as a "safety distance" for a well from a source of pollution. The above applies to dug wells, as they are perhaps most susceptable to pollution. The character of the soil and the source of pollution as well as the general slope of the ground and the character of the subsoil all have a bearing on this "safety distance." As a general rule in clay or other tight soils and where the pollution is at the ground surface 100 feet is a sufficient distance to guarantee a pure water supply as far as the particular source of pollution under consideration is concerned. If the contaminating matter is beneath the ground's surface, as in the case of a cesspool, a much greater distance may be required.

Simple precautions toward securing a safe water supply from a dug well are either to make the upper 10 to 15 feet of the casing water-tight by the use of concrete, brick or tiling, or by simply filling in behind the stonework with tightly packed puddled clay. This casing should be carried high enough above the surrounding surface to give good drainage and to prevent the entrance of any surface water, and the top covered by a good concrete curb.

Pollution of well waters by seepage from private or similar source of contamination is usually indicated by the presence of chlorine in the water. The presence of chlorine can be detected by the following test: Thoroughly wash and rinse in water from the well to be tested a glass tumbler. Fill the tumbler half full of the well water and add six drops of a solution of five grains of nitrate of silver in one ounce of distilled water. ' This solution can be made up at a drug store. If chlorine is present in any appreciable amount the water will appear cloudy when held up against a dark surface. If there is reason to doubt the purity of drinking water and chlorine is found to be present it is advisable to have it tested by a laboratory examination.—R. H. S,

BLASTING BOULDERS

THERE are three kinds of boulders from a blasting standpoint —one which is not a boulder at all, but a ledge of rock extending up through the ground; second, a boulder proper which is not imbedded in the ground so deep but that a charge can be placed under it; and third, a boulder which rests on the surface of the ground with some depression in the top which makes it possible to break it up by firing a charge of high explosives placed directly on the rock with a quantity of soft mud on top to give confinement.

Suppose for this demonstration that the rock is of the second class, and about four feet long, three feet wide and two feet high, without visable seams or cracks. It would take too long to drill a hole into it, as we would have to do with the ledge rock, and it is imbedded in the ground too deeply to mudcap economically, so we will punch a hole with a crowbar or pointed piece of drill steel at such an angle that the end of the hole is close up under the rock. This, you will notice, is different from our proceeding with the stump we blasted in the last article where we got the charge down about two feet below the base of the stump. We do not want to blow this boulder out entire; we want to break it up. As there are no buildings in sight, we will put about three 1¼" x 8" cartridges under this boulder the last on being the primer. Although there no buildings in sight, the boulder is alongside a fairly well traveled road, so we will fire it electrically.

We make the primer in the same way as with cap and fuse, placing the electric blasting cap in a hole punched in the side of the cartridge and tying a piece of string about eight inches long first to the wire and then around the cartridge so that the cap cannot pull out. After pressing this primer down against the other two cartridges with our sawed-off broom stick, we fill up the hole with soil scraped up in the neighborhood in order to confine the explosive and prevent it from blowing out the bore hole. We then connect the two wires sticking out of the hole to the two free ends of our duplex leading wire, being careful that the joints do not touch each other and being particularly careful to wind the cap wires around the well scraped leading wire ends, bending these latter over into a hook to prevent their pulling loose. We next uncoil the leading wire as far as it will go—in this case 250 feet—and connect the two free ends of the leading wire to the two binding posts on the blasting machine. It does not matter which wire goes to which post. Just as we get ready to fire, a team is seen coming up the road. This shows the advantage of electric firing, because if we had lighted the fuse when we left the boulder we should have had to go down the road and warn all vehicles to stop, a thing they do not particularly like. With the electric blasting, however, we merely wait until the team has passed. Then we lift the rack bar of the blasting machine up as far as it will go and push it down with a sudden, quick, powerful movement as hard as we can. This generates an electric current which travels down through the leading wires and fires the cap, which in turn explodes the dynamite, and if we have gauged the charge correctly the boulder is broken in pieces of a size which can readily be loaded on a stone boat and taken away.—Arthur La Motte, Mgr. Technical Section, Explosives Dept., E. I. du Pont de Nemours & Co.

DON'TS FOR TRUCK DRIVERS

DON'T try racing with a touring car; your truck was built for strength not for speed.

Street car tracks are nice on springs, but hard on tires—and steel costs less than rubber.

Don't neglect a loose part, even though it seems to operate more freely that way.

Don't forget to watch the other fellow ahead; a slow stop on your part nearly always costs you a punctured radiator.

Use your brakes when getting "spotted;" platforms were built to load from not for bumping posts.

Don't drive too close to the curb; edge-trimming is a fine institution for pie crusts, but to expensive for truck tires.

MICHIGAN CROPS

HISTORY OF THE IRISH POTATO

THE potato is not a root, as many are inclined to think. It is an underground stem which has become thickened, and which is a storehouse of food for the new plant. The eyes are auxiliary buds from which the stems and roots come when the potato begins to grow.

So many authentic evidences of the nativity of the potato in temperate South America, from Chili to Colombia, that this region is indisputably considered its original home. It is said that potatoes grow wild in Chili at present.

The Irish potato, Solanum tubyrosum, belongs to the Solanacae. Solanum is the Latin for nightshade, hence it is a member of the nightshade family; to this family also belong our good friend the tomato, the ground-cherry and the beautiful winter flower the bittersweet.

Also some we do not like so well, as the nightshade and the tobacco. The genus Solanum contains a great many species now distributed all over the world, but most abundant in the south temperate zone.

From Virginia to Europe

The potato was introduced into the colonies in the latter part of the 16th century, but just how it was brought there is not exactly known. It is possible that it was obtained from the Spanish traders as the Spanish were using it quite commonly as a food at that particular time.

Undoubtedly the Spaniards had become acquainted with the potato during their conquest of Peru during 1532-1585. Our best authorities say that there is no positive evidence to show that the potato was utilized by the Indians before the arrival of the white people. From Virginia it was taken to Europe.

First a Cattle Food

When the potato was first discovered and used for food it did not make the palatable and appetizing dish it does today. It was much smaller and somewhat bitter in its taste. It was first, both in England and in other parts of Europe, thought that it might serve as food for cattle. Later it was decided that it might be used as a food for the poorer classes of people, and that it might be cultivated for a food for use during emergencies, such as famines and when grain crops would fail.

Now Indespensable

For a long, long time it was cultivated indifferently. People evidently were skeptical and the result was the potato did not improve very rapidly. It is only during the latter age of scientific cultivation that the potato really did improve, and this was through better cultivation, breeding and cross-breeding. Thru this it has reached its present state of perfection and become an indispensable dish for rich and poor.

Although the potato can now be grown in almost all temperate and sub-tropical regions, the climate sets an irrevocable stamp upon it. The potato raised in the warm climates bring a high price in our markets in the spring, but it cannot in the least compare with the much superior article grown in the North where climatic conditions are the more nearly like those where it originally grew—South American temperate regions. It prefers cool climates with rich, fertile soils and reached the climax of perfection in the north and northwestern states and Canada.

Murphy's Father

The potato was not generally cultivated in the United States until after 1800. The people of the United States are greatly indebted to the efforts of Rev. Chauncey E. Goodrich of Utica, New York, for the present high state of perfection the potato bears. In 1842, in the hope of improving the potato, Rev. Goodrich sent to South America for some wild tubers and during the following sixteen years he conducted experiments. The results were that he originated about a half-dozen new varieties of great value, among which were the forerunners of some of the present leading varieties which we enoy so much today, one of them being the Early Rose.

Why Irish?

Where did the potato acquire the name of Irish potato? This question is often asked. The name is certainly misleading, for Ireland is not its native home. It is true that Ireland opened her doors to the lowly potato and had succeeded in bringing about many improvements on the crop before the rest of the European countries realized its value and good qualities.

It is also said that colonists had taken potatoes along back to Europe after they had in some way been introduced into the American colonies from South America, and after they had been cultivated for a time had been brought to America as Irish potatoes. It is possible that they never will know exactly how the name originated.

BEST KIND OF CLOVER FOR HAY

I would like to know through your paper which kind of clover makes the best quality of hay. The Red clover or the Alsike? Which can be most successfully raised on all kinds of soil and whether alsike is hard on land?—N. K., Midland, Mich.

—Alsike is a hardier, longer lived plant and adapted to a wider range of conditions than Red Clover. Alsike will grow on land that is too wet and too acid for Red clover. There is but little difference in the feeding value for hay. The following table from Henry's Feeds and Feedings shows the digestive nutriments in one hundred pounds of each:

Dry matter: Alsike 87.7, Red clover 87.1; Crude Protein: Alsike 7.9, Red clover 7.6; Carbohydrates: Alsike 36.9, Red clover 39.3; Fat: Alsike 1.1; Red clover 1.8; Total: Alsike 47.3, Red clover 50.9.—C. R. Megee, Farm Crops Dept., Mich. Agricultural College.

HOW MUCH MARL SHOULD BE USED?

Can you please tell me where I can get material to inoculate sweet clover seed? Also, how much marl should one use to the acre, using the marl test, 95 per cent lime?—A. L. L., Traverse City, Mich.

—Material for the inoculation of sweet clover seed may be secured from the Department of Bacteriology, M. A. C., East Lansing. The price is 25c per bottle and one bottle contains sufficient material to inoculate a bushel of seed. Directions for application accompany the material.

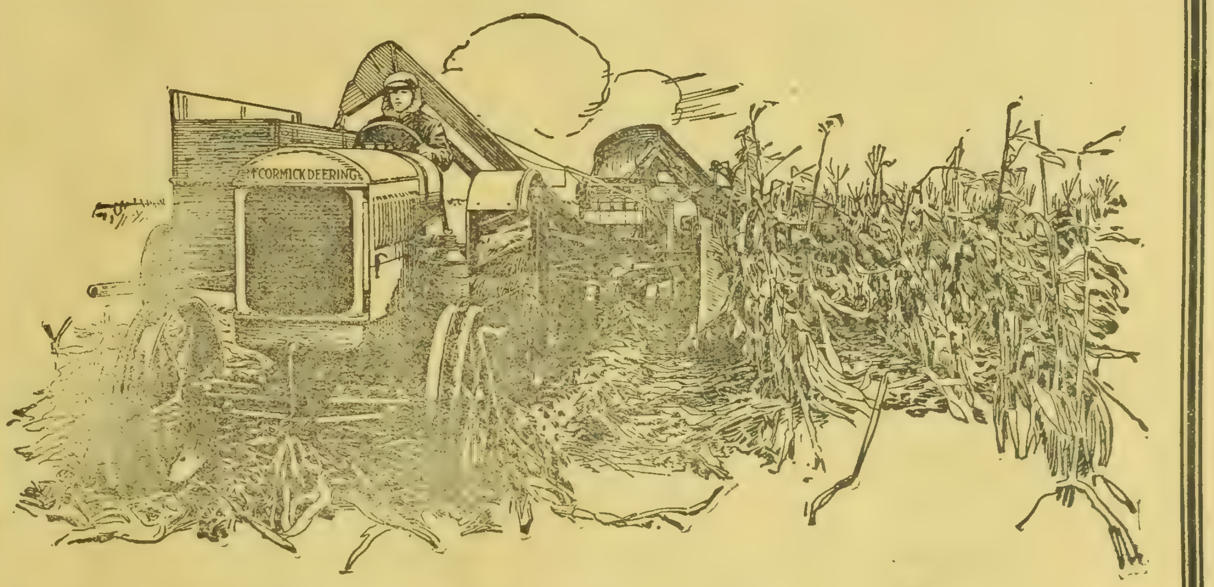
The amount of marl that should be used will depend largely upon the acidity of the soil. In general from four to six cubic yards should be used. There are a few soils that require a higher application.—C. R. Megee, Associate Prof. of Farm Crops, M. A. C.

SHALL WE HAND PICK OUR BEANS ON THE FARM?

(Continued from Page 3)

hour. Could give you statement from several friends that I cleaned a few for them just to show what it would do and for one neighbor cleaned the screenings which he brought back from the elevator and thought worthless, which he returned and sold for $25. This took about three hours. The machine also proved to be the best for cleaning seed beans, except hand picking which few of us have time to do.

After finding a way to increase the capacity to 30 or 40 bushels per hour and realizing that the farmer should have a chance to clean his own beans for market, applied for patent. This is as far as I ever got have not had time to build a complete machine for myself as the other farm work takes all of my time. Have talked with some manufacturing concerns but they seem to think that the elevators should have the chance to pick the beans and take it away from the farmer or they find fault because there would be very few repairs or the bean growers are losing thousands of dollars by not having proper ways of cleaning seed and paying the elevators for hand picking their beans while they do a greater part with mechanical pickers and keep the profit. Here is hoping that this will be stopped some day.—Lee A. Medcalf, Fairgrove, Mich.



Let Livestock Put Your Corn Crop in the Bank

The corn crop will soon be ready—and there is one best way to turn the crop into money. Sell your corn on the hoof! Low-priced grain produces cheap pork and beef, yet the livestock market promises fair. By harvesting your corn with the least possible man labor, and putting both ear and stalk into shape for feeding, you can fatten livestock this winter and sell it at a profit.

Big factors in the success of this plan will be McCormick-Deering corn machines. Corn binders and ensilage cutters are doing the early work on many farms. Later you can pick the corn with a mechanical picker that enables two men to do the work of from five to seven men. Pick your own crop quickly, then pay for your McCormick-Deering Corn Picker by helping some of your neighbors with their crops.

Many acres of fodder will be fed in the coming winter. As soon as the corn has dried in the shock, put it through a McCormick-Deering Husker and Shredder. You can gauge your feeding better when you feed ear corn and roughage separately. McCormick-Deering Huskers and Shredders are built in sizes for home or custom work.

This fall hundreds of enterprising farmers will feed the corn and sell the crop on the hoof. And they will have McCormick-Deering Corn Machines ready for many more years of good work—both at home and in the fields of their neighbors. Good machines save man power, cutting your operating costs and adding to your profits. Talk it over with the McCormick-Deering dealer in your town.

DAIRY and LIVESTOCK

HOLSTEIN TOURS WELL ATTENDED

WHEN the dust had settled away the Holstein Tours staged by the county agents, Dairy Department, M. A. C., and the State Holstein Association had covered twenty-two counties, visiting 131 farms and the number of breeders who toured totaled 661. In addition to this attendance there was held a noon meeting in Clinton county in connection with the Looking Glass Farmers' Club with a point gathering of 200, and a night meeting in Livingston county at the lake on the Brouse Farm where 300 Holstein enthusiasts took in the bathing, boating, movies and program. So well over 1,000 breeders were reached.

High honors for attendance and interesting program lay between Kent, Clinton and Livingston counties.

The Grand Round-up at the farm of D. D. Aitken, Flint, was indeed a success. Over 350 breeders were in attendance, coming from practically every nearby county. The editor of Hoard's Dairyman, A. J. Gllover, was the principal speaker of the afternoon. Other imported talent included Fred Koeing, Director of Extension for the National Holstein Association and W. B. Barney, the first Holstein breeder west of the Mississippi. The surprise of the occasion came when following a gift to Mr. Atken of a silver loving cup from Genesee neighbors the costly set of True Type models of the breed were presented to him by Holstein cattle breeders of Michigan.—J. G. Hays, Ext. Spec. for Mich. State Holstein Ass'n. and Dairy Dept., M. A. C.

CATTLE SALE AT WEST MICHIGAN FAIR

ON Thursday, September 20th, about thiry cows with cow testing association records of 300 pounds of butterfat or better will be sold at the West Michigan Fair, Grand Rapids, Michigan.

This fair is unique in the history of Michigan Dairy Cattle Sales. It is the first effort that is being made to sell, at public sale, cows an a straight cow testing association basis. Very much interest in evident thruout the cow testing association area of Michigan.

The requirements for entry in this sale is a year's record in a Michigan cow testing association. The record must be three hundred pounds of butterfat or better, the cow to be T. B. tested, and definite information will be given concerning the total feed consumed, the value of her product, and the returns above cost of feed remaining to the owner. Both purebred and grade cows will be included in this sale. Farmers will be able to buy, at their own prices, cows on a definiee basis of actual dollars and cents returned for feed consumed by each cow.

Considerable interest is evident in a number of associations to make entry in to this sale. The Fair management at Grand Rapids is offering free stall space, bedding and feed, and additionally is furnishing a high-class auctioneer free of charge. With sixty-one cow testing associations in Michigan totaling about eighteen thousand dairy cows and representing eighteen hundred cow testing association members, it can readily be understood that a great number of men appreciate the value of a cow testing association record on a cow. Hence the sale value, while no record prices are expected, will no doubt hold up with some of the best sales held in Michigan during the past months.

The records of the cows entered in this sale will be verified by a number of the Dairy Extension Department, M. A. C.—A. C, Baltzer, Extension Specialist in Dairying.

MICHIGAN'S FIRST PURE BRED SIRE SALE IS PLANNED

A NEW venture in livestock improvement work is the proposed pure bred sire sale which is being promoted by the Ionia County Farm Bureau. The sale is to be held September 22nd in the splendid new sales pavillion which was recently erected and placed at the disposal of Ionia county farmers by the National Bank of Ionia.

The idea is believed to be a new one, and credit for it is given to B. F. Hall, of Belding. On his suggestion the Ionia County Farm Bureau is featuring the sale, the first of its kind, and is expected that it will lead the way to other sales of a similar nature that will result in great benefit to the live stock industry.

According to County Agent R. L. Helm, the proposed sale is novel and has the peculiar feature of being the first sale of the kind ever attempted in the state. It is to be a sire sale exclusively. There are no "equal rights" about it. The females of the species will not take part.

The plan briefly is this: Only sires are to be sold. Two to four good registered male animals of all breeds of dairy cattle, beef cattle, hogs and sheep being raised in the county are to be consigned by the various breeders and breed associations and sold at auction at this sale.

It is believed that most of those who come to this sale to buy will be farmers of Ionia and adjoining counties who are in the market for good pure bred males to improve their grade herds and flocks, and the purpose of this sale is to offer them an opportunity to get this kind of a male at an auction where prices are sure to be right. The movement will ultimately, it is declared, result in great improvement to the grade herds of Ionia county farmers by the more general use of pure bred sires.

The details of the sale are being arranged as rapidly as possible, Mr. Helm states, and nearly all of the consignments it is possible to handle have been made. The services of Col. J. P. Hutton, of Lansing, have been secured for the sale.

THE SILO ON THE RENTED FARM

RENTED farms are on the increase, according to the U. S. Department of Agriculture. In some states they represent nearly fifty per cent of the holdings. The land owner as well as the tenant is interested in making the farm pay, and it is well worth while to consider factors which cater to a dependable revenue from the land.

A silo on a rented farm not only makes it more attractive to a good renter but also encourages a longer period of renting, and all land owners know it is better to keep a good tenant for a term of years than to experiment by changing each year. Farm renting naturally favors crop farming, which is not only hazardous but tends to deplete soil fertility and fails to build up the land. General or stock farming requires more working hours of the tenant, but it is more sure of reward, especially if a good herd of milking cows is a part of the equipment. A renter who is willing to care for live stock should be encouraged, and the land owner will find a silo is one of the main factors toward popularizing stock farming and making it pay.

A Minnesota farmer, Mr. Patchen by name, recently reported to a farm paper an interesting comparison between a farm having a silo and one without such equipment. Mr. Patchen has a herd of Jersey cows and keeps careful record of each animal. He found on his rented farm with a silo that the average annual production was 325 lbs. of butterfat per cow. The next year on a farm not having a silo he was only able to get 260 lbs. of butterfat per cow. The third year he occupied a farm with a silo and increased the annual butterfat per cow 65 lbs.. The silo gave this farmer an increase that represented a good profit, and with a herd of twelve cows and butterfat at 40c per pound it would equal $312, which would about pay for a silo.

When we consider that the silo will not only feed the dairy herd but all other stock on the place including calves, steers and stock cattle besides colts, horses and mules, it is easy to figure how it will pay for itself in one year.

Both land owner and renter can depend on the silo as an economic means of producing stock and stock

It's NATURAL for a hog to wallow
Provide a wallow and add
DR. HESS DIP and DISINFECTANT
then~

1. Your hogs will be free from lice.
2. They will have clean, healthy skins.
3. Disease germs will be destroyed.
4. Foul odors will be kept down.

If you do not have a wallow, use the sprinkling can freely. Sprinkle the animals — the sleeping quarters and pens.

Sprinkle the cow barns to keep them healthful and clean-smelling—

The poultry-house to kill the mites and lice.

Use it about the house—in the closets, sinks and drains. Excellent for the sickroom.

products. The silo is literaly a necessity on the stock farm. It is a dependable forage bank and an insurance for a forage crop. Any corn which has been grown can be saved, even when injured by hail or frost. The silo saves labor in feeding, and furnishes a food which stimulates growth and milk production. It makes possible to carry more stock on the farm and saves much expensive grain feeding. It will encourage and keep the best tenant on the farm which means profit to both land owner and renter.—A. L. Haecker.

VETERINARY DEPARTMENT

LEGS GIVE OUT

I have a yearling ewe that is heavy with lamb and there is something wrong with her and I cannot find out what it is. She seems in good health, eats good and moves spry for a few minutes then acts as though her legs gave out and lies down. Bowels and kidneys seem alright. Can you tell me what is wrong with her and what to do for her?"—S. A. M., Mancelona, Mich.

—I think the trouble with the ewe is due to her being heavy with lamb. Trouble like this sometimes occurs in ewes late in the gestation period, the cause has never been definately determined. The trouble generally disappears when the ewe lambs.—John P. Hutton, Assoc. Prof. of Med. and Surg., M. A. C,

PRISON LABOR MAY SOLVE GOOD ROADS RIDDLE

(Continued from Page 4)

work on highway construction and their labor is proving efficient and most satisfactory.

The Human Side

We have mentioned the value of this plan to the individual convict, and this must not be lost sight of in the consideration of the use of convicts in highway construction. We would be less than human if we did not consider the rights of the individual who is confined for some misdemeanor against society.

The purpose of a prison and the purpose of prison confinement is to reconstruct the individual whose misdeeds are all too often the result of the degenerated physical body which preys on his mental processes.

It is undoubtedly true that with fresh-air, wholesome food, the environment of the great out doors, the sence of accomplishing something for the good of society or of paying a penance, as it were, by creating something which all people may enjoy, all these things must have their mental and physical effect on the individual convict. To know that he is earning $1.25 a day is being credited to him for the day when he leaves the prison, must give him a feeling of accomplishing something for himself and remove from him the hopeless feeling that must come over the prisoner who sits alone within the confines of a prison cell and hopelessly views the future.

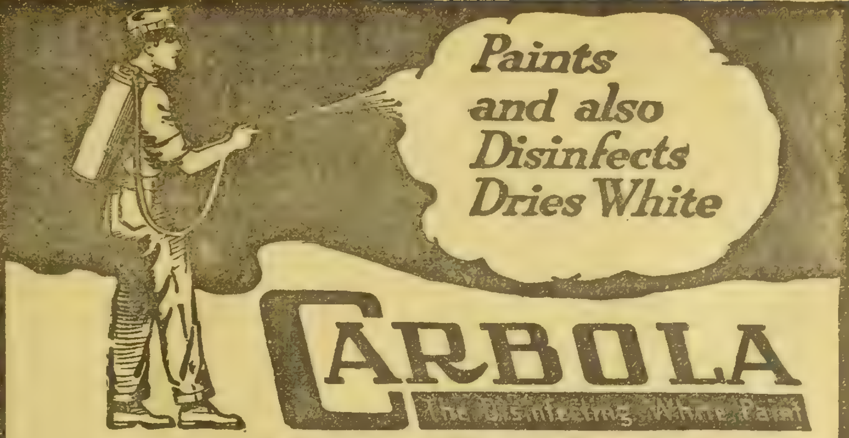
Communities Praise Work

The people in the communities where prison camps are being operated express themselves as not only highly pleased with the type of work being done, but with the conduct of the men who are employed in the camps having given them no cause for complaint.

At Grand Blanc the motion picture theatre owner invited the prisoners in for an evening of entertainment and the churches in that village have entered into the spirit and are doing all possible for the comfort and upbuilding of the men employed near them.

The tax payers in the state of Michigan can well be proud of the accomplishment which has been made to date, and with the enlarged plans for the coming year it may be that the riddle of the Sphinx has been solved and Michigan can have its system of paved highways joining every community, thus making all farm land more valuable, adding to the comfort, entertainment and education of every citizen of the state, and yet accomplishing it without a cost which is unbearable.

And it is well to remember that the fellows who cheer you today will be just as ready to jeer you tomorrow.



Paints and also Disinfects Dries White

The Disinfecting White Paint

So Easy to Use
—In Poultry Houses, Cow Barns, Etc.—

Carbola is a white paint and powerful disinfectant combined in powder form. Simply stir the powder in a pail of water and it is ready for brush or sprayer—no waiting or straining. *Does not clog sprayer. Won't peel or flake.*

The powerful disinfectant does not evaporate but keeps its strength on the walls. Carbola will not spoil even in water and may be kept standing in pail to be used as wanted. One pound covers about 100 square feet.

Results Are Sure and Certain

Carbola is neither poisonous nor caustic—harmless to the smallest chick or stock that licks a painted surface. It gives walls and ceilings a smooth, white finish, increases the light, improves the appearance, and helps make buildings clean, sweet-smelling and free from mites and contagious disease germs. There is nothing better than Carbola for dairies, poultry houses, cellars, dog kennels, rabbit hutches, garages, tree trunks, etc.

It has been used for years by more than 100,000 dairy and poultry farmers and by agricultural colleges and experiment stations. We have a big file of letters from farmers and storekeepers praising it. Give it a trial—you will never regret it.

AS A LOUSE POWDER for use on cattle, poultry, horses, hogs, dogs, etc., the dry powder will be found most satisfactory. The dry powder is applied like any other louse powder, and is very effective—a first-class louse powder at 10c a pound.

Your hardware, feed, seed, poultry supply or drug dealer has Carbola or can get it. If not, order direct—prompt shipment by parcel post or express.

5 lbs. 75c and 10c postage 10 lbs. $1.25 and 15c postage 20 lbs. $2.50 delivered
50 lbs. $5.00 delivered 200 lbs. $18.00 delivered

CARBOLA CHEMICAL CO., Inc., 310 Ely Avenue Long Island City, New York

HEAVES Is your own horse afflicted? Use 2 large cans. Cost $2.50.
Money back if not satisfactory
ONE can at $1.25 often sufficient. In powder form.

FREE SAMPLE COUPON

Take this coupon to Dr. LeGear's dealer in your town and get free sample of Dr. LeGear's Poultry Prescription for your molting hens—also free 123 page book on "Care and Treatment of Stock and Poultry."

DEALERS: If your supply of Dr. LeGear's samples runs out, take name and write us for new supply. Dr. L. D. LeGear Medicine Co., St. Louis, Mo.

I want every poultry raiser to use *Dr. LeGear's* Poultry Prescription for molting hens, ten days free!

Your hens are right in the *molt*.

You won't get *eggs* until it's over.

Hurry it through. Get them *laying*.

You can do it—with *special* care.

Add one tablespoonful of my Prescription in mash feed, for 20 hens, *every day*.

It will put your hens in *condition* to offset the strain of the molt, and get them *laying*.

It *purifies* the blood! It keeps the bowels open! It *improves* the whole digestive system! It sharpens the *appetite!*

Dr. LeGear's Poultry Prescription: 25c, 50c and $1 packages (except Rocky Mountain States and West). Also pails and drums. Satisfaction guaranteed or money refunded.

IMPORTANT! Ask at store about my Poultry Course without cost to users of my Remedies.

Dr. L. D. LeGear, V. S.
[illegible]
Trade-Mark Reg. U. S. Pat. Off.

It's *my own* Prescription from my 30 years' poultry experience.

Test it now with your *molting hens*. See how quickly they get back to *laying*.

Go to my dealer in your town. He will give you my sample package *free*.

Try it! Then buy the size package you need for your flock. Ask at store.

Buy Dr. LeGear's [illegible]

Use Dr. LeGear's [illegible]

Poultry for Profit

MERITS OF WHEAT AS POULTRY FEED

WITH the price of wheat in several states lower than, or about equal to, the price of corn, poultry specialists in the United States Department of Agriculture point out the desirability of giving wheat an important place in poultry rations. The influence of war-time conservation of wheat is still evident, according to specialists of the department, but there are no longer any economic reasons for conserving wheat or using it solely as a human food. On the other hand, it is so plentiful and cheap in many localities that it is a more economical livestock and poultry feed than corn.

Corn and wheat are the best grains for poultry and are about equal in value for this purpose, although wheat can be fed alone better than corn, which is inclined to be fattening. Best results are obtained when wheat and corn are combined about equally in egg-laying rations. Following is a good scratch mixture: 1 pound cracked corn, 1 pound wheat, 1 pound oats.

While wheat is an excellent feed for dairy cows and meat animals. it needs to be ground for best results with such stick, whereas poultry relish it and utilize it as whole grain.

The department points out also that wheat at 89 cents per bushel, which was the approximate current price recently in seven Middle Western States, is $29.66 per ton, which is a lower price than prevails for various other feeds having no greater nutritive value. The department's recommendations for putting wheat back on a pre-war basis as a stock feed are reinforced by action already taken by some farmers. A cooperative association of Michigan farmers recently published a list of feeds for which wheat could be economically substituted. This association contends that the local wheat market was below the cost of production and that local wheat would bring more when fed to livestock than when sold on the open market.

POULTRY FARMER'S BUSINESS IN NEED OF STANDARDIZATION

THE farmer has always been a poultryman. The fowl is more at home on a farm than in any other place in the world. There isn't a single feature about the poultry business that does not make it peculiarly adaptable to the farm life. The hen is native to the open country and always has been.

There is a good reason for this.

There is no place in the world where the opportunities are more abundant and inviting for poultry culture than on the farm. The broad open fields, the largeness of room for houses and yards, the limitless chances for the production of everything that is needed for the feeding and the care of birds—everything in fact appears to invite the man of the soil to engage in this great business of raising fowls on a large scale. These statements will surely not be doubted nor disputed.

There is need of standardization of the farmer's poultry business.

What do I mean? This is my thot—there are too many farmers who are conducting the poultry end of their calling in practically the same old way as it was done on the average farm a hundred years ago. They may keep more hens; but they are not down to date in their methods.

Standardization means reducing your business to a system or standard corresponding to the best science that has been discovered for that particular work. Its the average former doing this? Is he adopting the most efficient means and methods for getting the largest profits out of a flock of 250 hens? I believe we must all admit that there is still much for the average farmer to do in this respect.

Many are coming along in fine form. But there is still a feeling that the keeping of hens is rather a trifling side line, unworthy of the sedious attention of the men of the ranch. Accordingly, either the women have to take care of the birds and raise the chicks and market the eggs or that whole department of the farm job goes by default.

This ought not so to be. I know apparently very inteligent farmers who have been declaring for the last five years that the poultry business "is being overdone," and that the bottom will all fall out of it "next year." But each season these men have seen thousands of other people making fine little fortunes from their hen yards while they themselves have continued to scrape along milking cows and raising corn and potatoes at what they declare to be a loss. Why not try losing along some other line?

Many farmers are on this job; but I insist there are too many who are not making the best of a good thing. They need not only information, but inspiration. They need to come more down to date in hatching and housing, in caretaking and in marketing.

WEST MICHIGAN FAIR TO BE BEST EVER

MAKING farming pay! That in short, is the slogan of the officials who are behind the big educational program which will be presented at the coming West Michigan State Fair, Grand Rapids, September 17 and 21.

A visit to the fair will be like taking a short course at an agricultural college. It will give visitors many new ideas. The farmer, who is anxious to keep in step with the progress that is being made in agricultural and live stock breeding, will find much of interest to him. He will have a chance to study the various exhibits, make comparisons, and learn ways of improving his own crops and livestock.

One of the most interesting departments of the fair will be the machinery show. Machines of many different types, that will perform every conceivable task on the farm, will be exhibited. Factory experts will be on hand to explain their workings and tell exactly how much man-power each machine will replace.

The livestock show, with hundreds of head of fine cattle, sheep, swine and horses, valued at thousands of dollars, will be one of the show places on the grounds. Premiums totaling $18,000 will be awarded to the owners of prize winning animals.

The West Michigan Fair this year will be the best ever staged according to Secretary L. A. Lily. Both the educational and entertainment ends of the program will be of the very highest standard.

NEW POULTRY COURSE COMPLETED BY NOTED EXPERT

DR L. D. LE GEAR, V. S. of St. Louis, has just completed an extensive Poultry Course of 12 volumes and 33 lessons, in which he has given the practical knowledge of his 30 years of poultry raising experience.

Dr. LeGear is known throughout the United States as a National Poultry Expert. and it is the practical handling of the back yard flock that Dr. LeGear particularly covers in his Poultry Course studies.

Volume No. 12 of Dr. LeGear's Course is of particular interest at this time because it covers every phase of the molting period and gives complete instructions on how to get hens back to egg laying quickly.

This complete Poultry Course is not for sale but it being offered by Dr. LeGear without cost to users of his remedies. These volumes can be secured through any store where Dr. LeGear Remedies are sold.—(Adv.)

Calamity Ed had just taken his son back of the woodshed and thought the time ripe for a heart-to-heart talk.

"Eddie," said he as impressively as he could, "suppose I should be taken away suddenly, what would become of you? Eh?"

"Well, I'd stay here, I guess. Question is, what would become of you?"

"JUST WHAT I WANTED"

Your answer to inquiry No. 2183 at hand. The information is just what I wanted. Thank you.—E. S., Pittsford, Mich.

The Agricultural and Business Situation

Revised Monthly by the Department of Research of the American Farm Bureau Federation.

An understanding of the figures on this page as they are revised and presented each month, enables the farmer to see the position of the important factors which indicate the trend of business and prices and give a basis for judgment concerning future agricultural operations.

PRODUCTION AND TRADE:

August forecasts indicate a yield of wheat 8 per cent less than last year. Corn remains the same. Potatoes show a decline of 16 per cent. Cotton an increase of 17 per cent. The commercial apple crop promises an output 6 per cent greater than last season and peaches 17 per cent less. Comparisons with the five year average for eighteen crops may be noted in the accompanying table.

Industrial production is continuing at a high rate. In the first seven months of 1923 the output of automobiles almost equaled the output for the record year 1922. Total production for this year promises to be four million cars which is about one-third of the automobiles in use at the beginning of the year.

Building expenditures, the first six months of 1923, have been 32 per cent more than for the corresponding period in 1922. Prices of building materials during this period averaged 24 per cent higher than the same months last year.

Freight car loadings are at high levels except for grain and grain products. Railroads have added to their equipment and are meeting the demands made upon them without the congestion of a year ago.

Mail order sales, January to July this year, are 37 per cent above the same months in 1922.

11. FOREIGN TRADE:

Total exports in dollars for the twelve months ending June, 1923, were 5 per cent over the previous year while imports jumped 45 per cent. Pork exports, in volume, were 18 per cent greater this year; wheat exports were 20 per cent less; cotton 22 per cent less; tobacco practically the same.

European money with the exception of England, Holland and Sweden, is quoted lower than last year.

III. MONEY AND CREDIT:

Interest rates on four to six months commercial paper have made a steady advance since the low point of 4.25% in July, 1922, the rate now standing at 5.19%. The rate in August, 1920, at the beginning of the depression, was 8.25%.

IV. PRICES:

The latest figure on farm purchasing power, as published by the United State Department of Agriculture, is 71 compared with 72 for a year ago. For the first half of 1923 the figure averaged 69 compared with 72 for the same period last year.

Prices of many products are improving. Cattle, hogs and lambs are higher than a year ago. Wool is holding even. Dairy and poultry products are stronger. Corn is 25 cents higher. Wheat, although below the average for last year, is the same price as for the corresponding date a year previous. Cotton is 3 cents higher. Potatoes have taken a big jump.

Out of 25 commodities 17 are above a year ago; 5 are below and 2 remain unchanged. Compared with last month, 17 are higher and 7 lower.

Butter	138	143	121
Wool	248	250	104

4. Relative Purchasing Power of Farm Products:

(U. S. Bureau of Agricultural Economics)

The quantity of various commodities which a given amount of each farm product would purchase at prices prevailing in 1913 is put equal to 100. The figures given represent the percentage of this quantity which the same amount of farm products would purchase in June, 1922. Prices at the farm are used for agricultural products, and wholesale prices at central markets for other commodities.

	All Commodities	Cloths, etc.	Fuel, etc.	Metals, etc.	Building Mtls.	House Furn'gs

MARKET FLASHES

MARKET SUMMARY

Milling demand holds wheat firm. Moderate demand for corn. Oats steady. Rye quiet after decline. Beans firm. An oversupply of fruit on the market and prices are declining. Butter and eggs steady to firm. Poultry not wanted. Cattle trade active. Sheep higher in price. Hog trade active but prices lower.

(Note: The above summarized information was received **AFTER** the balance of the market page was set in type. It contains last minute information up to within one-half hour of going to press —Editor.)

FOOTE'S MARKET LETTER

BY W. W. FOOTE

Business Conditions Good

MARKETS are in good shape compared with a few months ago and business is reported better from all industrial circles. It seems that the mid-summer lull has passed and there is a growing expansion of consuming and purchasing power everywhere. The population of the United States has increased around 14,000,000 during the last ten years and our yearly national income has increased around $16,000,000,000 compared with ten years ago. The total of our savings deposits has grown from $6,000,000,000 to $14,000,000,000. The wide spread apprehension which has prevailed throughout all industries earlier in the year, has given way to more confidence and the outlook for the remainder of the period is more or less optomistic. Foreign trade balances are much in our favor, railroads report the heaviest volume of business in history, stock markets have improved materially within the last two weeks, and everything points toward further expansion and betterment of all businesses.

A recent act producing much good feeling in industrial world was the recognition of Mexico by the United States. That apparently small country is virutally an undeveloped area and there are vast resources of wealth yet to be found.

The purchasing power of the agricultural population continues to grow as indicated by increasing sales of those who cater to the rural districts. With the exception of the one crop man, the wheat raiser, most producers are reporting favorably as to their year's work. The cotton planter in the south has been hard hit but he learned the lesson of diversified farming a few years ago and now his condition is not so serious as the specialized wheat farmer. The cotton industry as a whole however, is of much concern to the United States who for many years controlled the world production of that staple product. Reduction in this year's crop is so great there is possibility that our country may lose the lead in production and Great Britian, who has long hoped to gain in that commodity is bending her efforts to lead in the world production.

The coal strike has passed without serious damage to business and peace generally exists in this country contrasted to the turmoil in Europe and the great calamity which has recently befallen the Japanese people. Here, we are busily laying up enormous sums of money for rainy days and still have immense amounts to send over to aid the Japs in their unfortunate predictment. True it is, that there is a certain class of farmers who have lost and seldom ever gain much. According to statements made by many bankers from all over the country at a meeting of the Land Banks Association recently, the American farmer is enjoying the best period in the history of agriculture. It was estimated that the value of agricultural land was $67,000,000,000 and the estimated value of this year's crops was $8,500,00,000, which is not a bad return even when the cost of production is deducted. More than 50 per cent of the farms in America are clear of debt and around 95 per cent are in sound financial condition.

The Weather Factor

There has been much rainfall in the corn belt states, and small grains have been damaged considerably. The corn crop is still growing and there is a possibility of much of it maturing late. Unless mild dry weather comes soon, there will be danger of early frosts. On the other hand there are some localities which have suffered from long dry spells. There has been a drouth in the bean growing areas of Michigan to such an extent that the crop has been cut in half. Inland potato growing sections have also been dry but along the lake shore this crop has done well. Another pest which has caused much damage to the Michigan crops is the grasshopper. Innumerable of this foliage eating insect has invaded certain regions and stripped the trees and legumes of their foliage leaving the country devastated and driving many farmers from their land. In the fruit growing sections of the western part of the state, crops are good but there is a shortage of labor for harvesting the fruit. Labor in the near by cities is so dear that it is hard to find any one willing to work on farms. The dairy industry is rapidly growing in Michigan and most dairy men are doing business on a small scale which eliminates the need of much help.

Wheat Situation

Eastern wheat farmers have not experienced the great worry that western wheat men have suffered. Farming is more diversified in the east and when one crop proves unprofitable, others take its place. Recently there has been an uncertain trend in the wheat market and there is no reason to believe that big advances will come nor is there reason to think that prices will decline sharply. The market fluctuates but at present is still above the dollar mark and some choice grades of cash wheat are quoted from $1.10 to 1.16. Reports from abroad have influenced the market at times and there will have to be an increase of foreign demand to absorb the surplus of this grain. The decrease in export business is apt to more than offset the reduction in this year's crop as compared with last year. People who have been abroad recently report that very inch of tillable soil is under cultivation and crops are in exceptionally fine condition. Europe will undoubtedly raise a great part of what she will consume this year. In this country farmers are storing their wheat in enormous quantities and are feeding and intend to feed most of the low grade wheat. Millers of this country apparently are aware of the fact that there will be but a little over production, if any, of choice wheat and they are now willing to pay good big prices for the best. An estimate of the 1923 wheat crop for countries north of the equator, which produce around four fifths of the world crop, was made recently by the United States Department of Agriculture. As compared with 2,566,510.000 in 1922 and 2,477,638,000 in 1921, this year's crop is estimated at 2,683,396,000 bus. The increase is the result of wide spread acreage in Europe and particularly France.

Corn markets at present are high and are making up for lost profits in wheat sections. Some of the best corn is now quoted at 90c. Oats also show higher prices than a year ago. An outstanding feature in the whole grain situation is that coarse grain values are higher than last year while meat is about the same. This, in face of all bearish propaganda, is surely surprising.

Meat Consumption

Consumption of dressed meat in the United States has been tremendous during the first half of this year and undoubtedly will continue on the gigantic scale for the rest of the year and as long as people are working. According to figures published by the research department of one of the largest meat packers, domestic consumption during the first six months of this year totals 2,494,000,000 lbs. of beef and veal against 2,375,,000,000 lbs. during the same period last year. The consumption of mutton and lamb was 229,000,000 lbs. as compared with 209,000,000 lbs. the year previous and of pork, 3,330,000,000 lbs as compared with 2,633,000,000 lbs. during the corresponding months in 1922. Pork consumption increased 26 percent over last year. Pork prices have been considerably lower taking the year as a whole and like wise the price on hogs. However, recent markets on hogs have made money for the farmer. This enormous consumption of meat products indicates industrial activity.

Live Stock Declines

During the last two weeks, live stock values have suffered a set back, but most traders are firm in their belief that the decline is but temporary and with light receipts prices on most stock will go higher. Most severe turndowns were registered on hogs and cattle. Today's prices however are at money making levels and still higher prices are looked for before the year is over. Choice light weight hogs reached $9.75 early this week, that being the highest of the year. Strictly finished steers sold up to $13.00 but closed with $12.85 taking the best. Fat lambs sold late at $13.40 with choice feeding lambs at $13.60. Producers have been gambling on live stock recently paying very high prices for cattle to take out for short feeding periods and giving from 25 to 50c more for lambs than killers were willing to pay. At Chicago countrymen bought fat steers of choice quality at $9.50 to 10.50 during the past week intending to put the cattle in the feed lots for two or three months and bring them back in the fall and cash them at high prices. This is a dangerous game of chance but there is always someone who like the thrill. The same condition exists at the Missouri River markets and steers have left that market for a short feed in the country costing $10.00 and above. There has been a broad country outlet for thin stock recently and as a movement of western range cattle comes into full swing, the trade in stocker and feeder is expected to show further volume.

Shortfed cattle have been offered on the market in large numbers lately, while strictly finished beeves have been comparatively scarce. Receipts were too much for the needs of the trade and declines were forced almost daily. During the last ten days beef steers have been on a downward trend and as compared with the high time then, closing values this week were from 75c to $1.50 lower. Finished steers however, were in a class by themselves and did not show more than 25c loss during that time. Thousands of cattle good enough for beef making went for slaughhter at $8.50 to 12.00 with some thin, ill-bred steers going as low as $6.50. Many western rangers found killer outlet at $7.50 to $8.50 and to feeders at $7.00 to $8.00. A few meaty western steers found feeding outlet at $8.50 to 9.00. Butcher stock also suffered in line with steers although the best corn fed offerings received the least decline. Most cows and heifers turned within a spread of $4.25 to 6.50 with the best at $8.00 to 9.00. Canners and cutter cows cleared largely from $2.50 to 3.00 and good dairy cows sold by the head from $60 to 90. Veal calves strengthened and closed at $11:00 to 12.00 levels. Bologna bulls found outlet mostly within a spread of $4.25 to 4.60.

On closing sessions hogs showed a little reaction from the low spots when the best went at $9.00. Most of the desirable light hogs sold late at $8.75 to 9.10 with tops at $9.15. Desirable medium weight hogs cleared largely from $8.40 to S.65 and heavy butchers went at $8.25 to 8.50. Rough, heavy packing sows closed on a $7.00 basis for bottom, and pigs also sold as low as $7.00 with the best around $8.25.

While the bulk of feeding lambs went at $13.00 to 13.50 all week, packers bought the best fat lambs downward from $13.25 to 12.75 mostly. Late in the week the best fat lambs sold up to $13.40. Common lambs sold down to $11.00 with culls as low as $9.00. Sheep values dropped sharply 75c to $1.50 on heavy offerings. Even the best light ewes were worth downward from $7.00 and heavies cashed at $5.00 and under. These prices were the lowest since last June. Slow demand for heavy cuts of mutton were responsible for the decided break in sheep values.

WHEAT

The wheat market continued steady during the two weeks ending Saturday, September 1st, and prices advanced on some markets during that period. Foreign news has been of a bearish nature but demand at home has been sufficient to keep the market from weakening. The demand has been mostly from the millers. Mills have been good buyers ever since the crop started moving. There were times that it was reported that they were filled up but at no time did it appear that they were out of the market, and the demand has been on the increase for some time. The market at Detroit seems to be in a very healthy condition. Flour is moving freely for domestic and foreign consumption. Good wheat is not plentiful and farmers are not inclined to sell readily, preferring to hold and see if prices will not advance. The holding is being done by both winter and spring wheat growers. Friends of lower prices are trying to use the large Canadian crop to bear the market. The American visible supply is very large and the hedging of it taxes the volume of speculation quite severely. The Canadian movement is heavy and this wheat is to a great extent hedged in Chicago as fast as it reaches the Lake Superior terminal elevators. Should the hedging be as great as usual it is feared the offerings may swamp Chicago and demoralize the whole North American market. Some grades of Canadian wheat have already been marketed in Minneapolis, duty paid. This makes an advance in prices appear difficult, if not impossible, while the marketing is on. The scarcity of corn has determined many wheat farmers to feed wheat largely and it is in this feature that bulls expect a stronger situation later on.

Prices

Detroit—Cash No. 1 red, $1.07; No. 2, $1.06; No. 3, $1.03; No. 2 white, $1.07; No. 2 mixed, $1.06.

Chicago—Cash No. 3 red, $1.04; No. 2 hard, $1.05½@1.13.

New York—Cash No. 3 red, $1.17¾; No. 2 hard, $1.15¾.

Prices one year ago—Detroit, Cash No. 2 red, $1.08; No. 2 white and No. 2 mixed, $1.06.

CORN

Trading in corn has been slow and the market affected by the action of wheat. September has continued to act independently and prices have been higher on short covering. Shipping demand has been rather slow. Weather conditions have not been favorable throughout the corn belt and there is some fear of damage by frost to the crop. Dry, hot weather is needed over a large portion of the corn growing territory. Any bullish influence that weather conditions might have on the market have been offset by the government crop report which was quite bearish. Receipts are only moderate. Export trade appears to be looking to Argntine for its supply. Students of the market state that corn and oat prices are about as high as they can go with prices of other grains at present levels.

Prices

Detroit—Cash No. 2 yellow, 96c; No. 3, 95c.

Chicago—Cash No. 2 mixed, 89@89¼c.

New York—Cash No. 2 yellow and

No. 2 white, $1.08; No. 2 mixed, $1.07.

Prices one year ago—Detroit, No. 2 yellow, 68c; No. 3 yellow, 67c; No. 4 yellow, 66c.

OATS

Oats have followed the trend of the wheat market. A fair trade has been noted and the price has fluctuated some. Chicago reports receipts during the past few weeks have been considerable larger than a year ago.

Prices

Detroit—Cash No. 2, 42½c; No. 3, 40½c; No. 4, 38½c.

Chicago—Cash No. 2 white, 40¼@40½c; No. 3, 38@40c.

New York—Cash No. 2 white, 51c.

Prices one year ago—Detroit, Cash No. 2 white, 39c; No. 3, 37c; No. 4, 34c.

RYE

Rye went from steady to easy at Detroit after an advance of 1 cent and the easy tone continues at this time.

Prices

Detroit—Cash No. 2, 75c.

Chicago—Cash No. 2, 72½@73c.

Prices one year ago—Detroit, Cash No. 2, 74c.

BEANS

Dealers in beans are alarmed over the recent weather. Heavy rains in some sections has done considerable damage to the crop and it is now estimated that the crop will be much smaller than previously estimated. Michigan beans are expected to be about one-half of a normal crop. Dry weather during the growing season hurt the crop in this state. The price at Detroit advanced 10 cents last week.

Prices

Detroit—C. H. P., $5.50.

Chicago—C. H. P., $5.40@5.85.

Prices one year ago—Detroit, C. H. P., $4.75.

POTATOES

The people are beginning to realize that the potato crop in Michigan will not be as large as was expected owing to continued dry weather and as a result demand is better. Prices at Detroit and other points have made several advances during the past fortnight. The market is firm in tone.

Prices

Detroit—Michigan, $2.83@3, cwt.

Chicago—Wisconsin, $2 @ 2.15 per cwt.

Prices one year ago—Detroit, Michigan, $1.42 per cwt.

HAY

Hay markets remain firm but with prices working a trifle lower. Increased receipts have weakened the central western markets but stocks have been cleaned up from day to day and condition as a whole is healthy. The recent rains in the southwest checked the demand for alfalfa and the market is a shade easier.

Prices

Detroit—No. 1 timothy, $20.50@21; standard, $19.50@20; light mixed, $19.50@20; No. 2 timothy, $18@19; No. 1 clover mixed, $17@18; No. 1 clover, $15@18.

Chicago—No. 1 timothy, $26@27; No. 2 timothy, $23@25; No. 1 light timothy & clover mixed, $24@26; No. 1 clover, $22@23; No. 2 clover, $15@17.

Prices one year ago—Detroit, Standard timothy and light clover mixed, $16@16.50; No. 1 clover, $14@15.

FROM HERE AND THERE IN MICHIGAN

Grand Rapids — Nelson-Mather building to have 4-story addition for furniture exhibit building. Railroad shopment of the Pere Marquete railroad given wage increase of 3 cents per hour effective September 1. City plans new pumps and supplementary conduit as further expansion of water distribution service.

Saginaw—Michigan Central builds new spur track to provide better shipping facilities for Saginaw Products Company. Local shops of Pere Marquette turn out 4 steel frame way cars, first of new kind ordered by Interstate State Commerce Commission. City awards contract for Mackinaw street paving. Also plans to buy 50 automatic voting machines at cost of $45,000. Local ladder factory organization increases capital from $25,000 to $75,000. Work on addition to Eagles temple making rapid progress. New Central school for east side children completed.

Bessemer — Hercules Powder Company building three new powder magazines near town. Three new contracts awarded for Gogebic county bridge and highway work.

PRITCHARD'S
WEATHER
FORECAST
INTERPRETED BY THE STARS

Week of September 16

THE unsettled weather in the West the past few days will rapidly develop into a more intense storm and reach Michigan early this week. During Monday and Tuesday the winds will be strong and the rainfall plentiful. These storm conditions will weaken towards the middle part of the week. clouds gradually break away and fair weather set in for a few days.

Temperatures will rapidly fall about Wednesday and very low temperatures for the season are expected, especially the nights when frosts will also occur.

Near the end of the week there is a probability of a showery period but nothing severe is expected from this storm.

Week of September 23

While unsettled conditions are expected during early part of this week with some fair weather, we believe that showery weather will predominate over most of the state through the 25th. General rains may be expected about 27th and 28th but will be closely followed with higher barometer and much cooler weather. The weather will also remain unsettled in most parts of Michigan during last part of this and beginning of next week.

The price of butter depends a great deal upon flavor, body, color and salt and 50 per cent of these conditions depend upon the weather during previous weeks.

At this time we believe the butter market will be easy and the quality good, judging from a weather stand point only. We also figure that late supplies of cheese will also be good.

CROP REPORTS

WEXFORD—Threshing time past, grain a fair average. Plenty of rain. Grass growing good, making good pasture. Some wheat sowed and some plowing for wheat. Potatoes looking fine but not a large acreage. Lots of apples. Light frost Sunday night but no damage.—Jos. H. Campbell.

CALHOUN—Not much doing in this section. Farmers are getting ready for their fall seeding. Late potatoes are looking good. Soil is in good shape.—C. E. Beardsley.

OGEMAW—Getting too much rain for new potatoes. Tri-county fair is over and I must say that Tuscola, Roscommon and Ogemaw can boast of some of the best cattle in the state. I have never seen a better lot, the sheep and hogs were the best they have shown in years. James Anderson.

OAKLAND—Harvesting all finished and threshing being rushed. Wheat is a good sample, so are oats. Corn is getting ripe and some of it cut. Potatoes are looking well and no signs of blight. Pastures are gone. No rain of any account for a long time. Some orchards have a good show for apples but more have but a few. Not much fruit of either kind here.—E Foster.

CLARE—Beans harvest on two-thirds of a crop. Corn good crop.—W. C. Fuller.

SHIAWASSEE—Farmers are very busy filling silos and pulling beans. Heavy rains during the past week have damaged beans to some extent. Quite a hard frost on September 2nd but was not a killer. Corn and potatoes promise good. Clover seed is well filled and of good quality. No wheat seeding is reported as yet but many farmers have their ground nearly fitted.—D. H. Morris.

CLINTON—Plenty of rain now, bean harvest being held up on account of rain. Bean yield cut by dry weather. Grain threshing nearly finished. Farmers are plowing for wheat. Low prices on wheat will cut acreage. Some corn being cut. Corn down bad by recent wind.—O. R. Richard.

MECOSTA—Weather was real wet and warm up to September 7, but it is quite cold at present. Corn is only a half crop. Threshing is all done. Potatoes are looking good but need at least three weeks to get their growth. Beans only a half crop. Some are doing fall plowing. Help is hard to get. Eggs and butter are on the raise. Farmers are real busy. —Frank DeBoer.

World's Greatest Dairy Cattle at the National Dairy Exposition

Great exhibit of 1,500 head of selected dairy cattle—pure bred, grade and Club calves—from every section of the country, representing all the dairy breeds. An opportunity for you to inspect them—in one big barn—compare their good qualities and learn to produce the most milk at the least expense. See the world's most famous bulls and cows that produce the most milk and the richest

Dairy Farm Equipment Display

Over two miles of farm and dairy machinery—a great exhibit of new and improved milking machines, cream separators, barn equipment, churns, and a thousand and one other articles to lighten labor and increase profits on the farm.

U. S. Department of Agriculture's Exhibit

Showing modern practices in breeding and feeding cattle and in marketing dairy products.

Meetings and Conventions of Dairymen Every Day
Reduced Railroad Rates from Everywhere

NATIONAL DAIRY EXPOSITION

Syracuse, N. Y., October 5th to 13th

Detroit Beef Company

offers its services to the *Farmers of Michigan* as a high class, reliable commission house for the sale of *Dressed Calves* and live poultry. Write us for information how to dress and ship calves to market. $250,000 capital and surplus. 34 years in business in the same place and same management.

Address
DETROIT BEEF CO., Detroit, Mich.

TOBACCO

LEAF TOBACCO. FIVE POUNDS CHEWING $1.75; Ten $3.00. Five pounds smoking $1.25; Ten $2.00; Twenty $3.50. Send no money; Pay when received, pipe and recipe free. CO-OPERATIVE FARMERS, Paducah, Ky.

LEAF TOBACCO: CHEWING, FOUR POUNDS $1.40; fifteen pounds $4.00. Smoking, four pounds $1.00; fifteen, $3.00. Pay when received. Pipe and receipe free. UNITED TOBACCO GROWERS, Paducah, Ky.

GENERAL

I WISH TO GET IN TOUCH WITH GROWER who has 100 bushels or more good peaches for sale. Prefer one living near Turner. E. O. ENSIGN, Turner, Michigan.

LOW RATES TO CLEVELAND by the D. & C. Waterway. Refreshing. All conveneniences.

We Want Every Business Farmer Reader To Be Insured!

THE Business Farmer has made is possible for every single reader to carry $1,000 Accident Insurance for the trifling sum of 75c per year!

This is the total cost of the insurance policy here described and it is issued by the well-known North American Accident Insurance Company of Chicago.

There are no other costs if you are a paid-in-advance subscriber to The Business Farmer and you can secure a policy for every member of the family providing one member is a subscriber, at the same cost, 75c for each policy.

This is YOUR opportunity to do what you have been putting off so long.

There is no red tape—no medical examination—just sign the Application Blank in the corner of this page and send it in with the required amount—Seventy-Five Cents (75c) for each policy.

Just one requirement—ONE MEMBER OF YOUR FAMILY MUST BE A PAID-UP SUBSCRIBER ONE FULL YEAR or more—and you must enclose the address label from this or any recent copy of The Business Farmer to prove it.

If your subscription is not paid up add SIXTY CENTS for a One Year renewal and send 75c for each policy desired.

OLD AS WELL AS NEW SUBSCRIBERS MAY SECURE THIS POLICY!

Any or all members of a family from 16 to 70 years of age may secure this policy, providing they live at one address, at which one member of the family is a paid-up subscriber to The Michigan Business Farmer.

We have issued Several Hundred of these policies to date and most of Our Readers have insured other members of their families after receiving and reading the Liberal Policy offered.

ORDER AND REGISTRATION FORM

The Michigan Business Farmer, Date..............................1923
Insurance Department, Mt. Clemens, Mich.

I hereby apply for a $1,000.00 TRAVEL ACCIDENT INSURANCE POLICY of the North American Accident Insurance Company, for which I enclose Seventy-five cents (75c) in check, money-order or registered letter.

☐ I also enclose my address label from a recent issue of The Business Farmer to prove that my subscription is paid-up for one year.

☐ I enclose SIXTY CENTS (60c) in addition ($1.35 in all) and my old address label, for which you are to mark my subscription paid in advance One Full Year.

SIGNED.. Age....................

Post Office.. R. F. D. No..............

State.. Occupation..................................

☛ In consideration of my subscription I may also wish to secure.............. additional $1,000.00 Travel Accident Policies for other members of my immediate family, send necessary Order and Registration forms with my policy.

EDEN BROTHERS GARAGE
F BOYER GARAGE
DAVIS MOTOR CO
NATIONAL GARAGE. ROY ATKINSON, PROP.
GARAGE IN AUSTRALIA OWNED BY SWEENEY STUDENT

Own Your Garage or Business

LOOK at these pictures. Twenty thousand Sweeney trained men own garages, tire shops, vulcanizing and service shops, just like these. **You can be your own boss.** You can be independent. It is easy to start in business for yourself. Then you don't have to bow down to some employer and do work you don't like.

Sometimes it looks like carpenters, plasterers, etc., get big wages, but when hard times come they are out of work. I say work for yourself. Then you are not bothered by strikes, lockouts, factories closing down. **Own your own business;** work for yourself with enthusiasm, not drudgery. It's the yearning of every young man TO BE HIS OWN BOSS, and Sweeney makes it possible.

How would you like to see your name above the door of a neat and profitable garage like one of those shown in the pictures?

Sweeney trains men in eight weeks in the auto and tractor business. I have had over 60,000 graduates. I estimate 20,000 are in business for themselves.

You don't need previous experience. These men had no previous experience. You don't need any capital to speak of. These men hadn't much money. But they had Sweeney's training and made good. There are opportunities everywhere. Other fellows with money are often looking for trained men to handle the the mechanical end as partners.

Look at Clayton Eden's nice garage at Ainsworth, La. Clayton says: "We operate the leading garage. Have all the business we can do. Also handle Hudson, Essex and Buick cars. Owe my present success to the wonderful training received at the Sweeney School."

Look at the National Garage. Roy Atkinson sent me this picture from Everett, Mo. "Worked on a farm," says Roy. "At nineteen had only $14.00. Got father to send me to the Sweeney School. Three days after I came home I fixed a neighbor's Ford car. That was my start. Today this garage is worth $4,785.00. My business takes three men to handle. I never worked in any other garage. I used my Sweeney training. If you want to get that start, do as I did and go to the Sweeney School."

Look at John Boyer's garage at Milford, Illinois. John says: "Having a good business; busy all the time."

From far off Australia S. A. Noller writes "Business is fine."

What these boys have done you can do. If you like mechanics write me today Get my Big FREE catalog. There is a fortune for you in the pages of this book. You have a right to make a success of your life. Make the start right now. I'd like to show you what thousands of men just in your position have done as a result of the **SWEENEY SYSTEM OF PRACTICAL TRAINING.** Learning is a real pleasure in the Sweeney School. World's finest equipment. Fine associates. Healthful surroundings. Entertainment after working hours. Instructors who take a personal interest in you.

Farm Magazine Owned and
Edited in Michigan

VOL. XI, No. 3 SATURDAY, SEPTEMBER 29, 1923 TERMS: TWO YEARS $1
60c PER YEAR—5 YRS. $2

There is Always a Market for Sorted Fruit

In this issue: "Both Sides in M. A. C. Fight Shout 'Politics!'"—"What Ails Mutual Fire Insurance Companies?"—"Is Your Local Banker the Chief Aid to Farmers in Your Community?"—Opening chapters of our new serial "Oh, Money! Money!"—Agricultural and Business Situation page.

Starting Ninth Year

Non-Assessable Policy by Experience

Assets Over $375,000.00

THE Citizens' Mutual Automobile Insurance Company of Howell has had a remarkable growth. Over 12,000 members were insured within a year from date of organization. The company has now finished eight years and is starting on the ninth season. The company has never had to borrow a dollar and has increased its assets each year. The policy holders pay one renewal each year. In a mutual company the money accumulated is left in the treasury for the benefit of all policy holders. No dividends are paid. With about 45,000 policy holders the company has a state-wide organization of adjusters, agent and attorneys in every county seat and town in the state of Michigan to give them service.

DETROIT CONCERNS PAY PREMIUM FOR GRADED POTATOES

ONE of the most interesting facts gleaned by the casual reader from the premium-list of the Top O' Michigan Potato Show which will be held in Gaylord on the 7th, 8th and 9th of November, is that several prominent Detroit concerns are willing to pay a large premium above market price for potatoes, provided they can be assured of proper grading and selecting. The Detroit Association of Commerce, Crowley Milner Co., Newcomb Endicott Co., and several other Detroit business houses have offered to buy over a half of a carload of carefully selected and graded potatoes at $2 a bushel from those growers who win first prizes in certain classes of exhibits at the Gaylord Show.

So desirous is the consumer to have potatoes that are well-graded and carefully selected that they are willing to pay a large premium to get them. In this case, the premium will probably amount to over a dollar a bushel, which will make a very handsome prize for the grower who places first in that particular class at the Show.

The Detroit News also offers a special prize to those exhibiting potatoes at the Top O' Michigan Potato Show by offering to purchase 300 bushels of specially graded potatoes from the grower who wins first prize in the class calling for a 150 lb. sack of graded potatoes. They offer to pay 50 per cent above the market price at the time of the Show.

With the consumer putting forth such inducements to Michigan growers to place quality stuff on the market, it will probably not be long before shipments from other states will be crowded out.

FROM HERE AND THERE IN MICHIGAN

Lawton — Devel pump factory seeking factory site at this point.

Paw Paw—New school house under construction rapidly nearing completion.

Ironwood—New municipal Memorial building costing $750,000 complete.

Lansing — Economic surveys of Antrim and Ogemaw counties nearing completion.

South Haven—Chicago Syndicate to build $750,000 "Edgemers Beach Hotel" in this city.

Alma—Alma Grain-Lumber Company purchased by local business men, operation to be continued.

Cheboygan—Iosco Land Company buys Gerow estate Pigeon river property to develop water power project.

Cassopólis—Michigan Gas & Electric Company making headway securing rights of way along pike between here and Edwardsburg.

Wakefield—Estimated 12,000,000 tons iron ore to be shipped from Wakefield and Plymouth mines before season closes.

Albion — National Spring and Wire Company installing machinery to manufacture automobile cushions, factory to be opened soon.

Cadillac—Assets and business of Detroit Veneer & Panel Company sold to new corporation, Gluetite Panel Company of Cadillac.

Grand Rapids—Citizen Telephone Company properties transferred to Michigan State Telephone Company. New Fountain street Baptist church nearing completion.

Muskegon—Brunswick Tire Company sells business to B. F. Goodrich Company, moving plant to Akron, Ohio; Buildings of Brunswick Company to be utilized for manufacture of other products.

Detroit—American Bond Company purchases real estate and bond business of United Trust & Mortgage Company. Contracts amounting to $1,000,000 awarded to electrify Detroit, Toledo and Ironton Railroad.

Ludington—Pere Marquette Railroad Company's car-ferry business employs 250 men drawing $251,000 annually in wages. Pere Marquette Railroad to inaugurate new fast freight trains between Toledo and this city.

Flint—New home of Industrial Savings Bank and that of First National Bank nearing completion. New "Flint Six" plant of Durant Motor Company to turn out 300 cars daily. Contract to be let for erection of nurses home for Hurley hospital.

Fruit Ass'ns Combine Into Strong Organization

THE Michigan Fruit Growers, Inc., is making wonderful progress in the organization of Michigan's co-operative fruit marketing industry. Within the past few months it has organized 75 per cent of the co-operative packing house output in the state and today controls a tonnage of more than 4,000 cars of peaches, apples, grapes and pears. It is working forward to a goal of 5,000 cars of fruit to be marketed through the farmer-owned and controlled Michigan Fruit Growers, Inc.

The Michigan Fruit Growers, Inc., is affiliated with the Michigan State Farm Bureau under the commodity control type of organization. Offices at Benton Harbor have been opened with Secretary F. L. Bradford in charge.

Seek Organization Benefits

The organization of this state-wide co-operative sales agency for Michigan Fruit is proceeding in the right manner. The central sales organization is being builded upon already existing and successful local marketing associations. They are getting together for the benefits that come from an organized marketing of their products. These are: eliminating murderous competition between the co-ops. themselves, and protecting themselves against the raids of speculators who seek to beat down the price. The fruit growers see in the Michigan Fruit Growers an opportunity to market their fruit throughout the country in an orderly manner as the big California Exchanges do, and profit accordingly.

The Michigan Fruit Growers will enable these same co-operatives to organize their capital and other resources for standardization of varieties, grades and packs, a powerful, far-reaching sales organization which will be backed by proper advertising and other sales helps.

The Fruit Growers have marketed more than 100 cars to date and expect to be handling 50 to 100 cars daily in a short time. Eighty per cent of all tree fruit handled is graded and packed through associations and 66 per cent of all grapes are handled through associations.

Fruit Ass'ns. Flock In

During the past few weeks nearly all of the powerful fruit marketing associations north of Grand Rapids have joined the Michigan Fruit Growers and have contracted the sale of their fruit through that organization. New members of the Fruit Growers are:

Grand Rapids Growers' Association, Fremont Co-operative Produce Company, Hart Co-op. Marketing Association, Onekama Farm Bureau Local, Benzie Co-op. Fruit and Produce Association at Beulah, Benzie Co-operative Fruit Exchange at Elberta, Mason County Fruit and Produce Exchange at Ludington. The Grand Traverse Packing Company and the Tri-County Co-op. Marketing Association at Brunswick are considering memberships in the Fruit Growers.

The Southern Crop

Other members of the Michigan Fruit Growers, Inc., most of them South of Grand Rapids, are as follows:

Kibbie Fruit Exchange, South Haven Fruit Exchange, Lawrence Co-op. Mktg. Ass'n., Bangor Fruit Exchange, Paw Paw Co-op. Ass'n., Benton Center Fruit Growers Ass'n., St. Joe (Mich.) Fruit Growers Ass'n., Lincoln Fruit Growers Ass'n. at Stevensville, Bridgman Fruit Growers Ass'n., Lake Shore Fruit Growers Ass'n. at Sawyer, Decatur Co-op. Ass'n., Sodus Fruit Growers Ass'n., Grand River Fruit Ass'n. at Spring Lake. The Fennville Fruit Exchange will be affiliated with the Michigan Fruit Growers.

Both Sides in M. A. C. Fight Shout "Politics!"

Veteran and Unbiased Political Observer States Facts in Present Turmoil Which Begun With Ousting of Dr. Friday and Which Has Upset All Factions in Lansing

By JOHN FITZGIBBON

(Veteran Lansing Correspondent of the Detroit News.)

UNIQUE in the history of Michigan is the bitter controversy between Gov. Groesbeck and his associates on the State Administrative Board on one side, and the Michigan Agricultural College Board and the State Farm Bureau on the other.

It is a controversy in which leading allegations are, to quote the Governor, "that the management of the college has drifted into the domain of petty politics," and that a farmers' organization, the Farm Bureau, without any semblance of legal right, is not only doing considerable in the way of directing certain activities of the college, but is contributing to the financing of these activities, and, to quote the college board, that the Administrative Board, of which the Governor is the head, is usurping constitutional prerogatives of the college board.

Also it is a controversy that has broken some close political friendships. The six members of the college board are a unit in charging what they term interference, in defiance of the Constitution, by the Administrative Board in college affairs. Yet three of the members received important appointments from Gov. Groesbeck and in the past have been his ardent supporters. They are L. Whitney Watkins, whom the Governor last year appointed state commissioner of agriculture, and Clark L. Brody and Jay R. McColl, who were placed by him on the college board to fill vacancies. Herman H. Halladay, who was the Governor's first commissioner of agriculture and was, with his cordial approval, transferred to the secretaryship of the college at a better salary, the transfer being made at the solicitation of Dr. David Friday when the latter was appointed president, has also turned from a friend to a critic and lined up with the college board.

Dates Back to 1921

Melvin R. McPherson, another member of the college board, who is a Kent County farmer, used to say that Mr. Groesbeck was the best Governor Michigan ever had. Now he is telling farmers' meetings that the Governor has an ulterior political motive in trying to hold the purse strings of the college.

The controversy had its inception during the legislative session of 1921, when Rep. Arlie Hopkins, Manistee County farmer, who was in charge of the college's appropriation bill, brought about an exhaustive investigation of the college management. At last Wednesday's meeting of the Administrative Board it was mentioned that the substance of Rep. Hopkins' report was that the business methods of the college were very poor and that no progress was being made towards development. His criticism extended to all branches of the management, and the outcome was that the Legislature placed a clause in the college's appropriation bill that the moneys for the different purposes specified in the bill should be expended under the general supervision of the Administrative Board.

The board proceeded to exercise this supervision without objection by the college board and, in the words of Gov. Groesbeck, solely to build up the college and to carry out the legislative mandate. There were rumors that the college board did not like this supervision, but there was no open resentment. In part, the college board appealed to the Administrative Board to undertake the construction of a home economics building and a library building, for which the Legislature had appropriated about $400,000. The college board had been unable to secure bids within the appropriation, but the Administrative Board, by purchasing the material and eliminating contractors, is now finishing both buildings for considerable less than the appropriation.

Then the Dr. Friday Affair

The proposal that Dr. Friday be appointed president originated, as was widely recorded at the time, with Gov. Groesbeck. The Governor was supremely confident that the prestige of the new president as an educator and economist, in conjuction with his avowed policies, would place the college in the foremost rank of agricultural colleges of the country. The circumstances of how the college board and the Farm Bureau leaders broke with President Friday last May over agricultural development plans, the two more important questions of difference being co-operative marketing and farm organization, and his resignation, are too recent to need recounting at this time. Anyhow, the propaganda of the college board and Farm Bureau leaders against Dr. Friday before he retired from the president's chair resulted in open hostilities between these two groups, on one side, and the Governor and the Administrative Board on the other.

Now, as to the activities of the Farm Bureau leaders in affairs of the college. According to these leaders, these activities are solely speaking in general terms, to make farming more profitable. Those who resent the bureau's affiliations with the college, take the ground that the farmers' organization is using the college through the county agricultural agents in more or less of the 64 counties that have such agents, as well as through others who have positions, both with the college and the bureau, to keep its members in good salaried situations, as well as for political purposes.

County farm agents, whose duties are to instruct farmers and fruit growers how to meet problems that will make their fields, their orchards, their herds and their flocks earn more money, were authorized under the Smith-Lever Federal Act of 1915. By the terms of this act the Federal Government gives $600 towards providing an agricultural instructor, or agent, for any county if the State matches it with a like amount. Boards of supervisors may vote as much as they feel conditions warrant to add to the $1,200. Some boards vote a few thousand dollars annually so as to secure a highly trained agent. If supervisors do not vote funds county organizations of the Farm Bureau may do so under authority of a legislative act of 1919.

Farm Bureaus Pay $124,000

A report submitted to the Administrative Board shows that the farm bureaus in 39 counties have contributed $47,720 towards the salaries of county agents, and $77,586.69 for agents' expenses. The Legislature last spring voted $150,000 for each of the two fiscal years beginning July 1, this year, for farm extension work, which the descriptive designation of the services rendered by county agents and like work by men sent out from the college. County farm bureaus sometimes, while not contributing anything to agents' salaries, provide their office and traveling expenses Some of the wealthier counties have not only an agricultural agent but, in addition, a home demonstrator as well as a farm boys' and girls' leader. County farm agents are appointed by the college board on recommendation of R. J. Baldwin, extension director of the college, and, according to an investigator's report to the Administrative Board, county bureau leaders are consulted in making appointments.

There are four inspectors of the county agents, Hale Tennant, who is also market director of the college, salary $6,000; R. G. Carr, salary $4,500; C. X. Ballard, salary $4,200; E. G. Amos, salary $3,600. Three of the six members of the college board, Mr. Watkins, Mr. Brody and Mr. McPherson, are directors of the State Farm Bureau, Brody being secretary and manager. A former office employe of the board says that Brody's salary from the Farm Bureau a few years ago was $7,000 and that it has been raised since. Watkins is discussed, though not by those in his confidence, as likely to be the bureau's candidate for the Republican nomination for Governor but he himself says that he is not yet prepared to talk about the matter.

In 1920 a story was printed that Mr. Watkins had been told that he would be designated as the farmer candidate in the Republican primaries for Governor, but that some of the leaders met in a hotel in Detroit one day without his knowledge and selected the late Milo D. Campbell. Mr. Campbell was the farmers' candidate in the primaries, finishing second to Gov. Groesbeck.

Would Oust Farm Bureau

The Farm Bureau's income is derived from $10 a year dues, of which $6 goes to the county organization, $3.50 to the State Bureau and 50 cents to the American Farm Bureau Association. At State headquarters of the bureau, Lansing, the information is that the bureau's membership is now about 60,000. Several years ago statements were printed representing the membership to be nearly 100,000.

Gov. Groesbeck is emphatic in declaring, and the other six members of the Administrative Board support him, that the college board must dissolve all relations with the Farm Bureau, and that county agricultural agents shall receive their entire salary and expenses from the Federal and State governments, and the counties, "but from no other sources," and until they agree to these terms the Administrative Board will refuse the college board the right to draw any of this year's $150,000 appropriation for farm extension work.

The college board, while it is on record as conceding that the Administrative Board has general supervision as to how other items in the college's appropriation shall be expended, refuses so far to yield to the ultimatum of the Administrative Board that it renounce all connection with the Farm Bureau. The college board informs the Administrative Board that "as to the suggestion that county agents receive all their salary and expenses from Federal, State and County funds, we have for some time recognized this as desirable and look forward to some arrangement whereby sufficient funds from these sources will be provided."

Unless the college board yields the Supreme Court may be invoked to settle the controversy. The last word from the Administrative Board to the college board is that the courts have repeatedly sustained its position, and that the courts are still "open and in session if the college board wishes another expression."

SAYS BEAN PICKING MACHINE MADE HIM $460 LAST YEAR

I NOTICED your article in September 15th issue of Michigan Business Farmer about hand picking beans on the farm. It would have been impossible to have handled my beans last year by any such method as your article suggests, although you have the right idea.

Last year my neighbors and myself began discussing different methods of cutting out the enormous hand picking charges which are so high that they are taking the life and profits out of the bean growing industry.

I looked around for a machine which would pick out the stones, dirt, and partially rotted beans. Our hardware dealers finally ordered a machine for me which certainly worked way beyond my expectations.

On a thousand bushels of my beans that picked 12 lbs. per hundred pounds by running them on this machine I reduced them and sold them to the elevator at 2 lb. pickers. The machine took out 10% or 6,000 pounds of culls from the lot at 8 cents a pound, which the elevator charges for picking a pound of culls, or saved me $480.

Besides I didn't have to load up and haul and give to the elevator three tons of culls. Futhermore, I didn't have to make a couple of trips to town to pay $15 a ton to get the culls back on the farm where they belong. Neighbors brought beans to be picked from as far as eleven miles away and were well satisbeans to be picked as far as eleven miles away and were well satisfied with the work the machine did for them. In about twelve days I earned in charges to neighbors $225 which leaves me a balance, after paying for my machine, of $435 on the picking of the 1922 bean crop. Several people nearby have bought the same make of machine I have and also think it is the proper way of handling the bean marketing profitably.

I think it funny since so many of these machines were sold around here and it is such a success that this information hasn't gotten into either yours or some other Michigan publication before. My picker will surely be valuable to me this year as I have about 45 acres, some of which are damaged by rain, but this does not trouble me near as much as it used to when I did not have the picker.

I paid $300 for my picker last year but understand the new price is $200 for this year.—J. Shay, Jr., Saginaw County, Mich.

What Ails Mutual Fire Insurance Companies?

Business Farmer Investigator Finds Farmers Dissatisfied With Present Methods and Increasing Cost of Insurance in 93 Mutual Fire Insurance Companies Operated in Michigan

IT is high time something was being said about the rapidly mounting cost of fire, hail and other insurance to the farmers of Michigan. The mutual companies which once boasted of efficient management and low costs are the ones Which most directly affect the farmer. There are 93 mutual fire insurance companies alone in Michigan. They carry three-quarters of a billion dollars at risk for their farm members. This is a subject we are sure Business Farmer readers will be glad to have brought out in the open.

Editor Business Farmer:—The readers of your valuable paper are practically all farmers. Every one of us carries insurance for the protection of our property, and yet we seldom read anything in your columns about mutual insurance.

Never in my remembrance has so much dissatisfaction been expressed by the farmers in my locality about insurance as now. Every year our assessments are climbing and we don't seem to get any more or greater protection. What is wrong with mutual fire insurance? From your observation can't you give us some information?—J. C. R., Greenville, Mich.

WE are frank to admit that we have published very little relative to mutual fire insurance as carried by companies insuring farm risks exclusively, other than to answer inquiries from time to time, and probably the matter is of sufficient importance to devote some space thereto.

In looking over the last statement issued by the State Insurance Department we find that the mutual companies are carrying nearly three-quarters of a billion dollars, divided among 93 mutual companies, most of which are covering only counties in which they are located, others two or three counties and but a very few carrying risks anywhere in Michigan, outside of cities with less than 5,000 population. The most any company has at risk is $98,892,420 and the smallest $100,400.

The total amount of losses paid was $2,411,884,84.

This is a wonderfully big business in which the farmers of Michigan are greatly interested, and thus we are glad to express our views as to its standing and betterments. There is not any business in the State, in which the farmers are so vitally interested, in a more chaotic condition. Of all of these 93 mutual companies we can safely say that no two have the same set of governing by-laws. So long as they do not conflict with the State laws and the plans of the State Insurance Department, any company can adopt laws to suit the fancies of its members.

We say members, and really they have but little voice in the formation of the laws governing their company. The laws and the changes which are made thereafter are usually drafted by some officer or officers, and when the meeting is called for the purpose of passing upon same, the attendance does not represent one in every hundred. While it is the privilege of every member to attend these meetings and have a voice, yet they do not, and instead of being the result of a united membership vote it is but fulfilling the requirements of the many by few.

The Forgotten Purpose

One lamentable fact in the operation of mutual insurance companies is that laws are enacted for the government of the company which are made to suit the requirements of the officers in charge instead of making them for the most liberal protection possible to render its members. The officers seem to lose sight of the fact that a mutual fire insurance company is nothing more or less than a number of farmers banded together to pay each other's losses caused by fire and lightning, and the cost of operation of the company, but they so form the governing laws as to perpetuate those in charge in good positions. In so doing the rights of the insured member is so lessened that the protection afforded becomes of uncertain value. Instead of making the laws in the interests of the insured many companies seem to see how little can be furnished in case of loss.

The laws of these farm mutual insurance companies consist of the articles of association and the by-laws of the company usually printed on the policy. The usual plan of organizing a company is to take the articles of association and by-laws of some company already in operation and revise them to suit the fancy of the organizers of the new company.

No Two Alike

There are not two farm mutual fire insurance companies in the state of Michigan with the same set of by-laws. Some are liberal and fair and some are not. Some companies carry what is known as the blanket policy, which has been in force by only a few companies for the past few years.

In order that our readers may thoroughly understand what we mean by blanket policies, many companies indicate in their policy the amount of insurance on each individual building, the amount on hay, grain and produce, the amount on farm implements, the amount on livestock, etc. This is what is termed a specified policy. Some companies even go so far as to say how much insurance they will carry on the contents of a certain barn, how much on the contents of all other buildings, specifying separately each one. In the way of explanation will say that if the policy of insurance placed $1,500 on barn No. 1 and $500 on the contents of same, then no matter how large the loss might be on the contents of that barn, the insured would only get $500 by the specified policy.

The blanket policy came to light about ten years ago and while it is in force with a few companies, many are reluctant to adopt it because it will very materially increase the amount paid the insured in case of loss, and therefore, necessitates larger assessments. A blanket policy usually indicates the amount of insurance on each separate building, and on personal property, comprising hay, grain, produce, implements, vehicles, live stock, poultry, etc., only one amount is indicated. For instance, it might be $2,000 regardless of in what buildings this property might be located, the company carrying the blanket policy would pay the full amount of the loss. The blanket policy would pay any amount on the contents of a barn, granary or any other building, in case of loss, if it did not exceed the amount of insurance, whereas in the granary there might be 1000 bushels of wheat worth $1,000 and on the policy specified only $300 on the contents of the granary which would be all the farmer would get in case of loss, whereas if the blanket policy were in force, the insured would get the entire loss, $1,000. It seems hardly fair to ask a member who is paying $1,500 on insurance, possibly $500 on live stock, $500 on hay, grain and produce, and $500 on implements and machinery to accept $500 in case of loss of $1,500, the contents of barn No. 1, because he saved his implements and live stock. In such case the member is paying for $1,500 protection and while his loss may be a great deal more than that he receives but $500 compensation in case of loss.

The Business Farmer believes that there should be a uniform blanket policy adopted by all of the mutual

(Continued on Page 17)

Is Your Local Banker the Chief Aid to Farmers in Your Community?

By MR. S. T. KIDDOO,
President of the Live Stock Exchange National Bank, Chicago.

MR. S. T. KIDDOO, the author of this article, gained his first fame as a banker in the live stock regions of the Northwest, where his activities secured so much attention that he was called to the presidency of the Live Stock Exchange National Bank. Mr. Kiddo is in a peculiarly fortunate position to keep his fingers upon the pulse of the live stock industry and also keep an eye on those factors that intimately concern the welfare of the farmer.

I DO not know what you, as a farmer, think of your local banker. You may consider him as the chief aid to agriculture in your neighborhood. On the other hand, you may look upon him as an individual whose strong hand is blocking agricultural progress and barring the gate between you and prosperity. Whatever your opinion, it probably is based upon the same foundation that governs the opinions of most of us, namely, a personal experience.

I, as a banker, may have little respect for a fellow business man purely because of a personal and isolated experience with that man. He may do business in a way that is fundamentally sound, and at the same time be rendering a definite service to the people who patronize him.

Nearly every business is the lengthened shadow of the man who runs it, and sometimes we are inclined to judge a business more by the personality of its president than by the actual service it is rendering. That is why a hale fellow who is a good mixer is often a great asset to a business: Customers of that business keep their eyes on him because of his admirable sociability, give the business a better deal and more favorable judgment. On the other hand, the head of a business who has a grim, cold nature may cause his institution to develop a reputation which is unfair to it and not at all in line with the service it renders. This is true of banks as of all other businesses, and since practical service rendered is the criterion of a business's usefulness, it will pay patrons of any institution, whether it be a bank or not, to look beyond the personality of the management and determine honestly whether the business itself renders a wholesome, economical service.

All of this is preface to a question which I am about to ask, and inasmuch as I hope it will be answered fairly, I felt it necessary to set the stage for the inquiry.

What service is your banker rendering you?

Theoretically, your bank should be a combination of the following activities:

1. It should safe-guard your money and valuables, by providing facilities that will free you from the risk of burglary, carelessness, fire and other mishap.

2. It should encourage thrift and habits of saving by paying you interest on monies you deposit in its savings department.

3. It should provide the expert information that you need on all major financial transactions that you engage in.

4. It should likewise be a clearing house of financial information which it can secure from its correspondents and from similar institutions in other parts of the country.

6. It should definitely carry on a campaign to instruct your children in habits of saving and provide ways and means for developing such habits.

7. It should co-operate so far as possible with local schools in campaigns to inculcate thrift.

8. It should be active in every movement that has to do with the sound economic development of the territory it serves.

Most of these activities can be accepted as the duties of a normal healthy bank, and as such, can be expected and demanded by the depositors of all normal, healthy banks. The experience of the writer leads him to believe, and to say, that very few bankers fail to carry out such activities to the limit of their abilities. However, it is the writer's belief that banks can go still further in rendering service to individuals and communities, provided the banks receive the moral support and active co-operation of the farmers around them.

I refer particularly to the following types of activity:

A. Movements that will lead to the agricultural and industrial development of the community.

B. Movements for the betterment of live stock, soil and other natural resources.

C. Assistance—not financial—in the solution of the local farmers marketing problems.

It goes without saying that a bank may have the finest building, vaults and personnel in the world; be located in a land of milk and honey, and at the same time be a failure in the midst of failures.

The money deposited in a bank depends not altogether upon the accuracy of the bank's accounting system, the honesty of its personnel, the strength of its vaults or the beauty of its building. In a farming community, for example, all these things will go for naught if the farmers are unable to market their products at a profit. Also, if farm lands are gradually deteriorating; if such scourges as tuberculosis are permitted to run riot among the local herds.

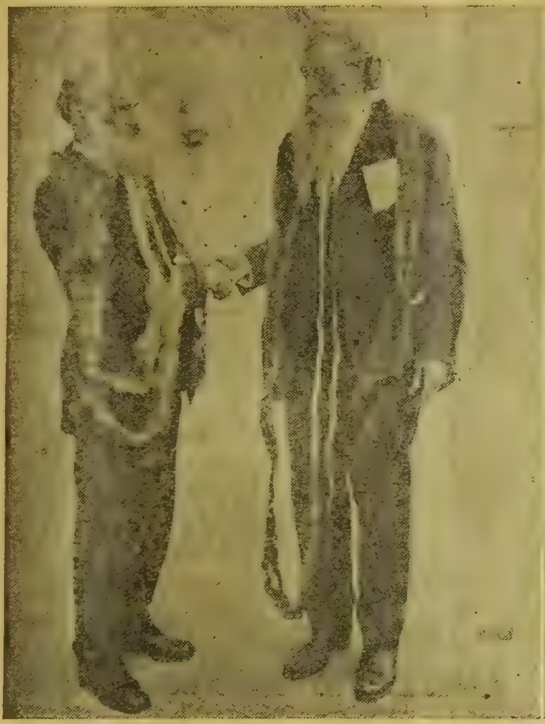
It is simply a matter of self-preservation for a bank to engage in activities such as I have listed arbitrarily under A. B. and C., above, but—

The banker should not be the sole one held responsible for doing these things.

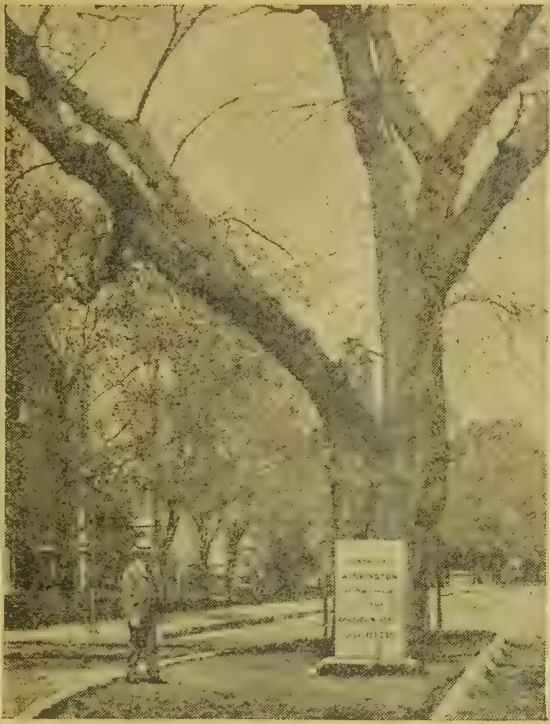
He is perhaps as well fitted and in as good position as anyone in a community to foster such activities. He, moreover, can get out such work with less antagonism. But he is by no means the expert in agricultural matters that the farmer is, and unless some of these things are initiated and pushed by the farmer himself, the banker is helpless.

It is with the idea of starting something along this line, that this article is prepared, and with the permission of the editor of this publication, we will continue the discussion in a future issue.

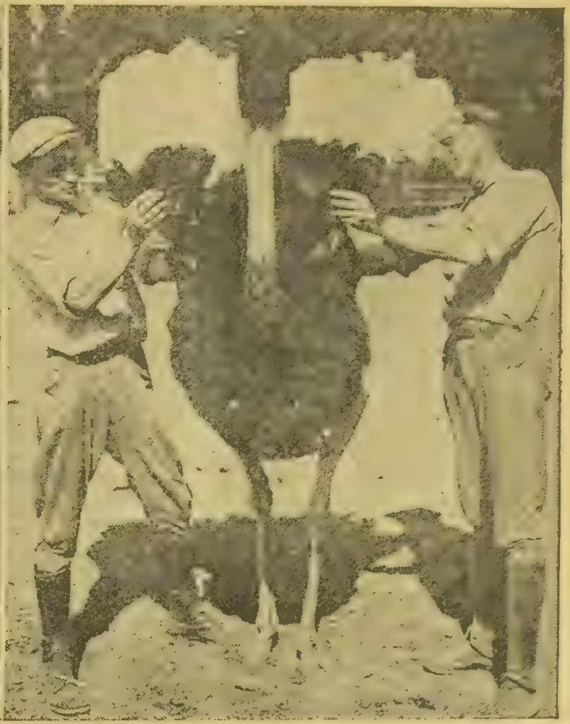
PICTURES FROM FAR AND NEAR



ALL HAIL TO THE GRAND WHISKERINO.—Hans W. Langseth (right) 77 years old, of Barney, N. D., who has the longest beard in the world. It is 17 feet long, and at the recent annual convention of the International Association of Specialty Salesmen, Pres. Burns of the convention declared that Hans would be crowned King Whiskerino of the world. The man at the left has a beard 11 feet, seven inches long.

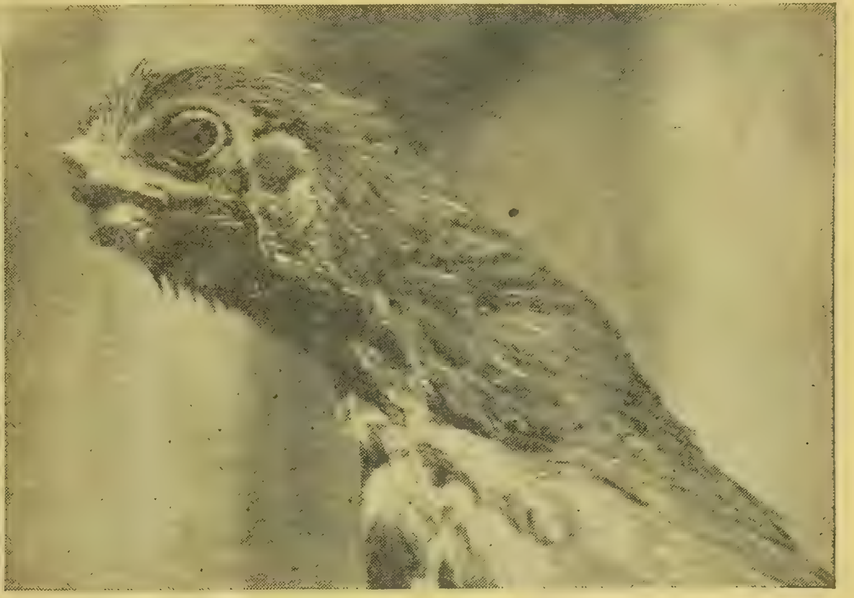


WASHINGTON ELM TREE IN CAMBRIDGE DIES.—The Washington Elm Tree, Cambridge, Mass., under which George Washington took command of the American Army, which has been pronounced dead by experts. A shoot from this tree, cut off several years ago and now thriving, has been suggested to be put in its place, while Mayor Quinn, of Cambridge, has started a drive for funds to erect a monument on the spot.



PULLING THE WOOL OVER HIS EYES.—Plucking the ostriches at the Cawston Ostrich Farm, South Pasadena, Calif., is one of the most interesting sights vouchsafed to tourists. Contrary to general opinion the feathers are clipped and not pulled out, as the term of plucking would imply. To render the bird docile it is necessary to pull a hood or stocking over its head for when blindfolded the bird gives no trouble.

DISCUSS FARM FINANCIAL SITUATION WITH PRESIDENT.—Members of the Federal Farm Loan Board paid a visit to President Coolidge and discussed the financial situation of the farmer throughout the country. Left to right:—Commissioner R. A. Cooper, M. L. Corey, E. E. Jones, L. J. Pettijohn, J. H. Guill.



WHAT A COMBINATION.—Cats hate chickens, and vice versa. Here is a strange chicken with a cat like head, property of a Philadelphia, Pa., man. It meows, climbs trees and likes milk. Wonder what would happen if the cat half got mad with the other half?

THERE IS NOBILITY IN THE POULTRY WORLD.—Illinois claims the queen of the poultry world, Lady Anne, a real scion of the feathered nobility. She holds the record for laying among living hens, having reached the 1300 mark. She expects to soon exceed the world's record of 1355—made by a hen who has long since passed to chicken heaven. Lady Anne is 10 years old, a white Leghorn, of English ancestry, incubator bred.

FIRPO, THE VANISHED.—On September 14th at the Polo Grounds, New York City, Jack Dempsey proved himself to be a real champion by knocking out Luis Angel Firpo of Argentine, South America, in the second round of their scheduled 15 round go, making it one of the shortest championship bouts ever fought. The South American gave Dempsey a hard battle knocking the champion through the ropes during the first round.

A MODEL OF INDUSTRY.—A view of the baby's carraige blanket, made by Mrs. Calvin Coolidge and which was an entry into a National Knitting Contest. The blanket, which Miss Lena Lorris is holding, was made while Mrs. Coolidge and her husband were on the Vermont farm, before the death of the late President Harding. Mrs. Coolidge states that the blanket will go to her first grandchild—but that event is a long way off.

(Copyright, Keystone View Co.)

EXTERMINATING SAND BURS

Would you please tell us how to get rid of sand burs? We have about one-half acre that we have to fight every year.—Mrs. M. W., Midland, Mich.

—We are fortunate in Michigan in having only one species of sand bur, Cenchrus carolinianus. In the more southern portions of the country they are blessed (?) with 4 or 5 kinds, some with large, some with medium sized, and some with small burs. All these, however, are annual plants, i. e. they do not have roots that live through the winter, so that they have to depend on their seeds to carry them over until next year.

The method of combating them that has been shown to be the most successful is that of pulling them up, placing them in a pile and burning them when dry, the burning being for the purpose of killing the seeds which otherwise will continue to ripen after the plants are pulled up and will then break free and become scattered.

The difficulties in carrying out this method are (1) that the burs are allowed to break loose and fall to the ground, thus reseeding the patch; (2) that in pulling up these plants small portions of the plants are allowed to remain which quickly develop new roots and new stems so that within a short time the plant appears as vigorous as before.

The sand bur does not enjoy competition so that if the soil is rich enough to support a thick growth of some other plant such as millet, sorghum or buckwheat, provided the stand of the latter is very good, it will be unable to develop to maturity that season. Putting the field to a hoed or cultivated crop will settle the difficulty if the hoeing or cultivating is done at frequent enough intervals, which is, however, usually not the case.—E. A. Bessey, Professor of Botany, M. A. C.

MEN SHOULD RENDER ACCOUNT

A number of farmers formed a cooperative farmers elevator and as they gave their notes each one also signed a collateral note. A board consisting of seven members was appointed to take charge of affairs. A man from another city was hired to run the business at an exorbitant salary. He hired extra help and spent the money until finally the collateral notes had to be paid. Then within a few months bankruptcy was declared, three men were appointed to sell the elevator and it has been sold but none of the stockholders know for how much or anything about the business. An auditor came and looked over the books but no report has been given and the stockholders, at least those who were not on the board, are wondering where the money has slipped to. The elevator was a paying business when owned by individuals. Can a few of the members do business in that way and give no account of the auditing, the sale or the delinquency of the manager and board?—L. M., Clifford, Mich.

—The three men appointed, in the bankruptcy proceedings, to sell the elevator would be required to render an account of their proceedings.

I suggest that you take this matter up with the referee in bankruptcy. If that is not sufficient, you could file a petition to have an accounting, which would probably necessitate the services of an attorney. —Asst. Legal Editor.

CUT WEEDS ALONG HIGHWAY

Has a farmer a right to let wild carrot grow on his farm or on the road side? We have been keeping it down on our farm but the neighbors have it all around us and we would to know how to go about it to have them cut it down before it goes to seed.—A.H., Brown City, Michigan.

—The statute specifically provides that every owner, possessor or occupier of land shall cut or cause to be cut and destroyed all Canada thistles, milk weed, wild carrot, oxeye daisies and other noxious weeds growing thereon at least once in each year, before July 1 in townships south of R 16 N and before July 15 in townships north of R 16 N and as much oftener as is necessary to prevent their going to seed. Failure to comply with this law makes such person liable to a fine of $10.00 and for the cost of cutting the weeds and in such case the weeds would be cut by the township highway commissioner or by men in his employ and the cost would be levied against the property owner in the same manner as other taxes are levied and collected.

This law is interpreted to mean that the abutting property owner is required to cut such noxious weeds on his land and the center of the highway abutting same. It is the duty of the township highway commissioner to post proper notices and to see that all violations of this act that come to his knowledge are prosecuted. Reference, Act No. 66, P. A. 1919 as amended.—Frank F. Rogers, Highway Commissioner.

Farmers Service Bureau

(A Clearing Department for farmers' every day troubles. Prompt, careful attention given to all complaints or requests for information addressed to this department. We are here to serve you. All inquiries must be accompanied by full name and address. Name not used if so requested.)

COPYRIGHT FARM NAME

Please advise me regarding the registering of a farm name or copyrighting of same. It seems I read something in reference to this some time ago but do not remember the substance now.—W. C. B., Mattewan, Mich.

—If you wish to transact business under the farm name, it would be necessary to register it with the county clerk. However, if you wish to give it a name merely for designation or for distinction, it would not be necessary to have it registered.—Asst. Legal Editor.

OBLIGED TO MAINTAIN FENCE

"When a feller needs a friend" he looks about, considers the nature of his affliction and then, if he is an M. B. F. reader, he will, in all probability, send his S. O. S. towards Mt. Clemens.

And now could you give me the meaning of Michigan law governing railroads in respect to the maintenance of fence along its right-of-way. I live near Romulus and our pasture field abuts the Wabash Railroad and the fence is so poor the cattle can go back and forth at will. The section foreman knows about this but makes no effort to repair the fence. Have been to see station agent and he kindly informed me that the Wabash railroad declined to fix its fence where the property owner did not maintain a good fence over his farm. —S. D. E., Romulus, Mich.

—Railroad companies are required by the laws of Michigan to maintain suitable fences along their right-of-way, to protect stock from injury by trains.—Asst. Legal Editor.

BUG ON PUMPKIN VINES

Last year our pumpkin and squash vines were eaten up by a bug and this year there is a lot of them. Would you please tell me if there is any thing that will kill them? Am sending specimen.—C. L., Whitehall, Mich.

—The insects turn out to be the common squash bug or stink bug. This creature likes to hide under bits of board during the cold nights and if one places small pieces of board or shingles on the ground near the squash vines the bugs will crawl under these boards and can be jarred off into a bucket of water and kerosene early in the morning before the air starts to warm up. This is called trapping them. It is also the very best of practice to clean up rubbish in the fall since these bugs go through the winter under rubbish.—R. H. Pettit, Professor of Entomology, M. A. C.

NOT COMPELLED TO SERVE AFTER RESIGNING

If the governor of Michigan should hand in his resignation and it was not accepted, would he have to go on being governor just the same even though he did not want to?—A. P., Weidman, Michigan.

—The Governor could not be compelled to serve after resigning, even if his resignation were not accepted. —Asst. Legal Editor.

EACH PARTY FURNISH HALF

We rented a farm, each to furnish half and take half. There were nine acres of rye on the farm which we were to cut with the understanding that we were to leave the same amount of ground sowed to rye when we left. Who should furnish the seed to plant this ground?—E. A., Elwell, Mich.

—When a farm is let on the fifty-fifty basis, that is, the landlord gets one half of farm income and tenant one-half, such expenses as seed, twine, fertilizer, etc., are borne in the same proportion as income is divided. In the above case the landlord would furnish one half of the seed and the tenant one half, providing the same number of acres are sown as were on the place when leased. This works out the same as any crop the tenant put in and harvested during the cropping season as potatoes, corn, etc.—F. T. Riddell, Research Asst. in Farm Management, M .A .C.

"D" LIABLE FOR DAMAGE

You have always helped your readers when in trouble and now I would like to have you help me in my problem. This spring R. made a new line fence, placing oak posts 10 ft. apart and nailed on a new woven wire. R planted corn in his field 3 feet from his line fence. D had clover hay on his field across from R's cornfield and now after D harvested his hay he put his cattle into the clover field, and they broke down posts and trampled over wire and ate a considerable amount of corn and broke down and tramped up a lot. R told D to repair line fence R made as it was just put up new or pay for damages and D says it's not his fence and he is not going to repair it or pay damages. Does D have to pay for damages or fix fence or does R have to repair fence and stand the damage D's cows made?—Reader, Bay City, Mich.

—Under the circumstances, I am of the opinion D would be liable to you for the damage done by his cattle to your land and the fence.—Asst Legal Editor.

NOT OBLIGED TO TRANSPORT CHILDREN TO SCHOOL

At our annual school meeting we voted to close our school, each scholar to go to the school nearest to their home. Two miles and twenty rods is the farthest any one of the children has to go. Some claim we cannot close the school without arranging transportation for the scholars to some other school. Is this true?—H. S. S., Midland, Mich.

—The State does not undertake to compel a district to maintain a school or to transport its children to another school district. It is within the power of the electors in the district to vote to have no school, according to their discretion. But if no school is maintained, and no provision made for sending its pupils to another school, the district loses its share of the primary school interest fund.

SEE ATTORNEY

Please advise if in your opinion there is any way to force payment of $28.00 wages due me for operating a tractor, threshing last fall? This party has repeatedly promised payment but all his holdings are mortgaged, even the threshing outfit is not paid for. Can I attach the machine which is left here in my neighborhood?—A. H. P., Gould City, Mich.

—Compiled Laws 1915, Section 13,-029, sets forth the requisite conditions to attachment proceedings. Under the circumstances, you will likely require the service of an attorney to collect your debt, so I suggest you turn it over to a good lawyer, who will proceed by whatever means is most advisable. The facts you have given me are not, within themselves, sufficient to justify attachment proceedings.—Asst. Legal Editor.

RIGHT TO ACTION FOR DAMAGES

Can anyone collect pay from anyone for running over a hen that is in the road when he could of missed her if he had of slowed down a little?—C. McQ., Greenville, Mich.

—I am of the opinion you would have a legal right of action for damages against the person who ran over your hen.—Asst. Legal Editor.

MICHIGAN CROPS

SOW ALFALFA WITH WHEAT

What would you advise about seeding alfalfa in fall wheat, that is sowing alfalfa seed in the spring? Is there any difference in alfalfa seed and if there is which is the best kind to sow? I have ten acres I want to put to wheat and thought maybe it would make a difference in the amount of wheat to put on to the acre if I seeded it to alfalfa.—R. S., Harrison, Mich.

—Wheat usually makes an excellent companion crop for alfalfa when planted at the usual rate of six pecks of wheat per acre. Lighter rates of planting will benefit the companion crop of alfalfa to some extent. It certainly is not advisable to plant at a heavier rate than the customary six pecks if a good stand of alfalfa is to be expected.

There is a great difference in alfalfa seed and varieties from various sources. The Grimm, Michigan Grown Lebeau, and northern grown common are dependable in Michigan. The Grimm is hardier and longer lived than the common. For heavy lands either the Grimm or Michigan grown Lebeau are recommended. Twelve pounds per acre, applied early next spring, properly inoculated, is sufficient. If your soil is acid lime should be applied for best results with alfalfa when fitting the seed bed this fall.—J. F. Cox, Professor of Farm Crops, M. A. C.

VARIETIES OF RAPE

I would like to know if there is any difference in rape and if there is, what is the best kind for hog pasture?—R. S., Harrison, Michigan.

—There is a great difference in rape varieties and in seed secured from various sources. The Dwarf Essex from Holland has long been recognised as the best for hog pasture, or for pasture use for other live stock. The crop produced from the Dwarf Essex rape is more rapid and more even in growth. The yield is greater and the crop is much more palatable and succulent than is the crop from the Japanese, a stemmy, coarse, lighter yielding rape which has been largely distributed in the United States, particularly during the war period, when there was a great shortage of Dwarf Essex rape. It is usual to plant rape at the rate or two or three pounds per acre to a depth of one-half to three-quarters of an inch on a well prepared seed bed.—J. F. Cox, Professor of Farm Crops, M. A. C.

DO NOT SOW ALFALFA NOW

Will you kindly tell me if I can sow alfalfa on wheat ground now and have it do any good? I seeded five acres this spring and got a very poor catch only in spots. Would like very much to get this piece of ground in to alfalfa.—L. H. C., Ithaca, Mich.

—Alfalfa seeded during late August and early September is likely to winter kill badly. For best results I would recommend that you hold over until spring. The spotted condition of last spring's seeding may be due to soil acidity or it might be due to poor drainage.—C. R. Megee, Associate Prof. of Farm Crops, M. A. C.

JAPANESE PERSIMMONS

I saw an article in a farm magazine about Japanese Persimmons and would like to know more concerning them. Can they be grown in muck? If so where can I get trees and instructions on planting and care?—O. S., Decatur, Mich.

—We do not recommend the culture of Japanese persimmons in this state. Without doubt many of the soils in the state would be found suitable for raising this fruit, but the Japanese persimmons are tender to winter cold and they would be sure to winter-kill here.—V. R. Gardner, Professor of Horticulture.

Simply Unbeatable Prices on the World's Best Fall Styles

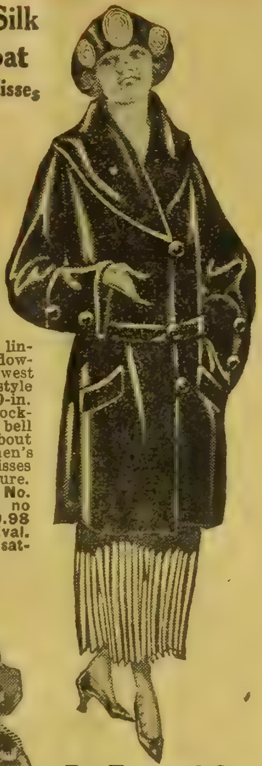
Yes, prices that are absolutely rock-bottom. Sharood invites you to order any of these amazing bargains on approval. Don't send one cent. Just letter or postcard brings you any of these smashed price bargains. Merely give Name and Number of each Article You Want. Also State Size and Write Your Name and Address Plainly to Avoid Delay. Pay nothing till goods arrive—then only the amazing bargain price and postage. If you are not delighted with your bargain for any reason at all, simply return the goods and your money will be cheerfully refunded. ORDER NOW.

Send No Money---Pay on Arrival

Sporty Style Silk Seal Plush Coat

For Women and Misses

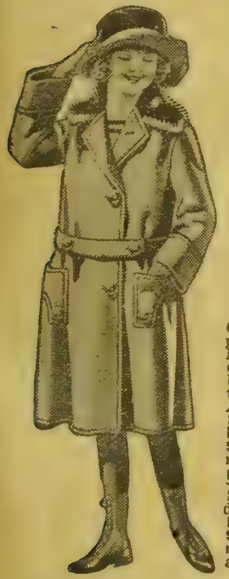
$10.98



Where else can you buy a genuine silk seal plush coat of this jaunty style and splendid quality for such a low price? Beautifully modeled of soft, warm, lustrous, deep pile silk plush with full lining of beautiful flowered sateen. Newest loose back flared style with belt. Wide 10-in. shawl collar, two pockets and roomy bell sleeves. Length, about 34 inches. Women's sizes 34 to 44; Misses 32 to 38 bust measure. State size. Order No. 96E7000. Send no money. Pay $10.98 and postage on arrival. Money back if not satisfied.

Fur Trimmed Coat For Girls and Children

$3.48 UP

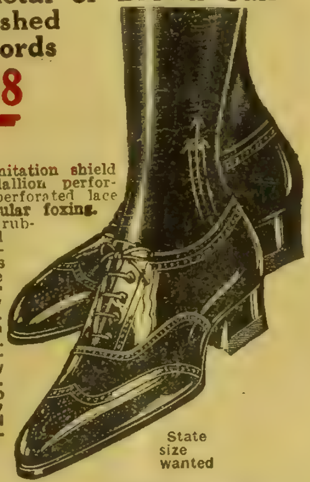


Girl's stylish coat of polo with warm Coney Fur Collar. Two novelty pockets. All-around belt. Novelty buttons trim pockets and belt. An amazingly low price. Sizes 7 to 14 years. Navy 96E7308. Brown 96E7310. Send no money. Pay $4.48 and postage on arrival.

Same quality for children, sizes 2 to 6 years. Navy 96E7458. Brown 96E7460. Send no money. Pay $3.48 and postage on arrival. State Size.

Women's Patent Leather, Gunmetal or Brown Calf Finished Oxfords

$1.98

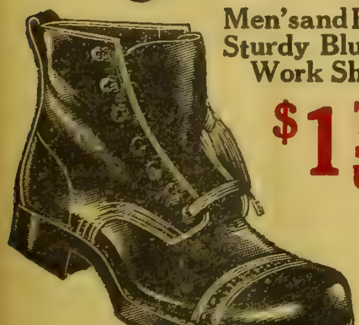


Made with imitation shield tip and medallion perforated vamp, perforated lace stay and circular foxing. Has medium rubber heel and medium pointed toe. Sizes 2½ to 8, wide widths. Order patent by No. 96J121. Order gun metal by No. 96J122. Order brown by No. 96J123. Send no money. Pay $1.98 and postage on arrival.

State size wanted

Men's and Boys' Sturdy Blucher Work Shoe

$1.79 UP

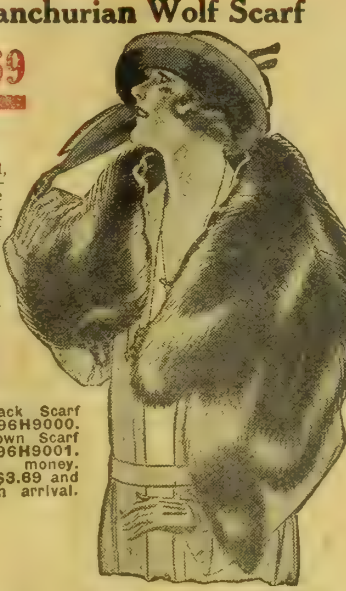


Give Size

Brown or Black work shoe of durable leather. Solid leather inner soles. Heavy double soles. Green chrome outsole. Leather heel. Sizes 6 to 12. Wide widths only. Order Brown by No. 96A758. Order Black by No. 96A760. Send no money. Pay $1.98 and postage on arrival. Order Boys' sizes 1 to 5½ by No. 96A554. Price $1.89. Order Little Boys' sizes 9 to 13½ by No. 96A555. Price $1.79.

Manchurian Wolf Scarf

$3.69

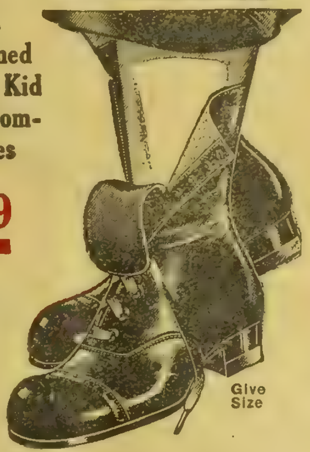


Beautiful, soft, inexpensive Manchurian Wolf scarf lined with Messaline silk. Length about 44 inches. Width about 12 inches. Tail 13 inches, large and bushy.

Order Black Scarf by No. 96H9000. Order Brown Scarf by No. 96H9001. Send no money. Pay only $3.69 and postage on arrival.

Women's Fleece Lined Soft Black Kid Finished Comfort Shoes

$2.29

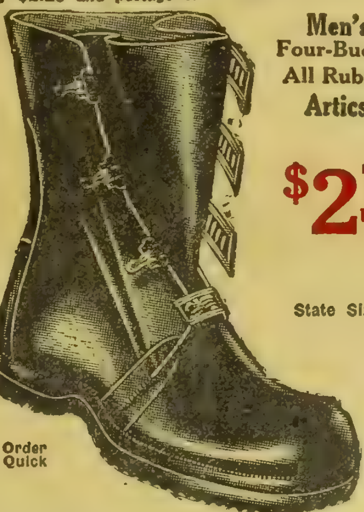


Give Size

Positively America's greatest bargain in a woman's shoe of this kind. Soft kid finished pliable leather uppers have heavy splendid lining that keeps feet warm as toast in the most severe winter weather. Excellent grade natural oak leather soles and low rubber heels. A roomy last that is also dressy in appearance. Simply unbeatable value at Sharood's low price. Women's sizes 3 to 9, wide widths. Order No. 96J880. Send no money. Pay $2.29 and postage on arrival.

Men's Four-Buckle All Rubber Artics

$2.79



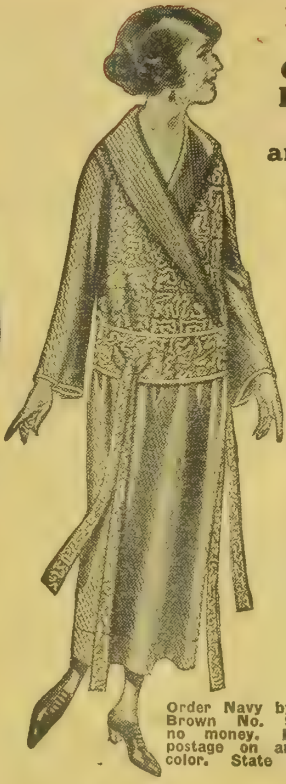
State Size

Order Quick

Guaranteed best quality all rubber 4-buckle hi-cut artic for men. Made with double thick soles and seams reinforced. Snow excluding tongue. Furnished in men's sizes 6 to 15. Wide widths. Sensational value. Send quick. Order by No. 96A990. Send no money. Pay $2.79 and postage on arrival.

Bulgarian Effect Gabardine Frock For Women and Misses

$2.98

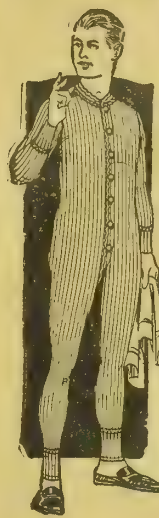


An exceptionally attractive fine quality cotton gabardine dress for women and misses. Long roll collar in shawl effect, sleeves and belt piped in red. Entire front of blouse enhanced with exquisite all-over embroidered design in Bulgarian effect with rich harmonious colors. Two streamers at both sides and front. Wide belt embroidered to match blouse. Sizes for women, 34 to 44 bust; for misses 32 to 38 bust. State length desired. Colors, navy or brown.

Order Navy by No. 96E7500, Brown No. 96E7502. Send no money. Pay $2.98 and postage on arrival for either color. State size.

Heavy Fleeced Union Suit

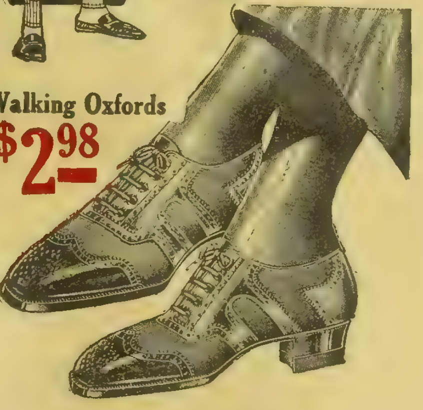
89c UP



Men's heavy flat knit union suit of good quality cotton yarn, with heavy fleece lining. A sure protection from cold. Closed crotch, flap seat, flat seams. Knit cuffs at wrist and ankle. Sizes 34 to 46. Order Tan Jarger Color by No. 96C1279. Send no money. Pay $1.29 and postage on arrival. Order Gray Random Color by No. 96C-1280. Send no money. Pay $1.29 and postage on arrival. Order Boys' sizes 22 to 34. Tan Jaeger color by No. 96C1358. Pay 89c and postage on arrival.

Walking Oxfords

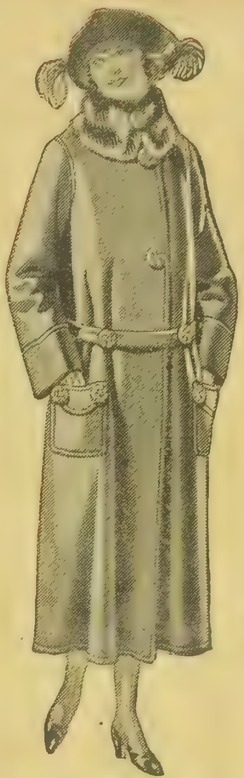
$2.98



Women's combination sport oxford with Log Cabin or gray suede vamp and quarter with contrasting brown calf or Patent Leather trimming at tip, lace row and quarter. One-piece genuine oak sole; low walking heel with rubber top lift. Sizes 2½ to 8. Wide widths. Order brown by No. 96J119. Order gray by No. 96J120. Send no money. Pay $2.98 and postage on arrival.

Fur Trimmed Thibet Coat For Women

$5.98



Another sensational value in a warm winter coat. This becoming model is of splendid Thibet cloth in choice of rich brown or navy blue. The ample collar is of genuine brown Coney fur Coat is finished with all-around self material belt and two patch pockets trimmed with pretty buttons. Imitation cuff is also button trimmed. Coat measures about 48 inches long, and comes in sizes 34 to 44 bust.

Order Brown by No. 96E7094. Navy by 96E7096. Order Black by No. 96E-7095. Send no money. Pay $5.98 and postage on arrival. State size.

Men's Sturdy Duck Coat

What the Neighbors Say

HAVE COUNTY OFFICIALS DO ABSTRACT WORK

DEAR EDITOR:—Feeling that I have been imposed upon by the charges that were recently made when I had occasion to have some abstracting done, I want to ask you, and any others who may happen to have had a similar experience, why should every county have an abstract office composed of persons who are not county officials?

Not to have the county officials do this work which is in a nature public work, at least the public is interested in it, seems to me to be the wrong system. After the abstracting is done you are not sure that it is correct and unless the work is done by a concern that guarantees its work there may be grevious mistakes with no come-back by the one who had to pay the high abstracting fees.

I cannot but think that our system is fundamentally wrong and should be corrected. The two glaring faults with our present method is that of the outrageous charges, and then of the fact that you do not know that your abstract is correct. I recently had occasion to get an abstract of eight acres of land which lays partly in the village of Cass City. I went to Caro and called at the recording office only to be told that I would have to go to the abstract office. These people wrote the abstract and then forwarded it to one of the Cass City banks with a charge of fifty dollars. Now money talks and it is this charge of fifty dollars that is making me talk because such a charge can only be described as exorbitant, and even then what I have isn't worth much and I am not sure that it is correct.

Now I want to ask you, what is the value of this abstract, and wasn't the charge of fifty dollars altogether too much? Let some interested person answer this, even some practical abstracter.

A certain good business man has just told me that I should have had the abstract cover only the last twenty years. That seems strange to me, it is like telling them what to do, that is to tell them just what to put in the abstract; to my mind such a paper would not be at all complete and would not tell the whole story of that particular piece of land. I may be wrong, and if so I am ready to be enlightened; that's why I have solicited answers to my questions. To have the abstract curtailed would no doubt also curtail the cost, but it would also curtail the narrative as to whose hands the land has gone through and this might be objectionable to some future buyer.

I can not see why the clerks in the abstract office could not have gone to the recorder's office and there secured the records regarding the piece of land and then transferred these records to the abstract books in a very short time; in regard to my eight acres I'm sure this could have been done in much less than one-half day and that much work certainly would not have cost anything like fifty dollars. If it would the abstracting charges certainly need revising downward.

Other lands have different systems which work out perfectly and with none of the abuses which I have tried to point out which are so apparent in our American way of doing this work. Ontario has a much more direct and responsible method and when you get an abstract there from the proper government office you know you have something that is correct and will stand any test. I am not a knocker to tear down, but a constructive one, and when I think I see an evil I want to be shown that I am wrong or else do something to remedy the defect. That's what we all should do, and I think you will agree with me. Abstracting costs our people millions of dollars annually with no adequate return as I can see.

None of us sheuld object to paying well for a real service but when we have to hand out our dollars for a piece of work that seems to be of no practical value I think it is time we made a change. But even granting that an abstract is necessary, and also that it is executed correctly, why cannot some means be adopted so we can have an abstract made without the present exorbitant charges being attached to it? That is the crux of the whole question and the whole country is ready to give any man a high place who can suggest some adequate and practical scheme whereby abstracts can be obtained that are dependable and at a reasonable cost.—E. K., Cass City, Mich.

DO NOT BLAME FARMERS FOR LEAVING FARM

DO you blame farmers for quiting the farm? I do not. There are too many farmers now. We farmers raise too much, more than we can sell at a profit. Why ask a man to work on the farm for $1.25 per day (many a man get less) when he can get from $5.00 to $8.00 per day in the city. Money talks.—E. B., Mecosta, Mich.

Uncle Rube Spinach Says:

WHERE ARE WE AT ANYWAY?'

HERE jest a little while ago me an' men an' various wimmin wuz sorta advocatin' the short skirt for the female of the species, so to speak. We sed they wuz cool, co-table an' convenient, an' they wuz all of that an' more. More is what I ain't goin' to talk 'bout now but may later on in this letter.

Anyway, reformers, — ol' maids with nothin' to brag about, preachers an' divers an' various folks sed short skirts wuz redic-lus an' ? mor'-lizin' an' everything. There didn't seem to be much of anything left unsaid 'bout 'em did there? Girls, young women, even older women, wore 'em up to the knees or, sometimes, upperan' that . Well, we old fellers an' most of the young lads got sorta used to seein' 'em that way an' didn't think much about it.

But now—oh Jeremiah's Jumpin' Ghost! Long skirts—I saw this very day hittin' the sidewalk—bright blue stockin's and bright blue shoes. An' I see 'em in red an' green shoes an' stockin's to match. An' skirts with so many scallops into 'em that with all the high colors on their underpinnin' you see more'n anybody ever dreamed of seein' with short skirts.

An' now what will our reformers—ol' maids, ministers of the Gospel, what will any of 'em have to harp about? The long long skirts are with us—not to stay long but they are with us now. Bobbed hair an' long skirts. Long skirts, bobbed hair an' green stockin's an' green shoes. Long skirts an' short minds—we've got 'em an' we're all wearin' 'em or seein' 'em which is 'bout the same.

An' now 'at we've got 'em down what have we reformers of women's wear got to holler 'bout? 'Course we'll soon have the bustle—mebbe hoop-skirts. You older fellers remember bustles an' hoops, don't you? We'l anyway I remember 'em — also I member when most every woman was a street sweeper with her long skirts.

An' I am just wonderin' right now if we ain't goin' back to where we come from 30 or 40 years ago? Women heve looked purty good to me fer a long time—short skirts didn't make 'em look any less attractive to me. They got around nice in 'em, could get into a street car or an auto handy—didn't have to pull their dress up to their — well to their knees if they met a wet place on the side walk, an' gen'raly speakin' they looked purty comfortable. Long skirts—skirts like I seen today on a fashionable young woman, may be fine—mebbe so fer folks older'n I. But they don't look good to me—I may get used to 'em when I git old but when I git old they won't wear 'em that way.

In a year or less they'll be much shorter 'an ever—but time flies an' I'm gittin older every year. Let's have sense an' short skirts now while we can enjoy 'em. Yes, what say? Cordially yours, UNCLE RUBE.

JESUS' PASSION TO HELP MEN

A SERMON BY REV. DAVID F. WARNER

> Text: "Jesus of Nazareth, how God annointed him with the Holy Spirit and with power: Who went about doing good, and healing all that were oppressed of the devil; for God was with him." Acts 10:38.

JESUS' so-called week of passion was but typical of his entire earthly life to do good unto men. His was the model social life. He, only, has interpreted to the world genuine love and neighborliness. Brotherhood, without him, is unreal, impossible. With him, it is real and vital.

But, you say men were created to be brotherly, and socially helpful. Yes, that is the creational idea. And into this natural brotherhood came Jesus as the "Son of Man." Yet he met no helpful, brotherly responses among his fellows. He encountered no social passion such as his. For thirty years with a true brother's heart he stood sorrowfully alone. The world would not receive him and his own countrymen rejected him. Men were veiled in sin and hence the Gospel builds no hopes on a natural brotherhood.

But God annointed the Nazarine with the Holy Spirit and with power. This Man of Galilee travelled the hills and dales of Palestine living out a new passion morn of the Spirit. His was to be, and is, a spiritual brotherhood; a new creation; a life of new and sinless desire; a Cross of social passion. For this Man, it went slowly. But he swerves not from his purpose and gathers around him a handful of men and women whom he had helped as the Big Brother, and who were unionized and fraternized in him.

Jesus dedicates himself, formally, to this life of social purpose at baptism. Here, the "Love your neighbor as yourself" life took on a new meaning. Can't you hear the Baptist saying, "Why, my baptism is for sinners. You don't need it?" But Jesus says "suffer it to be so for I want to be a friend and brother to man." In Jesus' passion to be light and life to man he took his place by the side of man, and paid the price in misunderstandings, sufferings, and death. Why is a well-known, modern apostle of the Cross burning up his life and consuming a fortune to help men? A brother-passion is the answer. The threshingmachine had just pulled into farmer A's barn, when, lo! Mr. A heard the rumble of thunder and saw the rain clouds forming. Hurriedly, he gave orders to the threshermen to pull out and go thresh his neighbor's grain which was in the field. Said he, "My grain is in the dry and can wait." Why did he do this? Because of an unusual type of neighborliness. Do you have this secret passion, brother farmer? Behold, contemplate, the Peasant of Galilee.

Again, Jesus illustrates this principle of life by eating with social outcasts. "Ah," said the elite of society, "a friend of publicans and sinners." But this showed the far-reaching sympathy of his heart. These publicans were a low, despised set. The religious folks of the day hated them. Public opinion held out no sympathy for them. And Jesus' intimacy with them created a furor among the best people of the land. But this Man was different. He could not help it. His great heart went out to all classes. He sympathized and felt for them. He did not care a whit if he must violate the rules of etiquette and society slammed her door in his face; he must be a brother to men. Now, we can the better understand Tolstoi and Ghandi. We can understand the spirit that drove Theodore Roosevelt to eat lunch in the White House with Booker T. Washington, tho Washington's society folks protested. Friends, when you make a dinner, dare you, as Jesus teaches, call in the poor and the outcast, as well as your friends and kinsfolk?

The miracles of Jesus are a standing testimony to his life of "brothering." His age saw in them evidence of super-greatness and power. We see in them his compassion. Pain and sickness everywhere appealed to him. He could not pass them by. Suffering drew virtue from his heart. Does it from your life and mine? A funeral is on across the street. One hundred automobiles are parked. The casket is being banked high with flowers. Today the lady is dead and has many friends(?). Yesterday she was living, but with few friends. Alas! When will mortals learn the simple, neighborly, understanding of life's realities as Jesus taught and lived.

Jesus' love for men was international and interracial. He was preaching his first sermon, and too, in the town of his boyhood. The home folks were out to hear him. He discoursed on social and physical salvation for all peoples. He told his audience that there were needy widows in Palestine, but it pleased God to give special attention to an outside widow. And, that there were many lepers in Palestine but God, thru healing Namaan, heaped special honor upon the Gentiles. In other words, Jesus' sympathy takes wings, and he endeavors to push out the social horizon of his hearers so that they might see and feel the need of other nations. But they rejected his teaching and even made an infamous attempt to kill him. However that was sixty generations ago. But what are you doing today? Do you at this moment hear, sympathetically, the call of a stricken Japan? Are you a friend or a Pharisee to the foreigner in your community?

Peter asked of his Master one day, how oft he should forgive his brother, "until seven times?" The rule of the rabbis was three times. Peter exceeded this by four. Surely this is aplenty. But Jesus' seventy times seven makes the rule of love and forgiveness as unlimited. Peter was coldly calculating. But Jesus says the heart has no table of figures and arithmetic is foreign to its affection. Love cannot be bounded. One day he amazed His hearers by saying, "Love your enemies." When you are hated, don't throw love overboard. Keep it on top. "Bless them that curse you and do good unto them that hate you." And just for this men nailed him to the Cross. But his life ebbs out in the passionate words, "Father, forgive them for they know not what they do." But we know better today. And, says Scripture, "He that knoweth to do good and doeth it not, to him it is sin."

So Jesus passes down to us the true spirit of helpfulness and brotherhood with the command to keep it working. Christian friend, this is your work and mine. Jesus could not do it alone nor in a few years. So, he forms his society, the church; annoints it with his spirit and sends it out to neighbor mankind We are to go about doing good. We must not be found with divided purpose or doubtful action. Blessed is the man who has caught the vision of a redeemed race in a spiritual brotherhood in Christ. And, if before the sun descends low upon your day, you are enthusiastic in the work of making your vision real, you are misunderstood and maligned, remember, so was Jesus for your salvation.

OUR BOOK REVIEW

(Books reviewed under this heading may be secured through The Michigan Business Farmer, and will be promptly shipped by parcel post on receipt of publisher's price stated.)

The Sea-Hawk—by Rafael Sabatina author of "Saramouche," "Captain Blood," "The Snare," etc. Elemental in its record of unrepressed loves and hates is the story of how Sir Oliver Tressilian, Cornish gentleman and sometimes commander of one of Her Majesty's ships which dispersed the Spanish Armada, became a follower of Mahmud, and a Barbarycorsair, winning for himself the title of Sakr-el-Bahr—Hawk of the Sea. He adopts the picturesque Barbary costume and becomes a favorite of the Basha.

Finally on a captured Spanish ship he invades the coast of England and carries away the girl whose unforgiving hate had kept him from returning to his home. To save her from the harem of the Basha, he defies his commander, and determines to escape. Undoubtedly, this is one of the most dramatic moments in any of Mr. Sabatina's books, and the story of their subsequent adventures makes a superb and thrilling epic of romance.

CHAPTER I

Exit Mr. Stanley G. Fulton

THERE was a thoughtful frown on the face of the man who was the possessor of twenty million dollars. He was a tall, spare man, with a fringe of reddish-brown hair encircling a bald spot. His blue eyes, fixed just now in a steady gaze upon a row of ponderous law books across the room, were friendly and benevolent in direct contradiction to the bulldog, never-let-go fighting qualities of the square jaw below the firm rather thin lips.

The lawyer, a youthful alert man of sixty years, trimly gray as to garb, hair, and moustache, sat idly watching him, yet with eyes that looked so intently that they seemed to listen.

For fully five minutes the two men had been pulling at their cigars in silence when the millionaire spoke.

"Ned, what am I going to do with my money?"

Into the lawyer's listening eyes flashed, for a moment, the keenly scrutinizing glance usually reserved for the witness on the other side. Then quietly came the answer.

"Spend it yourself, I hope—for some years to come, Stanley."

Mr. Stanley G. Fulton was guilty of a shrug and an uplifted eyebrow.

"Thanks. Very pretty, and I appreciate it, of course. But I can't wear but one suit of clothes at a time, nor eat but one dinner—which, by the way, just now consists of somebody's health biscuit and hot water. Twenty millions don't really what you might call melt away at that rate."

The lawyer frowned.

"Shucks, Fulton!" he expostulated, with an irritable twist of his hand. "I thought better of you than that. This poor rich man's 'one-suit, one-dinner, one-bed-at-a-time' hard-luck story doesn't suit your style. Better cut it out!"

"All right. Cut—it is!" The man smiled good-humoredly. "But you see I was nettled. You didn't get me at all. I asked you what was to become of my money after I'd done spending it myself—the little that is left, of course."

Once more from the lawyer's eyes flashed that keenly scrutinizing glance.

"What was it, Fulton? A midnight rabbit, or a wedge of mince pie not like mother used to make? Why, man alive, you're barely over fifty, yet. Cheer up! It's only a little matter of indigestion. There are a lot of good days and good dinners coming to you yet."

The millionaire made a wry face.

"Very likely—if I survive the biscuits. But, seriously, Ned, I'm in earnest. No, I don't think I'm going to die—yet awhile. But I ran across young Bixby last night—got him home, in fact. Delivered him to his white-faced little wife. Talk about your maudlin idiots!"

"Yes, I know. Too bad, too bad!"

"Mm-m; well, that's what one million did—inherited. It set me to thinking—of mine, when I get through with them."

"I see." The lawyer's lips came together a little grimly. "You've not made you will, I believe."

"No. Dreaded it, somehow. Funny how a man'll fight shy of a little thing like that, isn't it? And when we're so mighty particular where it goes while we're living!"

"Yes, I know; you're not the only one. You have relatives—somewhere, I surmise."

"Nothing nearer than cousins, third or fourth, back East. They'd get it, I suppose—without a will."

"Why don't you marry?"

The millionaire repeated the wry face of a moment before.

"I'm not a marrying man. I never did care much for women; and—I'm not fool enough to think that a woman would be apt to fall in love with my bald head. Nor am I obliging enough to care to hand the millions over to the woman that falls in love with them, taking me along as the necessary sack that holds the gold. If it comes to that, I'd rather risk the cousins. They, at least, are of my own blood, and they didn't angle to get the money."

"You know them?"

"Never saw 'em."

"Why not pick out a bunch of colleges and endow them?"

The millionaire shook his head.

"Doesn't appeal to me, somehow. Oh, of course it ought to, but—it just doesn't. That's all. Maybe if I was a college man myself; but—well, I had to dig for what education I got."

"Very well—charities, then." There are numberless organizations that—" He stopped abruptly at the other's uplifted hand.

"Organizations! Good Heavens I should think there were! I tried 'em once. I got that philanthropic bee in my bonnet, and I gave thousands, tens of thousands to 'em. Then I got to wondering where the money went."

Unexpectedly the lawyer chuckled.

"You never did like to invest without investigating, Fulton," he observed.

With only a shrug for an answer the other plunged on.

"Now, understand. I'm not saying that organized charity isn't all right, and doesn't do good, of course. Neither am I prepared to propose anything to take its place. And maybe the two or three I dealt with were particularly addicted to the sort of thing I objected to. But, honestly, Ned, if you'd lost heart and friends and money, and were just ready to chuck the whole shooting-match, how would you like to become a 'Case,' say, number twenty-three thousand seven hundred and forty-one, ticketed and docketed, and duly apportioned off to a six-by-nine rule of 'do this' and 'do that,' while a dozen spectacled eyes watched you being cleaned up and regulated and wound up with a key made of just so much and no more pats and preachments carefully weighed and labeled? How would you like it?"

The lawyer laughed.

"I know; but my dear fellow, what would you have? Surely, unorganized charity and promiscuous giving is worse—"

"Oh, yes, I've tried that way, too," shrugged the other. "There was a time when every Tom, Dick, and Harry, with a run-down shoe and ragged coat, could count on me for a ten-spot by just holding out his hand, no questions asked. Then a serious-eyed little woman sternly told me one day that the indiscriminate charity of a millionaire was not only a curse to any community, but a corruption to the whole state. I believe she kindly included the nation, as well, bless her! And I thought I was doing good!"

"What a blow—to you!" There was a whimsical smile in the lawyer's eyes.

"It was." The millionaire was not smiling. "But she was right. It set me to thinking, and I began to follow up those ten-spots—the ones that I could trace. Jove! what a mess I'd made of it! Oh, some of them were all right, of course, and I made those fifties on the spot. But the others—! I tell you, Ned, money that isn't earned is the most risky thing in the world. If I'd left half those wretches alone, they'd have braced up and helped themselves and made men of themselves, maybe. As it was—Well, you never can tell as to the results of a so-called 'good' action. From my experience I should say they are every whit as dangerous as the bad ones."

The lawyer laughed outright.

"But, my dear fellow, that's just where the organized charity comes in. Don't you see?"

"Oh, yes, I know—Case number twenty-three thousand seven hundred and forty-one! And that's all right, of course. Relief of some sort is absolutely necessary. But I'd like to see a little warm sympathy injected into it, some way. Give the machine a heart, say, as well as hands and a head."

"Then why don't you try it yourself?"

"Not I!" His gesture of dissent was emphatic. "I have tried it, in a way, and failed. That's why I'd like some one else to tackle the job. And that brings me right back to my original question. I'm wondering what my money will do, when I'm done with it. I'd like to have one of my own kin have it—if I was sure of him. Money is a queer proposition, Ned, and it's capable of—'most anything."

"It is. You're right."

"What I can do with it, and what some one else can do with it, are two quite different matters. I don't consider my efforts to circulate it wisely, or even harmlessly, exactly what you'd call a howling success. Whatever I've done, I've always been criticised for not doing something else. If I gave a costly entertainment, I was of showy ostentation. If I didn't give it, I was accused of not putting money into honest circulation. If I donated to a church, it was called conscience money; and if I didn't donate to it, they said I was mean and miserly. So much for what I've done. I was just wondering—what the other fellow'd do with it."

"Why worry? 'Twon't be your fault."

"But it will—if I give it to him. Great Scott, Ned! Think what money does for folks, sometimes—folks that aren't used to it! Look at Bixby; and look at that poor little Marston girl, throwing herself away on that worthless scamp of a Gowing who's only after her money, as everybody (but herself) knows! And if it doesn't make knaves and martyrs of them, ten to one it does make fools of 'em. They're worse than a kid with a dollar on circus day; and they use about as much sense spending their pile, too. You should have heard dad tell about his pals in the eighties that struck it rich in the gold mines. One bought up every grocery store in town and instituted a huge free grab-bag for the populace; and another dropped his hundred thousand in the dice box before it was a week old. I wonder what those cousins of mine back East are like!"

"If you're fearful, better take Case number twenty-three thousand seven hundred and forty-one," smiled the lawyer.

"Hm-m; I suppose so," ejaculated the other grimly, getting to his feet. "Well, I must be off. It's biscuit time, I see."

A moment later the door of the lawyer's sumptuously appointed office closed behind him. Not twenty-four hours afterward, however, it opened to admit him again. He was alert, eager-eyed, and smiling. He looked ten years younger. Even the office boy who ushered him in cocked a curious eye at him.

The man at the great flat-topped desk gave a surprised ejaculation.

"Hullo, Fulton! Those biscuits must be agreeing with you," he laughed. "Mind telling me their name?"

"Ned, I've got a scheme. I think I can carry it out." Mr. Stanley G. Fulton strode across the room and dropped himself into the waiting chair. "Remember those cousins back East? Well, I'm going to find out which of 'em I want for my heir."

"Another case of investigation before investing, eh?"

"Exactly."

"Well, that's like you. What is it, a little dectective work? Going to get acquainted with them, I suppose, and see how they treat you. Then you can size them up as to hearts and habits, and drop the golden plum into the lap of the worthy man, eh?"

"Yes, and no. But not the way you say. I'm going to give 'em say fifty or a hundred thousand apiece, and—"

"Give it to them—now?"

"Sure! How'm I going to know how they'll spend money till they have it to spend?"

"I know; but—"

"Oh, I've planned all that. Don't worry. Of course you'll have to fix it up for me. I shall leave instructions with you, and when the time comes all you have to do is to carry them out."

The lawyer came erect in his chair.

"Leave instructions! But you, yourself—?"

Oh, I'm going to be there, in Hillerton."

"There? Hillerton?"

"Yes, where the cousins live, you know. Of course I want to see how it works."

"Humph! I suppose you think you'll find out—with your watching their every move!" The lawyer had settled back in his chair, an ironical smile on his lips.

"Oh, they won't know me, of course, except as John Smith."

"John Smith!" The lawyer was sitting erect again.

"Yes. I'm going to take that name—for a time."

"Nonsense, Fulton! Have you lost your senses?"

"No." The millionaire still smiled imperturbably. "Really, my dear Ned, I'm disappointed in you. You don't seem to realize the possibilities of this thing."

"Oh, yes, I do—perhaps better than you, old man," retorted the other with an expressive glance.

"Oh, come, Ned, listen! I've got three cousins in Hillerton. I never saw them, and they never saw me. I'm going to give them a tidy little sum of money apiece, and then have the fun of watching them spend it. Any harm in that, especially as it's no one's business what I do with my money?"

"N-no, I suppose not—if you can carry such a wild scheme through."

"I can, I think. I'm going to be John Smith."

"Nice distinctive name!"

"I chose a colorless one on purpose. I'm going to be a colorless person, you see."

"Oh! And—er—do you think Mr. Stanley G. Fulton, multi-millionaire, with his pictured face in half the papers and magazines from tthe Atlantic to the Pacific, can hide that face behind a colorless John Smith?"

"Maybe not. But he can hide it behind a nice little close-cropped beard." The millionaire stroked his smooth chin reflectively.

"Humph! How large is Hillerton?"

"Eight or ten thousand. Nice little New England town, I'm told."

"Hm-m. And your—er—business in Hillerton that will enable you to be the observing fly on your cousins' walls?"

"Yes, I've thought that all out, too; and that's another brilliant stroke. I'm going to be a genealogist. I'm going to be at work tracing the Blaisdell family—their name is Blaisdell. I'm writing a book which necessitates the collection of an endless amount of data. Now how about that fly's chances of observation. Eh?"

"Mighty poor, if he's swatted—and that's what he will be! New England housewives are death on flies, I understand."

"Well I'll risk this one."

"You poor fellow!" There was exasperation and amusement in the lawyer's eyes, but there was only mock sympathy in his voice. "And to think I've known you all these years, and never suspected it, Fulton!"

The man who owned twenty millions still smiled imperturbably.

"Oh, yes, I know what you mean, but I'm not crazy. And really I'm interested in genealogy, too, and I've been thinking for some time I'd go digging about the roots of my ancestral tree. I have dug a little, in years gone. My mother was a Blaisdell, you know. Her grandfather was a brother to some ancestor of these Hillerton Blaisdells; and I really am interested in collecting Blaisdell data. So that's all straight. I shall be telling no fibs. And think of the opportunity it gives me! Besides, I shall try to board with one of them. I've decided that."

"Upon my word, a pretty little scheme!"

"Yes, I knew you'd appreciate it, the more you thought about it." Mr. Stanley G. Fulton's blue eyes twinkled a little.

With a disdainful gesture the lawyer brushed this aside.

"Do you mind telling me how you happened to think of it, yourself?"

"Not a bit. 'Twas a little booklet got out by a Trust Company."

"It sounds like it!"

"Oh, they didn't suggest exactly this, I'll admit; but they did suggest that if you were fearful as to the way your heirs would handle their inheritance, you could create a trust fund for their benefit while you were living, and then watch the way the beneficiaries spent the income, as well as the way the trust fund itself was managed. In this way you could observe the effects of your gifts, and at the same time be able to change them if you didn't like results. That gave me an idea. I've just developed it. That's all. I'm going to make my cousins a little rich, and see which, if any of them, can stand being very rich."

"But the money, man! How are you going to drop a hundred thousand dollars into three men's laps, and expect to get away without an investigation as to the why and wherefore of such a singular proceeding?"

"That's where your part comes in," smiled the millionaire blandly. "Besides, to be accurate, one of the laps is—er—a petticoat one."

"Oh, indeed! So much the worse, maybe. But—And so this is where I come in, is it? Well, and suppose I refuse to come in?"

"Regretfully I shall have to employ another attorney."

"Humph! Well?"

"But you won't refuse." The blue eyes opposite were still twinkling. "In the first place, you're my good friend—my best friend. You wouldn't be seen letting me start off on a wild-goose chase like this without your guiding hand at the helm to see that I didn't come a cropper."

"Aren't you getting your metaphors a

WHAT WOULD YOU DO WITH $100,000?

THE STORY—Oh, Money! Money!—which begins on this page is one that thousands and thousands of our folks will read. It deals with a subject that everyone of us is interested in—money, lots of money.

The first chapter tells about a rich man who is troubled over what to do with his money. He has millions, and no children to leave it to. He decides to give $100,000 to each of his three cousins in a country town, and leave his fortune to the one who proves to be able and fitted best to take care of it. So he gives them $100,000 each. How they receive it, what they do with it and how they finally come out makes the most interesting story The Business Farmer has ever printed.

We wonder what you would do with $100,000? Suppose you should wake up some morning and find $100,000 on your doorstep? Suppose some rich relative left a fortune to you? Or, suppose, by some hook or crook or turn in the luck, you suddenly became rich? What would you do with the money?

You know, not everybody knows how to care for money. Lots of people are rich today but their children may wear rags. What would you do with a lot of money? If you had $100,000 what would you do with it?

For the best letter of not over 250 words from a reader telling what he or she would do with a gift of $100,000 we will pay $5 and give a one year new or renewal subscription for each other letter published. Write plainly on one side of paper and sign your full name and address which will not be used in publication if you so request. Letters must reach us by October Fifth.

Prize Winning Letters will be Published in the October 13th Issue. Don't miss them! And don't miss reading "Oh, Money, Money," one of the best serials ever run in The Business Farmer.

trifle mixed?" This time the lawyer's eyes were twinkling.

"Eh? What? Well, maybe. But I reckon you get my meaning. Besides, what I want you to do is a mere routine of regular business , with you."

"It sounds like it. Routine, indeed!"

"But it is—your part. Listen. I'm off for South America, say, on an exploring tour. In your charge I leave certain papers with instructions that on the first day of the sixth month of my absence (I being unheard from), you are to open a certain envelope and act according to instructions within. Simplest thing in the world, man. Isn't it?"

"Oh, very simple—as you put it."

"Well, meanwhile I'll start for South America—alone, of course; and, so far as you are concerned, that ends it. If on the way, somewhere, I determine suddenly on a change of destination, that is none of your affair. If, say in a month or two, a quiet, inoffensive gentleman by the name of Smith arrives in Hillerton on the legitimate and perfectly respectable business of looking up a family pedigree, that also is none of your concern."

With a sudden laugh the lawyer fell back in his chair.

"By Jove, Fulton, if I don't believe you'll pull this absurd thing off!"

"There! Now you're talking like a sensible man, and we can get somewhere. Of course I'll pull it off! Now here's my plan. In order best to judge how my esteemed relatives conduct themselves under the sudden accession of wealth, I must see them first without it, of course. Hence, I plan to be in Hillerton some months before your letter and the money arrive. I intend, indeed, to be on the friendliest terms with every Blaisdell in Hillerton before that times comes."

"But can you? Will they accept you without references or introduction?"

"Oh, I shall have the best of references and introductions. Bob Chalmers is the president of a bank there. Remember Bob? Well, I shall take John Smith in and introduce him to Bob some day. After that, Bob'll introduce John Smith. See? All I need is a letter as to my integrity and respectability, I reckon, so my kinsmen won't suspect me of designs on their spoons when I ask to board with them. You see, I'm a quiet, retiring gentleman, and I don't like noisy hotels."

With an explosive chuckle the lawyer clapped his knee.

"Fulton, this is absolutely the richest thing I ever heard of! I'd give a farm to be a fly on your wall and see you do it. I'm blest if I don't think I'll go to Hillerton myself—to see Bob. By George, I will go and see Bob!"

"Of course," agreed the other serenely. "Why not? Besides, it will be the most natural thing in the world—business, you know. In fact, I should think you really ought to go, in connection with the bequests."

Why, to be sure." The lawyer frowned thoughtfully. "How much are you going to give them?"

"Oh, a hundred thousand apiece, I reckon."

"That ought to do—for pin money."

"Oh, well, I want them to have enough, you know, for it to be a real test of what they would do with wealth. And it must be cash—no securities. I want them to do their own investing."

"But how are you going to fix it? What excuse are you going to give for dropping a hundred thousand into their laps like that? You can't tell your real purpose, naturally! You'd defeat your own ends."

"That part we'll have to fix up in the letter of instructions. I think we can. I've got a scheme."

"I'll warrant you have! I'll believe anything of you now. But what are you going to do afterward—when you've found out what you want to know, I mean? Won't it be something of a shock, when John Smith turns into Mr. Stanley G. Fulton? Have you thought of that?"

"Y-yes, I've thought of that, and I will confess my ideas are a little hazy, in spots. But I'm not worrying. Time enough to think of that part. Roughly, my plan is this now. There'll be two letters of instructions: one to open in six months, the other to be opened in, say, a couple of years, or so. (I want to give myself plenty of time for my observations, you see.) The second letter will really give you my final instructions as to the settling of my estate—my will. I'll have to make some sort of one, I suppose."

"But, good Heavens, Stanley, you—you—" the lawyer came to a helpless pause. His eyes were startled.

"Oh, that's just for emergency, of course, in case anything—er—happened. What I really intend is that long before the second letter of instructions is due to be opened, Mr. Stanley G. Fulton will come back from his South American explorations. He'll then be in a position to settle his affairs to suit himself, and—er—make a new will. Understand?"

"Oh, I see. But—there's John Smith? How about Smith?"

The millionaire smiled musingly, and stroked his chin again.

"Smith? Oh! Well, Smith will have finished collecting Blaisdell data, of course, and we'll be off to parts unknown. We don't have to trouble ourselves with Smith any longer."

"Fulton, you're a wizard," laughed the lawyer. "But now about the cousins. Who are they? You know their names, of course."

"Oh, yes. You see I've done a little digging already—some years ago—looking up the Blaisdell family. (By the way, that'll come in fine now, won't it?) And an occasional letter from Bob has kept me posted as to deaths and births in the Hillerton Blaisdells. I always meant to hunt them up some time, they being my nearest kith and kin. Well, with what I already had, and with what Bob has written me, I know these facts."

He paused, pulled a small notebook from his pocket, and consulted it.

"There are two sons and a daughter, children of Rufus Blaisdell. Rufus died years ago, and his widow married a man by the name of Duff. But she's dead now. The elder son is Frank Blaisdell. He keeps a grocery store. The other is James Blaisdell. He works in a real estate office. The daughter, Flora, never married. She's about forty-two or three, I believe, and does dressmaking. James Blaisdell has a son, Fred, seventeen, and two younger children, Frank Blaisdell has one daughter, Millicent. That's the extent of my knowledge, at present. But it's enough for our purpose."

"Oh, anything's enough—for your purpose! What are you going to do first?"

"I've done it. You'll soon be reading in your morning paper that Mr. Stanley G. Fulton, the somewhat eccentric multimillionaire, is about to start for South America, and that it is hinted he is planning to finance a gigantic exploring expedition. The accounts of what antiquities to the source of the Amazon. I've done a lot of talking today, and a good deal of cautioning as to secrecy, etc. It ought to bear fruit by to-morrow, or the day after, at the latest. I'm going to start next week, and I'm really going exploring, too—though not exactly as they think. I came in to-day to make a business appointment for to-morrow, please. A man starting on such a hazardous journey must be prepared, you understand. I want to leave my affairs in such shape that you will know exactly what to do—in emergency. May I come to-morrow?"

The lawyer hesitated, his face an odd mixture of determination and irresolution.

"Oh hang it all—yes. Of course you may come. To-morrow at ten—if they don't shut you up before."

With a boyish laugh Mr. Stanley G. Fulton leaped to his feet.

"Thanks. To-morrow at ten, then." At the door he turned back jauntily. "And, say, Ned, what'll you bet I don't get so I can eat real meat and 'taters again?"

CHAPTER II

Enter Mr. John Smith

It was on the first warm evening in the early June that Miss Flora Blaisdell crossed the common and turned down the street that led to her brother James' home.

The common marked the center of Hillerton. Its spacious green lawns and elm-shaded walks were the pride of the town. There was a trellised band-stand for summer concerts, and a tiny pond that accommodated skaters in winter. Perhaps, most important of all, the common divided the plebian East Side from the more pretentious West, James Blaisdell lived on the West Side. His wife said that everybody did who was anybody. They had lately moved there, and were indeed barely settled.

Miss Blaisdell did dressmaking. Her home was a shabby little rented cottage on the East Side. She was a thin-faced little woman with an anxious frown and near-sighted, peering eyes that seemed always to be looking for wrinkles. She peered now at the houses as she passed slowly down the street. She had been only twice to her brother's new home, and she was not sure that she would recognize it, in spite of the fact that the street was still alight with the last rays of the setting sun. Suddenly across her worried face flashed a relieved smile.

"Well, if you ain't all out here on the piazza!" she exclaimed, turning in at the walk leading up to one of the ornate little houses. "My, ain't this grand!"

"Oh, yes, it's grand, all right," nodded the tired looking man in the big chair, removing his feet from the railing. He was in his shirt-sleeves and was smoking a pipe. The droop of his thin mustache matched the droop of his thin shoulders—and both indefinably but unmistakably spelled disillusion and discouragement. "It's grand, but I think it's too grand—for us. However, daughter says the best is none too good—in Hillerton. Eh, Bess?"

Bessie, the pretty, sixteen-year-old daughter of the family, only shrugged her shoulders a little petulantly. It was Harriet, the wife, who spoke—a large, florid woman with a short upper lip, and a bewilderment of bepuffed light hair. She was already on her feet, pushing a chair toward her sister-in-law.

"Of course it isn't too grand, Jim, and you know it. There aren't any really nice houses in Hillerton except the Pennocks' and the old Gaylord place. There, sit here, Flora. You look tired."

"Thanks. I be—turrible tired. Warm, too, ain't it?" The little dressmaker began to fan herself with the hat she had taken off. "My, 't is fur over here, ain't it? Not much like 't was when you lived right 'round the corner from me! And I had to put on a hat and gloves, too. Someway, I thought I ought to—over here."

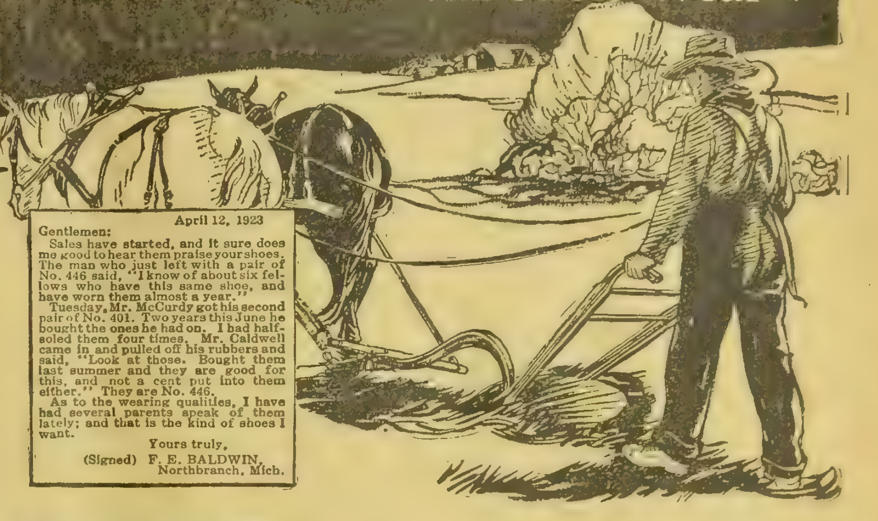
Condescendingly the bepuffed head threw an approving nod in her direction.

(Continued in October 13th Issue.)

ROUGE REX

The 1,000-Mile Shoe

Double-Tanned—Double Wear



April 12, 1923

Gentlemen:

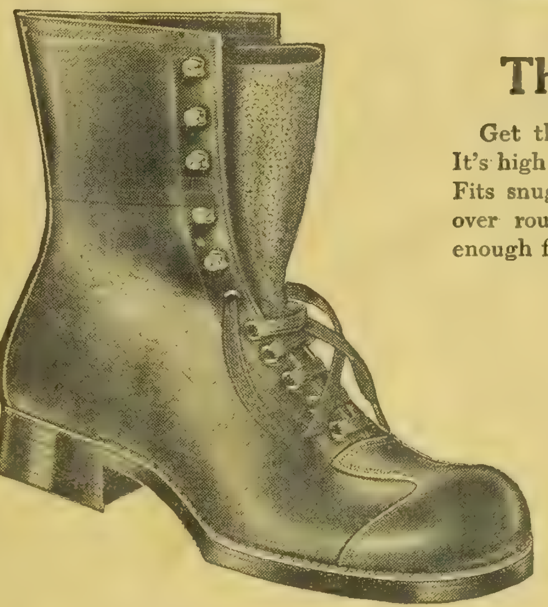
Sales have started, and it sure does me good to hear them praise your shoes. The man who just left with a pair of No. 446 said, "I know of about six fellows who have this same shoe, and have worn them almost a year."

Tuesday, Mr. McCurdy got his second pair of No. 401. Two years this June he bought the ones he had on. I had half-soled them four times. Mr. Caldwell came in and pulled off his rubbers and said, "Look at those. Bought them last summer and they are good for this, and not a cent put into them either." They are No. 446.

As to the wearing qualities, I have had several parents speak of them lately; and that is the kind of shoes I want.

Yours truly,

(Signed) F. E. BALDWIN,
Northbranch, Mich.



The Plowboy

Get this shoe for fall plowing. It's high enough to keep out dirt. Fits snug and protects the ankles over rough going. And it's low enough for comfort.

Plowboy

Grain Cuff
470—Double Sole Tan
446—Single Sole Tan

Split Cuff Single Sole
458—Chocolate
455—Smoke
452—Tan

1,000 Miles of Wear

Always Dries Out Soft

Here's a double-tanned horsehide work shoe that will never get stiff or hard. Many leathers dry out hard after they get wet. But this horsehide, double-tanned by our own private process in our own tanneries, dries out as soft as velvet. You can soak these shoes in mud, water and slush. They will always dry out soft and pliable.

We are work shoe specialists. Our goal is to make the world's strongest shoes. To get the best leather we do our own tanning. We use horsehide exclusively. For it is the toughest leather known. For centuries the fine saddles of the hard-riding Cossacks were horsehide covered. Big league baseballs are covered with it too—because it is the only leather that withstands such hard knocks.

And our special double tanning makes this leather soft and pliable as buckskin. Note its extra thickness. Feel its flexibility. Even after soaking it dries out soft as velvet. You'll get a new idea of foot comfort from Rouge Rex horsehide shoes.

You'll also be surprised by their long wear. They usually wear at least 1,000 miles. But customers tell us they wear 3,000 and 4,000 or more. We are frequently told they outwear three ordinary pairs.

If you are naturally hard on shoes, you'll say these are the most economical shoes you ever wore. See how tough and thick this horsehide is—and how soft. Then you'll understand why Rouge Rex wear like iron and do not tire your feet.

For every job there's a special Rouge Rex shoe model that fits your need exactly. For farm, mill or mine, for woods, field and camp we make a shoe that suits the conditions. And all are the same tough, pliable double-tanned horsehide.

If your dealer cannot supply you with Rouge Rex, we'll see that you are supplied from our nearest dealer. Write for catalog.

Rouge Rex Comfort Shoe

Tenderfeet welcome these shoes. They're soft and flexible as a moccasin, yet wear like iron. A typical factory or dry weather shoe so light you don't realize they are on duty. Ask for 435 in chocolate, 434 in tan. Both outing models. Ask for 495 in chocolate bluches.

RELIABLE ADVERTISERS

We will not knowingly accept the advertising of any person or firm who we do not believe to be thoroughly honest and reliable. Should any reader have any cause for complaint against any advertiser in these columns, the publisher would appreciate an immediate letter bringing all facts to light. In every case when writing say: "I saw your advertisement in The Michigan Business Farmer!" It will guarantee honest dealing.

"The Farm Paper of Service"

ROOSEVELT ON FALSE DOCTRINES

"ALL over the country," said T. R. Roosevelt, Jr., at Syracuse, N. Y., "there are sincere, but mentally limited fanatics and self-seeking politicians peddling false doctrines. These comprise such things as government price fixing and unsound loans. Steer clear of them. Remember that in the long run, anything which hurts the country hurts the farmer, just as surely as anything which hurts the farmer hurts the country."

POLITICS IN LANSING

LANSING is in the throes of a political situation which, according to no less an authority than Mr. John Fitzgibbon, veteran correspondent, is unparallelled in the history of the state.

The situation has arisen over the partial payment of the county agent's salaries by the Michigan State Farm Bureau, at least that is what is supposed to be at the bottom of it.

Although it affects the Agricultural College and should be of some concern to the farmers in Michigan we must admit that we have heard little or nothing about it from the farmers themselves, although their would-be spokesmen have arisen to remark both from the platform and the daily press that the farmers of the state were all wrought up about it.

That our readers may have a clear statement of the facts in the case and thus form their conclusions we are publishing on page 3 of this issue a complete statement by the competent political authority mentioned above, which is simply a clear statement of the case and we leave it to our readers themselves to make their decision as to who is right and who is wrong, if they are enough interested to tell us about it.

"EAT-MORE-BEANS"

NAVY beans are a major crop in the state of Michigan, and the position which the choice, hand-picked Michigan bean occupies on the American market, places it at the head of the list. Buyers pay a fancy price for our beans in competition with Colorado, California, and a few other states where they are grown.

Every division of the bean industry in Michigan, whether it be from the grower, the elevator, or the jobber, should be equally interested in the proposed advertising campaign to carry the message "Eat-More-Beans" to the American consuming public.

The scheme to advertise beans is not a new one but the practical plans for its accomplishment were never more nearly complete and ready to put in operation than they are today. There seems to be no question in anyone's mind but that the consumer demand for beans can be greatly strengthened by bringing their merits to the attention of the consumer, the same as the California growers have in the instance of citrus fruit, nuts, prunes, raisins, and other products of the Golden State. Anyone who is at all familiar with their plan of operation will readily subscribe to the proposed plan of increasing the demand for beans by intelligent national advertising.

We understand there is one party in the business in Michigan who is holding out of the present campaign because he believes that Michigan should advertise Michigan beans exclusively and therefore, eliminate the other states which are contributing. In the present plan, Michigan is asked to contribute only $16,000 out of a total of $50,000 to be spent in advertising. Our share, therefore, would not go very far in a national advertising plan, and we believe that Michigan would profit much more by the expenditure of $50,000 for the good of the entire bean industry than it would by a petty, though exclusive campaign which only scratched the surface of the market.

It is our prediction that if a $50,000 campaign is put on this year that this amount will be doubled within another year, and that the price of beans will be strengthened materially by the demand which this advertising is bound to create.

Advertising is simply bringing a thought to a prospect's mind at the physological time. If the housewife when she opens her morning paper saw the picture of an attractive pan of baked beans or a spread of beans laid out for the family dinner, accompanied by an attractive recipe for the preparation, it is safe to assume that she and a good percentage of those who read the advertisement would be eating beans that very evening.

We have always taken a great interest in the proposition to advertise this one product of Michigan which lends itself so well to a campaign of this kind, and we have done all within the power of this publication to present the facts to the farmers and others interested in Michigan so that they might understand the proposition when it was presented to them.

We had hoped to announce in this issue that the campaign had been closed and was under way with the full support of the Michigan jobbers who have been asked to contribute, but up to the moment of going to press we cannot get this assurance because there are, we understand, one or two who are holding out. We certainly trust they may see the light and soon, because this, of all years, with exceptional prosperity in every manufacturing community is the time to push the sale and increase the consumer demand of this great food product.

FOR CAUSE OR FOR EFFECT

THE more we read, and the more we hear, of the politicians who claim to be representing the farmer, the more we are led to the conclusion that most of what they write, and most of what they say, is to throw a smoke screen about their real aims and purposes.

Let's get down to business for just a minute!

Does the present high protective wall about American industry keep us from a world market for our products? The answer is: that it undoubtedly does, and will continue to do so (as it has in past history) so long as it is in operation.

Can anything actually be done about the present low prices of farm products? The answer is: that something can be done and is being done, and it is not being done by windy politicians or wordy editors. It is being done by the farmers themselves, who are organizing into strong selling organizations which do not play politics, but depend on sane marketing methods for bringing about the higher prices that they demand. These same business farmers, because of the scarcity of farm labor and for other good reasons, are curtailing their production this year to a point where the natural demand of a prosperous market is going to raise prices of farm products as only a few of the more optimistic market prophets even dare predict.

When the farmer gets back to a normal position, begins making money and the trend of population again starts toward the country will these same politicians and editors who are now doing nothing but spout about what ought to be done through legislation or some other dreamy-eyed will-o-the-wisp scheme, will they take credit for bringing farming back to a stable position? The answer is: that they certainly will, and the real business farmers who are doing the job of getting the old boat of agriculture back on a safe keel will get no credit, but the best part of it is they will ask none nor expect it.

Our hats off to you gentlemen! You don't say much, we don't see your pictures, we don't hear that you are going to talk at the next picnic, we don't read what you say in the political sheets which clutter our mail box but we know that you are hard at work and we begin to see the results which we knew would follow your efforts.

THE WHEAT SCARE-CROW

THEY were hardly less than traitors to the farming business, who raised the scare-crow of ruination to farmers because wheat had dropped below a dollar per bushel. So far we have failed to hear any clamor except from politicians or others who are living directly on the farmer, and these originated mostly in the states west of the Mississippi.

Wheat is of course, not the important crop in Michigan that it is in the western states, but if farmers there have been foolish enough to depend upon one crop, if by making no provision for the time when with curtailed European market and an increased production in other parts of the world, wheat growing on expensive American land can no longer be operated in competition, then they, in common with business men in other classes, must temporarily take their loss and make provision for changing their methods of farming in the future.

Michigan grows practically no spring wheat, the total crop of 1922 being only 130,000 bushels. Our winter wheat crop last year amounted to 14,196,000 bushels, and while valued at $16,325,000 did not equal the value of our bean crop. Our wheat crop was only slightly higher in value than our potato crop, even in a disastrous season, and the total value of all Michigan grown wheat was only a third of our corn or hay crop!

The actual result, therefore, of all the clamor over dollar wheat has been to dishearten our farmers, lower the price of their farm land and make every boy and girl on the farm anxious to get away from it into the city as soon as they can don long dresses or breeches!

If you will take the time to look over the Agricultural and Business Survey as prepared by the Department of Research, American Farm Bureau, which is reprinted in full on page 23 of this issue, you can learn from actual figures exactly where the farming business stands and where all other lines of endeavor stand in relation to it.

You will find for example, that seven major staples sold by the farmer are selling at higher prices than they did one year ago, (September 20th, 1922), and if you will read between the lines, you will see that the farming business is getting better every day and that the value of your farm, your equipment and your business is increasing.

If you had rather be cajoled with, cried over, and filled with hot air by those who are looking for political office, or some other soft snap, you will not read the actual figures as they are given.

We publish this department as a regular feature of The Business Farmer once a month because the kind of folks who like The Business Farmer want the facts, and we do our best to try and get them for them.

THE FARMER LABOR MOVEMENT

THERE is indeed some food for thought in the figures which have been given some publicity in the daily press, and whether they are accurate or not may be laid at the door of Mr. J. S. Wanamaker, President of the American Cotton Association, who we understand prepared them. They are as follows:

63½ dozen, or 760 eggs, pay a plasterer for one day's work of eight hours. 17½ bushels of corn, or a year's receipts from half an acre, pay a bricklayer. 32 chickens, weighing 3 pounds each, pay a painter in New York. 42 pounds of butter, or the output from 14 cows, fed and milked 24 hours, pay a plumber $14.00 a day. 175 lbs of hog, eight months' feeding and care, pay a carpenter.

Whether you believe in an alliance of farmer-labor or not, as has been suggested by so many well meaning persons, it is obvious that labor at present high prices and the farmer after the period of depression he has been forced through, the past three years, make strange bed fellows.

If we were a cartoonist we would draw an opulent citizen labeled "labor" occupying about three-quarters of the bed labeled "prosperity", and a thin gaunt person marked "farmer" occupying the small space at the other side and hardly covered by the blankets of home comforts which the laboring man enjoys. That cartoon, in our opinion, would just about express the present situation as relates to farmer and labor.

We do not begrudge labor its present prosperity, its right to work and honest employment, its right to secure as short a working day as is commensurate with good and healthy living and enjoying the luxuries and comforts of home life to which men are entitled, but we do begrudge labor occupying most of the bed and at the same time calling on the farmers to help fight their battles for more than they are entitled to. If there is to be an alliance between farmer and labor it ought to be an alliance by which labor agrees to bring the farmer and his business up to their standard, because to advance equally would still leave the ratio too lopsided. It would look like the bed we have pictured above.

POTATOES STILL FAVORABLE

THE United States Department of Agriculture predicts a crop of 389,674,000 bushels of potatoes this year, which compares with a five year average of 390,173,000 and last year's big crop of 451,185,000.

This is late enough in the season so that the crop is pretty well set and if anything, there is more apt to be a lessened than an increased crop. This would seem to be a ray of sunshine for our potato growers who were hit so hard in 1922.

With the labor of the country well employed at high wages and consuming large amounts of food stuffs there is no reason why the potato grower should not get a fair price for his product this year, and we only hope that our growers will hold back enough of their products so that at no time will the market be flooded to a point where it drops from this unnatural cause.

PUBLISHER'S DESK

HOME WORK

Do you know of any other companies that are reliable where I can get work to do at home as I am very anxious to get some work that I can do at home, for I have quite a lot of spare time that I could work if I had something I could do at home, as we do not like to break up our home. I would be very thankful if you could send me addresses of some companies that you know are reliable.—Mrs. E. T., Mayville, Mich.

THE above is a fair sample of several inquiries that come to my desk almost every week from sincere women who wish to find some means of employing their spare time on the farm, and usually it is someone who is harassed by poverty and handicapped by some physical deformity.

I wish I could offer some suggestion to these worthy readers, and could tell them of some sort of home employment that we could recommend.

Some papers accept the advertising of home knitting machines, and other contraptions which are sold with the expectancy that they can be paid for by home work, but we have never yet found where this worked out continuously satisfactory, so that it would be the last thing in our minds to advise any of our readers to invest the 50 to 75 dollars necessary to purchase a home knitting outfit, neither will we accept the advertising of these concerns, in the Business Farmer, because we believe that although not fraudulent, they are misleading.

We are suggesting to the farmers in Michigan that they employ the spare time on the farm in picking beans, because this class of work has for years been done in the small towns and cities, and lately by expensive female help, because of the competition for this class of labor from manufacturing institutions. We now have a prize offer of $10.00 for the best plan for a home made bean picking machine, and we have already published two simple plans in the September 15th issue. In this issue on page 3, you will find a letter from a Saginaw county farmer who bought an expensive bean picking machine, which has made him a nice profit. This of course is machine picking and not hand picking which the women on a farm could do. Even a cripple or anyone who has the use of their hands could pick beans, and not only save the cost of picking, but keep the culls on the farm.

We want to say just a word to the men folks about this home work of farm girls and women. If it is done on the farm, for goodness sake, let the women have all or part of the money you save over having it done in town. Nothing so disheartens a woman as to have the man of the house hold on to every penny he can get. The modern and usually successful married couple have a single purse, and their relations form a partnership in which all of the good things are split 50-50.

The Publisher's Desk is open for any suggestions for the home employment of our farm women, and we would be glad to publish any suggestions from our readers.

"JUST ANOTHER"

DEAR Sir: In some way my letter to you must have been overlooked. The very day (about June 23) I received my settlement and I sent you a letter on our afternoon mail. It was some joke how you folks woke ——— up. Indeed it was such an awakening they sent me my order and money, too. I sent back the check as I only wanted what was rightly mine. I have friends who have had just such trouble with the same company.

Have been reading your article for the last two weeks and also the replies regarding the people who have gotten stung by the American Music Publishing Co. and other companies and I wish to warn them that it also goes under the name of the L. Wolfe Gilbert Music Corp., 1658 Broadway, N. Y. I was not so good as to send them the two dollars which they ask for, but I did get stung by the Underwood Art Goods Company conducted by a woman named Ruth Underwood. I was to send them a dollar which they were to hold until I had done twelve dollars worth of work then it was to be returned to me. They sent me a cheap handkerchief which I was to keep and make a sample for their inspection of my work, which I did. If it passed inspection I was to get twenty-five cents apiece for all I could make, but, of course, my work did not pass, as the handkerchief they sent me was machine made while mine was hand made. My work has been very highly recommended but I do think one dollar an awful price to pay for a ten cent handkerchief. Don't you? Hope to see this in print.—Just Another Darn Fool, Howell, Mich.

THE ——— TIRE COMPANY

IF you can will you please tell me if the ——— Tire Company of Bay City is a safe company to buy stock in? Agents have urged us hard to buy in this company and several of my neighbors have done so. I would like to invest if you thought it safe.

—I certainly could not advise the purchase of any industrial stock as an investment unless you can afford to gamble on the amount you invest.

Any industrial is a business speculation, and no man has a right to advise another to purchase it. The only safe place for savings is in government securities or farm mortgages, or reliable bonds. The above statements refer to all industrial speculations and not necessarily to the one you mention. It is always best not to put all of your eggs in one basket.

MADE 'EM SIT UP!

In today's mail I received my money from ——— Company. To say I am thankful is not enough. I am doubly so. They surely sat up and took notice when you wrote. They clipped the letter you wrote to their check so I see how you brought it about. Again I say thank you and wish you all success to be had. A Subscriber and always one.—Mrs. F., Woodland, Mich.

HOME TANNING OF LEATHER AND SMALL FUR SKINS

DIRECTION for tanning hides on the farm are given in a new bulletin just published by the United States Department of Agriculture, and issued as Farmers' Bulletin 1334, Home Tanning of Leather and Small Fur Skins. This bulletin was prepared in response to the thousands of requests received from the farmers for information that will enable them to make use of the hides produced on their farms and for which there is often no market. Sometimes hides can scarcely be given away, yet farmers must pay from $1 to $1.50 a pound for leather in small pieces. Under such conditions farmers naturally feel that they must either work up their raw materials or do without finished leather.

While it is possible to do a fairly satisfactory job of tanning on the farm it requires some skill and a considerable amount of experience. Only in the event that the margin of price between the raw hide and the finished product is such as to warrant the farmer in tanning for himself is it advisable to attempt home tanning. The inexperienced can not hope to make leather equal in appearance, or possibly in quality, to that obtainable on the market, but farmers and ranchmen should be able to make serviceable leather for most farm purposes by carefully following the directions given in the bulletin.

It is never advisable for an inexperienced person to try to tan valuable fur skins or large hides to be made into coats, robes, or rugs. The results would be disappointing, both in appearance and quality. Small fur skins of low market value, however, can be tanned for home or country use, according to directions given in the bulletin, a copy of which may be obtained from the United States Department of Agriculture, Washington, D. C., as long as the supply lasts.

The Farm Home
A Department for the Women

Edited by MRS. ANNIE TAYLOR

DEAR FOLKS—Now is the time to pick the bitter-sweet and paint weeds for the home during the winter months, when the flowers are asleep. Just a few mullin in a corner painted in bright shades give an attractive look to that part of the room, that looked bare and dark. Swamp berries, and barberry make delightful looking baskets. Paint some common milkweed pods and stand in a vase on the table or book-case.

Remember our recipes for the cookbook and our personal column is for you and I want you to use it. Read our "Exchange" and feel that it is your very own to advertise your wants.

Your Friend,
Mrs Annie Taylor

Address letters: Mrs. Annie Taylor, care The Business Farmer, Mt. Clemens, Michigan.

SELLING THE HOUSE

By Anne Campbell

I did not mind the thought so much.
  To sell the house was fine!
All houses were the same to me.
  They painted up a sign
And hung it so that passersby
  Could hardly fail to see
That here there was a house for sale
  And please apply to me.

Some folks came in to criticize
  And some came in to praise;
And some came in to chat awhile,
  And some came in to gaze.
They lingered in the cozy rooms,
  And I could almost cry
When they dropped in to speak of terms,
  So scared I was they'd buy!

I did not mind the thought so much,
  It would be fun to sell!
To move into another place
  Would please me mighty well;
But when they tried to close the sale
  Somehow I never could.
I couldn't bring myself to leave
  The dear old neighborhood.

I couldn't move the little print
  Of hands along the stair.
I couldn't move the dreams that hung
  In every corner there.
I couldn't move the love and joy
  Behind each time-worn wall,
And so I just took down the sign
  And did not sell at all!

(Copyright 1923, Detroit News.)

THE HOME SEWING CLUB

SUMMER is over and so many pleasant tasks are before us with the coming holidays and if we get the right start it will be so much more pleasant and the work will be a joy. I started a sewing club of just six women and we meet every Tuesday at two o'clock and work on different articles and our conversation is upon all subjects. We just spend a lovely three hours together. At four o'clock the hostess for the day serves a very simple tea. It is against the rules to be extravagant. This summer I have made a complete luncheon set of five pieces and feel that I have accomplished something worth while, and at the same time enjoyed the pleasant company of some dear friends. It is surprising the help you can get from so many different minds. Each one has some suggestion when you get stuck on a certain stitch. We discuss dress and this fall hope to make a great many of my Christmas gifts.

In making a lampshade, which is quite common to a great many folks now, you might have a member who could show you how to make one of these delightful shades that just seem to make a living-room more inviting.

There are always a few friends who are fond of sewing and the afternoon is one well spent and not wasted.

You have the companionship of your neighbors and it takes you out of your own home at least one afternoon a week. If this is too often make your sewing club every other week.

NAPKINS TO SAVE YOUR LINEN

THE best housewives no longer feel they must have pure linen for their table service. In the last few years this fabric has become so expensive that it was necessary to look to other materials for the making of lunch cloths and napkins. So many pretty and durable cloths are found that even the most careful and conscientious choose the cheaper materials for at least part of their napkin supply. The laundries are hard on linen and these less expensive napkins last as long and perhaps a little longer even if one cannot launder them at home.

Unbleached muslin never fails to fill a need and when used to make up a lunch cloth and napkins, there is no comparison to linen in the price. Make them generous, trim them with bands or hems of gingham, percale, or cretone and they will look much like unbleached linen when laundered. A little applique in colors to match the china and an edge of blanket stitch makes a fancier napkin, quite acceptable as a gift.

The various lovely ginghams offer no end of possibilities for napkins which launder easily and well. A yard will make nine if an edge is crocheted or a band set on. Or it will make four eighteen-inch ones. Cross-stitch in bright colors—carefully chosen as fast—makes an interesting finish for both the edge and a corner. An initial in cross-stitch looks well, especially if a few French knots are used to decorate. A set of blue napkins with a small yard-square cloth makes an excellent breakfast set which one can wash out and keep fresh with little effort.

Perhaps there is nothing which gives a smarter touch to an afternoon tea of luncheon than black-and-white napkins. These might be of the striped percale edged with half-inch lace, white cross-barred muslin with an inset border of black and white stripe, or crepe voile with a black cross-stitch edge and a design outlined in black in the corner.—E. M. Paige.

VALUABLE HOUSEHOLD HINTS

WHEN using a meat-grinder for crumbling dry bread, a paper bag over the end of the grinder will catch the crumbs and prevent them from being scattered.

To keep a large piece of cheese for any length of time without molding, pour melted paraffin over the cut surface.

When boiling a number of small articles, make a cheese-cloth bag and put them in it. In this way none will be lost and all can be removed quickly from the suds.

When boiling old potatoes, add a slice of lemon to the water in which they are to be cooked and you will find that the potatoes will not discolor. A teaspoon of vinegar will also help.

If glass-curtains are dipped in a little starch when laundered, put back on the curtain-rods while wet and hang at the windows, they will look like new without ironing.

Slip-covers of washable material for pan-holders can be easily washed often and slipped back on the pad. This prevents the necessity for making or buying new holders frequently. The covers are more easily laundered than a thick holder.

Mothers Problems

OFF TO BED

TO most mothers there is no sweeter time than the end of the day when she tucks her little folks off for the night. It is the time of day when Mother and the children get very, very close, and no mother, no matter how eager she may be to get the evening's work out of the way, should hesitate to take a little time at bed time to draw near to her children.

The youngest boys and girls may drop off to sleep at once, but the older ones of or approaching school age are full of questions their curious little minds want answered. Sometimes they are of a very intimate nature, such as they could not talk without embarrassment in the daytime. They are questions that should be answered and answered by Mother alone, but if Mother has no time to remain by the bedside a few minutes for a little talk, the chances are they will never be put to Mother, and eventually their information will come in a way exceedingly undesirable.

Be your children's confidante. Let them feel that there is no one nearer and dearer to them, and no one more desirous of answering their puzzling questions and telling them the truth no matter what others may have told them. Keep yourself close to them just as long as you can. Daytimes when work presses in on every side, it is hard to give full attention to the children and their problems, but in the evening, at bedtime, it is easy to win their confidence.

Too many mothers stop going up to bed with their children long before they should. So far as necessity goes, why the children can get into their nightclothes unassisted, and crawl between the sheets but Mother should be there to hear the prayers, to kiss away the disappointments of the day, to suggest ways to make the next day better and happier. And most of all she is needed to answer the questions that the cool, empty darkness bring to the fore in the child's brain. Better by far to let the dishes stand unwashed a while than to risk your child's confidence by giving him no time to talk freely and openly with you. Lie down on his bed to-night and let him talk!

THE TEN-MINUTE LESSON

THERE is a difference between having a child help with the work, and teaching him how to work. A girl may be told to dust a room, yet never learn how properly to dust. She may be told to make the beds, yet never learn how properly to make them. Children are observant, it is true, and "pick up" a great deal of learning just by watching; still, without a real lesson, they are very apt to get only a surface knowledge of the work they do, and grow up without acquiring more.

It is an excellent idea—and one that has been carried out effectively by more than one mother—to take a stated time each day for a home-lesson period. During that period, the child should be taught all the whys and wherefores connected with his task. His work should be performed under the watchful eye of the mother and Mother should not be satisfied with anything short of a perfect performance.

There is, we have all been told, a right and a wrong way to do everything. The child, left to himself, may learn only the wrong way—and the wrong way invariably is full of handicaps. Since a child must learn various forms of work, why not begin early to teach the way that is right, and therefore best?

Sometimes, oppressed as we are by work, we slight tasks, regretfully, yet knowingly. The child, observant always, learns also to slight things. Yet that is exactly what a child should not learn to do. That is why time should be taken to teach him the way that to the best of our knowledge is correct. Ten minutes a day for such valuable training is little time indeed to give, yet ten minutes a day spent faithfully and regularly teaching a child how to wash dishes correctly, do simple ironing correctly, fill the water-tank correctly, or do correctly whatever tasks the child is old enough to undertake, will prove in later years the most valuable daily ten minutes ever given to his upbringing.

When Washing Your Lamp Chimneys, lift them out of the water and set them on the hot stove; they will not break. Let them steam; then wipe on a clean cloth and they will be as clear as crystal.

Personal Column

Bobbed Hair—A long letter and written with a great deal of thought upon the writer's part came to me on the subject of "Bobbed Hair" and I must give you some of the article. Our reader says:—"Because Mother Eve wore her hair long, must all women go back to the primitive age for style. Eve wore her hair always hanging down her back. Do you? The men wore long hair long ago, why not now? There is nothing in the ten commandments that says 'Thou shalt not wear bobbed hair.' 'A woman's hair is her crowning glory.' Then wear it bobbed and show the crown and live in glory." I am the mother of three fine girls grown to young womanhood and all have their hair bobbed.—Maud L. Peet.

Another Reader's Opinion—I would like very much to say that I for one think bobbed hair an ideal thing. I am 29 years old and the mother of four little children, and have bobbed hair. Now, that I know the comfort of it I do not want long hair for some time. Not only the comfort, one can keep tidied up all the time, and the children like it too. I heard women say it takes years and years for it to become long again, but I think different. A girl friend of mine had bobbed hair last summer, and now she has long thick beautiful hair. I think if girls want bobbed hair, let them have it. I was a girl once, and know how it is to want for something and not be allowed to have it; so give her a chance. Let her have bobbed hair one summer and see how you like it.—E. M. S.

Let Us Inspire Our Girls With Lofty Ideals—This sordid word flapper was devised by the London hooligan for the purpose of showering his contempt upon the friendless English working girls. May we forget it.

She's the daughter of my neighbor,
Who, with strivings, waxeth old,
And she'll make a home for daddy
When the dear old home is sold.

She will rise above the turmoil,
Refute the poison pen;
Chastise the leering gargoyle—
And be the mother of great men.
—George J. Barrie, Huron County.

Where Do We Find Mendets?—Would you kindly tell me where I can buy some mendets; the soft lead plugs for repairing holes in milk pans by putting the plug in the hole.—Mrs. A.

—Mendets can be bought in any five and ten cent store or in a hardware store. If you are too far away, write to the nearest town, address Five and Ten Cent Store and name of town.

Cleaning Grey Suede Slippers—I would like to know how to clean gray suede slippers. I have some and do not know what to clean them with.—C. L. N.

—Brush the slippers first with a stiff brush, clean with a cloth dampened with gasoline or carbona, which is in any drug store. Buy a grey powder the shade you want and dust on slippers. I keep mine clean this way. The powder can be bought in the shoe store.

Has Any Reader Tried This With Success—Will you please tell me thru your columns how to wash a chamois vest so that it will not get hard after it is dry? I think the Business Farmer is a fine paper, we look forward to its coming each time.—Mrs. A. W. J., Edmore, Michigan.

—Personally I have never had any luck with cleaning chamois gloves. They are always hard and much smaller after washing, even when I kept them on my hands. A great deal depends upon the quality of chamois that is in your vest and will entail some risk if you launder it at home. If you prize it very much I would suggest sending it to a dry cleaner and then it will be like new when returned. If any reader has had success with this work, let us have the benefit of your experience.

Water Spots on Varnished Table—The rain beat in on my library table that is highly polished mahogany. I did not notice it for twelve hours and a large white spot was left. I washed the spot with ivory soap and luke warm water and rubbed hard until the white started to disappear. I rubbed O'Cedar oil on the spot and polished it again. It made the top look just the same as before.—Annie Taylor.

White Wood Lice—Now may I ask a favor through this column? I wonder if others are bothered the same with the little white wood lice on furniture and upholstering, also on clothing that is put away. They were first seen on the furniture. Can anyone tell me what to do to get rid of them? Ever a reader of M. B. F.,—Mrs. G. T. H.

—You may obtain a bulletin from the United States Department of Agriculture on lice and other insects that infest the home.

Mirror Resilvered—Some time ago a reader asked how to resilver her mirror. I wrote to different concerns, but no answer. There is a shop in Detroit that does this work and the name is "City Mirroring and Beveling Works," 5449 12th Street, Detroit, Michigan.

The Runner's Bible

Title Registered in the U. S. Patent Office

Let your speech be always with grace, seasoned with salt, that ye may know how ye ought to answer every man.—Col. 4:6.

Every man shall bear his own burden.—Gal. 6:5. There are diversities of gifts, but the same spirit.—1 Cor. 12:4.

But now are they many members, but yet one body. ' ıe eye cannot say to the hand, I have no need of thee, nor again the head to the feet, I have no need of you.—1 Cor. 12:20-21.

It takes all the light in a sunbeam to fill its own angle; each spoke in a wheel can lift but its share of the weight; each child of God carries a different message. Hence there must be no shrinking, nor interference with the duty of another, that the whole may be perfect, divine. In the light of all this, how foolish is jealousy.

RECIPES

Apple Pie with Quince Flavor—One quince, three-fourths cup sugar, a little nutmeg and a little cinnamon. Chop the ripe quince, cook until tender in just enough water to cover, and mix it with enough thinly sliced apples to fill one pie; add the sugar, the nutmeg and cinnamon. Bake with one or two crusts.—From The Designer.

Elderberry Jelly.—Have any readers ever made elderberry jelly? By using very tart apples to supply necessary pectin, and using only enough of the elderberry juice to nicely flavor it is delicious. Elderberries are very deficient in pectin, and will not jell alone.—Mrs. E. L. Johnson.

Baked Quinces—Wipe, quarter, core and pare eight quinces. Put in a baking dish, sprinkle with three-fourths cup sugar, add one and one-half cups water, cover, and cook until soft in slow oven Quinces require a long time for cooking.

Quince Marmalade—Wipe quinces, remove blossom ends, cut in quarters, remove seeds; then cut in small pieces. Put into a preserving kettle, and add enough water to nearly cover. Cook slowly until soft. Rub thru a fine sieve, and add three-fourths its measure of heated sugar. Cook slowly twenty minutes, stirring occasionally to prevent burning. Put in tumblers.

Citron Peel—Can any of the readers tell me thru the paper how to make citron peel like we buy. Would like to try and make some. I enjoy this department and get such good recipes and advice from it.—Mrs. W. C. P., Rives Junction, Michigan.

Gold Cake—Beat to a cream one cup of sugar, one-half cup of butter. Beat very light, two whole eggs, the yolks of four eggs, one-half cup of milk, two and one-half cups of flour, two teaspoons of baking powder. Flavor to taste.

Silver Cake—Beat one-half cup of butter with one cup of sugar. The whites of four eggs beaten to a stiff froth. One-half cup of milk, two and one-half cups of flour, two teaspoons of baking powder. Flavor to taste.

Lemon Filling for Cake—One lemon, juice and grated rind, one cup of cold water, one cup of sugar, one egg and one tablespoon of cornstarch.

MY FAVORITE RECIPES

Sailor Duff Desert—Four tablespoons sugar, two eggs, one cup molasses, four tablespoons melted butter, beat well. Two teaspoons soda dissolved in a little hot water; add three cups flour beat well, one cup boiling water, steam one and one-half hours.

Sauce—Four yolks of eggs, two cups pulverized sugar, two teaspoons vanilla. Add this to one pint of whipping cream just before serving.—Annie Taylor.

—if you are well bred!

The Manners of a Hostess—First of all a hostess must show each of her guests equal and impartial attention.

Also, altho giving one of the guests her undivided attention, she must be able to notice anything amiss that may occur. If a glass is broken by a guest and it is one of your choice pieces, you should remove it and appear more concerned about your guest and her comfort at the table than over the broken glass.

WOMEN'S EXCHANGE

IF you have something to exchange, we will print it FREE under this heading providing: First—It appeals to women and is a bonifide exchanges, no cash involved. Second—It will go in three lines. Third—You are a paid-up subscriber to The Business Farmer and attach your address label from a recent issue to prove it. Exchange offers will be numbered and inserted in the order received as we have room. —MRS. ANNIE TAYLOR, Editor.

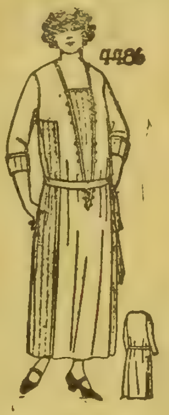
102—Woman with two children wants position as housekeeper.—Mrs. Sadie Fell, R. 1, Lyons, Michigan.

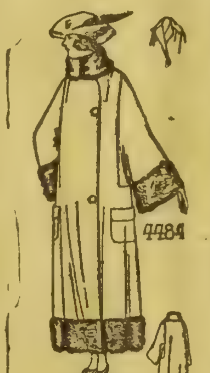
103—Good home for boy about 12 years old who will do chores for schooling and clothes.—Mrs. Myrtle Reid, Main, Michigan.

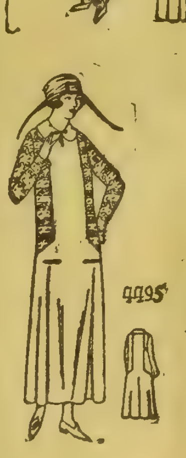
Although people's tastes differ, everyone desires tender, wholesome, nutritious, well flavored bread and flaky palatable pastries, which accounts for the widespread popularity of **LILY WHITE FLOUR,** *"The Flour the Best Cooks Use."*

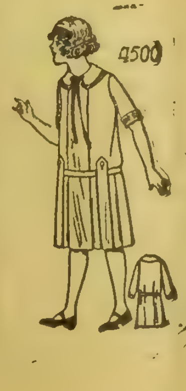
VALLEY CITY MILLING COMPANY - GRAND RAPIDS, MICHIGAN

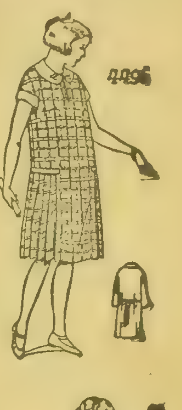
AIDS TO GOOD DRESSING

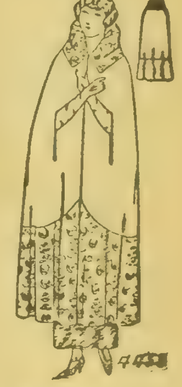


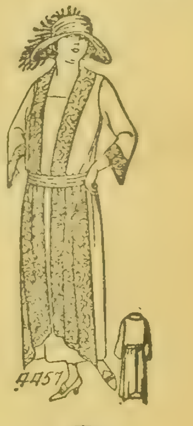












IN planning the fall sewing I might add that the straight unbelted line is the most popular; of course, the belt is used because there are some figures that need a break in the line. The Coats are long with large buttons fastening on one side. Fur is used on nearly every coat. The short coat is still very good and a great many are shown in the shops. Brown, cinnamon, and beige are the most popular shades.

Coat No. 4451 is a very smart style.

4495. A Stylish One Piece Dress—This model has youthful lines, and new style features. It portrays an attractive combination of plain and striped material. One could use braided or embroidered fabric for waist and sleeve, and taffeta, satin or kasha for the panel and skirt portions and for the collar. The Pattern is cut in 3 Sizes: 16, 18 and 20 years. An 18 year size requires 3 ¾ yards of 40 inch material. To make sleeves and waist portions of contrasting material as illustrated requires 1 ⅝ yard. The width at the foot is 2 ⅝ yards.

4484. A Stylish Seasonable Coat—This is a model good for all cloakings, for velours, kasha, plush, and other pile fabrics, and for fur. The collar may be closed high at the neck, or rolled low with the fronts forming revers. The Pattern is cut in 4 Sizes: Small, 34-36; Medium, 38-40; Large, 42-44; Extra Large, 46-48 inches bust measure. A Medium size requires 5 ½ yards of 44 inch material.

4480. A Set of Smart Waist Accessories—This group comprises several attractive collar styles, and a quaint new cuff. Collar No. 1 and the Cuff would be pleasing in taffeta or organdy, with bands of velvet ribbon, or bandings in a contrasting color. Corded self tucks, and an edge band in contrasting material would be effective. No. 3 is good for any of the dress materials now in vogue. For firmness it may be interlined with coarse canvass, or the edges may be wired. No. 4 is a pretty "bertha" style, worn low on the shoulders. It may be of crepe, crepe de chine, silk or satin, and finished with any preferred trimming. The Pattern is cut in 4 Sizes: Small, Medium, Large and Extra Large. No. 1 requires ⅜ yard, No. 2 requires ⅜ yard (for one pair of cuffs), No. 3 requires ⅜ yard. No. 4 requires ⅝ yard of 36 inch material.

4509. A Popular Blouse in Slip On Style—An old friend with new features is this stylish model. The fullness of the front, makes this style attractive for slender figures. The sleeve may be in wrist or elbow length. The Pattern is cut in 6 Sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38 inch size requires 2 ⅝ yards of 32 inch material. If made with short sleeve 2 ¼ yards will be required.

4496. A Dress with New Features for the Growing Girl—Plaid gingham with linen in a contrasting color would be attractive for this style. Printed cotton, crepe or ratine are also pleasing. The waist portions are cut with skirt sections, that are joined to plaited side portions. The short sleeve is cut in one with the waist. The long bell shaped sleeve is added. The Pattern is cut in 4 Sizes: 8, 10, 12 and 14 years. A 12 year size requires 3 ½ yards of 36 inch material. To trim as illustrated with contrasting materials requires ½ yard 36 inches wide.

4451. A Stylish Top Garment—Heather mixture, caracul and other pile fabrics, polo cloth, bolivia, and fur are good for this style. The model shows the popular side closing, and a new collar. The Pattern is cut in 7 Sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38 inch size requires 4 ½ yards of 54 inch material.

4504. A Neat and Pleasing Frock—The stylish side closing and the pretty basket pockets will please the little girl for whom this dress may be selected. The sleeve may be in wrist or elbow length. Gingham with collar, vest pockets, belt and cuffs in contrasting material will be good for this design. Brown linen with tan or white for trimming is also attractive. The Pattern is cut in 4 Sizes: 4, 6, 8 and 10 years. A 6 year size requires 3 yards of 27 inch material.

4486. A Good Model for Mature Figures—The combination of plain and striped material here portrayed is very appropriate for this style. The long lines and "V" shaped vest, are especially becoming to women of mature figure. Ratine and linen or gingham and chambrey could be used for this model. The Pattern is cut in 7 Sizes: 36, 38, 40, 42, 44, 46 and 48 inches bust measure. A 38 inch size requires 5 ⅜ yards of one material 36 inches wide. To make as illustrated requires 2 yards of plain material and 3 ⅜ yards of striped material. The width at the foot is 2 ¼ yards.

4453. A Stylish Wrap—This model shows the circular effect that marks many of the new models. It is attractive for velours, kasha cloth, faille, velvet and other pile fabrics, also for fur. Brocade silk, and embroidered chiffon could also be used. For service and utility wear, double faced coatings, twill or heather mixtures would be desirable. The Pattern is cut in 4 Sizes: Small, 34-36; Medium, 38-40; Large, 42-44: Extra Large, 46-48 inches bust measure. A medium size requires 5 ⅜ yards 40 inches wide. For collar and flounce of contrasting material 3 yards 40 inches wide is required for a Medium size.

4500. A Good Model for a School Dress—This is a splendid style for linen, gingham or jersey. The closing is effected under the panel in front. The sleeve may be in wrist or elbow length. Brown linen suiting, with ratine bindings in a contrasting color would be attractive for this model. The Pattern is cut in 4 Sizes: 6, 8, 10 and 12 years. A 10 year size requires 4 yards of 36 inch material.

4457. A Stylish Costume for the Woman of Mature Figure—Navy blue satin with braiding in black silk would be attractive for this style, or one could combine plain or figured silk as illustrated. The panel tunic and Tuxedo collar give length of line to the figure. The bell shaped sleeve is a popular model. This Pattern is cut in 7 Sizes: 36, 38, 40, 42, 44, 46 and 48 inches bust measure. To make the dress of one material will require 6 ⅜ yards 40 inches wide for a 38 inch size. To make as illustrated requires 2 ⅜ yards of figured and 4 ⅜ yards of plain material. The width of the skirt at the foot is 2 yards. To make tunic, collar and sleeve facing of contrasting material, requires 2 ½ yards 40 inches wide.

4501. A Comfortable Overcoat for a Growing Boy—Scotch Mist, heather mixtures, serges, cheviot and other coatings are good for this style. The Pattern is cut in 5 Sizes: 6, 8, 10 12 and 14 years. A 12 year size requires 2 ⅜ yards of 54 inch material.

UNCLE NED,
The Business Farmer,
Mt. Clemens, Mich.

THE JUMPING WILD PIG

A WILD Pig, or Peccary, once boasted of his jumping ability and challenged a Hare. The test was to be which could jump across a wide river.

The Hare made a wonderful leap. but missed the further bank by a few inches.

The Peccary jumped and fell in the middle of the stream.

Both asked the Fox which had won.

"Neither," said the Fox, "for you both fell in the water. A failure is a failure, whether by only a few inches or half the width of the stream."

Almost to do a thing means little.

OUR BOYS AND GIRLS

Dear Uncle Ned:—May I join your merry circle? I have never written before and have never seen any letters from around here so thought I would write. However, I hope this letter does not get an introduction to the honorable Mr. Waste Paper Basket. We take the M. B. F. and papa thinks it is such a nice paper because it is so helpful. I always read it through and enjoy reading the Children's Hour. How many of the cousins have a scrap book? I have one with two hundred and seventeen pages in it, and I have it nearly filled with stories, poems and pictures. They are as handy in school too. Have any of the cousins the song by the name of "My Papa's the Engineer." If any have it will they please send me the words? I suppose I should give a sketch of myself. I was eighteen years old on the 30th day of July. Have I a twin? I am five feet in height, weigh one hundred pounds, and have medium brown hair and dark blue eyes. I will send in a few riddles for the cousins to guess: A man married a woman by the name of Elizabeth. She had two children when he married her. What did he get? Why is a lame dog like a school boy adding six and seven? What benefit can be derived from a paper of pins? What do lawyers do when they die? I will give a present to the one who answers the most riddles. I would also like to hear from boys and girls of my age and over. I will promise to answer all I receive. The answer to Etta Bannister's riddle is "Holes." I will close now with a riddle for Uncle Ned to guess. Why is a true and faithful friend like a garden seed? Will close with love to Uncle Ned and cousins. From your niece,—Mildred Parker, R2 Cass City, Michigan.

—I can't guess the answer to your riddle although I realize there is a likeness. Write and tell us the answer.

Dear Uncle Ned:—I have been a silent reader of the Children's Hour for quite a long time but have never written. May I join your merry circle? I hope you will permit me to. I love to read the letters because most of them are so interesting. I am a girl eleven years of age, weigh about 75 pounds, have blonde hair, brown eyes, and my hair is curly and quite long. Maybe I will have it bobbed. My mother wants me to. I will be in the seventh grade when school starts. I have about two miles to go to school. I am going to tell you about three of my pets, a dog, a sheep, and a lamb. My dog is still a puppy, but is quite big. His name is Shep or Sheppie. These are a few of his tricks. We tell him to speak and he will bark, he will roll over when we tell him to, he will shake hands, and jump through a tire when we hold it up for him. My sheep was a lamb only one day old when we got her, a funny looking thing she was. Mostly legs. We named her Nanny. We got her from a neighbor and because we had no sheep, we had to feed her with a bottle. We kept her in a big box in the kitchen because it was winter when we got her. She would always jump out of the box. She is big now and has a lamb. A very fat lamb it is. We named it Bessie and we keep them in the orchard. The minute the mother hears her name spoken she will blat. I think the answer to Miss Doris Margaret Scott's riddle is a "Well." I hope I guess it right because I love to receive letters and answer them too. Will some of the cousins please write. I will answer all letters received. I don't see how this letter can escape the waste paper basket. Your niece, [illegible], Cass City, Mich.

—So your mother wants you to have your hair bobbed. You are lucky as many girls want to wear their hair bobbed but their mothers will not let them. Write again.

Dear Uncle Ned:—I haven't written to you in quite a while so I guess I will write a few words. I'm living in town now. I am going to live here in town this winter. Well how is the weather down there now? It has been kind of hot around here lately, but is a little cooler today. Everything is growing around here this hot weather. Well as my letter is getting kind of lengthy, I guess I will close, hoping to see this in print.—Lawrence Chapman, 92½ North Pine Street, Alma, Michigan.

—We have been having nice weather here but today it is raining and I guess it is going to continue through the night.

Hello Uncle Ned:—As I haven't anything special for tonight I thought I would write and let my first letter reach the waste paper basket. I have seen only one letter from up this way so thought I'd try this time. Perhaps there are some who wonder who I look like, so I'll try and describe myself. I have medium brown hair, blue eyes, and I am five feet five inches tall. Guess I'll let you cousins guess my age. I live on a farm, although my brother rented it. I have two sisters and two brothers, and I am the youngest of them. Have you been to the Fair this year, Uncle Ned? I went to the Lake City Fair last week and this week I went to the Cadillac Fair. I was visiting my sister, who lives at McBain, she wanted me to go along, so we went on the train. Oh, but it was cold, and it rained part of the time. I am going to be a ninth grader as soon as we can get the books, but we haven't them yet. Our school started two weeks ago, but of course I haven't went yet. Well, as my letter is getting rather long, I will close and give the rest some room. Would like to hear from some of the boys and girls. Good-bye, your niece,—Helena Hoekwater, R. 2, Box 35, McBain, Mich.

—I attended the State Fair at Detroit and enjoyed it very much. Have you ever attended the State Fair?

Dear Uncle Ned:—This is not the first time that I have ever written to you, and say, I certainly got a lot of enjoyment out of the other one I wrote. I received letters from Zella Moffit, and Lena Baker, and we have kept up correspondence ever since. I have been corresponding with Eunice Butler for quite a while and I also correspond with Lizzie Butler. I think it is great fun to correspond with girls and boys in other parts of Michigan. Don't your other readers think that too? My brother has installed a radio in our house. We get concerts given by the Detroit News and Detroit Free Press. At night he gets other stations out of Michigan. He has got St. Louis, Mo., Troy and Schenectady, New York and Chicago, Illinois. Have any of you readers a radio? They're certainly nice aren't they? I was twelve years old the ninth day of July, will be in the seventh grade this year. I have light hair and it is bobbed and I certainly like it better than I did when it was long. My oldest sister and her two little boys, and her mother-in-law drove through to New York last week. I would rather like to see the boys. I am taking piano lessons. My letter is getting rather long so will not write any more this time. I will close with a riddle. "In marble wall as white as milk, lined with a skin as soft as silk; within a fountain crystal clear, a golden apple doth appear. No doors there are to the strong hold,—but thieves break in and steal the gold." An egg. Your niece,—Eunice N. Traver, Williamston, Michigan, R5, Box 68.

Dear Uncle Ned:—May I come in and have a little chat with you and the cousins this morning. I have written three different times, but only saw one letter in print. I saw Bessie Brown's letter in the M. B. F. a few days ago. She is an old school mate of mine, and we correspond with one another. Please Uncle Ned, will you print this, for, I am lonesome and wish some one would write to me. I would like to hear from Selden Fowler, Traverse City, Michigan, and also from Katie M. Prowant, Durand, Michigan. Well I guess I better describe myself so you'll know what I look like: I am five feet five, and have brown hair (which is bobbed) brown eyes and fair complexion. I won't tell my age, but I'm between 14 and 18. If Selden Fowler and Katie Prowant write to me, please send me your pictures. Uncle Ned, why don't you print your picture on the page some time. I'd love to see it. As I have some sewing to do, I'll close, Good-bye, your niece,—Lena Ables, R. 3, Montgomery, Michigan.

Dear Uncle Ned:—I am a new birdie. I will describe myself. I am 4 feet 2 inches tall, and weigh 87 pounds. I have dark brown hair, blue eyes of course. I am a "Blue eyed beauty, do your mother's duty," and am light complexioned. Ha! Ha! Uncle Ned, are you light or dark complexioned. That's what I would like to know. I hope this letter will be in print. We have geese and they stay around the dooryard so much of the time, and are always making some kind of a noise. I like to look at the "pictures from far and near." I like the M. B. F. very much. Bye bye. Your niece,—Marguerite Smith, Freeland, Michigan.

Dear Uncle Ned:—May I join your merry circle? I am a farmers girl. I will describe myself. I have dark brown hair and eyes. I have dark complexion, my hair is bobbed. For my pets I have a dog named Sandy and four cats. We have three horses, five cows and one pig. We live on a 89 acre farm. We have one one mile and a half to Parshallburg.

I have one sister, she is thirteen years old. Her name is Anna. My age is between nine and fifteen and who guesses it right will receive a letter from me. We have pickles on contract this year and I like to pick them. I am nearly always busy on the farm. I was in Detroit once and I like it out there. Uncle Ned, were you ever in Detroit? I would like to see my letter in print. I never wrote before so I don't know very much about it. I will write more next time if you wish me to. Do you like grapes? I will close now. Goodbye. Please girls and boys, write to me. Your friend—Josephine Soukeys, Box 8, Oakley, Mich.

—Yes, Josephine, I have been in Detroit, not only once but several times. It is only a few miles from where I live. I like grapes more, I believe, than any other fruit. I am referring to Michigan grapes and not those grown in California.

Dear Uncle Ned:—Isn't it fine weather this year for people to go vacationing? Last year it was wet and rainy at this time. I know because a bunch of "Glee Club" girls were out camping and it rained all but two days while we were gone, but this year the weather was nice all the time. We rented a cottage this year. We were camping on Lake Missauka, one of the nicest lakes in Michigan, we think. The lake about 10 miles around it, and about 5 miles across. It has a resort on the south side where we were. One of the girls that was with us from Grand Rapids said it had the nicest bathing beach of any lake she had been at this summer. We all had a great time, all of us got our shoulders nicely sunburned, and one girl had the toothache two days, but nevertheless we had a nice time. We had a heavy rain between our place and Cadillac last Sunday. It washed our corn field awfully. My dad has a large field of melons this year. Somewhere around 2030 hills and we expect to have ripe melons by the 15th of August. People come from all around to our melon patch. We live 8 miles north of Lake City, on the M66 State Trunk Line. As my letter is getting rather long I will close hoping to see my letter in print and also that some of the readers of the Children's Hour will write to me. Your friend.—Leata Lamb, R. 2, Box 79, Lake City, Michigan.

Dear Uncle Ned:—I have been reading the Michigan Business Farmer for three years and have been a silent one so I decided to write now. I am a farmer boy between the ages of 14 and 18. Who ever guesses my age will receive a letter from me. I am 5 feet 1½ inches tall, can swim, hunt deer, or any game. I like to hunt very much. Our farm consists of 80 acres. I live near a large river and have good swimming places. I think I will go to college next fall. I like to drive a car and tractor very much. I hope some of the boys and girls would write to me. I will answer all the letters I receive. Good-bye.—Wayne Carlow, Chassell, Michigan, R2, Box 70.

Dear Uncle Ned:—I wrote to you some time ago and thought I would like to see my letter in print again. I am a boy of nine years and in the fifth grade. I have two sisters named Thelma and Martha. Thelma is married and Martha is in the ninth grade. My folks have an Overland automobile. We have two dogs named Pet and Jiggs, three cats, eight cows and, four calves and three horses named Beauty, Flora and Prince. As my letter is getting long I will ring off. I would like to have some members of the M. B. F. write to me. Your friend—Phillip Bell, R. 1, Box 60, Freeland, Michigan.

Dear Uncle Ned:—I read the letters of the Children's Hour and would like to join your merry circle. I am fifteen years old, am five feet five inches tall, my hair is dark brown, and my eyes are gray. My folks have not a very large farm. The fowls we raise are: turkeys, chickens, geese and ducks. I am in the eighth grade at school. My folks have taken the M. B. F. for 1 year and think it a very good paper. This is my first letter to you. I would like to have some cousins write to me. Your niece,—Marion Myers, Sandusky, Michigan, Star Route, in care of H. C. Diem.

A Visit With A Famous Circus Clown

"IT ain't no snap being utility man in a circus, take it from me!" said John Slater, the old-time circus clown, as he completed the transformation of a seamed but kindly face to the whitened grotesque requirements of a funmaker's mask.

"Yep, I've gotta drive the poney police wagon in the opening parade, then hustle this make-up off—and into another—I gotta make nine changes tonight. Some life, eh, pal?

"It's this way—I been in the show business thirty-five years, clowning all the time. If I'd stuck to just one thing I might 'a made more money, but I can take a stab at a little of everything, so I'm utility man. They don't call me that, but that's what I am. And, believe me, it ain't like being utility with a baseball team, no sitting on a bench half the season and watching the other guys play the game. Every night for little John—and then some.

"I got my regular clowning to do, but if some guy is sick or gets hurt, I put on his togs and fill in. Tonight I gotta take Pete's place in that riding act in the end ring. Horse stepped on his toe and Doc says nothing doing for him for three or four days. Then I gotta let John toss me 'round in that rough house rastling act of his and, take it from me, kid, he ain't gentle."

You may not recognize John Slater if you visit the world's greatest circus. When you think you have him spotted in his funny clown make-up, you may find an entirely different John Slater balancing precariously on the back of a mule. Or the rider in the Roman race may be John Slater again. But John is mostly clown, and at his best when doing absurd stunts that make the kidlets and grown-ups laugh.

NEW LAMP BURNS 94% AIR

Beats Electric or Gas

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. Government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94% air and 6% common kerosene (coal oil).

The inventor, A. R. Johnson, 609 W. Lake St., Chicago, Ill., is offering to send a lamp on a 10 day's FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him to-day for full particulars. Also ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month. (Adv.)

WHAT AILS MUTUAL FIRE INSURANCE COMPANIES

(Continued from Page 4)

companies insuring farm risks in the state, that the member is entitled to full protection so long as he pays his assessments for a certain amount.

There is an association in the state known as the Association of Michigan Mutual Insurance Companies which holds meetings annually at different points. However, only a part of the companies have been sufficiently interested to take out memberships. At every meeting a discussion is indulged in along the lines of a uniform policy, but no headway has ever been made. There seems to be too much jealousy existing as to the encroachment of one company upon the territory of another.

There isn't any question but what there is great need of uniform policies among mutual insurance companies, and if the officers of these companies are not able to get together and agree upon a uniform policy which would protect its members adequately, then the State Insurance Department should insist upon action along this line, and if it is not within his power to do so, then laws should be enacted making it compulsory that Michigan Farm Mutual companies should adopt the uniform policy.

Some of these mutual companies insure a building for a stated amount, for instance, a barn for $2,000, and a member pays assessments based on the insurance carried, $2,000, but in case of loss, that company pays but 75 per cent or $1,500. This is unjust and wrong and the company should be compelled to pay the amount of the insurance indicated in the policy if the building is not over-insured.

Cancelling Policy

Our attention has been frequently called to the fact that some insurance companies will not cancel a policy until the insured has paid for his share of the losses and expenses to the date of cancellation, regardless of how long the time may be. We have gone into this matter quite fully and we find incorporated in the by-laws of some of the companies, a law governing which covers this point. The officers say that without this the insured frequently disposes of his property or lets his insurance go by default and does not pay what he is rightfully owing the company, and in order to get it that this club must be held over the member.

A member should pay for the full time for which he is protected and without putting the company to the expense of making the collection. On the other hand, he should not be asked to pay his share of the losses and expenses when his policy is suspended when he could not recover in case of loss. This publication has gone into this matter very fully and we find that even though it seems unjust and unfair, where it is incorporated in the by-laws, there is no redress for the member and he must pay this amount, regardless of the fact that his property has not been protected during the certain part of the period for which he is charged.

The laws, rules and regulations as laid down in the articles of association and by-laws of the company are held valid unless they conflict with the laws of the State, and the Courts have frequently upheld the position taken by the company, and it would seem that the only redress that the member has is to pay his insurance assessment for the time he has been a member promptly when due and send in his policy for cancellation. The State Insurance Department will insist upon cancellation of the policy without the accumulation of further indebtedness.

In behalf of the officers of mutual insurance companies having this plan in force, will say that the matter of insured members leaving properties and assessments unpaid to be reassessed against other members has caused very great annoyance. When any member desires to cancel his insurance, he should pay up his share of the losses and expenses and surrender his policy for cancellation. He owes that to the company, but just so long as insurance companies collect for their losses and expenses at the end of the year for the year previous, they are going to meet with difficulty in making their collections, and a certain percentage will retire without paying for the protection they have enjoyed, and what these members have failed to pay will be reassessed against the members in good standing in the following assessment. It would seem that the ideal way of making payments would be in advance. Then, when the time for which the assessment has been paid has elapsed, the policy would be suspended. The insured would owe the company nothing and no accumulation of indebtedness would occur. However, very few farm mutual companies in Michigan are operated on the assessments paid in advance plan.

Most of the farm mutual companies compensate their officers with a salary entirely inadequate for the service performed, but they do permit such officers to convert to their own good commissions such as policy and membership fees paid by new members, amounting to quite large amounts during the year, depending entirely upon the size of the company and its growth. This plan is all wrong. The person in charge should be paid a salary commensurate with the service rendered. If he is under-paid, he knows it, and it is quite human for him to get all he can from the other sources—new members, and in so doing he is very apt to accept applications which are not desirable, and instead of being an assett to the company are positively a hazard, and undesirable members are taken in and over-insurance accepted because of the commission coming from such application to the person in charge. Just a few dollars added to the salary of the officer in charge and the placing of the fees into the treasury of the company, where it rightfully belongs, will eliminate, to a great extent, the undesirable over-insured risk, which is the greatest menace to any mutual insurance company. When a new applicant asks for admission to the company his application should be carefully scrutinized instead of being received without question for the small sum that would go to the officer who passes upon the desirability of the application.

Rivalry Between Companies

The rivalry between mutual companies to get business has also been detrimental to the business to a very great extent. In order to get business means have been resorted to that has honey-combed the foundation of mutual insurance. Over-insurance and undesirable risks have entered into the building of some mutual companies to the extent imperiling their very foundation. It has caused excessive losses, which means heavy assessments and finally a dissatisfied membership deserting the company built upon a foundation which could endure.

The successful mutual insurance company must eventually prepare for the building of a reserve fund which will care for excessive assessments when they occur. With a reserve fund, when assessments are high, from which to borrow, to be replaced when losses are lessened, the company is building a foundation which will endure. Just how this fund should be provided we are not advocating, as there are many ways, but nevertheless preparations should be made for emergencies as they occur.

Costs Increased

Insurance costs have increased materially during the past two years and some of the mutual companies carrying farm risks have been compelled to increase their rates to such an extent that the old line companies have taken advantage of the situation and made heavy inroads in the farm mutual field. Farm mutuals should be able to carry insurance much cheaper than old line companies, but they must materially strengthen their plan of operation or else make way for such companies as can afford a full measure of protection and at a marked saving in costs.

The subscribers of the Business Farmer own farms and farm buildings, and, as good business men, naturally protect them from fire and lightning. The are deeply interested and concerned in mutual insurance as they are heavy contributors to the cause, and therefore are interested in dependable insurance information, and while we have devoted considerable space in this article to the matter, yet in so doing we

GLEANER FIRE INSURANCE COMPANY

Established nearly Eight years ago. Two Classes, Rodded and Unrodded.

Highest rate ever assessed, Rodded $3.30, Unrodded Class $4.50 per $1,000 per year. Only one special assessment ever called and that was 15 cents per $1,000 insurance.

Only six assessments called in the Rodded and seven in the Unrodded classes since organized.

Now on the advance assessment plan, permitting members to pay three, six, nine or twelve months in advance as they may prefer.

The estimated rate upon which assessments are being collected is $3.26 per $1,000, per year in the Rodded Class and $3.80 in the Unrodded Class.

Issues the broad and liberal blanket form of policy. Adjusts and pay all losses promptly. Accepts only the better class of risks and those who do not want over-insurance.

Has $9,000 in a reserve fund deposited in the National Bank of Commerce, Detroit, drawing interest, which money has not been raised by assessing members, but saved from the money new members have paid to join the company, which is usually taken by officers of mutual insurance companies as their commissions.

Every new member joining the Gleaner Fire Insurance Company is given absolutely free a first-class fire extinguisher, valued at $3, for every $2,000 insurance taken out. These are sent prepaid.

A mutual insurance company operated on the "Golden Rule" plan, to furnish its members with the best possible form of insurance at the lowest possible cost, with all grafts and commissions eliminated. Built upon honor with the determination to endure.

If you are interested in placing your insurance in a company which can and will furnish you the best form of insurance at the least possible cost, fill out the coupon below and mail to us and we will send you complete information.

HEREFORDS

FIRST PUBLIC AUCTION
Caberfae Herefords
Caberfae Ranch, Boon, Mich.
Property of Ira Nelson Morris, Chicago
At Chicago International Sales Pavilion
Union Stock Yards
Thursday, October 11, '23
50 Cows with their 50 Sucking Calves
25 Bred Cows and Heifers
25 Choice Yearling Heifers
25 Rugged Yearling and 2-year Bulls
1 Harris-bred Repeater Bull
1 Engle-bred Son of Beau Blanchard

Caberfae herd represents Fairfax, Anxiety, Disturber, Columbus, Corrector, and other great bloods, bred from America's best herds. Females bred to, and young cattle sired by, Repeater and Beau Blanchard Sires. TUBERCULIN TESTED, Caberfae never had a reactor.

BABY-BEEVES are bred and fed more profitably than any other. For this purpose the pure-bred Hereford has no equal. Those who breed their own feeders go safe, avoiding speculation.

BEEF IS A STAPLE NECESSITY. Herefords produce it best. A valuable necessity like Hereford Cattle will always be wanted. 50 years has witnessed three low tides in pedigree cattle prices, each followed by higher tides. The present low tide is sure to turn to the inevitable rise. Profit by it.

PRESENT CONDITIONS FAVOR BUYERS. Good notes will be taken.

Let's talk things over further in the catalog and at the sale. For Catalog address

WM. L. GRIFFIN, Secretary, Howell, Michigan.

DAIRY and LIVESTOCK

SHEEP INDUSTRY RECOVERING RAPIDLY FROM DEPRESSION

RAPID recovery from the depression which struck it three years ago is being made by the American sheep industry under the stimulus of tariff protection, fairly good prices, and improved credit facilities, say reports to the Department of Agriculture. Sheepmen generally are optimistic and in good financial shape, and mutton and wool production, though still below normal, is increasing.

Proof that the industry is getting back on its feet is seen in the fact that the number of sheep in this country according to an estimate as of January 1, has increased by 882,000 over the total on the corresponding date in 1922. It is still 243,000 below the 1921 total of 37,452,000, but the rate of increase suggests that the losses of the liquidation period will soon be made up. Officials of the Department of Agriculture do not, however, think that the high figures of war years will be reached again for some time. The peak of the war period was touched at 49,956,000 head in 1915.

Effect of Open Ranges

Settlement of grazing lands for farming purposes has proceeded so rapidly in the last few decades that it is improbable the United States will ever again be as big a sheep producer as it was in the days of the free open ranges. Countries of sparce population and low-priced lands are best suited to sheep raising, and the United States has emerged from that category. The number of sheep dropped from 63,965,000 in 1903 to 51,482,000 in 1913 largely owing to the diversion of grazing lands to farming. There is room for considerable expansion of the sheep industry from its present position, however, if only as a natural swing-back from the extreme depletion it underwent in 1920 and 1921.

The liquidation in that period was the greatest ever known. Flocks were reduced approximately 12,000,000 head. Income from wool wiped out, returns from mutton and lamb were greatly reduced, and hundreds of flockmasters were ruined. From so drastic a shake-up, which diminished wool and mutton production far below current needs, some recovery was inevitable. When Congress placed a duty of 2½ cents a pound on fresh mutton, 4 cents a pound on lamb, and 31 cents a pound on wool of clean content, sheepmen were encouraged to build up their flocks again, and a foundation was laid for reestablishment of the industry on a normal footing.

Wool and Lamb Prices Good

Precisely what effect the tariff has exercised on the sheep industry cannot be ascertained, because the tariff is only one of the factors in the recovery now in progress. It is noteworthy, however, that wool prices began to advance shortly after the emergency tariff went into effect in 1921. For a time domestic wool prices advanced while world wool prices declined. Wool today has a higher relative purchasing power in this country than any other commodity, and lambs are one of the few agricultural commodities that are running substantially above the 1913 level.

In attempting to guess what the immediate future holds in store for the American sheep industry, it is necessary to bear in mind, say officials of the Department of Agriculture, that the enterprise has a dual character. Sheep raising involves the production of both wool and mutton, and market conditions for each must be favorable to ensure stability and progress. The wool outlook seems favorable. Americans use more wool than any other people. Per capita consumption has risen from about 3 pounds in our early history to about 6½ pounds. Although a heavy producer of wool, the country is nevertheless obliged to import of its supply. Home producers are therefore assured of a broad domestic market.

Less certainty exists in regard to the market for mutton and lamb. Lamb and mutton are high-priced, and are considered as luxuries by most people. In consequence sheep and lamb prices show greater sensitiveness to variations in general economic conditions than any other important commodities, and in recessions, as well as in advances, have usually preceded other meat products by substantial periods. How to assure a stable and broadening market for mutton and lamb is therefore one of the most difficult problems of the sheep industry. Officials of the department are making studies to see what can be done toward preventing seasonal gluts and shortages, and toward increasing the popularity of mutton and lamb.

Prospects Appear Satisfactory

Immediate prospects for both wool and mutton consumption in the United States seem fairly satisfactory. Permanent prosperity for the sheep industry, in the opinion of department officials, will depend largely on the success attained in stabilizing production and consumption. Hitherto the industry has usually been up in the clouds or down in the valley, and it has consequently been hazardous and speculative.

Evidence of a trend toward better system, and therefore toward greater stability, are seen in the growing organization of the industry, in the better financing arrangements made available for it under the new agricultural credits act, in stricter use of scientific methods by sheep raisers, and in progress made toward cooperative marketing, particularly of wool. It is believed present prices for sheep, lambs and wool show a profit to competent sheepmen, and that farmers with small flocks can make money provided they give necessary care to their stock. In short, the view of experts in the Department of Agriculture is that, while the competition of other countries still in the pioneer stage may prevent our sheep industry from attaining the proportions it had thirty years or so ago, it has a good prospect of moderate progress.

MEET YIELDS OF FOOD ANIMALS SHOW WIDE VARIATIONS

STATISTICAL studies just completed by the United States Department of Agriculture, showing meat yields of various classes of animals in proportion to live weight, bring out clearly the importance of good breeding. In the work conducted, all the principal kinds of market livestock are included, the grades varying from common stock to animals slaughtered in the carcass competitions of the International Livestock Exposition. Figures were obtained from a number of government sources and from the packing industry.

Good Breeding Shows Its Value

The difference in dressing yield for various grades of cattle ranged from 48 to 66 per cent, meaning that that proportion of the animal was the dressed carcass. For sheep and lambs the dressing yield varied from 42 per cent for common market ewes to 58.3 per cent for International Show wethers. The figures for swine show dressing percentages ranging from 75 to 85.3 per cent. The relatively high figures for swine are due in part to the fact that the skin and head commonly remain on the carcass. The International Show animals in each case are chiefly purebreds, fed specially to produce an ideal carcass.

The results in the judgment of specialists in the Bureau of Animal Indctry, are clear-cut evidence that the types of animals shown and recognized as best by judges of livestock are much superior to poorly bred stock from a meat standpoint.

The practical side of the study just completed is shown by the following statement by John Roberts, of the Bureau of Animal Industry, who made the compilation

Steer Carcasses Compared

"The difference in dressing yield between a 'good' and a 'common' steer, according to the figures collected, is 6 per cent. For a 1,000-pound steer this would mean 60 pounds more of marketable meat. Nor is this all, since the meat of the higher-class animal is superior in quality throughout, as well as being better distributed among the choicer cuts. In other words, the well-bred steer makes a more profitable use of his feed than the inferior one. These things are taken strictly into account by the experts who price the animals in the stockyards; they are, indeed, the factors that determine the market value of one class as compared with another.

VETERINARY DEPARTMENT

KITTEN HAS HICCOUGHS

Could you please tell me what would cause kittens to have hiccoughs?—M. A. S., Bennington, Mich.

—The cause is probably due to irritation of the nervous system produced by toxines excreted by intestional parasites as well as by the irritation of the intestines they produce.—John P. Hutton, Assoc. Prof. Surgery and Medicine, M. A. C.

"MOON BLINDNESS"

I have a nine year old mare which has trouble with her eyes. At times one will seem to be cloudy, something like a film, and then the other will become affected and sometimes both at the same time. I took her to our local veterinary and he said nothing could be done for her and that eventually she would go blind. I am very anxious about her and would like to know if there is a cure.—R. F., Elsie, Mich.

—From the description given of this case I am of the opinion that the mare is suffering from "Periodic Opthalmia" commonly called ""Moon Blindness," and that your local veterinarian is right in his prognosis. The disease is incurable so far as we know. A great many horses go completely blind after several attacks, others will have two or more attacks and partially retain their eyesight for the rest of their life.—John P. Hutton, Assoc. Prof. Surgery and Medicine, M. A. C.

HORSE WIND BROKEN

I have a horse that is wind broken. Can you kindly tell me a cure?—J. A., Cass City, Mich.

—The horse that is wind broken may be cured by performing a surgical operation on his throat. The operation needs be performed by a veterinarian who has had experience performing the operation. Not all cases are cured by the operation but a very great percent of them are either benefited or cured completely after the operation.—John P. Hutton, Assoc. Prof. of Surgery and Medicine, M. A. C.

JACKSON COUNTY FAIR

WITH a record of having one of the most interesting county fairs in the state, Jackson county opened its 1923 county fair during the week ending September 15th. Before the close of the week those who attended declared that it was the best fair that had ever been held in that county. Every day it seemed that the crowd grew larger and the last couple of days it seemed that the crowd grew larger and the last couple of days it was impossible to seat all in the grandstand that wanted admission—and the stand holds 10,000 people. Tuesday was Children's Day and a holiday was declared in the schools in the county so the children might attend the fair. Exhibits at the fair this year were very good and they were plentiful. Then to amuse you there were races and a good vaudeville program, the latter being held on a stage in front of the grandstand. On Friday evening the returns from the Dempsey-Firpo championship fight were broadcasted in front of the grandstand. Everyone went away from the grounds well satisfied with what they had seen and heard and the general verdict was, "We'll be back next year and spend an extra day."

BOY GROWS 384 BUSHELS OF POTATOES PER ACRE

"THE best potato demonstration in years," is the way Club Agent J. R. Miltimore describes the work of Cristy Pettee, of Francestown, N. H. This 13-year-old champion grew 384 bushels of potatoes to the acre, with practically no rot.

His method was simple but comprehensive. He took no chance of failure. Following the advice of the College Extension Department thruout, Cristy used certified seed, treated with corrosive sublimate, and "greened" for two weeks before planting.

A half ton of commercial fertilizer per acre at planting and another half ton cultivated in later on, insured a well-fed crop. Four cultivations, three hoeings, and four sprayings (or dustings) kept the crop in fine condition, prevented late blight, and brought an unusually profitable crop to harvest.

U. S. BULLETINS OF INTEREST IN OCTOBER

A SMALL list of Farmers' Bulletins and Circulars of general interest during October is believed to be of value to our readers. Copies may be obtained free by addressing the Office of the Secretary, Publications, United States Department of Agriculture, Washington, D. C., as long as the supply lasts. Specify number and name and whether Farmers' Bulletin of Department Circular.

Farmers' Bulletin 900, Homemade Fruit Butters; 926, Some Common Disinfectants; 927, Farm House Conveniences; 970, Sweet Potato Storage; 992, Use of Machinery in Cutting Corn; 1067, Feeding Hens for Egg Production, 1080, Preparation of Barreled Apples for Market; 1096, Frost and the Prevention of Damage from It;1160 Diseases of Apples in Storage; 1172, Slaughtering and Use of Lamb and Mutton; 1175, Better Seed Corn; 1186, Pork on the Farm: Killing, Curing and Canning; 1194, Operating a Home Heating Plant; 1223, The Chinch Bug and Its Control; 1250, Green Manuring; 1264, Farm Manufacture of Unfermented Apple Juice; 1265, Business Methods of Marketing Hay.

WHAT AILS MUTUAL FIRE INSURANCE COMPANIES

(Continued from Page 17)

have touched the matter but lightly, and we shall be glad to give any of our readers such information as we may possess on matters pertaining thereto in which they may be directly interested. We are hopeful that mutual companies insuring farm risks will come to the realization that there is a great opportunity for their betterment and that they will eventually come to understand that there can be but one objective, and that to furnish the farmers of Michigan the best and most liberal form of fire and lightning insurance at the least possible cost.

PRITCHARD'S
WEATHER
FORECAST
INTERPRETED BY THE STARS

THE first day or so of this week will feel the tail end effects of the storm mentioned in last forecast. These conditions will disappear about Monday or Tuesday in Michigan giving place to cooler temperatures, clearing skies and higher barometer.

We really do not expect much change in temperature during early part of week and as the latter part comes, it is expected to be considerably warmer than is usually the case for this time of year.

About Tuesday or Wednesday rains will be in progress in this state and probably continue with unsettled conditions in most parts of Michigan through Friday or Saturday.

Week of October 7

Early part of this week is expected to be fair with a gradual warming up until about middle. About 10th showery, threatening conditions will begin and continue until about Friday during which time there will also be much wind.

Temperatures will drop immediately following middle of week and where crops are protected from wind frosts are quite liable. The week ends cool and sunshiny.

October to be Cool

Temperatures will average cool this week but will have an upward tendency until about 26th followed by a sudden drop for a few days. The average temperature for the month will be below normal.

The greatest rainfall period will come between 16th and 20th with an average of more moisture after this period than before. For the month as a whole, however, we believe that precipitation will be below the average and that there will be many pleasant, sunshiny days.

BEFORE YOU BUY A WINDMILL

Carefully consider the following facts: *A year's supply of oil is sent with every Aermotor*

The Auto-oiled Aermotor is the Genuiue Self-oiling Windmill, with every moving part fully and constantly oiled.

The Auto-oiled Aermotor has behind it 8 years of wonderful success. It is not an experiment. The double gears run in oil in a tightly enclosed gear case. They are always flooded with oil and are protected from dust and sleet. Oil an Aermotor once a year and it is always oiled. It never makes a squeak.

You do not have to try an experiment to get a windmill which will run a year with one oiling. The Auto-oiled Aermotor is a tried and perfected machine. Our large factory and our superior equipment enable us to produce economically and accurately. Every purchaser of an Aermotor gets the benefit from quantity production. The Auto-oiled Aermotor is so thoroughly oiled that it runs in the lightest breeze. It gives more service for the money invested than any other piece of machinery on the farm. The Aermotor is made by a responsible company which has been specializing in steel windmills for more than 30 years.

Aermotor Towers are Towers of Strength

Guns, Rifles, Traps, Night and Camp Lamps, Clothing, Boots, Baits and Smoke Pumps—in fact, everything you need on the trap line. Write Today.

Abraham Fur Co.

251 Main Street 46 YEARS IN BUSINESS St. Louis Missouri

Free to Asthma and Hay Fever Sufferers

Free Trial of Method That Anyone Can Use Without Discomfort or Loss of Time.

We have a method for the control of Asthma, and we want you to try it at our expense. No matter whether your case is of long standing or recent development, whether it is present as Chronic Asthma or Hay Fever, you should send for a free trial of our method. No matter in what climate you live, no matter what your age or occupation, if you are troubled with Asthma or Hay Fever, our method should relieve you promptly.

We especially want to send it to those apparently hopeless cases, where all forms of inhalers, douches, opium preparations, fumes, "patent smokes," etc., have failed. We want to show everyone at our expense, that our method is designed to end all difficult breathing, all wheezing, and all those terrible paroxysms.

This free offer is too important to neglect a single day. Write now and begin the method at once. Send no money. Simply mail coupon below. Do it Today—you even do not pay postage.

"What You Want"

About a Rich Old Man Who Tries to Help a Young Man

A Complete Short Story by O. HENRY America's Greatest Short Story Writer

Copyrighted, 1920, by Doubleday, Page & Co.; published by special arrangement with the Wheeler Syndicate, Inc.

NIGHT had fallen on that great and beautiful city known as Bagdad-on-the-Subway. And with the night came the enchanted glamor that belongs not to Arabia alone. In different masquerade the streets, bazaars and walled houses of the occidental city of romance were filled with the same kind of folk that so much interested our interesting old friend, the late Mr. H. A. Rashid. They wore clothes eleven hundred years nearer to the latest styles than H. A. saw in the old Bagdad; but they were about the same underneath. With the eye of faith, you could have seen the Little Hunchback, Sinbad the Sailor, Fitbad the Tailor, the Beautiful Persian, the one-eyed Calenders, Ali Baba and Forty Robbers on every block, and the Barber and his Six Brothers, and all the old Arabian gang easily.

But let us revenue to our lamb chops.

Old Tom Crowley was a caliph. He had $42,000,000 in preferred stocks and bonds with solid gold edges. In these times, to be called a caliph you must have money. The old-style calip business as conducted by Mr. Rashid is not safe. If you hold up a person nowadays in a bazaar of a Turkish bath or a side street and inquire into his private and personal affairs, the police court'll get you.

Old Tom was tired of clubs, theatres, dinners, friends, music, money and everything. That's what makes a caliph—you must get to despise everything that money can buy, and then go out and try to want something you can't pay for.

"I'll take a little trot around town all by myself," thought old Tom, "and try if I can stir up anything new. Let's see—it seems I've read about a king or a Cardiff giant or something in old times who used to go about with false whiskers on, making Persian dates with folks he hadn't been introduced to. That don't listen like a bad idea. I certainly have got a case of humdrumness and fatigue on for the ones I do know. That old Cardiff used to pick up cases of trouble as he ran upon 'em and give 'em gold—sequins, I think it was—and make 'em marry or get 'em good Government jobs. Now, I'd like something of that sort. My money is as good as his was even if the magazines do ask me every month where I got it. Yes, I guess I'll do a little Cardiff business tonight, and see how it goes."

Plainly dressed, old Tom Crowley left his Madison Avenue place, and walked westward and the south. As he stepped to the sidewalk, Fate, who holds the ends of the strings in the central office of all enchanted cities, pulled a thread, and a young man twenty blocks away looked at a wall clock, and then put on his coat.

James Turner worked in one of those little hat-cleaning establishments on Sixth Avenue in which a fire alarm rings when you push the door open, and where they clean your hat while you wait—two days. James stood all day at an electric machine that turned hats around faster than the best brands of champagne ever could have done. Overlooking your mild impertinence in feeling a curiosity about the personal appearance of a stranger, I will give you a modified description of him. Weight, 118; complexion, hair and brain, light; height, five feet six; age, about twenty-three; dressed in a $10 suit of greenish-blue serge; pockets containing two keys and sixty-three cents in change.

But do not misconjecture because this description sounds like a General Alarm that James was either lost or a dead one.

Allons!

James stood all day at his work. His feet were tender and extremely susceptible to impositions being put upon or below them. All day long they burned and smarted, causing him much suffering and inconvenience. But he was earning twelve dollars per week, which he needed to support his feet whether his feet would support him or not.

James Turner had his own conception of what happiness was, just as you and I have ours. Your delight is to gad about the world in yachts and motorcars and to hurl ducats at wild fowl. Mine is to smoke a pipe at even-fall and watch a badger, a rattlesnake, and an owl go into their common prairie home one by one.

James Turner's idea of bliss was different; but it was his. He would go directly to his boarding-house when his day's work was done. After his supper of small steak, Bessemer potatoes, stooed (not stewed) apples and infusion of chicory, he would ascend to his fifth-floor-back hall room. Then he would take off his shoes and socks, place the soles of his burning feet against the cold bars of his iron bed, and read Clark Russell's sea yarns. The delicious relief of the cool metal applied to his smarting soles was his nightly joy. His favorite novels never palled upon him; the sea and the adventures of its navigators were his sole intellectual passion. No millionaire was ever happier than James Turner taking his ease.

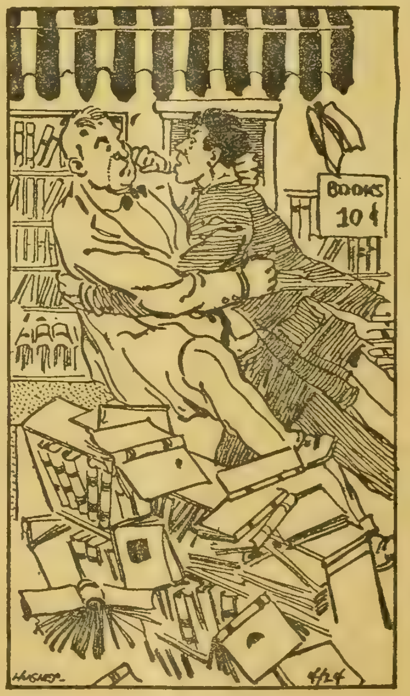
When James left the hat-cleaning shop he walked three blocks out of his way home to look over the goods of a second-hand bookstall. On the sidewalk stands he had more than once picked up a paper-covered volume of Clark Russel at half price.

While he was bending with a scholarly stoop over the marked-down miscellany of cast-off literature, old Tom the caliph sauntered by. His discerning eye, made keen by twenty years' experience in the manufacture of laundry soap (save the wrappers!) recognized instantly the poor and discerning scholar, a worthy object of his caliphanous mood. He descended the two shallow stone steps that led from the sidewalk, and addressed without hesitation the object of his designed munificence. His words were no worse than salutatory and tentative.

James Turner looked up coldly, with "Sartor Resartus" in one hand and "A Mad Marriage" in the other.

"Beat it," said he. "I don't want to buy any coat hangers or town lots in Hankipoo, New Jersey. Run along, now, and play with your Teddy bear."

"Young man," said the caliph, ignoring the flippancy of the hat cleaner, "I observe that you are of a studious disposition. Learning is one of the finest things in the world. I never had any of it worth mentioning, but I admire to see it in others. I come from the West, where we imagine nothing but facts. Maybe I couldn't understand the poetry and illusions in them books you are picking over, but I like to see somebody else seem to know what they mean. Now, I'd like to make you a proposition. I'm worth about $40,000,000, and I'm getting richer every day. I made the height of it manufacturing Aunt Patty's Silver Soap. I invented the art of making it. I experimented for three years before I got the right quantity of chloride of sodium solution and caustic potash mixture to curdle properly. And after I had taken some $9,000,000 out of the soap business I made the rest in corn and wheat futures. Now, you seem to have the literary and scholarly turn of character; and I'll tell you what I'll do. I'll pay for your education at the finest college in the world. I'll pay the expense of your rummaging over Europe and the art galleries and finally set you up in a good business. You needn't make it soap if you have any objections. I see by your clothes and frazzled necktie that you are mighty poor; and you can't afford to turn down the offer. Well, when do you want to begin?"



"The hat cleaner rallied and clinched."

The hat cleaner turned upon old Tom the eye of the Big City, which is an eye expressive of cold and justifiable suspicion, of judgment suspended as high as Haman was hung, of self-preservation, of challenge, curiosity, defiance, cynicism, and, strange as you may think it, of a childlike yearning for friendliness and fellowship that must be hidden when one walks among "stranger bands." For in New Bagdad one, in order to survive, must suspect whosoever sits, dwells, drinks, rides, walks or sleeps in the adjacent chair, house, booth, seat, path or room.

"Say, Mike," said James Turner, "what's your line, anyway—shoe laces? I'm not buying anything. You better put an egg in your shoe and beat it be-

ROOFING
Special Snaps For Quick Keen Buyers

Order From This List

We are offering a limited quantity of roll roofing in various grades for immediate acceptance and shipment as follows:

Smooth Surfaced Roofing

This material is built on three different weights of felt, well saturated, and surfaced smooth. It is easy to lay on any roof, and can be adapted to any conditions as follows:

No. SC-1 Light weight, per roll of 108 sq. ft. $1.00
No. SC-2 Med. weight, per roll of 108 sq. ft. 1.20
No. SC-3 Heavy weight, per roll, 108 sq. ft. 1.40

Red and Grey-Green Slate Coated Roofing

No. SC-4 This material is brand new 85 to 90 pound stock, built on a heavy felt, and surfaced with red or grey-green crushed slate. Price per roll of 108 square feet............ $1.50

No. SC-5 This stock is more or less defective as to slate coating; two to three lengths to the roll. Sold as is per roll of 108 sq. ft. $1.15

Roofing for Repair Jobs

No. SC-6 Lot TM-4. This material is put up in full rolls, running from three to four lengths to the roll. Suitable for small roofs, repair jobs, patching, and lining. It is known as repair job, or spliced roofing. Price per roll of 108 square feet............ 85c

NOTE: Nails and cement will be furnished at 10c per roll extra, for any of the above material.

fore incidents occur to you. You can't work off any fountain pens, gold spectacles you found on the street, or trust company certificate house clearings on me. Say, do I look like I'd climbed down one of them missing fire escapes at Helicon Hall? What's vitiating you, anyhow?"

"Son," said the caliph, in his most Harunish tones, "as I said, I'm worth $40,000,000. I don't want to have it all put in my coffin when I die. I want to do some good with it. I seen you handling over these volumes of literature, and I thought I'd keep you. I've given the missionary societies $2,000,000, but what did I get out of it? Nothing but a receipt from the secretary. Now, you are just the kind of young man I'd like to take up and see what money could make of him."

Volumes of Clark Russell were hard to find that evening at the Old Book Shop. And James Turner's smarting and aching feet did not tend to improve his temper. Humble hat cleaner though he was, he had a spirit equal to any caliph's.

"Say, you old faker," he said, angrily, "be on your way, I don't know what your game is, unless you want change for a bogus $40,000,00 bill. Well, I don't carry that much around with me. But I do carry a pretty fair left-handed punch that you'll get if you don't move on."

"You are a blamed impudent little gutter pup," said the caliph.

Then James delivered his self-praised punch; old Tom seized him by the collar and kicked him thrice; the hat cleaner rallied and clinched; two book-stands were overturned, and the books sent flying. A cop came up, took an arm of each, and marched them to the nearest station house. "Fighting and disorderly conduct," said the cop to the sergeant.

"Three hundred dollars bail," said the sergeant at once, asseveratingly and inquiringly.

"Sixty-three cents," said James Turner with a harsh laugh.

The caliph searched his pockets and collected small bills and change amounting to four dollars.

"I am worth," he said, "forty million dollars, but—"

"Lock 'em up," ordered the sergeant.

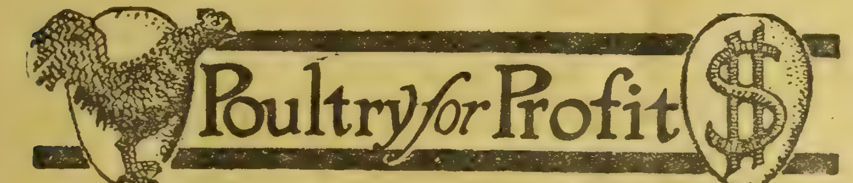
In his cell, James Turner laid himself on his cot, ruminating. "Maybe he's got the money, and maybe he ain't. But if he has or he hasn't, what does he want to go 'round butting into other folk's business for? When a man knows what he wants, and can get it, it's the same as $40,000,000 to him."

Then an idea come to him that brought a pleased look to his face.

He removed his socks, drew his cot close to the door, stretched himself out luxuriously, and placed his tortured feet against the cold bars of the cell door. Something hard and bulky under the blankets of his cot gave one shoulder discomfort. He reached under, and drew out a paper-covered volume by Clark Russell called "A Sailor's Sweetheart." He gave a great sigh of contentment.

"Say, kid, that old gazabo that was pinched with you for scrapping seems to have been the goods after all. He 'phoned to his friends, and he's out at the desk now with a roll of yellowbacks as big as a Pullman car pillow. He wants to bail you, and for you to come out and see him."

"Tell him I ain't in," said James Turner.



TEN RULES FOR POULTRY FATTENING

WHETHER for home use or for sale fatten all birds before killing.

2. Pen up about three weeks before killing.

3. Keep in a clean, dry, shady place.

4. Feed three or four times a day.

5. Feed all the birds will clean up in twenty minutes, then empty troughs.

6. Keep fresh water, grit and charcoal before birds at all times.

7. A good mixture consists of 4 parts cornmeal, 2 parts wheat middlings and 1 part beef scrap. Mix with sour milk or buttermilk and feed moist enough to drip from spoon.

8. Do not omit the animal food. Thirty pounds skimmilk, 10 pounds cut bones or 5 pounds beef scrap are estimated as being of the same value.

9. A small amount of lard or suet chopped through the mash gives good results.

10. Do not feed the birds for 12 hours before killing but see that they have plenty of water.

PURCHASE DRAKES EVERY SECOND YEAR

I have last year's ducks and this year's and want to keep some for breeding stock. Which ones and from which year's do you advise me to keep? Do you also think that the drakes must be from different nests or can they be from the same as ducks?—J. O., New Haven, Mich.

—The most successful duck raisers in this country purchase drakes every second year. It has been our experience in out crossing, that an increase in production, vigor, and growth is immediately registered. Where larger units are running together at large, every second year would be often enough to induce new blood. A young drake is usually preferred, providing he is large, vigorous, and well matured, to the older stock. The possibility of close inbreeding is somewhat remote if you are keeping a number of breeding stock, and no detrimental effects should be noticeable in using young drakes on yearling stock the first year.—E. C. Foreman, Professor of Poultry Husbandry, M. A. C.

AUGUST HATCHED CHICKS FOR FEBRUARY MARKET

Is it profitable to hatch heavy broilers in August for February market?—A. L. H., Jasper, Mich.

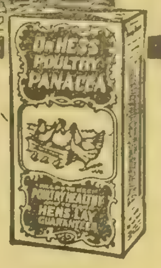
—I do not know of anyone that has successfully and profitably raised broilers in August for February market. The hatches late in the season ordinarily are very unsatisfactory and the chicks come into the world at the wrong season to make an economic growth. The extremely warm weather of August has the most depressing effect on the appetite and vitality of the chick so that they become stunted with the usual high mortality. An August hatched chick would become quite stagy by February and would be well above the broiler size, in fact, some of the pullets would be approaching a laying condition and the cockerels that lived would probably average from three to four pounds in weight. The August broiler would really come on the market the early part of December at a time when our markets are flooded with roasters, and all sorts of cull fowls. This means the broilers would have too much competition which would greatly reduce the quotations for such stock. I know of a number that have attempted this work and ordinarily one year's experience lasts a life time.—E. C. Foreman, Professor of Poultry Husbandry, M. A. C.

THE WONDER OF AN EGG

THE shell is composed of three distinct and porous layers protected somewhat by an outside covering of a mucilaginous substance. The outer layer of shell is very delicate and in a strictly fresh egg has a characteristic bloom-like appearance. Directly in contact with the inner layer of the shell is a tough shell membrane and surrounding the contents of the egg is another.

While the egg is still warm, just after being laid, these membranes lie next to each other throughout but as the egg cools, these two tough membranes separate at the large end of the egg and form what is known as the air-space. The yolk is divided from the white by a delicate membrane which is continued at each end of the yolk in the form of small cords which are fastened at each end of the shell, holding the yolk evenly suspended in the center of the shell. The germ of the infertile egg, or the embryo of the fertile egg can usually be seen as a tiny speck lying close to the yolk.

The white of the egg is put on in layers and specialists have secured red and white layers by feeding harmless but highly colored dyes and then withholding the coloring matter. Surely the egg "showeth His handiwork." One feels like taking off one's hat, bowing one's head and repeating the nineteenth psalm. Boil an egg for ten minutes, take it apart with seeing eyes and delicate fingers and observe the marvels of it.



Help your MOULTERS MOULT

If you want your hens to moult naturally—

If you want them back on the egg job promptly—fall and winter laying—

Then you must make sure that your moulters are healthy and hungry.

They must eat lots, and be able to digest what they eat.

That's just what

Dr. Hess Poultry

PAN-A-CE-A

does for your moulting flock.

It's a tonic that begins with the appetite—improves a hen's whole system.

It has Iron that keeps the paleness away, makes the combs and wattles red—the blood rich.

Pan-a-ce-a starts the food the egg way as soon as the moult is over.

No time lost.

No dormant egg organs after the moult, where Pan-a-ce-a is fed.

Tell your dealer how many hens you have. There's a right-size package for every flock.

100 hens, the 12-lb. pkg. 200 hens, the 25-lb. pail
60 hens, the 5-lb. pkg. 500 hens, the 100-lb. drum
For fewer hens, there is a smaller package.

I spent 30 years in perfecting Pan-a-ce-a.

MARKET FLASHES

MARKET SUMMARY

Wheat strong in face of bearish reports. Corn and oats follow trend of wheat. Rye and beans unchanged. Butter and eggs easy after small decline. Poultry wanted and supply moderate. Fruit market firm. Potatoes easy. Cattle slow and lower. Hog trade steady. Sheep trade slow and market steady.

(Note: The above summarized information was received AFTER the balance of the market page was set in type. It contains last minute information up to within one-half hour of going to press.—Editor.)

FOOTE'S MARKET LETTER

BY W. W. FOOTE

General Business Conditions

ENORMOUS sums of money are being invested in bonds throughout the country with municipals especially favored, while the recent issue of United States 4½ per cent treasury certificates maturing next March was greatly over-subscribed. Industrial employment is on a satisfactory basis, and the outlook for the future is one of the brightest in recent years, according to the monthly review of the United States employment service. A slight decrease in the number of employes, but an increase in the total amount paid in wages is indicated by the monthly report of the bureau of labor statistics. The building trades are fully employed, and there is no slowing down in this industry. Georgia has been the hardest hit by the exodus of the negroes from the south to the north, and it is estimated that 80,000 have left that state since New Year's, and that number will reach 100,000 by Christmas, the migration is said to be the cause of more loss than Sherman's march to the sea. It is pointed out that Tennessee, Kentucky, Virginia and other states with anti-lynching laws are suffering little from migration. The high cost of living is still with us, and for months past the trend of prices has continued in an upward direction, with most farm productions bringing unduly high prices to consumers. Farmers are not getting a fair deal, the middlemen pocketing too generous a share of the profits. Regarding the freight charges made by the railroads, President Markham of the Illinois Central Railroad says that the farmers can pay the freight charges on corn from Omaha to Chicago and have left about 9 to 16 cents a bushel more of the price he receives than he could ten years ago.

Eastern Farming

Most of the great bargains in eastern farms have been sold, and farms offered at $900 to $1,500 are scarce, but it is still possible to buy good farms in the New England states at prices that would surprise a westerner. A recent vacation passed in Maine and among the White Mountains brought out many interesting facts concerning farming, one of which was that wonderful progress has been made in the last few years in dairying, farmers having stocked up their farms with the better class of cows, while numbers of hens are owned, the market for dairy products being large and steadily growing. Summer visitors make a large home market and great quantities of butter, eggs, poultry, apples, berries, etc., are purchased for the Boston market. Potatoes and apples are sure of a ready market, while remaining forests are fast disappearing before the portable saw mills, the greater part being used for pulp for paper. It was a very dry summer in more than one respect, little rain having fallen, and grass and vegetation generally suffered greatly.

Exports of Grain

The average pre-war exports of wheat grain from the United States amounted to 57,000,000 bushels a year, with an annual average value of $55,000,000, and exports of flour averaged 10,678,000 barrels, with an average value of $51,000,000, according to a statement given out on world trade in agricultural products by the department of commerce. The value of wheat exports during the last three years has been over 600 per cent greater than pre-war, and those of flour 190 per cent. In 1922 the value of exports of wheat were 250 per cent greater than pre-war and that of flour 60 per cent greater, showing that wheat exports are growing much more rapidly than flour exports.

The Grain Markets

Improvement in wheat prices is slow at best, prices being lower than a year ago and far below two years ago. Statistics cut a big figure in the wheat trade, great stress being laid on the fact that reports agree that the world has produced much more wheat than is needed to meet the wants of importing countries, while much wheat is carried over to the new crop year. Grain exports from this country are running much below those of a year ago, and the visible supply of wheat and oats is growing, but corn stocks are insignificant. Rye stocks are far larger than last year, but oats supplies are much less. Complaints are heard regarding the poor quality of the northwestern wheat, and it seems certain that if the mills want choice wheat they will have to pay a handsome premium for it. The clover seed crop is short, and prices may be expected to go higher. It sells now at $16 to $21 per 100 pounds. September wheat sells in Chicago at $1, comparing with $1.09 a year ago.

Outlook for Corn Prices

A large corn crop is promised, but the prevailing opinion is that it will not prove excessive, with no heavy carry-over of old corn, which has been marketed freely recently, as prices have looked attractive to owners throughout the corn belt states. Frost nipped some of the late corn in Iowa, Illinois and Indiana, and this will make some soft grain, but the outlook is for a large crop of good corn. The soft corn will largely be fed to live stock, and with the usual abundance of fall feed on farms, the consumption of good corn will be on a limited scale during the first part of the corn season, running from November. The recent government report points to a corn crop aggregating 3,076,000,000 bushels, comparing with 2,891,000,000 bushels last year, and an average of 2,931,000,000 bushels. The ten leading corn states promise to harvest 2,034,000,000 bushels, or 243,000,000 bushels more than in 1922. It is pretty generally conceded that all the corn grown this year will be consumed by the end of November next year. Corn prices are much higher than a year ago and far above those of two years ago. September corn sells in the Chicago market at 85½ cents, comparing with 64¼ cents a year ago.

The Oats Market

Farm consumption of oats is on a large scale because of low prices for oats and high prices for corn. The oats crop of 1,321,000,000 bushels is 110,000,000 bushels larger than that for last year. September oats sell in Chicago at 39 cents, comparing with 39⅞ cents a year ago. September rye sells at 66½ cents, comparing with 72¼ cents a year ago.

The Cattle Market

Despite the greatly increased receipts this year in the markets of the country over recent years, prices are much higher than one and two years ago, the consumption of beef being unusually large throughout the country. Prime yearling steers and heifers have been high sellers, although selling lower than prime heavy steers. Many western rangers have been coming to market of late, with good prices paid for the better class. Common stockers are not much wanted, even at extremely low prices, the demand being mostly for the more desirable kinds of stockers and feeders. Unsatisfactory prices have been paid for poorly finished range cattle, as well as for their native competitors, there being altogether too much second grade beef on the market. Some heavy receipts of cattle recently sent prices down materially, the Chicago "run" on Monday aggregating the enormous number of 32,932 head, the largest of the year. Top sales last week were at $13 for heavy steers, the best yearlings bringing $12.50. Aside from a few lots of prime cattle, the general market was 50 to 75 cents lower, the bulk of the steers going at $8.75 to $12. Sales ranged down to $7 to $8 for common steers, with good steers selling at $9.75 and over and choice lots at $11 and upward. Cows and heifers sold mainly at $4 to $7.50 and calves at $10 to $14, while stockers and feeders sold at $4.50 to $9.15. A year ago beef steers sold at $6.50 to $11.95 and twelve years ago at $4.50 to $8.35. Western range steers sell at $4.50 to $9.75. Combined receipts of cattle in twenty markets for the year aggregate 9,792,000 head, comparing with 9,166,000 a year ago.

Milkers and Springers

Of late there has been an excellent demand for good close up springers, but sales of backward cows dragged. Sales were made of the best heavy springers at $90 to $100, while the bulk of the dairy cows went at $60 to $75, with numerous sales of heavy Holsteins at $80 to $90. Common backward cows are going largely at $40 and under.

Plenty of Hogs

Prices for hogs of late have been as high as could be expected in view of the enormous gains in receipts in the markets of the country this year over recent years. With an abundance of corn and other feed, owners have been making their droves of hogs quite weighty, and recent Chicago receipts have averaged around 244 pounds. The consumption of fresh and cured hog products is prodigious, and although 48,250,000 swine were slaughtered during the last fiscal year, about 4,250,000 more than ever before in the like period, prices made a seasonable improvement. Recent weeks have brought about a widening out of prices for hogs, with a good premium paid for choice light bacon and butcher lots. Charles A Mallory, for many years prominent as a hog seller in the Chicago market, advises stockmen to market their hogs of the old crop as fast as possible, and feed the new crop or else buy stock hogs for "hogging down" corn or feeding in other ways. He points to the too large offerings of thin hogs of all weights of late, and as the demand for these and for common hogs generally is very limited, they are slow of sale even at large discounts. It is usual as about this time of the year for many farmers to feed green corn to their hogs, and there is always danger of bad results from furnishing it too generously, instead of starting in a small way and gradually increasing the amount. Exports of cured hog meats and lard continue large despite the unsatisfactory financial conditions in several European countries.

Hogs Sell Lower

About 157,000 hogs were dumped on the Chicago market last week, comparing with 117,766 a year ago and enormous supplies made lower prices, closing sales being made at $7.10 to $8.90, the top comparing with $9.30 a week earlier and $10.40 a year ago. Pigs brought $5 to $8. Combined receipts in twenty markets for the year to late date amount to 30,093,000 hogs, comparing with 23,425,000 a year ago.

Excessive Lamb Receipts.

Last week's receipts of lambs were far greater than usual, and prices suffered severe reductions, with feeders especially depressed by the vast number of thin flocks. Prime flocks were not numerous enough, and they sold higher after early weakness. Late sales were made in the Chicago market of lambs at $9.25 to $14.50, feeders going at $12.50 to $13.60. Close to 143,000 head were received in Chicago for the week, comparing with 106,120 a week earlier and 83,215 a year ago. Breeding ewes are wanted at $6.50 to $11.75.

WHEAT

Up to the closing day of last week the Detroit wheat market did not go above level it was two weeks previous but improved milling demand caused the price to advance 1c on the closing day. It seems that eastern mills want Michigan white wheat and they can not get enough to fill their needs. This fact gave strength to the market for red wheat.

Prices

Detroit—Cash No. 1 red, $1.08; No. 3, $1.05; No. 2 white, $1.09; No. 2 mixed, $1.08.

Prices one year ago—Detroit, Cash No. 2 red, $1.12; No. 2 white and No. 2 mixed, $1.10.

CORN

Bullish reports from the corn belt did not influence the trend of the Detroit corn market last week. While many other markets were strong there was nothing doing at Detroit and the price did not change.

Prices

Detroit — Cash No. 2 yellow, 95½c; No. 3, 94½c.

Prices one year ago—Detroit, Cash No. 2 yellow, 70c; No. 3, 69c; No. 4, 67c.

OATS

Oats are steady and inactive at Detroit the price at the close of last week being one-half cent higher than two weeks ago.

Prices

Detroit—Cash No. 2 white, 41c; No. 3, 42c.

Prices one year ago—Detroit, Cash No. 2 white, 43c; No. 3, 41c; No. 4, 38c.

RYE

During the fortnight ending Saturday, September 22nd, the price in the Detroit rye market declined but before the close of the period it was back to 75c. There is a small supply.

Prices

Detroit—Cash No. 2, 75c.

Prices one year ago—Detroit, Cash No. 2, 75c.

BEANS

Pea beans have been steady and the price has made several gains during the past couple of weeks. Offerings of choice stock are small and many dealers see higher prices in the future. A firm tone prevails at Detroit.

Prices

Detroit—C. H. P., $5.85 per cwt.

Prices one year ago—Detroit, C. H. P., $5.25 per cwt.

POTATOES

There is a liberal supply of potatoes and consumers are reluctant buyers. We believe that they will be sorry before the year is up because there will be a smaller supply of potatoes than many expect owing to the dry weather. Farmers should hold a good share of their surplus until later in the year. All indications are that they will make money by doing so.

Prices

Detroit—Michigan, $2@2.33 per cwt.

Prices one year ago—Detroit, Michigan, $1.50 per cwt.

HAY

While prices in general are unchanged, the demand for timothy hay is reported active, especially for the choice grades. Lower grades continue slow.

Prices

Detroit—No. 1 timothy, $20.50@21; standard and light mixed, $19.50@20; No. 1 clover mixed, $17@18; No. 1 clover, $15@16, per ton.

Prices one year ago—Detroit, Standard timothy and light clover mixed, $15.50@16; No. 1 clover, $14@14.50 per ton.

The Agricultural and Business Situation

Revised Monthly by the Department of Research of the American Farm Bureau Federation.

An understanding of the figures on this page as they are revised and presented each month, enables the farmer to see the position of the important factors which indicate the trend of business and prices and give a basis for judgment concerning future agricultural operations.

PRODUCTION AND TRADE:

September crop forecasts show only moderate change from August except for cotton a decline of 700,000 bales. This, together with continued unfavorable weather and sharp increase in demand due largely to the effect of the Japan disaster on the silk industry, has brought the price of cotton up to thirty cents, an abrupt increase of about five cents per pound.

Wheat, from its low point last month rebounded nine cents per bushel and then began to decline when the larger crop estimates from Canada were published. Figures of exportable surplus for the United States and Canada, now current in the grain trade, range as high as 650 million bushels compared with around 500 million bushels last year. There appears no foundation for this present high estimate of surplus in face of a total supply for the two countries, including both crop and carryover, of 1369 million bushels this year compared with 1360 last year.

Industrial production shows no let-up. Manufacturing output which was 28 per cent below normal in the middle of 1921, the period of low activity, is now about 15 per cent above normal. Building operations which gave some sign of slumping two and three months ago, are now showing a greater gain over last year. Freight car loadings continue at record levels.

FOREIGN TRADE:

Imports, the first seven months of this year have been more than enough to pay for the exports. Exports for this period, show only a slight increase over the previous year. Cotton, during this calendar year has been going abroad at a ten per cent slower rate than last year; wheat 16 per cent slower; pork and lard 38 per cent faster; and tobacco, 11 per cent faster.

PRICES:

Central market prices of farm products as reported by the U. S. Department of Labor, are 3 per cent above last month and 6 per cent higher than last year. Decline from last year in the prices of non-agricultural commodities came exclusively in the fuel and lighting group. The gain, over a year ago, in farm purchasing power in terms of the price ratio, is therefore largely theoretical since farmers' purchases of these items are comparatively small. Trends covering the last three or four months are more favorable and are slowly narrowing the gap between farm and other prices at points that will yield practical benefits.

Out of 24 commodities 14 are above a year ago; 9 are below and 1 remains unchanged. Compared with last month 14 are higher, 7 are lower and 3 are the same.

INCOME:

Total cash income gives promise of being greater this present crop year than last for the following commodities: corn and other cereals except wheat, cotton, potatoes, dairy products and poultry products. Hogs will probably yield less income. Tobacco, cattle, sheep and wool should bring about the same gross receipts this crop year as last.

I. Production and Trade.

2. U. S. Department of Labor Relative Wholesale Prices:

Prices in year 1913 equal 100.

	Aug., 1923	July, 1923	Aug., 1922
All commodities (weighed average or general price level	150	151	155
Farm products	139	135	131
Food products	142	141	138
Cloths and clothing	193	193	181
Fuel and lighting	178	188	271
Metals and metal products	145	145	126
Building materials	186	190	172
Chemicals and drugs	127	128	122
House furnishing goods	183	187	173
Miscellaneous	130	121	115

3. Prices of Farm Products at the Farm Relative to 1913:

(U. S. Bureau of Agricultural Economics)
Prices in year 1913 equal 100.

Commodity:	July, 1923	June, 1923	July, 1922
Cotton	190	211	167
Corn	147	146	108
Wheat	107	121	124
Hay	108	106	100
Potatoes	191	129	179
Beef cattle	97	99	98
Hogs	89	85	122
Eggs	119	108	106
Butter	136	138	123
Wool	229	248	194

4. Relative Purchasing Power of Farm Products:

(U. S. Bureau of Agricultural Economics)

The quantity of various commodities which a given amount of each farm product would purchase at prices prevailing in 1913 is put equal to 100. The figures given represent the percentage of this quantity which the same amount of farm products would purchase in July, 1922. Prices at the farm are used for agricultural products, and wholesale prices at central markets for other commodities.

	All Commodities	Cloths, etc.	Fuel, etc.	Metals, etc.	Building Mtls.	House Furn'gs
Cotton	126	98	104	131	100	102
Corn	97	76	80	101	77	79
Wheat	71	55	58	74	56	57
Hay	72	56	59	74	57	58
Potatoes	126	99	104	132	100	102
Beef cattle	64	50	53	67	51	52
Hogs	59	46	49	61	47	48
Eggs	79	62	65	82	63	64
Butter	90	70	74	94	72	75
Wool	152	119	125	153	121	122

Average purchasing power of all farm products in terms of all other commodities. Same basis as above table.

1913	100	December, 1921	62
1914	112	July, 1922	69

CO-OPERATIVE BUYING DIRECT FROM THE MINES

YOU, as a farmer, understand the principles of "Co-operative Buying." You know what big savings can be made by that method. It is just as sound in principle as co-operative marketing. Here is a wonderful opportunity for you, not only to get your own coal for next winter *absolutely free*, but also for you to save real money for many of your friends and neighbors, thereby doing a genuine service for your community. Read below the details of our great money-saving offer.

I Will Fill Your Coal Bin FREE

A Straight Business Proposition from the President of the Peoples Coal Co.

Hundreds of Farmers Got Their Coal This Way Last Year

THIS is not a new and untried plan, but one that has been thoroughly tried out and found entirely practical and satisfactory. Hundreds of farmers in Illinois and other states got their coal from us last year through this plan and are again taking advantage of it this year. Their letters testify to their enthusiasm over the soundness of our method, the quality of our coal, and to the money that they saved. Read on. This is only one of hundreds we have received.

Onarga, Ill., Feb. 26, 1923.

Peoples Coal Company,
Chicago, Illinois.

Gentlemen:—Let me advise you what I think of the coal I have had from you the last month. I sent a load up to the high school last Friday to try out, and today I went up to see the janitor about it, and here's the answer he gave me:—

"Koon, I can get as much steam out of one ton of your coal as I can get out of two tons of the coal I have been using."

I thought that good enough, and think they ought not to turn me down on another car. Here's hoping the Indiana Egg that I have now rolling will even be better. Yours very truly,

(Signed) J. H. KOON.

(We have the original of this letter in our files.)

WE HAVE been successful coal shippers for the past 16 years, handling the outputs of the best mines in Illinois, Indiana and Kentucky and selling direct to the user. This method of conducting the coal business has enabled us to reduce the price and save the consumer $1.50 to $2.00 per ton. As the average family consumes 15 tons of coal per year, this means an important saving. We have found, through experience, that when we can ship in carload lots, we can reduce the cost still further, but as a car of coal runs from 40 to 50 tons, no one family is likely to use that amount. There is usually enough coal in one car to supply three or four families.

Help Your Friends Buy Coal at Wholesale

An experiment quickly showed that families would readily club together and buy coal by the carload in order to make this big saving. You see, we are wholesalers. We have no local yards, no local agent, or representatives. We are not equipped to reach individual consumers personally and interest them in getting together to buy a car of coal. In order to carry out the plan, we began to organize Peoples Coal Clubs, appointing an organizer for each club and giving him his coal free for his trouble in organizing the club.

You now have that chance. It will be a very simple matter for you to get your winter's coal supply free. You will find that your friends and neighbors will be delighted to club with you to get a carload of coal. They will thank you for the opportunity.

Own a Lucrative Coal Business

You needn't confine the offer to friends and neighbors. You can sell to storekeepers, banks, churches, hospitals, office buildings, or other large users of coal. You can order as many carloads as you want to and after you have all the coal that you can use, we will give you a big cash commission for each ton which you sell. This offer may start something "real big" in your life.

Best Quality of Coal

Our coal is all hand-picked, guaranteed coal, selected only from the choicest mines in Illinois, Indiana and Kentucky. It is all freshly mined, clean and free burning, makes very little soot, and is guaranteed to give perfect satisfaction. You will be amazed that such coal can be bought at the prices we offer. You will hear nothing but praise for it. You do not have to pay for the coal until the car arrives.

Fill out the coupon below and send it to us today and we will send you a price list with full descriptions and with complete instructions so that you can start right out and begin to line up your club. Ask your friends and neighbors if they want to save money on their coal supply. The answer is always "Yes," when our plan of co-operative buying is explained. A little effort in your spare time and you will quickly have a carload order made up. Here's a chance for you to build up a profitable business on the side.

Send the coupon today.

Our Responsibility

TO WHOM IT MAY CONCERN:

March 23, 1923.

We take pleasure in testifying to the responsibility and dependability of the Peoples Coal Company of Chicago, valued customers of this bank. The owners of this company are well and favorably known to us, impress us as possessing integrity and business acumen, and it is our opinion that any commitments made by the company will be fulfilled as agreed. A statement submitted to us of recent date shows them to possess a net worth in excess of $200,000.00. In our opinion this company is entitled to the confidence of those with whom they do business.

Very truly yours,
CENTRAL MFG. DISTRICT BANK,
WM. N. JARNAGIN, President.

ACT QUICK

Now Is the Time to Get Your Coal

It's Easy, but Don't Delay a Minute

The labor situation, car shortages, and other conditions indicate that the price of coal will be just as high next winter as last year if not higher. Check over your last winter's coal bills and see how much money you shoveled into your furnace and stoves.

THIS IS THE WAY OUT. Get your coal free, and save money for your neighbors by supplying them direct from the mines at wholesale prices, and in the summertime when prices are always lower.

THE PEOPLES COAL CO.
1118 W. 35th St., Dept. 597, Chicago, Illinois

Gentlemen—Please send me order blanks and instruction sheets in connection with your Peoples Coal Clubs. I want to try out your plan but I understand that this request carries with it no obligation of any kind on my part.

I find sweet peace in the depths of autumn woods,
Where grow the ragged ferns and roughtened moss;
The naked, silent trees have taught me this—
The loss of beauty is not always loss!
—Elizabeth Stoddard.

Read: Representation On Basis of Citizenship—Hints On Harvesting and Storing Seed Potato Crop.

Potato Grades Will Boost Michigan Products

MICHIGAN took another step forward in its fight to place the products of the Michigan farms foremost on the markets when the enforcement of the potato grade in this state by the Department of Agriculture went into effect Monday, September 29th. Market experts declare that it is particularly difficult to bring about uniform grading of potatoes because they are grown over such a large territory and shipped at so many different points. There is no question that some potatoes not up to specifications will be shipped to New York and other eastern markets, but while nothing formerly could be done about it now the inspector of the U. S. Bureau of Markets can, and no doubt will, make trouble for shippers found to be misrepresenting their stock.

Mr. William P. Hartman, who is deputy commissioner of agriculture in this state, declares that the importance of the use of grades by the farmers of Michigan cannot be overestimated. He goes on to say that standardization is one of the major facts in the solution of the market problem and the farmers can organize until doomsday but if their products are not good and dependable, they won't get very far. This is a fact all too true, and much to their grief a few cooperative associations have started out without giving this proper consideration. Needless to say, they have not been a success. Of course it is to be realized that organization, storage and advertising are needed just as well as standardization. These four are cardinal factors in the market system, but if any one of these is weak the whole system is weak.

"Mandatory grades mean much to the shipper and indirectly to the grower," says Mr. Hartman. "When the shipper knows that only good of certain quality are being offered to him he does not hesitate to pay the top price for that grade. But when poor stuff is included along with the high quality products the grower receives the bottom price for the whole."

The first step in this state to be taken in the effort for better marketing was in 1917 when the Michigan legislature passed a law creating the office of Director of Markets. Then in 1921 this office was placed under the commissioner of agriculture. The law regarding the director of markets reads that "he shall assist in the organization of cooperative and other associations, for improving the relations and services among producers, distributors and consumers, and afford them such services under adequate rules and regulations as relate to standardizing, grading, packing, handling, storage and sale of products within the law of Michigan not contrary to law, and enforce such rules and regulations by actions and proceedings in any court of supreme jurisdiction."

Up to date the department of agriculture has confined itself almost entirely to work of standardization and inspection, and establishment of a market news service as the Michigan Agricultural College has assisted in the formation of the market organization. Market information on grapes, peaches, apples and onions is sent out from the market news club office at Benton Harbor. This office is maintained jointly by state and federal funds. The address will be changed to Grand Rapids after October 15th, where the office will be maintained until May, as it chiefly concerns potatoes during the winter months.

Present Grades in Effect

At present mandatory grades for apples, peaches, grapes and potatoes are in effect. The apple law was passed in 1917 and was amended in 1919 and 1921. Last winter it was almost completely rewritten. The grades consist of "Michigan Standard Fancy," Michigan Standard A," "Michigan Under Color," "Michigan B," and "Michigan Unclassified."

Grape grades were promulgated by the department a year ago at the request of the growers, when it was found that California and New York grapes were receiving preference over their own. Up to that time no other state had adopted grades on grapes, and hence the men who devised the grape rulings were required to blaze an entirely new trail. Three grades were adopted—"Choice Table Grapes," "Choice Grapes," and No. 2 Grapes." Last winter these were enacted into law. This season the department has four men and the growers five men performing the inspection service in Southwestern Michigan.

United States grades on peaches were promulgated only four weeks ago. Though only rulings of the department, they are as binding as law. These grades consist of "U. S. Fancy No. 1," "U. S. No. 1," "U. S. No. 2," and "U. S. No. 3."

Growers Want Grades

The petition for the promulgation of potato grades was signed by the Michigan Potato Growers' Exchange, the Michigan Shippers' Association, the Michigan Potato Producers' Association and the Michigan Agricultural College. The grades adopted were those already established by the United States Bureau of Markets, with the addition of an "ungraded" class. The Michigan Potato Growers' Exchange plans to ship only U. S. Fancy No. 1 potatoes under its "Chief Petoskey" brand.

Last year Michigan shipped 19-527 cars of potatoes across the state line, but on eastern and central western markets many Michigan potatoes were underbid because they were not up to the standard of those of other states. The low prices received by Michigan table stock were in direct contrast to the fancy prices received by Michigan certified potatoes.

"Some people would like to have the Department of Agriculture cooperate with the Federal Bureau of Markets and put on an inspection service at every shipping point," said Mr. Hartman. "This would be desirable, but the department has not enough men or money to do so. If the growers and shippers get together and see that their goods conform strictly to the grading rules, there will be no kicks at the other end."

FIRE PREVENTION WEEK ON THE FARM

AMONG the most serious drains on our national resources is our appalling and rapidly mounting fire waste, according to Secretary of Agriculture Wallace in a statement just issued. The amount of this fire waste for last year has been reported as in excess of $500,000,000. The big individual items in this sum arise, of course, from large fires and conflagrations in cities and towns. No complete figures are available for the annual loss of farm property by fire, according to the Secretary, but enough information is said to be on hand to show that is it also on the increase and that the sum now materially exceeds $50,000,000—the actual figure may be nearer $100,000,000.

President Coolidge has designated October 9 as Fire Prevention Day, while prominent national organizations interested in conservation of our national wealth are urging that the entire week of October 7-13 be observed as Fire Prevention Week. During this day and week much will be said from the platform, as well as through the press, on the necessity for greater care and effort in the prevention of fire losses. Less of this publicity will reach the farmer than the city dweller. In any case, it will all be in vain unless the owners and users of property individually take heed and give personal thought to the fire menace.

CORN BORER QUARANTINE EXTENDED

EXTENSION of the Federal quarantine against the European corn borer to include additional cities and towns in New England, New York, Pennsylvania, Ohio, and Michigan, effective October 1st, was announced by the Federal Horticultural Board, United States Department of Agriculture recently. As the pest gradually spreads to new fields, the area under quarantine is widened. The new territory becomes subject to the quarantine regulations aimed to keep the pest in check. The new townships in Michigan that go under quarantine October 1 are: Ash, Dundee, and Raisinville, in Monroe county; Taylor, in Wayne county.

Invest in a McCormick-Deering for Fall Plowing and Belt Work

The remarkable new warranty covering the crankshaft and the crankshaft ball bearings in McCormick-Deering Tractors has shown the farmer more clearly than ever that he can best depend on these tractors for real value and economy. This is a guarantee for the entire life of the tractor and that means much.

It may well prove the deciding factor in your own investment. The ironclad agreement, printed below, provides you with a lasting security covering these important parts of the tractor. It is evidence of quality in the entire tractor. It is an indicator of practical design, accurate assembly, generous size of parts, and long life.

The fall season is ahead—a season of many power jobs, both drawbar and belt. Do your plowing speedily and well with a McCormick-Deering and fit your tractor to fall and winter work. McCormick-Deering Tractors are designed to handle belt jobs as you want them handled. And McCormick-Deering machines are made to work right with tractors. The combination can't be beat.

Stop at the McCormick-Deering dealer's and go over the construction and the features of these tractors. Study the value of replaceable wearing parts, the unit main frame, ball and roller bearings at 28 points, etc. And remember this important point: When you buy a McCormick-Deering Tractor you get all necessary equipment—throttle governor, belt pulley, platform, fenders, brake, etc. No extras to pay for. Make your power investment safe from every point of view by placing an order for a McCormick-Deering 15-30 or 10-20 Tractor.

SPECIAL WARRANTY
given every purchaser

The seller agrees to replace free the Two-Bearing Crankshaft in any 10-20 or 15-30 McCormick-Deering tractor, should it break during the life of the tractor, provided the broken parts are promptly returned to the factory or one of the branch houses.

Further, the seller agrees to replace free any Crankshaft Ball Bearing in the 10-20 or 15-30 McCormick-Deering tractor, which may break, wear out, or burn out during the life of the tractor, provided that the defective ball bearing is promptly returned to the factory or one of the branch houses.

Asks for Representation On Basis of Citizenship

Mrs. Dora Stockman of State Board of Agriculture Says People Want Educational Qualifications for Voters of Michigan

REPRESENTATION in state affairs on the basis of citizenship rather than on the basis of mere nondescript population is an idea that is winning support from unexpected sources and in unlooked for volume, according to Mrs. Dora Stockman, member of the state board of agriculture.

"Now it is evident that people are so strongly for the idea of citizenship representation let us go a step further and more closely and painstakingly define what citizenship shall be," said Mrs. Stockman, Monday, when asked further concerning her ideas for meeting the re-apportionment issue.

Asks Educational Test

'Let us have representation in our legislative councils on the basis of citizenship, and let us see to it that the citizenship which is to be represented is an intelligent citizenship—to put the matter bluntly it is high time that we had an educational qualification for citizenship in this state.

"There is not only good reason for this view, but there is ample precedent. Nearly a third of the state now have educational qualifications and the tendency in that direction has been increasing in recent years. The increase has come in the south and the west. It may be objected that the limitation of suffrage in the south, through aneducational qualification, was not quite bonafide and done in a spirit of extreme partisanship, but that does not by any means discount the whole tendency. Massachusetts and Connecticut have long had educational requirements for voters and those laws have worked well. They were passed early in the '50's, before the Civil war, and experience has shown no reason to let down the bars. The educational qualifications worked so well for the states mentioned that Maine copied the law, and both Wyoming and Washington have fallen in line.

"Washington requires that a voter shall both speak and read the English language. This is a requirement which strikes pretty closely home to what many earnest-minded citizens are thinking these days. Another state with an intelligent electorate is California, Delaware and New Hampshire also require literacy. The southern states requiring an educational qualification are Alabama, Arizona, New Mexico, Georgia, Louisiana, Mississippi,, North Carolina, South Carolina, Virginia, and Oklahoma. Arizona and New Mexico are more western and are doubtless animated by progressive rather than racial feelings in the matter of restricting the privilege of voting.

"It seems to me that we are all pretty well agreed that democracy, if it means anything, means an intelligent participation in goverment. We are so firmly of this view as a people that we spend millions of dollars annually, in educating our young people. Why does the state spend so much on education?—Is this state expenditure a gift to the individual? Essentially it is not—the state makes these large educational appropriations to the end an intelligent citizenship. Since, then, we require so much of ourselves, why throw the point of our large expenditures to the wind, and discretion as well, and give the ballot to new comers almost without question?

"Extension of the right of suffrage has gone forward in the last century, particularly in the last part of it, in an unprecedented way. On the whole this has been right and wholesome so far as it has tended to bring intelligence to the affairs of the nation, in the widest way; but, since we have been so prodigal in this extension, is it not high time that we begin to trim the raw edges that have resulted from this wide inclusion of voters?

"In limiting the vote to those who can read and write or otherwise manifest a fair degree of intelligence, there cannot be any possible thought of building up an oligarchy of education, for the reason that, on every hand, we provide means of overcoming the handicap of illiteracy. Any new comer who cares enough about our government and our ways to learn to read and write surely will be welcome as a citizen, and, furthermore, the second generation of the illiterate ought certainly to be able to read and write if they are to be accounted desirable citizens.

"Democracy in America is coming to its real testing in the years that are immediately ahead—let us trust to real intelligence and not to mere numbers when we come to the difficulties."

State to Continue to Make Binder Twine

MANUFACTURE of binder twine is to continue at the Jackson penitentiary, reports to the contrary from Lansing being emphatically denied by officials of Michigan State Prison.

Charles A. Blaney, chairman of the Michigan State Prison Commission, and Warden Harry L. Hurlburt vigorously refute Lansing dispatches stating the manufacture of binder twine is to cease at the local penal institution. The denial, as issued by Chairman Blaney, of the prison commission, is as follows:

"We note by dispatches from Lansing in the state papers articles to the effect that Jackson prison is to discontinue the manufacture of binder twine.

"Speaking as chairman of the Michigan State Prison Commission I wish to say that the commission has never considered any such move, nor do they contemplate any such action. I can not understand where this rumor originated.

"The binder twine industry at Jackson has always been the big money maker of all the industries in our prison. The sale has always been profitable and freight rates have nothing whatever to do with our inability to meet competition in western markets, due to the fact this is equalized.

"Our sales for the year 1923 amounted to $1,506,615.22, showing a profit to the state of $151,307.59. All raw materials are purchased and on hand for the 1924 harvest and 12,000,000 pounds will be made.

"This is one of the industries that has been of great benefit to the farmers of the state, keeping down the price of binder twine to the consumer, for which they would pay a great deal more were it not for their own industry at Jackson. The farmers of this state have purchased nearly 6,000,000 pounds this year."

The Warden also declared that the state can manufacture the highest grade of twine and sell it at a much lower price to the farmer, but that it is necessary to turn it out in large quantities and dispose of the surplus in other states in order to do that. The Warden said:

"Our twine is up to the highest grade of any goods on the market—there is none better. To make profits, production must be had. It is not practical to run a binder twine plant of just sufficient size to fill Michigan's requirements. This is the reason we sell in other states. This is done by every prison that makes binder twine and our tonnage last year of fourteen millions enabled us to sell at a price that saved the farmers money. We not only sell to the jobber, but to the dealer and to the consumer.

"With our binder twine plant closed it would only cause other prisons to sell into our state and leave the field open for the big manufacturers to hold the price sky high and I am conscious in saying that this industry should be kept moving at all times. I also insist that the governor has never at any time ad-

Valuable Hints On Harvesting and Storing of Michigan's Seed Potato Crop

By H. C. MOORE

Extension Specialist, Michigan Agricultural College

BY adopting more careful methods of harvesting and storing the potato crop, Michigan growers can save thousands of dollars annually.

The keeping quality of potatoes and the appearance which they present when placed on the market is determined very largely by the care used in harvesting and storing them.

Potatoes should be dug when they are well matured so that the skin is not easily broken in handling. Immature potatoes are easily bruised and skinned. Such stock takes on a dark color which renders them undesirable on the market. Furthermore immature potatoes are apt to rot in storage and the shrinkage loss is heavy.

If possible the digging should be done on bright cool days and when the soil is comparatively dry. When harvested under those conditions the potatoes will maintain a brighter color and will keep better in storage than when dug in warm rainy weather.

One of the main criticisms on the markets against Michigan potatoes is that many lots show too high a percentage of mechanical injuries. Growers are urged to use more care in digging. When digging with a fork or potato hook, pains should be taken not to stab the potatoes. Fork prick injuries are serious since they not only spoil the market value of the potatoes but every fork pricked potato when placed in storage is apt to serve as a host for various molds and potato rotting organisms which spread through the bin and cause great losses. The use of the mechanical diggers is becoming more general throughout the state. When properly operated these machines dig the crop with a minimum amount of injury. The shovel point should be adjusted deep enough to avoid cutting the tubers. In very light dry soil it may be necessary to place the shovel point quite deep so that sufficient soil can be run over the elevator chain to prevent serious injury to the potatoes. In most cases three or four horses are required to draw a digging machine. It is very important that the machine be driven at a slow uniform pace. Fast driving will greatly increase the amount of injury to the potatoes.

After the potatoes have been dug leave them on the ground for an hour or so to dry and toughen their skins.

Storage

Potatoes should be stored in a dark, frost proof cellar that is well ventilated, and where a uniform temperature of 34 to 40 degrees F. can be maintained. Before placing potatoes in storage they should be carefully graded and all cut, fork punctured and ill-shaped stock should be discarded.

The mechanical graders of the continuous belt type are very effective in grading for size, but it will be necessary for the operator to throw out by hand all undesirable potatoes. The grader should be operated at a moderate speed so that effective sorting can be done and serious injury to the potatoes be prevented.

The potatoes should be dumped carefully on the grader and burlap sacks or other suitable material from the grader to the bin or container. The potato is a perishable product and should be handled as such.

Potatoes that have been exposed to frost should not be placed in permanent storage since they are likely to rot during the storage period.

Every year considerable loss is sustained by growers who store their potatoes early in the fall when the weather is warm. Much of the early stored stock is immature and when placed in large piles in poorly ventilated houses is very apt to heat and spoil.

During mild weather in the fall the windows and doors of the storage cellar should be left open nights so that the temperature of the storage celler can be lowered quickly. During the first few weeks of storage potatoes go through a sweating process giving out large amounts of moisture. This moisture with the heated air must be taken out of the storage by means of ventilators in the top of the storage. Do not place potatoes in large piles without providing adequate ventilation for the pile. Potatoes must have free access to air or they will develop black heart, button rot and other types of break down, and will be spoiled for eating and seed purposes.

When filling large bins with potatoes, place at intervals of 6 or 8 feet false partitions or ventilating frames that reach from the floor to the top of the bin. These frames can be made from 2-in. x 6-in. uprights with 1-in. x 4-in. strips nailed on either edge. A one inch space should be left between each strip.

Harvesting and storing are two factors that must be given more consideration by growers, warehousemen and others before the best results can be secured. Detailed information on these subjects can be procured from the Michigan Agricultural College, East Lansing, Mich.

How Many Stumps Are You Plowing Around?

One Man Walked 45 Miles in Nine Years Plowing Around a Stump. Another Blew Out a Stump At Cost of 75 Cents and Raised $1.50 Worth of Potatoes on Spot Same Year

By A. J. McADAMS

Land Clearing Division, Michigan Agricultural College

IN the farming community in which he lived and conducted his business, Banker Abbot occupied much the same place in that community as the good doctor who practiced there. Which means simply, that Banker Abbot made regular and frequent trips about the district ministering to the financial needs of the tillers and encouraging them to greater effort in the reduction of their "paper."

It was Farmer Bill Smith's turn on the routine lecture. So it was that Banker Abbot and Farmer Smith stood, leaning against a fence rail at the rear of the eighty, sizing up the season's crop and speculating on the possible financial return. They had just about figured out how Farmer Smith would easily clear the mortgage that year when, quite without warning, Banker Abbot said:

"Bill, I see you are troubled a lot with tramps out here," and he turned to Farmer Smith inquiringly.

"Tramps?"—Bill looked up surprised, shifted his chew, and remarked: "Why no, Mr. Abbot, we don't have no tramps around here to amount to much. 'Casionally they drift in, but I give 'em one look at the wood pile and they're gone again 'thout ez much as a word of thanks," and he chuckled heartily at his own joke.

Banker Abbot shook his head. "No Bill—not that kind." He pointed out across the field before them. "Bill, do you see those old white and Norway pine stumps out there on those plowed fields?"

Bill looked up. "Reckon so—been looking at 'em just thataway fer nigh onto ten years now."

"Correct you are," and Banker Abbot brought his fist down with a resounding whack on the fence rail, "and those are the 'tramps' I'm talking about. They're worse than the other kind, Bill. You don't think you're feeding them, because you can't see them eat, but you ARE—and if you would be honest with me you would lay out a good healthy bill of expense, directly chargeable to them."

"Lookee here, Mr. Abbot," and Farmer Bill took on a much abused air, "you're a sittin' down there in your office every day, and I'm out here a plowin' my fields fer the sowin.' Now I ain't a tryin' to tell you how to run your bank, 'n 'f I know it, you ain't a goin' to tell me how to run my farm. I'll pay them notes—I'll clear that mortgage—I'll —I'll—" and Bill suddenly ran out of things he'd do.

Banker Abbot expected it. He reached in his pocket for his pad and pencil—the same pad on which but a moment before they had figured how to lift the mortgage from Bill's farm—rested it on a fence post, and said: "Here, Bill, let me show you, on paper.

"First of all, you have, say, eight stumps on an acre—that's a fair average, isn't it?"

Farmer Smith allowed as how it was.

"Surely you realize that the ground occupied by these stumps represents in itself, a considerable crop area. That's just the first point, and THAT'S true—how about it, Bill?"

"Surely you realize that the ground occupied by these stumps represents, in itself, a considerable crop area. That's just the first point, and THAT'S true—how about it, Bill?"

Bill shifted uneasily; he couldn't deny it, so he rather reluctantly "guessed it was."

Abbot grabbed his chance, and went right on. "Now you not only lose the ground occupied by the stumps, but there is always a certain area around each stump that is lost because you can't get your plow close to that stump. Figure THAT up at the rate of eight stumps to the acre, and that amounts to something, doesn't it?"

Once more the argument was faultless, and Bill "um-m-med" his rather hesitant approval. Bill was human—and he didn't like his own case battered down so thoroughly—and quickly.

"Very well," Banker Abbot steamed ahead—"Year after year, that represents a considerable area, and a more considerable loss of crop. Bill, I know a farmer who had just one white pine stump on his farm. He left it there, year after year—until he finally got to figuring just what it was costing him. He doped it out that it not only meant a loss in crops of several hundred dollars over that period, but that, figuring in the breakage of material, loss of his own time, and the time of his team, that stump was a positive draw-back, and he blew it out.

"It cost that farmer seventy-five cents to blast that one stump. He planted that exact area in potatoes, and realized $1.50 on their sale that year. He made fifty percent on his investment for explosives. Not a bad percentage of profit, was it, Bill?"

Bill was clearly stumped—and interested to boot. Furthermore, there was a perceptable distance between his upper and lower lips, denoting surprise, and the expression didn't escape Banker Abbot's notice. He tightened his hold with another illustration:

"Why, Bill, I can take you to another farmer who has worked the same field for nine years. During that nine year period he has walked forty-five miles around one stump. Just ONE stump, Bill, and here you have a whole field of them. Think of that extra effort. Think of the extra time—and all of it unnecessary, and the money, Bill—it's precious time and energy you're losing here, and it all costs money."

Bill's eyes were popping just a bit —that forty-five-mile-walk had hit home.

"I'll wager," went on Banker Abbot, cinching his argument like a seasoned salesman, "that you have broken several sickle bars, rake teeth, cultivator shoes and plow points—to say nothing of harnesses and whiffle trees, just working around those stumps. How about the time involved in making those repairs? How about the money lost

Farming Emerging From Serious Depression and Is Very Much on Mend

By JOHN H. KRAFFT

IN this article, which is the first of a series of four, the writer discusses the changes that have taken place in agriculture the last few years and what is being done to help the farmer finance his business. This article will be followed with three others discussing the three distinct classes of financing agriculture: 1. Short Time Loans through the farmer's local banker, and the additional facilities offered through the Federal Reserve Bank; 2. Intermediate Credit Loans to finance the production and marketing of crops and live stock, either through local bank or cooperative marketing organization; 3. Long Time Loans for the purchase of land, through the banks operating under the Federal Farm Loan Act. The first one will appear in an early issue. Watch for it.

EVERY farmer, as well as every other business man, is always interested in the financing of his business. Unfortunately, there is not much thought given to the proper financing of agriculture during prosperous years as there should be, but invariably when business slackens and agriculture becomes less profitable, this matter is given a great deal of thought, and there is invariably a great deal said and written, and recommendations made for legislators, and often by men who are not thoroughly qualified, or by those who are not primarily interested in the welfare of the farmer and agriculture generally, but in their own individual welfare.

Often this is the case with legislators who are primarily interested in mobilizing votes by promising impossible things. Legislation of the right type is very important to any business. However, legislation in itself will never improve economic conditions, and further legislation which is agitated will not benefit farming one iota.

There already have been established, by Acts of Congress, instrumentalities or agencies for the extension of credit to the farming industry, which offer the American farmer better facilities and better credit than is true in any other country in the world. Some of these agencies are comparatively new and, due to the fact that they have not been put to the use they should have been owing to a lack of understanding of the farmers, and often the bankers, have not shown their real worth.

It is true that up until recent years the facilities available to the farmer, in financing his business, were many years behind facilities offered other types of business. This fact was thoroughly realized by our Government, with the result that this fact has been changed. This was not only brought about by the farmers' interest in this matter, but on account of the public's interest. The business of feeding the world undoubtedly was our first business, and at the present time is the biggest and most important business in the world. An adequate food supply is the first and greatest concern of every nation. Our Government is looking into the future with the idea of providing for, and insuring, the continued production of food in abundance, and to make the production of this food as profitable as is possible and consistent with economical conditions.

Farming, like all industries, has its periods of prosperity and depression. During the period of war, and the hectic time which followed immediately after the war, agriculture flourished. During the period of depression agriculture, in common with other industries, suffered severely.

Study History of Agriculture

Every farmer can profit very materially by studying the history of agriculture and the history of financing. Perhaps the farmer had need for additional credit facililties from the beginning of time, but in this, as in all matters of progress, the need had to be sharply felt before it could be defined and before a remedy could suggest itself. For twenty years American agriculture had been undergoing a basic change. The tremendous growth of the United States to its present position of wealth and power was due, to a great extent, to the economical and political policies which made possible and encouraged the rapid and continued extension and development of new agricultural areas.

When our country was opened to settlers there was a great area of very fertile land available, and this invited men of ambition and industry. These free lands meant to the settler, who had brought his tract under cultivation, an ample reward for his labor and hardship, by the fact that he owned the land. As these free lands disappeared a brief area of cheap lands followed, which with the rapid increase in population was soon followed by a rise in land values. With the free lands entirely gone and with no cheap lands left, excepting those which cannot be cultivated, and those that require the investment of large capital for drainage or irrigation, or large expenditure for fertilization, the Government found that the development of farming could no longer be left to chance, but called for both money and organizing genius.

As long as there was undeveloped frontier it was possible to grant free land to settlers. The farming frontier was rapidly pushed from the Atlantic Coast to the Allegheny Mountains, and through the Ohio into the great Northwestern territory, through Kentucky and Tennessee, across the Mississippi to the Rockies, over the Great Divide and across the Great American Desert to the Pacific Coast. The limit has been reached. The frontier has gone and there is no more free land. The greatest

What Our Readers Would Do With $100,000

THE Money Editor is completely swamped with letters from our readers telling what they would do with $100,000 if it was their own. Within a few days after our September 15th issue was off the press they started coming, a few at first but each day the number increased and today we received fifty letters. They come from all directions and from women, men and children, the ages being from eight to eighty. And what a fine lot of letters they are. It is a mighty big job to choose the best.

We did not realize before that there were so many ways to spend money. As one man said, "If I received a check for $100,000 in the mail I'd drop dead!" A school boy wrote that he would buy 25 sheep, while one woman, a cripple herself, would use all of the money to help others who suffered like she did.

The most interesting thing about the letters is the spirit of self-sacrifice. With only a few exceptions the writers thought of the comfort of others before their own. The greater number of letters come from farmwives and in most cases they write of improvements in the barn and new machinery to use in the fields before any mention of improvements in the house. Husband and children before self is the spirit that predominates. Another interesting fact is that without exception the writers would pay their debts and purchase a farm. In not one single letter does the writer declare a preference for the city. Nor have any a desire to stop work and live on the interest of the money. Let the petty politicians and large-mouthed calamity howlers continue to wail that the world is going to the dogs but as long as the present class of level-headed farmers continue to follow the plow we need not worry.

While there are letters that contain more suggestions on how to spend the money to good advantage, writers who would use the money for many different purposes, we have awarded first prize to Mrs. M. R., Freeland, Michigan. After you have read her letter we are sure that you will agree with us that she has earned it. We regret that shortage of space will not permit our printing all of the letters as all contain such good thoughts but it is impossible.

I AM a cripple, have been for 22 years past and I am also blind in one eye. I am now 29 years old and have suffered each day for 22 years and all because I did not get help soon enough after an accident. If I received $100,000 in a check by mail I would use every penny of it to help other cripples who suffer pain each day and haven't the means to get help. I am crippled in a way that there is pain both day and night. I am in hopes of another operation this winter which I hope and pray will end my suffering. I have no parents and so I am sorry for all motherless cripples more than for any one else. My mother died before I was a cripple and blind. I wish I could take all cripples' pain and bear it for them for I am used to it now but some days are bad ones. Please do not publish my name.—Mrs. M. R., Freeland, Michigan.

Would Make Farm Modern.—When the mail brings me $100,000, if when such a miracle ever happens, I am afraid for a few minutes I would think I were dreaming and I believe in my dreams is as near to the fortune as I will ever get. But if such a miracle should ever happen a modern farm with all the conveniences is what I would wish for. A good farm of 200 acres would keep the three boys and father busy. A registered herd of Holstein cattle would live on the ever green alfalfa. Prize winning sheep and hogs would also be in our possession. A tractor and two good teams would furnish power to work the fields. A truck would draw the produce to market. A touring car would be for pleasure. The house would be equipped with all labor-saving devices, such as running water, electric lights, gas engines for numerous uses, furnace and other things for comfort and convenience. I think after the farm home were put in running order there would be considerable of the $100,000 left, the children would have the privilege of a college course and the remainder would be banked for a rainy day. —Mrs. G. F., Middleville, Michigan.

Buy Fine Farm.—What I would do if I received a check for $100,000: As I am a young man of 25, I would buy me a farm of 60 or 70 acres of good soil and put up nice buildings and make it my home and work for myself. What money I had left I would give to the poor, that is, if they were working and trying to succeed. But I have no use for a person who thinks this world is made to play in and beg in, and not work in. There is many a person today that if they had left booze alone they would be a lot better off, and then there are others who are rich, and worse than the poor. Money will never make a man anything, it takes labor and brains to make a man or woman. For money has spoiled many a home, and of the young men and ladies going to cities and leaving the farm it is nothing only money that has put them there.—Mr. P. Z., Azalia, Mich.

Have Aunt's Sight Restored.—I want to tell you what I would do if I would receive $100,000 in the mail. First of all I would pay my debts as we are poor and have eight children, five boys and three girls, and beside my husband and myself we also have my aunt living with us who is 72 years old and has been blind for two years. Well, after I had my debts paid I would take my aunt to some hospital to see if her eyesight could be restored again. Then I would build a nice barn, and build our house larger as it is small for so large a family as ours. I also would give a good share of the money towards building a new church as our church is getting too small, and I would give some of the money towards building a poorhouse, and some of the money I would give to the orphans homes. Then if I had some money left I would send the rest across the ocean to the poor starving children over there.—Mrs. G. F., Herron, Mich.

Pay All Debts.—Should I receive a check for $100,000, first I would pay up all debts. Then I would buy forty acres of good land, build a good comfortable house but not too large as there is only my husband and myself, also build other necessary buildings. The rest of the money I would loan to young married people or anyone who were trying to get a home of their own, at four per cent interest. The interest I would also loan in the same way. In this way I could help a great many people and still have plenty myself.—Mrs. A. K., Kingsley, Michigan.

Buy a Home First.—What would I do with $100,000? I would buy me a home first. Not a grand one but just a cozy and comfortable one and then my little daughter and I would be together again. I could have the education I am trying so hard to earn. I could help my sister and her husband who live on a farm and have tried to overcome the many disappointments each season. And last, but not least I could help those in the city that need help so badly in the winter. Money given with kindness brings a glow to every heart that is in financial distress more than any other thing. Oh, there are just hundreds of good things I could do for everyone. Instead of just a quarter now and then, I could give the Salvation Army, who does so much good for the poor, a great deal more. The old blind man who sells papers could receive more than the mere three cents I hand him each night. In $100,000 is a fortune of good to the one who has it and those they could help.—Mrs. O. R. L., Lansing, Michigan.

Put Money in Federal Reserve Bank.—What I would do with $100,000. First, I would place it in four federal reserve banks, not putting my eggs all in one nest. Second, I would set aside one tenth for a good religious cause. Third, I take enough to clear my property of any encumbrance, and enough to tide me over for six months. Fourth, I would watch my opportunity to invest in government, state, county or city bonds with good legal advice. Fifth, I would live within my income. I would raise and introduce certified seeds, and pure bred stock, for the good of my community lending a helping hand financially, wherever deserving.—B. H. T., Bellevue, Mich.

Establish State Park.—What I would do with $100,000. Well! Well! If some one would leave me $100,000 what would I do with it? Well, there a great many ways in which one could use money, but a few days ago I saw something that struck me more forcibly than anything else, and I think if someone were to leave $100,000 on my doorstep this is what I would do with it: I would go up in S. E. Manistee County and buy up three or four sections of land. It is covered with beautiful second growth timber, and has a creek running thru it. I would clean up the brush and rubbish, trim the trees, supply the stream with fish, build bird houses, and transplant wild flowers of all kinds in the shady nooks. Deer and other wild animals should have free range in this big, wonderful free-for-all playground, or park. Then I would put some of the money into roads, so there would be good roads to it from every direction. What money I had left I would put out at interest, the income to be used, each year, during the best part of the summer months to bring children from the large cities all over the country, to enjoy the beauties of nature with me.—H. L., Tustin, Mich.

Home for Boys.—We have a 160-acre farm, mostly unimproved—good fruit land—on which if I had $100,000 I would establish a home for boys that leave the farm, lured by a mind picture of wealth and pleasure of the city, that find themselves in the city broke and out of work, with an unpaid board bill. I would rescue them before the "first offense." In our humble way we have "rescued" six. If I had $100,000 I would make this and kindred work, my work, the remainder of my time on earth.—An M. B. F. Booster.—J. L. C., Shelby, Michigan.

Devote Life to Homeless Children.—My life's interest has always been children. Therefore, if I should come into possession of $100,000 I should first buy a large comfortable home, with an orchard, fields, a place to raise cattle and chickens, plenty of lawn, ground for vegetable and flower gardens, near either village or city where there are good schools and churches. Next I would take unfortunate children, those who have no home, father nor mother and raise as I would my own. While I would need a kitchen, laundry and other help, I would be the one to care for the children, teach them their prayers and tuck them in bed. The older ones I would teach to work, to play, how to make the vegetables and flowers grow, how to earn, spend and save money and do my best so they would be useful citizens of our own United States. I would give to the church, Red Cross, and other organizations beneficial to mankind, but my main interest would be for children as I feel it my calling, as the minister is to the ministry, the banker to the bank. It may not give me dividends in dollars and cents but what bigger, nobler investment can anyone make than children and what would the harvest be?—H. M. M., Oakley, Michigan.

Solicit Subscriptions to M. B. F.—Referring to your offer in The Michigan Business Farmer of September 15th, 1923, concerning the subject, "What would you do if you received a check for $100,000 in the mail?" First, I would buy a Ford runabout, secure three counties of the Thumb and work for The Business Farmer, as I would like to see every farmer of the state take this paper as it is one of the best in the country. Second, I would get me a little home and a little business of some kind, then I would take treatments for my hip and leg. I have had neuritis and sciatica rheumatism since the 21st of last month. I am up and around walking with a cane, as the doctor thought I was going to lose the use of them. As the flesh had practically gone from the bone. It will take time and care to rebuild and may never be as before.—P. L. M., Saginaw, Michigan.

Money for Repairing Roads.—I will tell you what I would do with $100,000. First I would make the home comfortable and would have a car or horse to go to the city with. I also would give some of the money to our county to repair roads in places where they need it. I would also get a good education to become a teacher in a country school or a city school. I would also sow the lawn to lawn seed and keep it wet all the time. I would have electric lights installed in the home and would also have an electric light plant installed so that other people could get light from that plant. I would have the pier built up again on Carp Lake and also have little minnows and small sized fish put in the lake for the good of the resorters and the people who go fishing at the lake. I would also have the farm all plowed up and seeded with sweet clover or alfalfa. I would also have the school yard plowed and plant flowers in it.—Miss E. H., Traverse City, Michigan.

Return Favors.—Should I receive a check for $100,000 I feel sure I would hunt up every person in the world who had ever shown me a favor or a kindness, when in need, and reward them. I would educate my two children, and instead of using my money to gain notoriety I should give that part to those in need, and to those who nad never experienced the joy of being on "easy street."—Mrs. Mac., Detroit, Mich.

Buy Farm for Each Child.—If I was to have $100,000 I'd first pay my debts, and as we have eleven children and one farm I would buy ten more good 80-acre farms with stock and tools. Give one to each of my children, subject to this condition, that they pay the wife and I $200 a year as long as we live and they were not to dispose of these farms.—J. H. C., Fenwick, Michigan.

Buy Poultry Farm.—I am sure that I should be so shocked I scarcely know just what I would do, if I should receive $100,000, but I believe that I should invest in a nice little poultry farm, as I like running incubators and hatching the fine fluffy little chicks. I should want real "full-bloods" of different breeds. I believe there is real money in raising poultry from what experience I have already had, although I have only gone into the business on a small scale, as compared to a real poultry farm. Of course I should not use all of this amount to start a poultry farm. I should be very careful in my plans and what was really not necessary to use in my poultry business, should be invested in a good reliable bank for future use.—Mrs. F. V., Woodland, Michigan.

One Tenth to Starving Children.—Only two hundred and fifty words to tell all I would do with $100,000. Well, all right but I'll have to crowd. First, a tenth to the starving children in foreign lands. Second, enough to make my mother, who is a widow, comfortable for the rest of her life. Also the same for father-in-law and mother-in-law who are old and alone. Now for the rest, I will have to tell you a little of our history first so you can see how welcome such a gift would be. Two years ago we bought a piece of uncleared land six miles east of Onaway. I would use enough of this gift to put this farm in first class shape. I'd provide music, flowers and books for my family of children; we have six. I'd give them all a good education and thus put them in a position to be self-supporting. And if that $100,000 were only like the widow's cruet of oil I'd give every child in the country a musical education, for a musical people are a happy people. Happiness is contentment and contentment peace. O, for a thousand words to tell of all the things I'd do, but since you have allowed us only two hundred and fifty I will close with many good wishes to you.—L. B. C., Onaway, Mich.

Give At Christmas Time.—I am a reader of your paper, and always look forward to its coming, and enjoy every page of it from cover to cover, especially the editorials and the questions and answers which are given. Have just read the story "Oh, Money! Money!" and would like to express my thoughts as to what I would do if I had $100,000. My first, would be to help the needy poor. Especially children and old people that haven't anyone to care for them. My one wish thru my life has been that at Christmas time I might be able to have money enough to make someone happy that would not be remembered. Spending money for clothes would be my last thought. Would like to have enough money and when asked to donate for any worthy cause would be able to do so. As for spending money on myself would first build a modern home (which I have always wanted and never been able to have.) That and spending money to make someone else happy is what I would do with $100,000.—Mrs. R. S., Onsted, Mich.

Have Sister Cured of Asthma.—I saw your offer in the M. B. F. and thought I would try for the prize. I am eleven years of age and am in the seventh grade at school. If I had $100,000 I would pay off all our debts and get the things we all need ourselves. My little sister who has the asthma very badly every year needs a different climate. I would have

(Continued on page 19.)

Now that you have read about what our readers would do with $100,000 you will be more interested in our new serial, "Oh, Money! Money!" The second installment and a synopsis of the first appear on the opposite page. How Frank Blaisdell, the grocer, and family spend their $100,000, how James Blaisdell and his family use their $100,000, what Miss Flora Blaisdell does with her share, all goes to make a most interesting story.

Oh Money! Money!

by ELEANOR H. PORTER

Copyright by Houghton Mifflin Company

THE STORY TO DATE

MR. STANLEY G. FULTON, 50-year old bachelor and possessor of twenty million dollars, calls on his lawyer and they discuss the disposition of this large fortune after its owner's death. The lawyer is in favor of giving the money to colleges or charities while Fulton is opposed to these ideas. He remembers that he has some distant cousins and decides to leave the money to one of them, but first he determines to learn which one will use it to the best advantage. To find out who is the worthy one he, through his lawyer, gives each cousin $100,000 to use as they will. He then grows a beard and, under the name of Mr. John Smith, goes to the town where these cousins reside to observe how they spend the $100,000. This is what the first installment covered. The more you read of the story the more interested you will be so you better start with this issue so you will not regret later that you missed the first part.

(Continued from September 29th issue)

"QUITE right Flora. The East Side is different from the West Side, and no mistake. And what will do there won't do here at all, of course."

"How about father's shirt-sleeves?" It was a scornful gibe from Bessie in the hammock. "I don't notice any of the rest of the men around here sitting out like that."

"Bessie!" chided her mother wearily. "You know very well I'm not to blame for what your father wears. I've tried hard enough, I'm sure!"

"Well, well, Hattie," sighed the man, with a gesture of abandonment. "I supposed I still had the rights of a free-born American citizen in my own home; but it seems I haven't." Resignedly he got to his feet and went into the house. When he returned a moment later he was wearing his coat.

Benny, perched precariously on the veranda railing, gave a sudden indignant snort. Benny was eight, the youngest of the family.

"Well, I don't like it here, anyhow," he chafed. "I'd rather go back an' live where we did. A feller can have some fun there. It hasn't been anything but 'Here, Benny, you mustn't do that over here, you mustn't do that over here!' ever since we came. I'm going home an' live with Aunt Flora. Say, can't I, Aunt Flo?"

"Bless the child! Of course you can," beamed his aunt. "But you won't want to, I'm sure. Why, Benny, I think it's perfectly lovely here."

"Pa don't."

"Indeed I do, Benny," corrected his father hastily. "It's very nice here, of course. But I don't think we can afford it. We had to squeeze every penny before, and how we're going to meet this rent I don't know." He drew a profound sigh.

"You'll earn it, just being here—more business," asserted his wife firmly. "Anyhow, we've just got to be here, Jim! We owe it to ourselves and our family. Look at Fred to-night!"

"Oh, yes, where is Fred?" queried Miss Flora.

"He's over to Gussie Pennock's, playing tennis," interposed Bessie, with a pout. "The mean old thing wouldn't ask me!"

"But you ain't old enough, my dear," soothed her aunt. "Wait; your turn will come by and by."

"Yes, that's exactly it," triumphed the mother. "Her turn will come—if we live here. Do you suppose Fred would have got an invitation to Gussie Pennock's if we'd still been living on the East Side? Not much he would! Why, Mr. Pennock's worth fifty thousand, if he's worth a dollar! They are some of our very first people."

"But, Hattie, money isn't everything, dear," remonstrated her husband gently. "We had friends, and good friends, before."

"Yes; but you wait and see what kind of friends we have now!"

"But we can't keep up with such people, dear, on our income; and—"

"Ma, here's a man. I guess he wants—somebody." It was a husky whisper from Benny.

James Blaisdell stopped abruptly. Bessie Blaisdell and the little dressmaker cocked their heads interestedly. Mrs. Blaisdell rose to her feet and advanced towards the steps to meet the man coming up the walk.

He was a tall, rather slender man, with a close cropped, sandy beard, and an air of diffidence and apology. As he took off his hat and came nearer, it was seen that his eyes were blue and friendly, and that his hair was reddish-brown, and rather scanty on top of his head.

"I am looking for Mr. Blaisdell—Mr. James Blaisdell," he murmured hesitatingly.

Something in the stranger's deferential manner sent a warm glow of importance to the woman's heart. Mrs. Blaisdell was suddenly reminded that she was Mrs. James D. Blaisdell of the West Side.

"I am Mrs. Blaisdell," she replied a bit pompously. "What can we do for you, my good man?" She swelled again, half unconsciously. She had never called a person "my good man" before. She rather liked the experience.

The man on the steps coughed slightly behind his hand—a sudden spasmodic little cough. Then very gravely he reached into his pocket and produced a letter.

"From Mr. Robert Chalmers—a note to your husband," he bowed presenting the letter.

A look of gratified surprise came into the woman's face.

"Mr. Robert Chalmers, of the First National? Jim!" She turned to her husband joyously. "Here's a note from Mr. Chalmers. Quick—read it!"

Her husband, already on his feet, whisked the sheet of paper from the unsealed envelope, and adjusted his glasses. A moment later he held out a cordial hand to the stranger.

"Ah, Mr. Smith, I'm glad to see you. I'm glad to see any friend of Bob Chalmers'. Come up and sit down. My wife and children, and my sister, Miss Blaisdell. Mr. Smith, ladies—Mr. John Smith." (Glancing at the open note in his hand.) "He is sent to us by Mr. Chalmers, of the First National."

"Yes, thank you. Mr. Chalmers was so kind." Still with that deference so delightfully heart-warming, the newcomer bowed low to the ladies, and made his way to the offered chair. "I will explain my business," he said then. "I am a genealogist."

"'What's that?" It was an eager question from Benny on the veranda railing. "Pa isn't anything, but ma's a Congregationalist."

"Hush, child!" protested a duet of feminine voices softly; but the stranger, apparently ignoring the interruption, continued speaking.

"I am gathering material for a book on the Blaisdell family."

"The Blaisdell family!" repeated Mr. James Blaisdell, with cordial interest.

"Yes," bowed the other. "It is my purpose to remain some time in your town. I am told there are valuable records here, and an old burying-ground of particular interest in this connection. The neighboring towns, too, have much Blaisdell data, I understand. As I said, I am intending to make this place my headquarters, and I am looking for an attractive boarding-place. Mr. Chalmers was good enough to refer me to you."

"To us—for a boarding-place!" There was an unmistakable frown on Mrs. James D. Blaisdell's countenance as she said the words. "Well, I'm sure I don't see why he should. We don't keep boarders!"

"But, Hattie, we could," interposed her husband eagerly. "There's that big front room that we don't need a bit. And it would help a lot if—" At the wrathful warning in his wife's eyes he fell back silenced.

"I said that we didn't keep boarders," reiterated the lady distinctly. "Furthermore, we do need the room ourselves."

"Yes, yes, of course; I understand," broke in Mr. Smith, as if in hasty conciliation. "I think Mr. Chalmers meant that perhaps one of you"—glanced uncertainly at the anxious-eyed little woman at his left—"might—er—accommodate me. Perhaps you, now—" He turned his eyes fell upon Miss Flora Blaisdell, and waited.

As a reader of "Oh, Money! Money!" you will be interested in the letters published on the opposite page. In these letters several readers of The Business Farmer tell what they would do with $100,000 if they were to suddenly fall heir to it. I suppose that you would spend it differently than the Blaisdell family of this story or any of the readers whose letters appear opposite this page.

The little dressmaker blushed painfully.

"Me? Oh, mercy, no! Why, I live all alone—that is, I mean, I couldn't, you know," she stammered confusedly. "I dressmake, and I don't get any sort of meals—not fit for a man, I mean. Just women's things—tea, toast, and riz biscuit. I'm so fond of riz biscuit! But, of course, you—" She came to an expressive pause.

"Oh, I could stand the biscuit, so long as they're not health biscuit," laughed Mr. Smith genially. "You see, I've been living on those and hot water quite long enough—as it is."

"Oh, ain't your health good, sir?" The little dressmaker's face wore the deepest concern.

"Well, it's better than it was, thank you. I think I can promise to be a good boarder, all right."

"Why don't you go to a hotel?" Mrs. James D. Blaisdell still spoke with a slightly injured air.

Mr. Smith lifted a deprecatory hand.

"Oh, indeed, that would not do at all—for my purpose," he murmured. "I wish to be very quiet. I fear I should find it quite disturbing—the noise and confusion of a public place like that. Besides, for my work, it seemed eminently fitting, as well as remarkably convenient, if I could make my home with one of the Blaisdell family."

With a sudden exclamation the little dressmaker sat erect.

"Say, Harriet, how funny we never thought! He's just the one for poor Maggie! Why not send him there?"

"Poor Maggie?" It was the mild voice of Mr. Smith.

"Our sister—yes. She lives—"

"Your sister!" Into Mr. Smith's face had come a look of startled surprise—a look almost of terror. "But there weren't but three—that is, I thought—I understood from Mr. Chalmers that there were but three Baisdells, two brothers, and one sister—you, yourself."

"Oh, poor Maggie ain't a Blaisdell," explained the little dressmaker, with a smile. "She's just Maggie Duff, father Duff's daughter by his first wife, you know. He married our mother years ago, when we children were little, so we were brought up with Maggie, and always called her sister; though, of course, she really ain't any relation to us at all."

"Oh, I see. Yes, to be sure. Of course!" Mr. Smith seemed oddly thoughtful. He appeared to be settling something in his mind. "She isn't a Blaisdell, then."

"No, but she's so near like one and she's a splendid cook, and—"

"Well, I shan't send him to Maggie," cut in Mrs. James D. Blaisdell with emphasis. "Poor Maggie's got quite enough on her hands, as it is, with that father of hers. Besides, she isn't a Blaisdell at all."

"And she couldn't come and cook and take care of us near so much, either, could she," plunged in Benny, "if she took this man ter feed?"

"That will do, Benny," admonished his mother, with nettled dignity. "You forget that children should be seen and not heard."

"Yes'm. But, please, can't I be heard just a minute for this? Why don't ye send the man ter Uncle Frank an' Aunt Jane? Maybe they'd take him."

"The very thing!" cried Miss Flora Blaisdell. "I wouldn't wonder a mite if they did."

"Yes, I was thinking of them," nodded her sister-in-law. "And they're always glad of a little help,—especially Jane."

"Anybody should be," observed Mr. James Blaisdell quietly.

Only the heightened color in his wife's cheeks showed that she had heard—and understood.

"Here, Benny," she directed, "go and show the gentleman where Uncle Frank lives."

"Alright!" With a spring the boy leaped to the lawn and pranced to the sidewalk, dancing there on his toes. "I'll show ye, Mr. Smith."

The gentleman addressed rose to his feet.

"I thank you, Mr. Blaisdell," he said, "and you, ladies. I shall hope to see you again soon. I am sure you can help me, if you will, in my work. I shall want to ask—some questions."

"Certainly, sir, certainly! We shall be glad to see you," promised his host. "Come any time, and ask all the questions you want to."

"And we shall be so interested," fluttered Miss Flora. "I've always wanted to know about father's folks. And are you a Blaisdell, too?"

There was the briefest of pauses. Mr. Smith coughed again twice behind his hand.

"Er—ah—oh, yes, I may say that I am. Through my mother I am descended from the original immigrant, Ebenezer Blaisdell."

"Immigrant!" exclaimed Miss Flora.

"An immigrant!" Mrs. James Blaisdell spoke the word as if her tongue were a pair of tongs that had picked up a noxious viper.

"Yes, but not exactly as we commonly regard the term nowadays," smiled Mr. Smith. "Mr. Ebenezer Blaisdell was a man of means and distinction. He was the founder of the family in this country. He came over in 1647."

"My, how interesting!" murmured the little dressmaker, as the visitor descended the steps.

"Good-night—good-night! And thank you again," bowed Mr. John Smith to the assembled group on the veranda. "And now, young man, I'm at your service," he smiled, as he joined Benny, still prancing on the sidewalk.

"Now he's what I call a real nice pleasant-spoken gentleman," avowed Miss Flora, when she thought speech was safe. "I do hope Jane'll take him."

"Oh, yes, he's well enough," condescended Mrs. Hattie Blaisdell, with a yawn.

"Hattie, why wouldn't you take him in?" reproached her husband. "Just think how the pay would help! And it wouldn't be a bit of work, hardly, for you. Certainly it would be a lot easier than the way we are doing."

The woman frowned impatiently.

"Jim, don't please! Do you suppose I got over here on the West Side to open a boarding house? I guess not—yet!"

"But what shall we do?"

"Oh, we'll get along somehow. Don't worry!"

"Perhaps if you'd worry a little more, I wouldn't worry so much," sighed the man deeply.

"Well, mercy me, I must be going," interposed the little dressmaker, springing to her feet with a nervous glance at her brother and his wife. "I'm forgetting it ain't so near as it used to be. Good-night!"

"Good-night, good-night! Come again," called the three on the veranda. Then the door closed behind them, as they entered the house.

Meanwhile, walking across the common, Benny was entertaining Mr. Smith.

"Yep, they'll take ye, I bet ye—Aunt Jane an' Uncle Frank will?"

"Well, that's good, I'm sure."

"Yep. An' it'll be easy too. Why, Aunt Jane'll just tumble over herself ter get ye, if ye just mention first what you'll pay. She'll begin ter reckon up right away then what she'll save. An' in a minute she'll say, 'Yes, I'll take ye.' "

The uncertainty in Mr. Smith's voice was palpable even to eight-year-old Benny.

"Oh, you don't need ter worry," he hastened to explain: "She won't starve ye; only she won't let ye waste anythin'. You'll have ter eat all the crusts to yer pie, and finish 'taters before you can get any puddin', an' all that, ye know. Ye see, she's great on savin'—Aunt Jane is. She says waste is a sinful extravagance before the Lord."

"Indeed!" Mr. Smith laughed outright this time. "But are you sure, my boy, that you ought to talk—just like this, about your aunt?"

Benny's eyes widened.

"Why, that's all right, Mr. Smith. Ev'rybody in town knows Aunt Jane. Why, Ma says folks say she'd save terday for ter-morrer, if she could. But she couldn't do that, could she? So that's just silly talk. But you wait till you see Aunt Jane."

"All right. I'll wait, Benny."

"Well, ye won't have ter wait long, Mr. Smith, 'cause here's her house. She lives over the groc'ry store, ter save rent, ye know. It's Uncle Frank's store. An' here we are," he finished, banging open a door and leading the way up a flight of ill-lighted stairs.

CHAPTER III

The Small Boy at the Keyhole

At the top of the stairs Benny tried to open the door, but as it did not give at his pressure, he knocked lustily, and called "Aunt Jane, Aunt Jane!"

"Isn't this the bell?" hazarded Mr. Smith, his finger almost on a small push-button near him.

"Yep, but it don't go now. Uncle Frank wanted it fixed, but Aunt Jane said no; knockin' was just as good, an' 't was lots cheaper, 'cause 't would save mendin', and didn't use any 'lectricity. But Uncle Frank says—"

The door opened abruptly, and Benny interrupted himself to give eager greeting.

"Hullo, Aunt Jane! I've brought you somebody. He's Mr. Smith. An' you'll be glad. You see if yer ain't!"

In the dim hallway Mr. Smith saw a tall, angular woman with graying dark hair and high cheek bones. Her eyes were keen and just now somewhat sternly inquiring, as they were bent upon himself.

Perceiving that Benny considered his mission as master of ceremonies at an end, Mr. Smith hastened to explain.

"I came from your husband's brother, madam. He—er—sent me. He thought perhaps you had a room that I could have."

"A room?" Her eyes grew still more coldly disapproving.

"Yes, and board. He thought—that is, they thought that perhaps—you would be so kind."

"Oh, a boarder! You mean for pay, of course?"

"Most certainly!"

"Oh!" She softened visibly, and stepped back. "Well, I don't know. I never have—but that isn't saying I couldn't, of course. Come in. We can talk it over. That doesn't cost anything. Come in; this way, please." As she finished speaking she stepped to the low-burning gas jet and turned it carefully to give a little more light down the narrow hallway.

(Continued on page 23.)

The Theory and the Hound

A Complete Short Story by O. HENRY America's Greatest Short Story Writer

Copyrighted, 1920, by Doubleday, Page & Co.; published by special arrangement with the Wheeler Syndicate, Inc.

NOT many days ago my old friend from the tropics, J. P. Bridger, United States consul on the island of Ratona, was in the city. We had wassail and jubilee and saw the Flatiron building, and missed seeing the Bronxless menagerie by about a couple of nights. And then, at the ebb tide, we were walking up a street that parallels and parodies Broadway.

A woman with a comely and mundane countenance passed us, holding in leash a wheezing, vicious, waddling, brute of a yellow pug. The dog entangled himself with Bridger's legs and mumbled his ankles in a snarling, peevish, sulky bite. Bridger, with a happy smile, kicked the breath out of the brute; the woman showered us with a quick rain of well-conceived adjectives that left us in no doubt as to our place in her opinion, and we passed on. Ten yards farther an old woman with disordered white hair and her bankbook tucked well hidden beneath her tattered shawl begged. Bridger stopped and disinterred for her a quarter from his holiday waistcoat.

On the next corner a quarter of a ton of well-clothed man with a rice-powdered, fat, white jowl, stood holding the chain of a devil-born bulldog whose forelegs were strangers by the length of a dachshund. A little woman in a last-season's hat confronted him and wept, which was plainly all she could do, while he cursed her in low, sweet, practiced tones.

Bridger smiled again—strictly to himself—and this time he took out a little memorandum book and made note of it. This he had no right to do without due explanation, and I said so.

"It's a new theory," said Bridger, that I picked up down in Ratona. I've been gathering support for it as I knock about. The world isn't ripe for it yet, but—well I'll tell you; and then you run your mind back along the people you've known and see what you make f it."

And so I cornered Bridger in a place where they have artificial palms and wine; and he told me the story which is here in my words and on his responsibility.

One afternoon at three o'clock, on the island of Ratona, a boy raced along the beach screaming, "Pajaro ahoy!"

Thus he made known the keeness of his hearing and the justice of his discrimination in pitch.

He who first heard and made oral proclamation concerning the toot of an approaching steamer's whistle, and correctly named the steamer, was a small hero in Ratona—until the next steamer came. Wherefore, there was rivalry among the barefoot youth of Ratona, and many fell the victims to the softly blown conch shells of sloops which, as they enter the harbor, sound surprisingly like a distant steamer's signal. And some could name you the vessel when its call, in your duller ears, sounded no louder than the sigh of the wind through the branches of the cocoanut palms.

But today he who proclaimed the Pajaro gained his honors. Ratona bent its ear to listen; and soon the deep-tongued blast grew louder and nearer, and at length Ratona saw above the line of palms on the low "point" the two black funnels of the fruiter slowly creeping toward the mouth of the harbor.

You must know that Ratona is an island twenty miles off the south of a South American republic. It is a port of that republic; and it sleeps sweetly in a smiling sea, toiling not nor spinning; fed by the abundant tropics where all things "ripen, cease and fall toward the grave."

Eight hundred people dream life away in a green-embowered village that follows the horseshoe curve of its bijou harbor. They are mostly Spanish and Indian mestizos, with a shading of San Domingo Negroes, a lightening of pure-blood Spanish officials and a slight leavening of the froth of three or four pioneering white races. No steamers touch at Rotano save the fruit steamers which take on their banana inspectors there on their way to the coast. They leave Sunday newspapers, ice, quinine, bacon, watermelons and vaccine matter at the island and that is about all the touch Ratona gets with the world.

The Pajaro paused at the mouth of the harbor, rolling heavily in the swell that sent the whitecaps racing beyond the smooth water inside. Already two dories from the village—one conveying fruit inspectors, the other going for what it could get—were halfway out to the steamer.

The inspectors' dory was taken on board with them, and the Pajaro steamed away for the mainland for its load of fruit

The other boat returned to Ratona bearing a contribution from the Pajaro's store of ice, the usual roll of newspapers and one passenger—Taylor Plunkett, sheriff of Chatham County, Kentucky.

Bridger, the United States consul at Ratona, was cleaning his rifle in the official shanty under a breadfruit tree twenty yards from the water of the harbor. The consul occupied a place somewhat near the tail of his political party's procession. The music of the band wagon sounded very faintly to him in the distance. The plums of office went to others. Bridger's share of the spoils—the consulship at Ratona—was little more than a prune from the boarding-house department of the public crib. But $900 yearly was opulence in Ratona. Besides, Bridger had contracted a passion for shooting alligators in the lagoons near his consulate, and he was not unhappy.

He looked up from a careful inspection of his rifle lock and saw a broad man filling his doorway. A broad, noiseless, slow-moving man, sunburned almost to the brown of Vandyke. A man of forty-five, neatly clothed in homespun, with scanty light hair, a close-clipped brown-and-gray beard and simplicity.

"You are Bridger, the consul," said the broad man. "They directed me here. Can you tell me what those big bunches of things like gourds are in those trees that look like feather dusters along the edge of the water?"

"Take that chair," said the consul, reoiling his cleaning rag. "No, the other one—that bamboo thing won't hold you. Why, they're cocoanuts--green cocoanuts. The shell of 'em is always a light green before they're ripe."

"Much obliged," said the other man, sitting down carefully. "I don't quite like to tell the folks at home they were olives unless I was sure about it. My name is Plunkett. I'm sheriff of Chatham County, Kentucky. I've got extradition papers in my pocket authorizing the arrest of a man on this island. They've been signed by the President of this county, and they're in correct shape. The man's name is Wade Williams. He's in the cocoanut raising business. What he's wanted for is the murder of his wife two years ago. Where can I find him?"

The consul squinted an eye and looked through his rifle barrel.

"There's nobody on the island who calls himself 'Williams,'" he remarked.

"Didn't suppose there was," said Plunkett mildly. "He'll do by any other name."

"Besides myself," said Bridger, "there are only two Americans on Ratona—Bob Reeves and Henry Morgan."

"The man I want sells cocoanuts,' suggested Plunkett.

'You see that cocoanut walk extending up to the point?" said the consul, waving his hand toward the open door. 'That belongs to Bob Reeves. Henry Morgan owns half the trees to loo-ard on the island."

"One month ago," said the sheriff, "Wade Williams wrote a confidential letter to a man in Chatham county, telling him where he was and how he was getting along. The letter was lost; and the person that found it gave it away. They sent me after him, and I've got the papers. I reckon he's one of your cocoanut men for certain."

"You've got his picture, of course," said Bridger. "It might be Reeves or Morgan, but I'd hate to think it. They're both as fine fellows as you'd meet in any all-day auto ride."

"No," doubtfully answered Plunkett; "there wasn't any picture of Williams to be had. And I never saw him myself. I've been sheriff only a year. But I've got a pretty accurate description of him. About 5 feet 11; dark hair and eyes; nose inclined to be Roman; heavy about the shoulders, strong, white teeth, with none missing; laughs a good deal, talkative; drinks considerably but never to intoxication; looks you square in the eye when talking; age thirty-five. Which one of your men does that description fit?"

The consul groaned broadly.

"I'll tell you what you do," he said, laying down his rifle and slipping on his dingy black alpaca coat. "You come along, Mr. Plunkett, and I'll take you up to see the boys. If you can tell which one of 'em your description fits better than it does the other you have the advantage of me."

Bridger conducted the sheriff out and along the hard beach close to which the tiny houses of the village were distributed. Immediately back of the town rose sudden, small, thickly wooded hills. Up one of these, by means of steps cut in the hard clay, the consul led Plunkett. On perched a two-room wooden cottage with a thatched roof. A Carib woman was washing clothes outside. The consul ushered the sheriff to the door of the room that overlooked the harbor.

Two men were in the room, about to sit down, in their shirt sleeves, to a table spread for dinner. They bore little resemblance one to the other in detail; but the general description given by Plunkett could have been justly applied to either. In height, color of hair, shape of nose, build and manners each of them tallied with it. They were fair types of jovial, ready-witted, broad-gauged Americans who had gravitated together for companionship in an alien land.

"Hello, Bridger!" they called in unison at sight of the consul. "Come and have dinner with us!" And then they noticed Plunkett at his heels, and came forward with hospitable curiosity.

"Gentlemen," said the consul, his voice taking on unaccustomed formality, "this is Mr. Plunkett—Mr. Reeves and Mr. Morgan."

The cocoanut barons greeted the newcomer joyously. Reeves seemed about an inch taller than Morgan, but his laugh was not quite as loud. Morgan's eyes were deep brown; Reeves's were black. Reeves was the host and busied himself with fetching other chairs and calling to the Carib woman for supplemental table ware. It was explained that Morgan lived in a bamboo shack to "loo'ard," but that every day or two friends dined together. Plunkett stood still during the preparations, looking about mildly with his pale-blue eyes. Bridger looked apologetic and uneasy.

At length two other covers were laid and the company was assigned to places. Reeves and Morgan stood side by side across the table from the visitors. Reeves nodded genially as a signal for all to seat themselves. And then suddenly Plunkett raised his hand with a gesture of authority. He was looking straight between Reeves and Morgan.

"Wade Williams," he said quietly, "you are under arrest for murder."

Reeves and Morgan instantly exchanged a quick, bright glance, the quality of which was interrogation, with a seasoning of surprise. Then, simultaneously they turned to the speaker with a puzzled and frank deprecation in their gaze.

"Can't say that we understand you, Mr. Plunkett," said Morgan, cheerfully. "Did you say Williams'?"

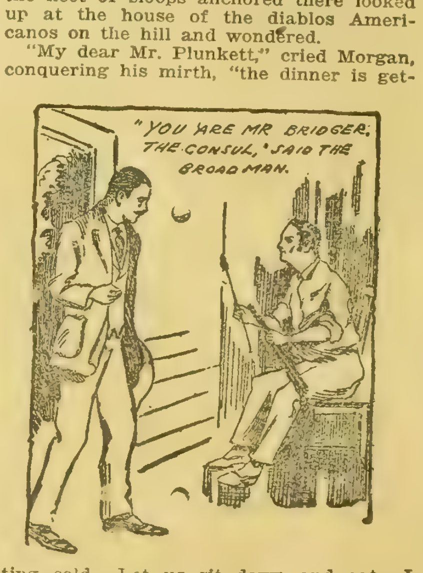
"What's the joke, Bridgy?" asked Reeves, turning to the consul with a smile.

Before Bridger could answer Plunkett spoke again.

"I'll explain," he said, quietly. "One of you don't need any explanation, but this is for the other one. One of you is Wade Williams of Chatham County, Kentucky. You murdered your wife on May 5, two years ago, after ill-treating and abusing her continually for five years. I have the papers in my pocket for taking you back with me, and you are going. We will return on the fruit steamer that comes back by this island tomorrow to leave its inspectors. I acknowledge, gentlemen, that 'Im not quite sure which one of you is Williams. But Wade Williams goes back to Chatham County tomorrow. I want you to understand that."

A great sound of merry laughter from Morgan and Reeves went out over the still harbor. Two or three fishermen in the fleet of sloops anchored there looked up at the house of the diablos Americanos on the hill and wondered.

"My dear Mr. Plunkett," cried Morgan, conquering his mirth, "the dinner is getting cold. Let us sit down and eat. I am anxious to get my spoon into that sharkfin soup. Business afterward."



"YOU ARE MR BRIDGER; THE CONSUL," SAID THE BROAD MAN.

"Sit down, gentlemen, if you please," added Reeves, pleasantly. "I am sure Mr. Plunkett will not object. Perhaps a little time may be of advantage to him in identifying—the gentleman he wishes to arrest."

"No objections, I'm sure," said Plunkett, dropping into his chair heavily. "I'm hungry myself. I didn't want to accept the hospitality of you folks without giving you notice; that's all."

Reeves set bottles and glasses on the table.

"There's cognac," he said, "and anisada, and Scotch 'smoke,' and rye. Take your choice."

Bridger chose rye, Reeves poured three fingers of Scotch for himself, Morgan took the same. The sheriff, against much protestation, filled his glass form the water bottle.

"Here's to the appitite," said Reeves, raising his glass, "of Mr. Williams!" Morgan's laugh and his drink encountering sent him into a choking-splutter. All began to pay attention to the dinner, which was well cooked and palatable.

"Williams!" called Plunkett, suddenly and sharply.

All looked wonderingly. Reeves found the sheriff's mild eye resting upon him. He flushed a little.

"Se here," he said, with some asperity, "my name's Reeves, and I don't want you to—" But the comedy of the thing came to his rescue, and he ended with a laugh.

"I suppose, Mr. Plunkett," said Morgan, carefully seasoning an alligator pear, "that you are aware of the fact that you will import a good deal of trouble for yourself into Kentucky if you take back the wrong man—that is of course, if you take anybody back!"

"Thanks for the salt," said the sheriff. "Oh, I'll take somebody back. It'll be one of you two gentlemen. Yes, I know I'd get stuck for damages if I make a mistake. But I'm going to try to get the right man."

"I'll tell you what you do," said Morgan, leaning forward with a jolly twinkle in his eyes. "You take me. I'll go without any trouble. The cocoanut business hasn't panned out well this year, and I'd like to make some extra money out of your bondsmen."

"That's not fair," chimed in Reeves. "I got only $16 a thousand for my last shipment. Take me, Mr. Plunkett."

"I'll take Wade Williams," said the sheriff patiently, "or I'll come pretty close to it."

"It's like dining with a ghost," remarked Morgan, with a pretended shiver. "The ghost of a murderer, too! Will somebody pass the toothpicks to the shade of the naughty Mr. Williams?"

Plunkett seemed as unconcerned as if he were dining at his own table in Chatham County. He was a gallant trencherman, and the strange tropic viands tickled his palate. Heavy, commonplace, almost slothful in his movements, he appeared to be devoid of all the cunning and watchfulness of the sleuth. He even ceased to observe, with any sharpness or attempted discrimination, the two men, one of whom he had undertaken with surprising self-confidence, to drag away upon the serious charge of wife-murder. Here, indeed, was a problem set before him that if wrongly solved would have amounted to his serious discomfiture, yet there he sat puzzling his soul (to all appearances) over the novel flavor of a broiled iguana cutlet.

The consul felt a decided discomfort. Reeves and Morgan were his friends and pals; yet the sheriff from Kentucky had a certain right to his official aid and moral support. So Bridger sat the silentest around the board and tried to estimate the peculiar situation. His conclusion was that both Reeves and Morgan, quickwitted, as he knew them to be, had conceived at the moment of Plunkett's disclosure of his mission—and in the brief space of a lightning flash—the idea that the other might be the guilty Williams; and that each of them had decided in that moment loyally to protect his comrade against the doom that threatened him. This was the consul's theory and if he had been a bookmaker at a race of wits for life and liberty he would have offered heavy odds against the plodding sheriff from Chatham County, Kentucky.

When the meal was concluded the Carib woman came and removed the dishes and cloth. Reeves strewed the table with excellent cigars and Plunkett, with the others, lighted one of these with evident gratification.

"I may be dull," said Morgan, with a grin and a wink at Bridger, with want to know if I am. Now, I say this is all a joke of Mr. Plunkett's concocted to freighten two babes-in-the-woods. Is this Williamson to be taken seriously or not?"

"'Williams,'" corrected Plunkett gravely. "I never got off any jokes in my life. I know I wouldn't travel 2,000 miles to get off a poor one as this would be if I didn't take Wade Williams back with me. Gentlemen!" continued the sheriff, now letting his mild eyes travel impartially from one of the company to another, "see if you can find any joke in this case. Wade Williams is listening to the words I utter now; but out of politeness I will speak of him as a third person. For five years he made his wife lead the life of a dog—No; I'll take that back. No dog in Kentucky was ever treated as she was. He spent the money that she brought him—spent it at the races, at the card table and on horses and hunting. He was a good fellow to his friends, but a cold, sullen demon at home. He wound up the five years of neglect by striking her with his closed hand—a hand as hard as a stone—when she was ill and weak from suffering. She died the next day; and he skipped. That's all there is to it. It's enough. I never saw Williams; but I knew his wife. I'm not a man to tell half. She and I were keeping company when she met him. She went to Louisville on a visit and saw him there. I'll admit that he spoilt my chances in no time. I lived then on the edge of the Cumberland mountains. I was elected sheriff of Chatham County a year after Williams killed his wife. My official duty sends me out here after him; but I'll admit that there's personal feeling too. And he's going back with me. Mr.—er—Reeves, will you pass me a match?"

"Awfully imprudent of Williams," said Morgan, putting his feet up against the wall, "to strike a Kentucky lady. Seems to me I've heard they were scrappers."

"Bad, bad Williams," said Reeves, pouring out more "Scotch."

The two men spoke lightly, but the consul saw and felt the tension and the carefulness in their actions and words. "Good old fellows," he said to himself; "they're both all right. Each of 'em is standing by the other like a little brick church."

And then a dog walked into the room where they sat—a black-and-tan- hound, long-eared, lazy, confident of welcome.

Plunkett turned his head and looked

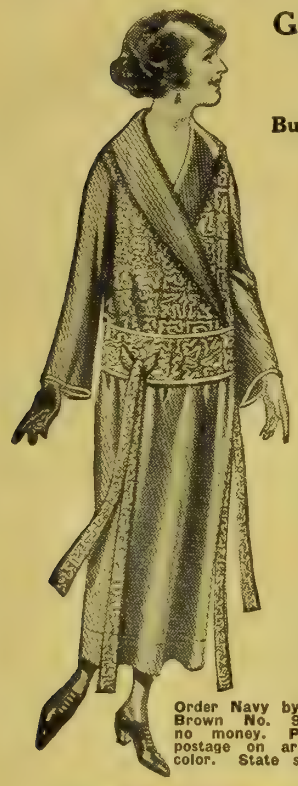
We Challenge the World to Match these Bargains

There never was—never will be a better opportunity to save money than this page offers you. Here are timely needs for all the family at prices which we positively guarantee to be the lowest in America—bar none. And remember this—we do not ask you to take our word for it. You are privileged to order whatever you wish on approval at our risk. We gladly ship with the understanding that you may return goods if not absolutely amazed at the value they represent.

Send No Money—Pay On Arrival

Don't send one cent. Just letter or postcard brings you any of these smashed price bargains. Merely give Name and Number of Each Article You Want. Also State Size and Write Your Name and Address plainly to Avoid Delay. Pay nothing till goods arrive — then only the amazing bargain price and postage. If you are not delighted with your bargain for any reason at all simply return the goods and your money will be cheerfully refunded. ORDER NOW. If you buy NOW, you'll BUY RIGHT!



Gabardine Frock

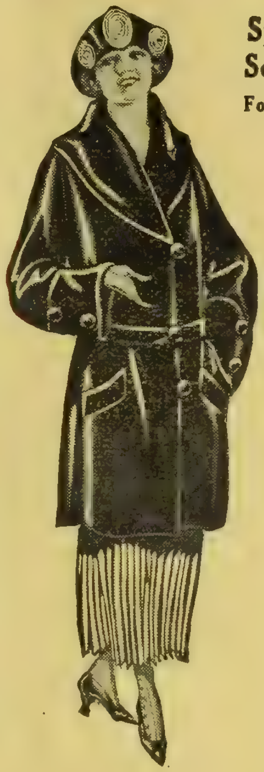
in

Bulgarian Effect

$2.98

An exceptionally attractive fine quality cotton gabardine dress for women and misses. Long roll collar in shawl effect, sleeves and belt piped in red. Entire front of blouse enhanced with exquisite all-over embroidered design in Bulgarian effect with rich harmonious colors. Two streamers at both sides and front. Wide belt embroidered to match blouse. Sizes for women, 34 to 44 bust; for misses 32 to 38 bust. State length desired. Colors, navy or brown.

Order Navy by No. 96E7500, Brown No. 96E7502. Send no money. Pay $2.98 and postage on arrival for either color. State size.



Sporty Style Silk Seal Plush Coat

For Women and Misses

$10.98

Where else can you buy a genuine silk seal plush coat of this jaunty style and splendid quality for such a low price? Beautifully modeled of soft, warm, lustrous, deep pile silk plush with full lining of beautiful flowered sateen. Newest loose back flared style with belt. Wide 10-inch shawl collar, two pockets and roomy bell sleeves. Length, about 34 inches. Women's sizes, 34 to 44; Misses, 32 to 38 bust measure. State size. **Order No. 96E7000. Send no money. Pay $10.98 and postage on arrival. Money back if not satisfied.**

Men's Sturdy Duck Coat

$2.98

How Fifty Cents Earned Two Hundred Dollars

A Hoosier farmer, with a HERCULES Sawing Outfit, cut 25 cords of firewood from straight poles in ten hours working time, with one man to carry and clear for him. His 7-h. p. engine, in those ten hours, burned less than 50 cents worth of gasoline. The wood was worth $8 a cord, right on the ground. Figure the earning for yourself!

What's the reason you can't cash in on cordwood the same way, all winter long?

What's fuel going to be worth this winter?

Answer that query according to where you live! Most of us will be glad to get any old wood at most any price. Mixing wood with even poor coal makes a wonderful fire, and cheap! There are down trees rotting away all over America. Must be plenty near you. Turn them into dollars with a HERCULES.

Saw wood. It pays!

Anybody can learn in an hour to run the HERCULES Sawing Outfit. It is self-adjusting, absolutely safe, runs on kerosene or gasoline, turns out an enormous amount of sawed wood—and the engine will do all kinds of other farm work when you are not sawing. Somebody near you can make you an interesting price on this outfit, or another of different capacity. Write us to learn who to talk with about it.

OUR $1000 ACCIDENT POLICY

If there is any paid-up subscriber to The Business Farmer who is not insured under our $1000 Accident Policy, issued by the North American Accident Insurance Company, for Seventy-five cents (75c) per year, it is their own fault!

Any person from 16 to 70 years of age can be insured and our only requirement is that your subscription be paid in advance for one full year or more from this date.

This is a genuine policy in a good company. It operates in Michigan under the auspices of the State Insurance Department, the same as every insurance company doing business in the state.

We will gladly send an application blank and further information to any reader who requests it. Address: Insurance Dept., THE BUSINESS FARMER, Mt. Clemens, Michigan.

U. P. Boys' Calf Club Visits Wisconsin Farms

THIRTY-SIX boys recently returned to thirty-six homes, in the Upper Peninsula of Michigan, entirely sold on the ideas and ideals of better dairying, and pledged to the methods and practices which they had witnessed during the ten day inspection tour through the dairy region of northern Wisconsin. The trip was arranged under the direction of the extension department of the Michigan Agricultural College, and the Upper Peninsula Development Bureau of Michigan, being financed entirely by the latter organization.

Chiefly important because it represented an intensive short course of practical dairy training for each of the boys and the leaders who accompanied them, the tour stands out as one of the most distinctive features of the better-dairying campaign now in progress throughout the Upper Peninsula of Michigan.

Space here will not permit a detailed account of the trip. Here, however, are a few terse facts which will suffice to impress upon the minds of even the most skeptical the fact that the calf club tour presented to these thirty-six boys a rare opportunity and a training which, if reckoned in dollars, would have meant a considerable investment to any one of the fortunate young farmers.

The tour was the first of its kind ever attempted in the history of boys' club work throughout the United States, according to R. A. Turner, state club leader for Michigan.

The trip covered 1400 miles, and ten cars made up the caravan.

The personnel included thirty-six boys from twelve counties.

About fifty dairy farms—the largest and most thoroughly developed that could be found along the route—were visited and a careful inspection made of each.

At the close of each day's work, "quizzes" were conducted by the leaders in charge, and the lessons of the day were firmly fixed in the minds of each of the boys.

Each boy was requested to keep a note-book, in which he jotted down everything of interest occurring along the route.

Among the outstanding establishments visited enroute were:

The Ferndell Guernsey Farm, Oneida, Wisconsin—220 head of pure-bred Guernseys and owners of one of the largest bulls of the breed. Supplies milk to the William Larsen Canning Company.

F. E. Fox, Guernsey Farm, Waukesha, Wisconsin—the most ideal and practical dairy farm seen on the tour. Producers of high-quality dairy products and pure-bred livestock. Now selling 400 quarts of milk and 90½ pints of cream daily to local market.

Anoka Farms, Waukesha. One of the leading Shorthorn farms in the United States. Farm has held nineteen livestock sales and averaged $810 a head for the nineteen sales. One animal alone from the herd brought $2,600 at last fall's sale.

Adam Seitz & Son, Ayreshire Farm, Waukesha. Declared the best Ayreshire farm in the world. Has herd of 130 animals.

Pabst Farms, Waukesha. Some of the world's greatest Holsteins seen on the farms of the wealthy Pabst brothers.

Hoard's Dairy Farm, Fort Atkinson, Wisconsin. Declared to be the finest model dairy farm in the country. Boys given an opportunity here to study some of the most "typey" of dairy animals.

And these are only a few of the outstanding establishments to which the boys were directed on their trip.

The Michigan Calf Club Boys' Tour was, without question, an epoch in the dairy industry of the Upper Peninsula of Michigan.

Three U. P. Club Boys Make Unusual Record

THREE of 'em—count 'em—three of 'em. There's Grant, James and Richard, and they're "The Three Musketeers" of Iron county, Upper Michigan, as far as boys' club work is concerned.

The three Gallups, energetic sons of Mr. and Mrs. Gaunce Gallup, of Gaastra, Iron county, upper Michigan, are setting a mighty rapid pace for other club members throughout the peninsula. In fact, the three Gallups are typically representative of the energy and spirit which has placed club work in upper Michigan on par with any similar effort throughout the country.

Here's the dope on the Gallups:

Grant Gallup has for the past three years been a member of the poultry club in Gaastra, Iron county, and has been one of the outstanding boys in poultry club work in Michigan. In 1921, he was declared Michigan State Poultry Club Champion in the first year project. In 1922, he was given second place for State Honors in second year poultry work. In 1922 also he received high individual honors for poultry culling in the contest held at the Upper Peninsula Club Camp at Chatham, Michigan. At this encampment he was also a member of the first prize culling team, which was given a free trip to the State Fair at Detroit, where they conducted a demonstration in culling.

In 1923, at Chatham, Grant was awarded the same honor and represented the upper peninsula on the first prize culling team at the State Fair contest. The valuation of poultry owned by Grant is $488.91; cost of operations, $269.83; yielding a net profit of $219.28 for the period of one year.

James Gallup joined the Cloverland calf club in 1922 and has been a diligent worker for the success of that organization. This was evidenced by the fact that at the organization meeting in 1923 he was elected president. He has conducted the affairs of the club in a commendable manner. At the Club camp at Chatham he was placed on the dairy judging team to represent Iron county which won a free trip to the State Fair at Detroit.

At the State Fair judging contest, in which the boys were required to judge a ring of Holsteins, Guernseys, Ayrshires and Jerseys, James Gallup won second highest individual honors in the state, notwithstanding the fact that he had to compete against boys who had practiced on all classes of animals. The only breeds James had worked on in his home county were Guernseys and Holsteins. Because of the position that he obtained through his work at the state fair, he, with six other boys, will be given a thorough course in dairy judging work at the Michigan Agricultural College, during the last week in September. From there the six boys will journey to Syracuse, New York, to represent the state of Michigan in the dairy judging contest at the National Dairy Show.

Richard Gallup, a younger brother of his brother James, joined the calf club this year. He has devoted all his spare moments toward making this work a success, but did not fare quite as well as his older brothers at the contest at Chatham. However, because of the experience which he had at these places, it proved a great benefit to him at the judging contests at the county fair. Richard was the boy who topped the list and was one of the three boys given a free trip to the International Livestock Show at Chicago, during the first week of December next.

And there you are—not bad for one family, is it?

VETERAN NOT DISCOURAGED OVER LOSS OF ARM

BEING handicapped after having lost an arm while serving at the Argonne Forest with the 132nd Infantry did not stand in the way of the success of Eugene J. Iberg, of Highland, Ill., who before the war was a farmer having only a seventh grade education and who, since his discharge, has stepped into general managership of the Highland Farms Dairy Company. Upon his discharge the outset looked bad for Iberg who was unable to resume his pre-war occupation. But having an arm shot off at the left shoulder did not cause him to despair. He applied to the U. S. Veterans' Bureau and received a course in vocational training which he took at University of Michigan and the University of

Illinois, where he was taught dairying. In connection with this course he also studied bookkeeping at a business college. After two years and four months under the supervision of the Veterans' Bureau Iberg was giving placement training as a bookkeeper with the aforementioned company. In a few months time he was in charge of the other clerks in the company's employ. Later he was appointed general manager.

RADIO DEPARTMENT

THINGS I HAVE LEARNED ABOUT RADIO

IN the past year I have learned quite a few things about making radio sets that might be helpful to other plans if printed in The Business Farmer.

In the first few weeks, I had to buy three new tubes. One tube didn't last over ten days. What was the trouble? $15.00 paid out before I learned. Instead of turning your light or rheostat on slowly, it should be flashed on quickly. Just the same as the lights on a car or your electric lights. I used to turn the rheostat on a little, then leave it for a while, so the filament would heat up; then turn it on slowly until I could hear the music, etc. This should not be done (except when using set for the first time, to see where to run it) as it makes the filament brittle and a little jar will break it.

Place a common knife switch between the A battery and filament. Do not burn the filament any brighter than is needed for to get the signals as loud as possible without squeals. Underheating is just as bad as overheating. A tube will last a year if used right. When a freshly charged battery is put in, the rheostat should be turned back a little because it has to be turned on more as the battery runs down. In wiring up a set, use flexible wire, such as light wire or Ford coil wire, (that's what I use) the size doesn't seem to make much difference. I used stiff No. 14 wire at first. Every time anybody would step a little heavy, it would jar it out of tune and I would have to tune in again, so I got some secondary wires from a flivver and rewired the set and everything was O. K. I placed the tube socket on a bracket made of spring brass and that made it jarproof. About tubes—don't let anyone tell you that you can hear just as far with a dry cell tube as you can with a 6-volt tube. They are not quite as sensative and they lack distance. But they save the cost of a storage battery and for winter use they are quite satisfactory. I tried the W. D. 12, but to get good results, I use the U. V. 200 Radiotron, and storage battery. Buy the best materials you can afford.—C. C. G., Harvard, Mich.

RADIO HELPS HIGHWAYS

A farmer in Northern Illinois, is located on a dirt road which is impassable during the winter if a frost comes when the road is in a rough condition. Last fall when the road was at its worst he got a radio warning of an immediate and heavy frost. Calling in his neighbors by telephone, they all got out and rolled the road. When the freeze came, it proved to be permanent, and the radio owner and his neighbors had a boulevard to town all winter.

WHY HE QUIT

"That's Bill Fligh, the aviator. He's the guy that used to write ads in the sky in smoke."

"Isn't he doing that any more?"

"No, he had to give it up. He got writer's cramp."—American Legion Weekly.

HOW TO DO IT.

This is the way to write a thoroughly angry business letter:

"Sir—My typist, being a lady, can not take down what I think of you. I being a gentleman, can not write it. You being neither, can guess it all."—Brisbane Daily Mail.

PRESENCE OF MIND

Ethel was sitting on the sofa with a friend of hers. On her knee was her little niece. The door to the next room, which was full of people, was wide open. The people in the other room heard this:

"Kiss me, too, Aunt Ethel."

"Certainly, dear, but don't say 'two,' say 'twice;' 'two' is not good grammar."—The Black and Blue Jay.

$85,265 a day for taxes

Railroads, of course, should pay a proper amount of taxes, but it must be remembered that whatever they pay must be passed on to the public through rates.—*Congressional Joint Commission on Agriculture.*

New York Central Lines paid taxes last year averaging $85,265 a day, an increase of 221% as compared with 1910. For the year the tax bill was $31,121,832, an amount considerably greater than the total dividends paid to the stockholders.

For the railroads of the entire country the increase in taxes as compared with dividends since 1913 has been as follows:

	1913	1922
Taxes	$127,725,809	$301,003,227
Dividends	$322,300,406	$271,576,000

Taxes are a part of the cost of railroad operation, which must be provided for in freight and passenger rates, just as are expenditures for wages, coal and materials. New York Central Lines pay more than one-tenth of the railroad taxes of the country.

What the Neighbors Say

RAISE MORE SUGAR BEETS

THE world production of sugar which before the war reached 20,000,000 tons of 2,000 lbs. and during the war dropped off several million tons, again is up to 20,000,000 of which 2,200,000 of 11% was produced in the United States and its possessions.

The U. S. consumption of sugar which before the war amounted to 4,000,000 tons, reached 4,600,000 in 1921 and in 1922 jumped to 5,700,000, an increase of 25 per cent in one year. The United States now consumes 28 per cent of all the sugar produced in the world.

Prio to the war our maximum per capita consumption of sugar was 84 lbs. In 1922 it jumped to 103 lbs. Only Australia and New Zealand now exceed us in this respect. Meanwhile, due to and because of the war, the per capita consumption in the United Kingdom has fallen from 90 to 70 lbs.; Germany from 75 to 54; and Russia from 29 to 5 lbs.

Excepting Norway and Portugal all the countries of continental Europe produce sugar from beets and before the war they annually exported a surplus of some 3,000,000 tons.

The European production of beet sugar which before the war exceeled 9,000,000 tons and in 1919-20 had fallen to 2,900,000, last year reached 5,200,000 tons. Nevertheless, in 1922 Germany, normally Europe's larger producer and exporter of sugar imported 180,000 tons against exports of only 17,000 tons.

Altlhough possessing a sufficient sugar beet area from which to produce the sugar of the world, the United States continues to be the world's greatest importer of sugar. Our imports for consumption in 1922 amounted to 3,300,000 tons. During the 5-year period 1917-1921 our total imports of sugar amounted to 16,000,000 tons, for which we paid foreign nations $2,545,000,000 or an average of $509,000,000 annually, a sum sufficient to erect 330 one-thousand ton beet sugar factories which would supply us annually with 3,300,000 tons of beet sugar from beets grown by American labor on American farms.—Truman G. Palmer, Sugar Statistician, Washington, D. C.

DOESN'T LIKE LAW ON LINE FENCE

EDITOR:—I protest against one bad and unjust law in Michigan which I believe farmers ought to resist at the polls with the ballot. It is the law on line fences. Michigan law does not require me to build a fence on the public highway if I have no stock. My woods, orchards and meadows are protected by the requirements of the law to confine stock within one's own territory. But this general law has a special feature that requires me to build half my neighbor's line fence to keep my grass or trees from getting on his premises.

It must be a stock fence but I have no stock and the stock fence which the legislature calls upon me to help build does not keep out the chickens, turkeys, guineas and pigeons which my neighbor keeps by thousands.

On the public highways all kinds of stock may be driven with the presence of a master to keep and care for the same on the public right. Why should I be forced to support a fence between some other's place and the highway? Unless I have stock why should I be required to help another to confine his stock? If he is required to fence against poultry the stock fence will serve no purpose and even a poultry fence is not protection against a pigeon farm.

Here is a situation. The east and west sides of my orchard lie open to the public highway. On the north is the division line without a fence because the owner raises only grain and has no need of fence and the owner on the south is all meadow and needs no fence. But one of these changes and begins raising stock and orders me to build half of the fence he needs and the other changes and goes to raising poultry and orders me to build one half of our division line. Depreciation of my farm follows. We need a better law on line fences.—J. S. H., Michigan,

ONE MAN'S OPINION

DEAR EDITOR:—You want to know what some of us farmers think about that College-Farm Bureau-Governor trouble at Lansing. For myself, will say that I hope the Governor kicks the Farm Bureau clean out of Michigan. I don't understand that he cares to take over any authority over the college funds, but does insist they cut out the Farm Bureau. I hope he makes it go. I wish he could also cut out a lot of those useless demonstrators that are making an easy living holding meetings, that but very few attend or want.—Clare D. Scott, Master Riverside Grange No. 741.

"BIG BUSINESS" IN THE SADDLE

ENCLOSED find check to extend the subscription to my wife's M. B. F. for two years. I think it is the best farm paper that I see. I enjoy the editorials and "What the Neighbors Say"—hugely. Also the markets and in fact the whole tenor of the paper is for the common folks. I would like to see an editorial on what is the cause of universal unrest everywhere. It seems to me that "Big Business" is in the saddle and intends to hold the seat, by playing politics to the detriment of those less fortunate than themselves. Is this so?—F. H. Carpenter, Allegan County, Mich.

FARMER AND LABORER TO SUFFER

DEAR EDITOR—As I have not said anything in a long time, I though it was about time for me to open up, so here goes. Big land holders in Germany have agreed to meet the big industrialist and put up $200,000,000 for reparation payments. This means that the farmers, who farm the farms and the workers who work the works, not only in Germany, but thruout the world, will be sweating harder than ever, will have to give up more of their life-blood than ever before, to pay—whom? Not they, the toilers, will get what is taken from them but the parasites who always and alone profit by the "glories" of war and empire. Let the farmer and worker think.—S. H. Slagle, Wexfor County, Mich.

Good Buildings Soon Pay for Themselves

UNCLE RUBE SPINACH SAYS

IT IS TO LAUGH, SOMETIMES

YES, folks, I sure do have to laugh sometimes when I think of the farmers of this state. And not only of this state but of all our states. Now I know just what you're goin' to say—its jest 'bout this—"Laugh you ol' fool—laugh all you want to—it don't cost you nothin' to laugh but it cost us a lot to do business for nothin'." Yes, dear farmer friends, I know somethin' of your problems, your worries, and all you would say to me. I've been through a good deal of it—was a farmer fer many years—more than 40 an' that's tellin' more about my age 'an I've ever told before. But friends, in 40 years a man, if he keeps his eyes open, learns consid'able. I learned my little lesson years ago—that would insinuate I waz gettin' old, now would'nt it? Well I'm not so old—I'm jest growin' up now—but I have a chance to see things that you don't see. Now f'r instance, you know what you git fer wheat? Do you know, 'at gen'raly, bread is the same as it waz when wheat brought you a fair return fer your labor an' cost of production? Take hogs, cattle, anything you raise, you know whut you git fer 'em, 'bout 7 cents fer good hogs, not any more if so much fer cattle, an' yet we are payin' up to 30 cents fer either kind a meat. Oh yes some of it at 24 cents, glesan' neck—why then is it to laugh?

Well, I'm jest goin' to tell you—it's jest cause you want to go it alone—want to sell your own stuff as you see fit. You don't want to join any society—any org'nization that wants to help you, somethin' like the co-ops or the Farm Bureau—an' by the way the Farm Bureau is doin' good work. We have a branch—and office—more 'an an office here in Battle Creek. I say more 'an an office 'cause they had an office an' a large warehouse on South McCamby Street an' have had to change locations 'cause their business outgrew the place they had) an' I know the man that runs the place an' I knew he helps the farmers that belong to the org-nization. He is straight as they ever make them an' does a wonderful business fer the farmers that employ him.

An' so I laugh when I think of the thousands of farmers what don't believe in any such thing. Yes, I have to laugh—long and loud, 'cause I know they are jest beatin' themselves an' blamin' it onto somebody else. Now, se here, ol' farmer friends, you can't do business alone as well as you can collectively. Why do labor unions hold out fer collective bargainin' if it ain't a good thing? Now let me tell you somethin', don't git the idea 'at you know all there is to know, don't think that every man 'at tries to help you is a thief. Mebbe you don't like the men at the head of the farmers' orgnization in your community—no matter about that—if he is doin' the right kind of business, likes or dislikes don't cut any figger. You jest git into the game, try collective bargainin' fer a while, buy an' sell through your orgn-zation and then in 6 months write to me through M. B. F. an' let me know if I shall stop the laugh. But honestly, folks, right now I have to laugh a little an' you don't really blame me, do you? Cordially yours, UNCLE RUBE.

KNOW YOUR STATE

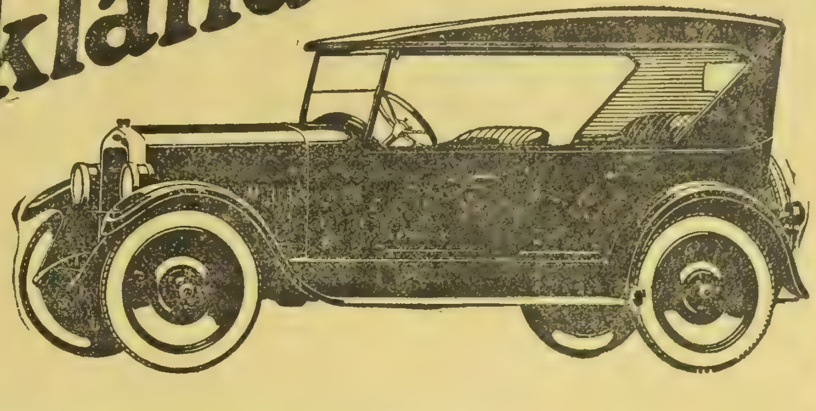
DO you know that the state of Michigan ranks first in the following agricultural products: cucumbers, mint, chicory, white beans, and small fruit? That it ranks second in all beans and sugar beats? That it ranks third in rye, celery, commercial apples, raspberries, and silage crops? —fourth in total apples, buckwheat, potatoes, green peas, strawberries, and butter sold? —fifth in clover seed, pears, blackberries, maple syrup, and butter fat sold?

Willie—Mamma, will you answer just one more question? Then I won't bother you any more.

Mother—All right, then, What is it?

Willie—Why is it that the little fishes don't drown before they learn to swim.

The Brand New Oakland "6" is here!



—and prices are lower

Think of it! A brand new, finer looking and even better performing Oakland at lower prices—prices never before associated with such a thoroughly fine car.

Note these new features—many of them exclusive:

Brand new L-head engine. Smoother, quieter, more powerful;

Four-wheel brakes for safety. Simple—practical—proved;

Beautiful new blue bodies built by Fisher;

Hand controls centralized on steering wheel;

Full automatic spark control at all speeds;

Permanent top and new type, close fitting curtains;

Disc steel wheels standard at no added cost;

Disc clutch and new easy shifting gear set.

RELIABLE ADVERTISERS

We will not knowingly accept the advertising of any person or firm who we do not believe to be thoroughly honest and reliable. Should any reader have any cause for complaint against any advertiser in these columns, the publisher would appreciate an immediate letter bringing all facts to light. In every case when writing say: "I saw your advertisement in The Michigan Business Farmer!" It will guarantee honest dealing.

"The Farm Paper of Service"

POLITICAL BUNKUM

THERE is an old joke that has become almost a national fable. It concerns the worthy gentleman who for some infraction of the law is rudely bustled into a patrol wagon, taken to jail and thrown into a cell. He begs for an opportunity to call his lawyer, and is finally given permission to use the telephone. He tells the lawyer his predicament. The lawyer says, "They can't put you in jail for that!"

The man in jail felt just about as the farmer feels now when he hears the typical political spell-binder inform him that he cannot be put in the position in which he has found himself the past two years.

Fortunately, the farming situation is clearing up and the day will come as surely as you are reading this page, when farming and labor will again stand on an equal footing in the matter of the price paid for their products in the market. As it is today labor is getting twice as much as the farmer is for the same amount of work, and yet labor is flirting with the farmer to organize a political party so they can get more.

ARE WE GUILTY?

THE farmers in Michigan, or those farmers who grow sugar beets have a skeleton in their closet which must be brought to light or else they must submit their closet to the closest scrutiny, because in the eyes of the public they are being given a place alongside of the child-slavery cotton mill operators of the South.

Only last week at the meeting of the Michigan Tuberculosis Association at Flint, Mr. Owen R. Lovejoy, Secretary of the National Child Labor Committee, made the following statement: "It is time the people of Michigan know what the report claims to show. It shows that we found 1,358 children at work; that 976 of these in the pulling season were 13 years old or less; that 17 of them were 5 years old and 52 were 6; that our agents actually covered over 10,500 acres, or about one-seventh of the area of beets last year; that children under 16 years were able to work from four to seven acres apiece; that the terms under which these contract laborers work are such that many men feel they cannot make a decent living without the labor of their children. The hours of work for these children are often excessive, being from 8 to 12 hours a day during the harvest and from 12 to 15 in blocking, thinning and weeding. The housing provided for these families often is indecent. These children are deprived of schooling. Contract labor children lost 63 per cent of their total school time while children of owners and tenants lost 29 per cent. The instructions from the state department of education expressly omits a census of these migrant children so that school officials have no means of knowing how many children of trancient families are in their country. The work of these little children is work, not play. Many of the processes required a physical posture, which, according to an expert of the United States Children's Bureau, is a direct and serious menace to health. All this is contained in our report. Accidents are not unknown, though our report emphasizes that the monotony, exhaustion, long hours, exposure and insanitary living conditions are far more serious."

There was a legislative investigation made last winter to determine whether or not the statements made regarding child labor in the beet fields of Michigan were true or false. No one seems to have been satisfied by the hurried series of public meetings which this junketing committee held, and even the daily newspaper reporters who accompanied it made a farce of the manner in which it was conducted.

Now the farmers in the state of Michigan who raise sugar beets know what the facts are. There is no need for and we resent, as does every man or woman interested in Michigan agriculture, the shadow which this kind of propaganda is casting all over the United States.

Michigan is being pointed to as a state where child slavery is practiced as it has been in the cotton mills of the south. Michigan has laws which prevent such conditions as exist in southern states, and it is high time those vested with the authority in our state take the necessary steps to correct this criminal condition if it does exist.

This is not a matter for the state legislature. It is a matter for the state police to handle, and if they are doing their duty they will see to it that the beet section of Michigan is properly patrolled to prevent any semblance of a condition which is claimed to exist.

We would be glad to publish letters from our readers in the heart of the beet country who know the facts, and we will use no names, if so requested. The important thing is to raise the stench before it has permeated too far.

WELL, THAT'S THAT!

WE got all het up this week as you probably did when you read that they were going to close the twine plant at Jackson State Prison because of the high freight rate which made it impossible for them to compete with large manufacturers.

We jumped at the conclusion, as you undoubtedly did, that the prison was going to sell out to the benefit of the independent manufacturers of binder twine and that they would, once the plant was closed at Jackson, make a football of binder twine prices in this state.

We publish on page 3 of this issue, a statement from Charles A. Blaney, Chairman of the Michigan State Prison Commission, and also a statement by Warden Harry L. Hulburt, which would seem to indicate that the press reports were without foundation, and that the farmers of our state need not worry, at least on this one score.

If there is any other prison, or other industry, conducted by the state of Michigan which produces a profit of over $150,000 annually, we do not know of it, and if this profit can be made and at the same time, sell the farmers of Michigan a superior product at less cost than they can buy elsewhere, there would be some rumpus before the doors of the prison twine plant could be closed and the machinery sold on the auction block.

So we have cooled off!

WORTH READING

JOHN H. KRAFFT, an authority on financing agriculture, begins in this issue an exclusive series of articles in which he attempts to explain the various forms of finance as they apply to the farmer.

He will cover in this series, the farmer's relation to the bank, the farmer's relation to the local banker, and the many forms of government aid which have been effected, supposedly to make the farmer's financial problem easier. We hope every reader who makes a business of farming will read this series through, because it has been our opinion for some time that there was no subject in which the farmer was actually less acquainted or sure of his footing than that of the present day finance.

Mr. Krafft has offered to answer any questions that occur to our readers while they pursue this series, and we hope you will take advantage of the opportunity of clearing the mists away from the present problem of agricultural finance. We confess that we will read this series with equal interest because there have been so many plans proposed and so many laws enacted that we feel, as you probably do, like "Babes-in-the-Wood" when we approach the subject.

THE AIR IS ALIVE

HOW many of the readers of this page heard the police band from Mexico City when it played at Arcadia Hall, Detroit, last Thursday evening? If you didn't hear it, it was your own fault. The entire program from first to last, encores and applause, were all broadcasted by the Detroit radio station, WCX, and a receiving set would have brought you as near this famous band as a seat in the hall itself would have given you.

How can we impress upon our readers what radio will mean to you and your family this winter? It is not difficult to build a set from the parts which can be secured at comparatively low cost, and the new bulb sets need no longer be operated by storage batteries, which are cumbersome and have to be recharged at a central station, but can be operated by dry cell batteries. Our own set has three pairs of dry batteries which have been in use since last May, and the "B" battery will last upwards of a year.

Some of the mail order houses now sell a complete outfit with battery and headset for less than $25. An extra head-set can be had for around $5. With this outfit you can hear any concert from Chicago, Detroit, Cleveland, Pittsburgh or Schenectady, or you can listen to the reports during the day and the market advice broadcasted each evening.

We wish that every home into which The Business Farmer goes might have a radio set this winter. Perhaps if you would pool all of your Christmas money that you naturally would spend in your family you would have a sufficient amount to purchase a set, as we know of no greater boon which has come to the farmer in our present generation, and particularly the farmers in Michigan are fortunate in being within easy range of all of the principal sending stations.

There is something doing in the air every minute, and the very room in which you read this now is charged with music, entertainment and information.

You don't believe it? Hook up a radio receiving set and see.

O, MONEY! MONEY!

YOU might have imagined that some of our readers thought we were trying to pick a lively prospect for a check for $100,000. Our new serial story by Mrs. Porter, which we believe our readers will find to be one of the best we have ever run, is a story of a man who gives $100,000 to some of his relatives and then watches the result. To introduce the story we asked for letters from our readers on what they would do with $100,000 and the best of these letters appear in the issue. We are sure you will find them very interesting as we did.

A reading of these letters left one outstanding impression in our minds, we are surprised to find that the old world is getting better all of the time, and if these letters indicate the trend of thought it is a pity that some of the poorer folks of this world cannot be blessed with the money with which to do the good that they would like to do.

We all get $100,000 in the mail every morning. That is, those of us who have two eyes, two hands, two legs, and a good appetite. If you could ask a blind man, a cripple or a bed-ridden patient which they would rather have, a day of twenty-four hours of good health, or to remain in their present condition and have $100,000, I will venture that most of them would spurn the money or what it would bring them in the future, for one day of health.

You, then, receive $100,000 every day, in their valuation of happiness and that is all you could expect to buy with the money if you had it.

Are you making as good use of the new day as if it were a check for $100,000?

BEET GROWERS LUCKY

A. B. COOK, of Owosso, Master of the State Grange and a leader in the beet growers' association, is authority for the statement that if the price of raw sugar stays where it is now the farmers who raise beets under the flat rate contract will get $9.25 for their beets, while those who raise them under the so-called 50-50 contract will get $10.31 for them.

We hope the price of sugar remains at its present level long enough to demonstrate that the 50-50 contract, as originally proposed by Mr. Cook, is a sound proposition and one which the beet growers of this state can well afford to stand solidly behind. If Mr. Cook's figures are correct this will net the beet grower who raised beets under the cooperative plan $1.06 per ton more than those who raised them on the flat rate contract.

Luckily, the price of raw sugar has held up well into the fall, and we see no reason why the beet outlook in Michigan is not brighter than it has been for many years. We will keep our fingers crossed, Mr. Cook!

MAKES WORK WORTH WHILE

IT is not drudgery to work with a good piece of machinery or with good tools. Neither is it drudgery to work with high class live stock. You can hardly blame a boy for leaving a farm if he has to get along with a scrubby team or a gallon-a-day cow. But enable him to take pride in what he has and what he works with and he will take pride in the accomplishments for which he strives.

Former Representative Patrick H. Kelley, of Lansing, said, "In my judgement, there is no person now living who will see the Eighteenth Amendment either modified or repealed. There is no doubt pre-prohibition beer intoxicated many, even with an alcoholic percentage of only 3½%. Legalization of 5% beer would, in effect, nullify the Eighteenth Amendment."

PUBLISHER'S DESK

AN AUTO KNITTER FOR SALE CHEAP

DEAR MR. SLOCUM—Noticing in the past of your help to farmer folks in solving their problems, I wish to ask you if you could sell my auto hosiery knitter for me.

I purchased it last fall late, but found my eyes would not allow me to do the work well as I have far sight and my glasses glance on the needles so I cannot get the stitch easily, or quick enough. It is positively new, never sent out one pair of socks, although we made some for home. It is perfect in every respect. Triplex $72.00 with yarn. Could you sell it and retain commission or let me get some of your names? Although you will have the best luck with the money, get a reasonable price and retain $10.00.

—If any of my readers are in the market for an auto knitter after reading the fabulous claims in their advertising, here is a chance to get one cheap. I will be willing to throw off the commission she has offered me and will be glad to forward it to this unfortunate woman.

OPEN SEASON FOR CATCH-PENNY SCHEMES

THIS is the open season for all kinds of schemes, and because there is a little more money in the country than there was a year ago, the mail boxes are being flooded with all kinds of catch-penny schemes, and I want to issue a warning to my readers to think twice before they leap into something that is going to cause them trouble in the future.

The safest rule to keep in mind is "Look twice before you leap." Don't go into some sort of a scheme when you do not know the company or the men behind it.

Usually the company which does not advertise in legitimate publications, and by legitimate I mean the class of publications which will not accept cheap medical and other kinds of advertising, secure large lists of farmers names or rural route names and use these with penny postage circular matter. They are a pretty safe class to keep away from, and I say this partly from selfish motives because we get so many of these claims in our Collection box and they are just about the only kind that we cannot make a settlement with.

They are crafty boys, these fellows who hide in the mailbox and pounce out with a piece of lead pipe to knock down a dollar here and there.

SOME OLD FRIENDS EXPOSED

DEAR EDITOR—As my subscription has expired, here is $1 for my renewal. I think the M. B. F. is the best paper printed for the good of the farmers. As you wish us subscribers to help expose some of these fake advertisers I will tell you of some of my experience with what I have written to.

I wrote to the Auto Knitter Hosiery Company for information concerning their machines, and what prices they would pay for goods that were knit for them. Their cheapest knitting machines are $50.00 each. You buy your own yarn to knit with at whatever price they choose to charge for it and they only pay $1.75 for every dozen pairs of No. 1 socks that you knit. Is that a square deal? I also wrote to the American Music Publshing Company, Nile Art Company, and the Tapestry Paint Company, at LaGrange, Indiana, whose work was painting pillow tops. I was to buy the cloth at so much per square, and buy my own paints at 25c per vial, and the price they paid for the work was so small it would not pay for refilling my paint bottles.

Two years ago we wished to sell our farm so we wrote to Leslie Jones, of Olney, Illinois. He asked us for $4.50 and we sent it but we still have the farm, so then we wrote to Warren McRae and he also asked for $4.50 but we did not send it to him. A number of people got "stung" by those two gentlemen so the more they are exposed the quicker they will quit business. These kind of people are living on the cream of everything just because the farming class of people are in such bad financial circumstances they are compelled to try some way of earning honest money outside of the farm to meet the increasing expenses. Hoping to see this in print, I remain, C. W. L., Maple City.

PLEASE TELL US

SURPRISING as it may seem, a good many of our friends who send us claims do not notify us when they receive a settlement from the company with whom we are corresponding. When you stop to think that the BUSINESS FARMER offers this collection box service without any charge, although each letter we write costs not less than twenty-five to fifty cents in postage and labor. This may sound high, but it has been figured in many big offices that the cost of overhead, actual typewriting labor, postage, stationery, and so forth, figures from twenty-five to fifty cents on a letter, and yet on some claims for our readers we have written as many as a half a hundred letters and followed it up innumerable times, and yet sometimes a reader will receive a settlement or voluntarily settle with the concern and never notify us of the fact so that our efforts are being wasted.

The whole idea back of the BUSINESS FARMER is service. We make no charge to any paid up subscriber for any service that we can render, no matter how expensive it is to us, but we do like to know that this service is appreciated and especially do we feel that in the case of the Collection Box that we are only asking the right thing when we ask you to notify us when the claim is settled.

ANOTHER "WORK AT HOME" SCHEME

My two boys read the advertisement of the Metal Products Company, Boston Road, New York City, recently and were much interested. The company sells casting forms for these toys and promises to buy all you make. The boys thought that they might make some pocket money that way. What do you think of it? —J. B., Howell, Mich.

LIKE all "work at home schemes" their proposition reads very nice and you are led to think that you can soon become wealthy if you just listen to them. It it desired the toys to sell to the public the company could make them much cheaper than to have individuals all over the country make them. Leave it alone.

WRITING SONGS

DEAR MR. SLOCUM—Am sending you some papers sent me by The New York Melody Corporation. Sent them the song poem while living in Lansing. Are they just after my money or would there be any money in it for me? They have made me several offers before. Respectfully, Mrs. W. C., Kent Co.

—If you have a lyric of sufficient value, I do not believe it will be necessary for you to pay to have it set to music. I would suggest that you write one of the standard music publishing companies, such as: Jerome-Remick Company, Detroit, Mich., they will tell you whether or not the lyric you have is of sufficient value to set it to music. It is pretty safe to assume that if you had something the New York house wanted they would be offering you something for it, not asking you for something!

The Collection Box

The purpose of this department is to protect our subscribers from fraudulent dealings or unfair treatment by persons or concerns at a distance.

In every case we will do our best to make a satisfactory settlement or force action, for which no charge for our services will ever be made, providing:

1.—The claim is made by a paid-up subscriber to The Business Farmer.
2.—The claim is not more than 6 mos. old.
3.—The claim is not local or between people within easy distance of one another. These should be settled at first hand and not attempted by mail.

Address all letters, giving full particulars, amounts, dates, etc., enclosing also your address label from the front cover of any issue to prove that you are a paid-up subscriber.

My Engine Will Do the Work of 6

"I set out to build a farm engine that would have every feature the farmer wanted and none he didn't want. It has now been on the market six years. Thousands of satisfied users tell me I've succeeded. I'm proud to have this engine bear my name."
—A. Y. EDWARDS

EDWARDS FARM ENGINE

Try This Remarkable Engine FREE

There is no other farm engine like it. Simple in construction and easy to operate. It is only one engine, yet it takes the place of six engines. It will give from 1½ to 6 H. P., yet it is so light that two men can carry it easily. Set it anywhere and put it to work.

Change Power as Needed

It is a 6 H. P. when you need 6, or 1½ H. P. when you need only 1½, or any power in between. Fuel consumption in proportion to power used and remarkably low at all times. Adjustment from one power to another is instantaneous.

Burns Kerosene

Operates with kerosene or gasoline. Easy starting, no cranking. The greatest gas engine value on the market. And you can prove all of these statements to your own satisfaction.

What Users Say

Ivan L. Blake, of Hannibal, New York, says: "Only engine economical for all jobs. I run a 28-inch cord wood saw, a 24-inch rip saw, a washer, a pump, and a grinder, and it sure runs them fine. It has perfect running balance, and it sets quiet anywhere."

Clarence Rutledge, of Manitoulan Island, Ontario, says: "Have given my Edwards four years' steady work and like it fine. It uses very little fuel. I run a 28-inch cord wood saw, also a rip saw, 8-inch grinder, ensilage cutter, line shaft for shop, churn, washer, separator and pump. Have had ten other engines and the Edwards beats them all."

Frank Foell, of Cologne, New Jersey, says: "It's a great pleasure to own an Edwards engine. I run a wood saw, cement mixer, threshing machine, etc. Do work for my neighbors. Easy to move around and easy to run. I would not have any other."

Free Trial Offer

Now—I want to prove my claims to you. I want to send you an Edwards Engine for absolutely free trial. Just write your name and address on coupon and mail. I will send at once complete details about my farm engine and about my free trial offer. No cost or obligation. Mail coupon now.

FOR SALE—GLADIOLA BULBS DURING October. Choice named, 20 for $1.00 postpaid. P. G. OGDEN, Montgomery, Michigan, R. 2

Cow hides and calf skins reconverted into shoe leather by a process called tanning. The wear in your shoes depends upon it. By tanning their own leather E-J *know* the wearing qualities of their shoes.

On their feet all day long—

what is the secret of their shoe wear and comfort?

Pound, pound. pound—millions of steps a year How do feet and shoes ever stand the strain?

The answer is E-J shoes. Men who are constantly on their feet have found that for Wear, Comfort and Price, no other shoes can equal them. They know that the name Endicott-Johnson on a shoe means the most skillful workmanship of expert, happy workers. They know that Endicott-Johnson, (the world's greatest tanners), make their own leather. And they have discovered that by eliminating all extra costs, Endicott-Johnson sell shoes at lower prices.

These same qualities are in every pair of E-J Shoes whether shoes for work or a snappy pair of oxfords for dress up. It's the same in styles for men, women and children. Dealers everywhere. Insist that you get

THE MORAL CHALLENGE OF THE HOUR

A SERMON BY REV. DAVID F. WARNER

TEXT: "Avenge not yourselves, beloved, but give place unto the wrath of God; for it is written, Vengeance belongeth unto me, I will recompense, saith the Lord. But if thine enemy hunger, feed him; if he thirst give him drink; for in so doing thou shelt heap coals of fire upon his head. Be not overcome of evil, but overcome evil with good."—Romans 12:19-21.

IT is human to hate. It is divine to love. It is human to seek vengeance. It is divine to let God do this. It is human to love those who love you. It is divine to love those who do not love you. The other day a dog wagged his tail when I would pet him; but he gnashed at me when I would strike at him. Some humans have the instinct of a dog.

Today's challenge to Christian men and nations, stated negatively, is "Avenge not yourselves." In civic life have you been wronged in body or property? Have you suffered under personal resentment? Then, God says we shall not take the law into our own hands, for he has a civil minister for this work. "He is an avenger for wrath to him that doeth evil." To violate this principle is to bring on civil disorder, as anarchism and mob violence. This is anti-social and certainly opposed to what Jesus did do, and would do today.

Here we are warned against the unbrotherly methods of intolerance and cruelty. But this idealism does not live among us yet in any large way. If it did our children would not glorify the bloody tale of successful battle with its terrible physical strain and suffering. They would not stand in such respectful awe before the martial achievements of war. If it did we would not have such group outbreakings of men as the Klu Klux Klan. It is regretable that we are having a revival of this organization, with its anti-Christian policies. But we may be sure that the violent eruptions of the social order in various sections of the country, the masked secrecy under which it is generating, will in time scatter it in dishoner. Are we to hold it to be Christian, or even American, for any mob or class to arrogate to itself the right to punish crime or enforce law? Even under the days of the cruel Nero, the apostle Paul, under inspiration, writes, "The powers that be are ordained of God." "Let every soul be in subjection to the higher powers." "For he (the emperor) is a minister of God to thee for good." And "he is an avenger for wrath to him that doeth evil." This teaching glorifies the authority of the state and must be adhered to to preserve social order. As I write these words, Oklahoma is under martial law, struggling with the Klan. Shall we have law enforcement by masked mobs or by the constitutional authority of the state? There is but one sane answer.

But the teaching of our text prohibits not only external acts of violence, but the desire, even, to do them. It deals with our thoughts and feelings. It says, "Owe no man anything save to love one another." And, "Render to no man evil for evil." It proscribes that feeling which says, "I'd like to pay him off in his own coin." Whatever ye would that men should do to you—" well, you know the rest. You see, don't you, that Christianity is the life of a new and brotherly desire. And in this day of bitter social and religious factionalism, we need so much the calming influence of Christian ministries.

As for vengeance, it belongs to God thru his ordained ministers of state. Not that God hates or is after passionate resentment. God is love. Yet, love recoils against studied sin and infidelity. And correction and chastisement seem to be a part of God's soverignity and government. He has his agencies and ways to punish those who do evil. His moral laws are irrevocable and in some way retribution falls upon the transgressor. Only God knows when evil has run its course and is past changing. When it has the laws of punishment become operative. "Wheresoever the carcass is, there will the eagles be gathered together," says Jesus. Therefore, because of Jerusalem's persistant formalism. her moral tyranny, and her refusal of the bondage-breaking Christ, God sent the Roman eagles down upon her in judgement under Titus. If nations will not come under the rule of love and brotherhood, they must submit to the law of political force. This is why God is said to have anointed worldly rulers to punish his own people.

But we, who have espoused the cause of the New Kingdom of peace and good-will among men as announced by the angels and proclaimed by Jesus, would not choose this way. Yet, ours is the greatest chadlenge in world history. What is it? It is perfectly clear. We can not be mistaken or neutral. This: WE MUST ABSTAIN FROM VENGEANCE. But, WE MUST DO SOMETHING. We must soften and melt with coals of fire. We are to "overcome evil with good." We have the opportunity thru private and personal ways, and thru the church, the Y. M. C. A. and the Red Cross, and thru various constructive lines offered by the state. The Christian must feed and promote the Golden Rule life in friend and foe; and urgently so, in this day of frantic need.

We are challenged to lend ourselves to the suppression of the liquor traffic and industrial oppression thru constituted and orderly means.

We are challenged to bequeath to the world a next following generation that will be a practical guardian of the human soul, of its rights and liberties. Such a Christianity is democratic at its core. It will know not the present day alignments of religion and race.

We are challenged to guard the foundations of faith in God. The writer does believe that men are coming to themselves; and we must hold them there by a Christianity that is not merely mystical and ceremonial, but that is also ethical and practical; that works, loves, and suffers. A Christianity that has lost its racial and religious bitterness, and is bent on fanning the smoking flax and tenderly caring for the bruised reeds.

We are challenged to establish the law of fraternity and peace and not a reign of disciplined violence and cruelty. We must do this or prepare for a reign of cultured paganism and militarism.

What can bring India, China, and Africa into the light? Christianity. What can cleanse England, France, America? The Christianity of Christ. The establishment of a world consciousness of the need of Christ, outranks all other needs of the hour. Then here is our challenge.

BIBLE THOUGHTS

GOD'S PROMISES KEPT.—There hath not failed one word of all his good promises.—I Kings 8:56.

SURE DELIVERANCE: — Surely he shall deliver thee from the snare of the fowler, and from the noisome pestilence.—Psalm 91:3.

DEPENDENCE:—Thine, O Lord, is the greatness, and the power, and the glory, and the victory, and the majesty; for all that is in the heaven and in the earth is thine; thine is the kingdom, O Lord, and thou are exalted as head above all.—I Chronicles 29:11.

TIME NO OBJECT:—But, beloved, be not ignorant of this one thing, that one day is with the Lord as a thousand years, and a thousand years as one day.—II Peter 3:8.

PRAYER IN THE MORNING:—My voice shalt thou hear in the morning, O Lord; in the morning will I direct my prayer unto thee, and will look up.—Psalms 5:3.

THY WILL, NOT MINE:—Teach me to do thy will; for thou art my God; thy spirit is good; lead me into the land of uprightness.—Psalm 143:10.

A WISE THOUGHT:—Let us search and try our ways, and turn again to the Lord.—Lamentations 3:40.

HUMILITY OF CHRIST:—Let this mind be in you, which was also in Christ Jesus. Let nothing be done through strife or vain glory; but in lowliness of mind let each esteem one another better than themselves.—Phil. 2:5, 3.

Farmers Service Bureau

(A Clearing Department for farmers' every day troubles. Prompt, careful attention given to all complaints or requests for information addressed to this department. We are here to serve you. All inquiries must be accompanied by full name and address. Name not used if so requested.)

STATE DOES NOT PENSION WIDOWS

I would like to know thru your paper if there is any law in Michigan allowing a widow's pension to an elderly woman who has been a mother but now whose husband and children are all dead. Or is there any way provided for the support of such persons, except town or county support? The woman in question is 63 years old and is a cripple, can scarcely walk with a crutch. I would be very grateful for any information that might help her.—Mrs. S. E. H,, Onaway, Mich.

—There is no law in Michigan providing for the pensioning of a widow by the state If her husband was a war veteran, she may be entitled to a military pension.—Asst. Legal Editor.

NONE OF SCHOOL BOARD TAXPAYERS

Can a school board, none of them taxpayers, use the district's money as they see fit when they are already burdened with high taxes? — Subscriber, Gobles, Mich.

—A school board whose members are not taxpayers would not be a legal school board and the law provides that in such case the office becomes vacant immediately and if more than twenty days have elapsed from the time that the vacancy occurred by virture of the statute the township board fills the vacancy until the next annual meeting.—W. L. Coffey, Dept. of Public Instruction, Lansing.

WIFE COULD NOT BE FINED

My wife took both our children, said she was going to my sister on a visit and I can not find them now. Can she be fined for doing a thing like that?—M. M. B., Blanchard, Mich.

—This would not be regarded as a crime, and would not be punishable by fine or otherwise. Your only recourse would be in an action for divorce, in which you could ask for the custody of the children.—Asst. Legal Editor.

NO RIGHT TO CUT TREE

Could you give me any information on the following? I have found a bee tree on another person's property. Have I the right to cut the tree and take the honey or have I not? Will you please tell me what right I have if any?—F. C., Midland, Mich.

—You would not have the right to cut the tree and take the honey without the permission of the owner of the land on which the tree grows. —Asst. Legal Editor.

TAX TO OPERATE THEATRE

I have a moving picture machine and desire to show pictures to the public with it. Will there be a war tax to be paid? If so, how much? Admission will be 25c. Will I have to have a license to show the pictures? To whom will the war tax have to be sent if one is collected? —A. P., Weidman, Mich.

—Section 800 of the Revenue Act of 1921 imposes a tax on all admissions of more than ten cents. On an admission of 25c the tax would be 3c. The tax must be collected from those paying for admission and paid over to the Government by the operator of the theatre. If the theatre is located in the First District of Michigan (Weidman, Mich., is) the tax must be received in this office accompanied with form 729 properly executed not later than the last day of the month following that during which the tax was collected, which in the case of September, 1923, tax would be October 31st, 1923.

Registration on form 752 would be necessary within ten days after commencement of business, otherwise a penalty is incurred.

The law also imposes on theatres including motion picture houses a Special Tax based on the seating capacity of the place and the population of the town:

Seating capacity not more than 250, tax would be $50 per year; not more than 500, tax $100 per year; not more than 800, tax $150 per year; over 800, tax would be $200 per year.

If the population of a town is not more than 5,000, the Special tax will be one-half the amount above stated.

. Regulations 43 and 59, also forms 11, 729 and 752 will be furnished by this office upon request.—Fred L. Woolworth, Collector Internal Revenue.

FENCE NOT ON LINE

A line fence runs about 1½ rods out of line, according to the original survey, across 40 acres. A rail fence has been maintained in this irregular manner for a number of years, probably 20 or more. While to my knowledge, there has been no direct demand to have this fence straightened, it has been talked off and on, and I understand that about 12 years ago the neighbors affected had a survey taken and then did not abide by it from the fact that some did not like the idea of giving up a small strip of ground. The quarter line original stake we understand cannot be found. We would like to know if there is any way that this fence can be straightened.—M. A. S., Vassar, Mich.

—If the line, according to the original survey, cannot be found, I would suggest that a majority of the adjoining land owners get together and have the county surveyor survey and re-establish the correct line. Ten days notice would have to be given all land owners concerned, and the expense would be shared among them.—Asst. Legal Editor.

WHO BUILDS CULVERT?

I live on a public road the ground in front of my driveway is high, to the north side of it a low spot that holds the water when there is a heavy rain and then dries up when the weather is dry. The highway overseer graded this piece of road in front of my house this summer and dug a ditch through my drive way which changed the water course. Now the question is who has to furnish the culvert do I have to furnish it or does the township furnish it? —H. G., Croswell, Mich.

—Your question can not be satisfactorily answered without complete knowledge of the lay of the land. Ordinarily the highway commissioner is repuired to construct such culverts as are necessary to carry the water from one side of the highway to the other side and if any culverts are needed or desired by an adjoining land owned for the purpose of draining his land, he must build them himself.—State Highway Department.

MUST BE NOTIFIED

A gives his note for thirty days. B signs the note with A. Can the note be collected from B after thirty days provided B is not notified that A has not paid the note within the thirty days? For instance, the holder of A's note notified B some three months after 30 days note was given that A had not paid. If A does not pay can they still hold B or is he liable only for the 30 days?—H. H., Cadillac, Mich.

—B as indorser of the note would not be liable to pay it unless he was given notice within 24 hours that the maker failed to pay it, provided notice was not waived.—Asst. Legal Editor.

REFUSE FROM LIGHTING PLANT AS FERTILIZER

Can you tell me if the refuse from carbide lighting plant has any value as a fertilizer? Would it take the place of lime?—L. E. C., Howell, Mich.

—The refuse from a carbide lighting plant is largely calcium carbonate which can be used for sweetening sour soils. Before this refuse is used for agricultural purposes it should be allowed to lie out in the open for some time until the entrapped gas escapes. If applied to the soil as soon as taken from the reservoir the entrapped gas might be injurious to plant growth.—G. M. Grantham, Research Associate, M. A. C.

The Children's Hour

Address all letters to the Children's Hour as follows:

UNCLE NED,
The Business Farmer,
Mt. Clemens, Mich.

DEAR girls and boys: Our drawing contest closed September 29th and I know you are anxious to know who the lucky ones are. They are LaVendee Adolph, Union City; Alice Erickson, Lake City; and Margaret Jackowiak, Sherwood, Michigan. I intend to publish the drawings in our next issue. There are several other drawings that I received that I want to publish also. This contest was so popular that I think we will hold another soon. Shall we?

How many of you wrote to Helen H. Bland, Holland, Michigan? Well, you got your letter back unopened, didn't you? And the reason is that Helen lives on R6, at Howell, Michigan, instead of Holland. It was through an error that her address appeared wrong so change the address on your letter and send it again as Helen is anxious to hear from the "Cousins."—UNCLE NED.

OUR BOYS AND GIRLS

Dear Uncle Ned:—Tap, tap, may I come in and join your merry circle? I have never written to you before. I think before I am ready with my letter it will land in the wastebasket. I am twelve years old and will be thirteen the 20th of February. I have blue eyes and bobbed hair. Have I a twin? We take the M. B. F. Oh, I like to read it, especially the Children's Hour. My father is dead, he was killed in a gravel pit. We have rented the place where we are now. My uncle is working the other farm. We have four children going to school. It is very much trouble to get the lunch fixed in the morning. It is raining all these days. I will close with a riddle, the one who guesses it right will receive a letter. What side of the house does it rain the most?—Your niece, Lillian Rademacher, R. F. D. 3, Fowler, Mich.
—I get the letter! It rains most on the outside.

Dear Uncle Ned:— May I join your merry circle? I will be 15 years old the 26th of Jan. Have I a twin? I have written to you before and saw my letter in print. We take the M. B. F. and like it very much. I am 5 feet 2 inches tall and have light brown bobbed hair. I passed the 8th grade examination last spring and graduated June 26th. I am taking music lessons and like it just fine. I am nearly through the first grade. We are having rainy weather these days. It rained almost every day this week. As my letter is getting quite long I will close with two riddles. Why do girls like to look at the moon? What always eats and never gets enough? The one who knows them correctly will receive a letter from me. Sending my best regards to Uncle Ned and cousins, I am, Your niece,—Mary Arens, R. F. D. 3, Fowler, Mich.

Dear Uncle Ned:—How are all of the cousins? May I join the merry circle? I wrote once before but did not see my letter in print. I think Shelden Fowler's place is just beautiful by the way he has described it. I just love the lake. We live 30 miles from the lake, but go very often. We have some neighbors that come from Traverse City. Uncle Ned, don't you think when we have the drawing contest that we draw a picture and write a good long story about it? I just love to make up stories and draw pictures. I have been reading the cousins letters for quite a long time. I am 14 years old. My birthday is the 27th day of August. Is there any one of the cousins that have or have not written whose birthday is the same as mine. We have a new house and barn. We live on a farm of 80 acres. We have some woods on the back of our farm. In the summer time in the afternoons we go back to the woods and play Indian and make wigwams. I have 3 brothers and no sisters. I had to work out in the field this summer and got tanned quite a lot. I am 5 feet 6 inches tall. In our school we have eleven subjects to study in the 8th grade. I wrote last year but did not pass. I passed the 7th and have only 5 subjects this year. Quite a change, isn't it? Every one of the cousins please write to me. I get lonesome for letters and someone to write to. Your want-to-be niece.—Esther Calster, Decker, Mich.

Dear Uncle Ned:—Well a girl friend and I have just been down town. We went to two ice cream parlors and then brought home an extra pint. We feel as though we might need the doctor most any time. We then settled down to read a stack of letters which my friend received from various members of the Children's Hour which were very interesting. Thereupon I decided to write because I want to get some letters too. I don't want you to think me a two year old or anything like that because I'm a dignified(?) junior, fifteen years of age, have sparkling blue eyes, long dark eye lashes, dark brown, straight bobbed hair, and an impish disposition. My name is really Anne Jardine although for short I get "Sonny" and "Shorty". I get rather lonesome over here in this wonderful (large) city of Boyne and although I am in town I would like to get some letters to cheer me up. Your niece,—Anne Jardine, 519 S. Lake St., Boyne City, Mich.

Dear Uncle Ned:—This is my first letter to you, although I have been reading the Children's Hour for a long time. I live on a farm and go to a country school with my two brothers. I have a little sister who will be two years old in November. I named her Wanda Louise. How do you like her name? I am very fond of riddles. I believe the answer to Blanche Ward's riddle is a sponge because it holds water and has holes in it. Will some of the cousins write me and send me some riddles I will close with a couple of riddles. First, it is a green house then it is a white house, and next it is a red house with lots of little niggers in it. If it took two years for a hen to lay a golden egg, how long would it take a rooster to lay a door knob? The ones that guess these riddles will receive a letter.—Evelyn Hawley, North Star, Mich.

Dear Uncle Ned:—I wrote once before and saw my letter in print, so I thought I would write again and see if you would print this also. When I asked the children to write to me I had no idea how many would write and I kept getting letters for easily two weeks. Sometimes two a day, and it took me about two weeks to answer them all, but it seemed I got more letters from Gladys Harris. Just think cousins and Uncle Ned, I got a letter from my own cousin, one I never knew about before. Her name is Ethel Eagly. I go to high school this year. School started September 3rd, and I go to Bear Lake high school, so if you children want to write me, my address is Bear Lake, Michigan, in care of Mrs. Will Richmond. Must close as my letter is getting long, and will take up quite a bit of space on the Children's Page. My cousin guessed my age correctly, I am 13 years old. Kate Prowant have you read the book of "What Katie Did"? I've enjoyed my visit as well as Luella Nelson. Good-bye to you all.—Phyllis Gibson, Bear Lake, Michigan.

Dear Uncle Ned:—How are all of your cousins? My father and mother take the M. B. F. I always read the Children's Hour the first thing. I am a farmer girl. My birthday is on the 9th day of November. I will be 14 years old. What have you been doing this rainy weather? I have been looking at the Sears-Roebuck catalog. Have you ever been fishing? I have. I have three brothers and two sisters. My mother is in Illinois now, visiting her brothers and sisters. My youngest sister and brother are with her. It is raining here today. My two oldest brothers are going hunting. You ought to be here and eat squirrel with me. One morning they got 8. They are 15 and 16 years old. We have seven cows. Uncle Ned, you will have to come in and help me milk awhile. Our school begins on the 17th of this month. I am in the 8th grade this winter. I will put in two riddles. Over doors, wall, I heard an old man squall, his beard was flesh, his nose was horn. I've never heard the old man squall since I've been born. What runs around over the pasture all day, and sets on the shelf at night? With love,—Miss Edna McCauley, Elizabeth, Ind., R. 3.

THE RED ANTS AND MEHCHANT-INSECT

THE Red Ants of Africa are very small, but very strong. Also, they can bite very hard.

It happened that the Merchant-Insect was going to market, and his bags were heavy. So he asked the Red Ants to help him carry his bags and promised to pay them when he came back. But, on his return, when he saw how small the Ants were, he would not pay them.

Now the Merchant-Insect fell sick of a fever and lay under a tree. At once thousands of Red Ants came, and with their strong jaws, they soon killed him.

The other insects complained to the King, but the King answered:

"It is just. A debt of honor is as sacred as life. Who fails in the one must lose the other."

Nothing is meaner than to evade a debt.

WHEN WRITING TO ADVERTISERS MENTION THE M. B. F.

FARMING EMERGING FROM SERIOUS DEPRESSION

(Continued from Page 4)

incentive for engaging in the business of farming has disappeared.

From now on the profits from farming must be made from the products of the farm, and in order to make farming more profitable it has been necessary to give the farming industry as favorable financing as have other businesses, and this has been done. Too many farmers have been led to believe, through ill-advised and unsound speech and written matter, that the farmer himself is the only one who has an interest in seeing that agriculture is placed on the soundest possible footing. When we consider the fact that farming represents a very large percentage of our total wealth, and that the buying power of the farmer is larger than that of any other class, it would be unreasonable to assume that others would not be interested in the prosperity of agriculture, even though it were only from a selfish stand point.

Three Classes of Financing

The financing of agriculture comes into three distinct classes:

1. Short Time Loans for operating capital, which are made by the local banker, and which the banker can re-discount with the Federal Reserve Bank.

2. Intermediate Credit Loans to finance the production and marketing of crops and live stock. These loans can be made either by the local bank or by a farmers' cooperative marketing organization, and re-discounted through the intermediate credit banks.

3. Long Time Loans for the purchase of land, which can be made through the Joint Stock Land Banks and Federal Land Banks, operating under the Federal Farm Loan Act.

By the use of these facilities, and proper cooperation of the farmer in the marketing of his own products, farming is being placed in the proper condition. Within the last few years it has been brought home to the farmer, the banker, and the public at large that it is absolutely necessary that there be improvement in the marketing of farm products.

The proper marketing of farm products will go a long way towards increasing the profits of farming. It will always be true that the products from the farms will always be sold on a world market, and this means that the food stuffs produced by the American farmer will always be placed on the market in competition with the same products produced by other nations, whose farming population is working under and living on an entirely different standard than is the American farmer.

This country has proved, however, that it can maintain a higher standard of wages and better living conditions in certain other industries which come into direct competition with other countries. This has been due to superior organization, methods of production and method of marketing. There is a great deal of room for similar work in farming. Agricultural schools have done much to show the large returns that are to be had from proper soil cultivation. These demonstrations have already brought great profits to farmers. Even our best farming sections can be made to yield greater profits through better knowledge of handling.

Most Counties Have Agents

Most of our counties, at the present time, have County Farm Agents, who are instrumental in helping the farmer and his family from the old habits into the more satisfactory methods of the present day. The good results from this work can hardly be over-estimated. County Agents have often been instrumental in interesting capital for mutually profitable investment. Often the farmer realizes that he should be using more improved methods in operating his farm and raising his crops. Very often the bank is ready to consider granting a loan when the County Agent approves the plan.

There is, at the present time, a very consistent effort on the part of the bankers in cooperating in every manner possible with farming. The wide-awake banker is studying the farmers' problems, and is cooperating with the farmer in the establishment and financing of County Farm Bureaus. He is helping to finance seed shipments, the purchase of pure bred stock, and is promoting in every way possible the farmers' interests.

The farmer is essentially an individualist and a capitalist. He is generally considered conservative and with some vision. Nevertheless, his position is essentially individualistic and he undoubtedly is the bulwark for individual liberties and representative Government as against the socialistic tendency of throngs of people who live in modern cities, trancient and tied to no one place as their home, with no real stake in the country.

This frame of mind on the part of the farmer has been brought about by the conditions under which he is living, and has its very satisfying phases. However, the farmer must consider that he cannot remain an individualist in a period of organized civilization and that he is compelled to associate himself with other farmers in order to live in a country in which labor and other businesses are thoroughly organized. An organization can either be condemned or lauded by what it has accomplished. If it is an organization which is improving the conditions of its membership and not doing any harm to others, it is very beneficial. If, however, it is only promoting the interests of its membership, to the detriment of everybody else, it can be justly condemned.

This is particularly true of some of the labor organizations at the present time. The object of some of these organizations seems to be to get all they can irrespective as to what they are delivering or the justice of their demands. This attitude on the part of labor organizations is, without question, by far the largest factor in determining the purchasing power of the farmers' dollar. As their position, however, is not based upon a sound business footing we can, with a degree of certainty, consider this position a temporary one, and that every re-action will be a decided factor in increasing the purchasing power of the farmers' dollar.

Need Not Fear About Farmer

We, however, need not fear about the farmer taking the attitude which some branches of organized labor have taken. The city laborers, as a class, have only one interest and that is their wage. With them there is no business investment, with the result that they can only see one side of an issue. However, the farmer is not only interested in the price of his labor, but also has a very substantial business investment, which gives him the same view of both sides of the situation.

We have periods of prosperity and depression in the farming business the same as we have in any other line of business. At the present time farming is emerging from a serious depression, and is very much on the mend. Conditions this year are very much better than they were last, and last year very much better than they were in 1921. Farmers generally have reasons for optimism in this respect. The farmers' purchasing power is gradually meeting the price of the commodities which he sells. After these two points have met, any further movement will undoubtedly be in favor of the farmer, and then we will have a tendency on the part of the city dweller to go back onto the farm, as against the tendency of the farmer to move into the city.

To the average man the farm is a better place to be than in the city. The average savings of the farming population over a period of years is far in excess of the average savings of the city population, and after all the amount a man is able to save determines, in a degree, his success. Periods such as we have had in the last few years invariably eliminate a lot of farmers, but usually not the best type. The time to stick by a thing is when the other fellow is quitting. Invariably the man who sticks at a period of this kind comes out on top. Our farming population, as a whole has shown this quality of stick-to-it-ive-ness in a surprisingly large degree, and this fact cannot help but work to their interest.

With this condition prevailing, and with the improved general conditions and facilities which the farmer has not had before, his business is coming back into its own.

WHAT OUR READERS WOULD DO WITH $100,000

(Continued from page 7.)

her and mama take a trip a long way off for about three years. I think the different climate would cure her from the dreadful disease that she has. I would get us all insured for a thousand dollars at least. Also as I love horses and cows I would buy two or three of each. I would put the money that remained in the bank. I would always take the M. B. F. for I think it is the best paper I ever read in my life.—Miss M. E. S., Reed City, Michigan.

Fix Church First.—Now this is what I would do if I received a check for one hundred thousand dollars. I would fix up my home church with all the modern conveniences. Then I would go to the county poor house and make the people happy, also help the poor little orphan children. I would put up a library so that they would have city privileges. Also send some for charity purposes. I would visit different parts of the United States and give where it is needed. Then I would return to dear old Michigan, and visit at Detroit, Mt. Clemens and other cities.—E. P., Palms, Mich.

Moving Your Coal

The 24 steam railroads operating in Michigan are already well advanced in their yearly task of bringing in the coal that will keep Michigan warm and working through the winter.

We are better prepared for this job than ever before.

Our repair shops contain only current work; there is no accumulation of crippled rolling stock. Our construction operations have been purposely pushed to release all equipment for this emergency. For four months we have been accumulating our own coal supplies until they are now at their highest point in history—79% of our entire storage requirements filled.

Best of all, we are swinging into use the record-breaking addition of 175 new locomotives, and 21,344 new freight cars, all bought during 1923. More improvements and additions are planned if you will back us by giving your support.

From the gateways, and the junction points, where we receive your coal, we are promptly carrying it on to you. Unload promptly and release our car for us to use in serving your neighbor's needs.

Are we doing this job as you want it done? We ask your criticism or approval.

Michigan Railroad Association
Railway Exchange Bldg., Detroit, Mich. (2)

"We Serve Michigan"

The Farm Home

A Department for the Women

Edited by MRS. ANNIE TAYLOR

DEAR FOLKS—How about the hot lunches for our growing boys and girls. This year a great deal has been accomplished by our M. A. C. with the Home Demonstration and they are still working out this big problem for you and me. If any of you have found some easy and short cuts in making up the lunches let us have them and give all the readers the benefit of your experiences. Start the sewing club. Christmas will be with us before we realize it.

Your Friend,
Mrs Annie Taylor

Address letters: Mrs. Annie Taylor, care The Business Farmer, Mt. Clemens, Michigan.

THE INVITATION

Come and bob for apples,
'T will be the greatest fun!
The witch will tell your fortune
When the bobbing is all done.
Perhaps to be the President,
Or rich, will be your fate
You'd better ask your mamma
If you can stay up late.

THE HALLOWE'EN PARTY

SURELY everybody likes to go to a Hallowe'en party. There, we have the kind of fun, no other day allows. It is an evening of laughter and mystery. A cooperative party can be very successful if the plans are laid right and each one does her part.

The suggestions I give can be used for either a home party or carried out with a large one. Maybe the Grange or Gleaner organization in your community has a small building that would make a splendid place for a Hallowe'en.

Decorations

In decorating for this occasion, one should bear in mind that it is on autumn festival, and arrange to emphasize the idea as much as possible. The berries and leaves are effective, fastened to the curtains and draperies in one's home. Your whole color scheme should be in brown, black and orange. The crepe paper found in the ten-cent store can be made into all sorts of cats, owls and witches.

The lights should always be candles, if possible, especially at the table. Use apples, turnips, carrots, and any of the vegetables, cut in grotesque faces for candlesticks.

If lamps or electric lights are used, make special shades of brown or yellow crepe paper or use stiff brown paper and cut into faces like Jack-o'-lanterns. The effect is very wierd and "spooky."

If there is a fence, place a row of Jack-o'-lanterns along the top. On the gate post seat two pumpkins with faces cut into them and candles lit inside.

Black cats, owls, bats, and spiders may be cut from paper and pinned on different walls. If practical, cut holes for eyes and place a candle behind.

The hostess—or those in charge of the evening could either have some member or themselves greet the guests upon arrival in a darkened entrance with a sheet over their heads, and with wet gloves on shake hands. Take your guest's hand and put it down in a pail of cooked cold noodles. This has a very slimy feeling as you all know.

Use pumpkins for the center of table and decorate with either fall leaves still left on the twig or chrysanthemums.

Refreshments—The menu should be foodstuffs in season. Sandwiches made of meat, cheese, and nuts, doughnuts, pumpkin pie and sweet cider.

The **Hallowe'en Cake** has held the place of honor since the beginning here in America. It should be a white cake with white frosting and can be improved with chocolate frosting lettering on top. The cake should contain the ring, key, thimble, penny, and button baked inside to foretell, respectively, speedy marriage, a journey, spinsterhood, wealth, and bachelorhood.

Games For Hallowe'en

Although a few new and untried games may be interspersed on Hallowe'en, the old ones that have been handed down are the very life of the celebration and must never be omitted.

Sailing Walnut Boats—The boats are empty half shells of English walnuts. In each is fastened a short piece of bright-colored Christmas candle, named for some member of the party, lighted, and set afloat with others in a big tub of water. The action of these little craft reveals the destiny of their owners, sometimes gliding smoothly along their way together, sometimes drifting apart. To be a bachelor or maid will be the fate of the one whose candle goes out first.

The Three Lugies—Three dishes are placed in a row. The players are blindfolded then allowed to dip a finger in one of the dishes. Clear water in the first denotes a long and happy married life; milky water in the second, early separation; the third, alas—is empty.

An Owl and Pussy-Cat Party—This will furnish a very novel and amusing evening. When the guests arrive, present the boys with No. 22 Owl Hats and the girls with No. 23 Cat Caps. Give each boy a walnut shell boat painted pea-green and boasting a paper sail. He is to write the name of a lady on a slip of paper, fold it and place it in his boat. The boat must blow across the water of a tub. If it reaches harbor, well and good; if not, he can expect only trouble on the sea of matrimony.

As the clock nears the hour of twelve, each girl is handed a paper cat tail. Guests sit on the floor in a circle, girls and boys alternating, then in order the tails are opened and read aloud. The hostess may prepare these or each girl may be asked to bring her own.

Pass out pencils and paper and ask guests to write down all the superstitious signs, good and bad, that they know. For instance, breaking a mirror means seven years' bad luck; counting the cars of a freight train has its ill effects; a wish made after seeing a load of empty barrels comes true, etc. At least two other people must have heard of the sign to make it count.

A prize should be given to the one who can remember the greatest number.

The witch takes a piece of paper about 8 inches square and tears it into eight pieces 4x2. She then gives out the papers, four to each side of the room. She asks one side to write the names of living people on their paper and the other to write the names of four who are dead. Papers are folded and collected in a hat, then the witch takes them out one at a time and tells whether the paper she holds has the name of a living person or dead.

The trick lies in the fact that she gives out the papers with three rough edges to one side, and papers with two rough and two smooth edges to the other side.

All she has to remember is that the names of the living are written on papers with two smooth edges. These edges she can feel as she holds the paper and thinks.

Blowing Out the Candles—Blindfolded players, in turn, blow out a lighted candle. The number of blows indicates the num- of years before the wedding day. A row of candles may be used instead, with one blow; the number left lighted will tell the same story.

The Cellar Stairs Test—This test is for a girl and consists of backing downstairs with a mirror in her hand, trying meanwhile to see within it the face of her future mate.

The Apple Paring Charm—The apple must be pared with the paring in one long piece. It must then be thrown over the left shoulder, whereupon it will fall into the form of the initial of the favored one.

A Party of Departed Spirits—Ask each guest to come as the ghost of some famous character. When all guests are assembled announce that the first game will be guessing the ghosts. Number each one, then furnish paper and pencil for the contest.

Miscellaneous Progressive Party—The same idea as in progressive card games. Instead of cards, various contests are arranged for each table. Some of them as follows:

1. Flipping cards into a hat from a certain distance.
2. Tiddlywinks.
3. Fish pond.
4. Jack straws.
5. Spearing peanuts.
6. Lifting beans with a lead pencil.
7. Making words out of one long word.

This list can be added to indefinitely, for any child's game can be made one of the events.

If there is music and folks to dance, this to my mind is always a sure way of entertaining.

Again, I want to say the evening of October 31st is one of fun and mystery and so much can be done to make a happy evening in your neighborhood.

Mothers Problems

THE FOOD THEY EAT

AN incident of my early motherhood bears repeating, I think, for the benefit of other young mothers. I was all alone with my baby, relatives and friends being on the opposite coast from me, and I had prided myself on raising my baby strictly according to Holt; His feeding, the first year, was simple; in his second year I encountered difficulties. There was a certain cereal "the book" said he should have. I myself hated that particular cereal, could hardly get it down, in fact, but I was determined my baby should eat it, "because it was good for him." It took nearly a whole morning for me to get him to consume his small dishful. It was

obnoxious to him: each mouthful fairly made him gag.

Eventually I won out—but it was the last time I ever forced a child to eat food that was obnoxious to them. I have grown older since them; I have raised more babies. I have come to realize that I have certain food prejudices myself, that there are certain things I cannot swallow easily. And some of my food prejudices I now have I attribute wholly to the fact that, as a child, I was forced to eat and scolded into eating foods that were naturally distasteful to me. Many other foods which I didn't like as a child, but which were not forced into me, I now relish.

Of course, there are sometimes whims which must be overcome, but even they should not be overcome by "forced feeding." Use patience and ingenuity. A pretty, odd-shaped dish will sometimes coaxe food into a whimsical child. A new presentation of it—prettily garnished, prettily moulded—may likewise induce that first taste which will tare down the prejudice.

Food that is enjoyed does a person a tremendous amount more of good than food that is detested. The sensative nerves of the stomach are easily affected by the mental attitude of the partaker of food. In stead of poisoning the mind, and to an extent, the stomach, by insisting on certain foods being eaten, choose agreeable ones which can be happily eaten and therefore easily digested.

Personal Column

Girl of Eighteen in Trouble.—Dear Mrs. Taylor: Will you please print the answers to the following questions in the personal column of the Michigan Business Farmer at as early a date as possible?

(1.) How old must a girl be before she can marry without her parents' consent?

(2.) If a girl leaves her home when she is 18 years of age can her folks bring her back?

(3.) If a boy friend promises a girl a ring, is it right to remind him of that promise? If a girl receives a ring can her parents force her to return it?

(4.) If a girl's parents do not like a young man is that any reason why a girl should not continue to care for him?

I hope the answers as soon as possible. Thanking you in advance for your information, I remain, "A Reader".

—A decision made recently by one of our judges was: "The common law which holds that a child is responsible to the father until the age of 21. The law holds the father responsible for the maintenance of his children until they are 21 and also is liable for the debts contracted by them. The court interprets the law that in return the children are responsible to the parents for their behavior until 21. The exception to this rule is that a girl can marry at 18, without her parents' consent, which emancipates her from further legal responsibility to her parents for her behavior and future.

Modesty prevents a girl frrom reminding a young man to keep his promise of giving a ring. Either he cannot afford it just now, or else he has other intentions, and maybe he is not sure of his feelings and wants more time.

Sometimes our parents knowledge and experience tells them a great many things that we do not see because of our infatuation for a certain person. I say, sometimes, they know best and then again sometimes, love will make up for a lot of shortcomings.

I would suggest that you listen to pour parents and also the young man and let your heart and head work out your problem.

Calling on the Sick.—We have been told to visit the sick, but just what does that word "visit" mean? Sometime ago I called on an old gentleman who had been in bed quite a while with a broken limb and he said he was feeling worse that week, because he got so tired the Sunday before on account of so many visitors. He said they kept coming in carloads all day and he could not sleep that night, and he felt worse ever since. I once heard a man very harshly criticised because he would not let some neighbor women in to see his wife and young babe. He said he wished to keep her quiet a week or two and the women said there was no use of that, they had company when their babes were one day old. And on the other hand I have heard invalids complain because no one came to see them. I think we need some enlightenment on this subject. Cannot our editor give us some rules to go by, or perhaps some trained nurse who reads this helpful page would be glad to tell us something. This to me at least is a very important subject, as it generally falls to the lot of the hard working wife and mother on the farm to care for the sick in the home, and as they seldom have any training along this line, in fact not many of us seem to understand much about the how, when, and why of visiting the sick, and as farmers in most cases cannot afford trained help, I am sure some talk along this line would be helpful. Should the one who cares for the sick be taken into account? I wonder if the daughter of the man spoken of above was tired that night; and, by the way, the company in that case was mostly from the city. Now we all wish to do what is right so let us hear from several, both from the country and city.—From one who wishes to learn

—To express one's sympathy with a call upon the sick does not necessarily mean seeing the patient. It all depends upon the nature of the illness and also on the patient's feelings. It is a very delicate situation and one has to use their own judgement in matters of this kind. If they need help you may extend your services or else bring some tempting dish for the patient.

"Birth-control"—Can you tell me where I can obtain a copy of Margaret Sangers book on Birth Control, also the price? I enjoy the Business Farmer very much and think the woman's page alone worth the price of the paper..—A reader.

—"Women's Morality and Birth Control" is twenty cents and can be purchased thru the New York Women's Publishing Company, 104 5th Avenue, New York.

Has Any Reader Saved this Recipe?—The one which I write for is a recipe for preparing the tomatoes, a half bushel I believe, with salt, pepper, onion and other ingredients in the right proportion and the canned product is all ready to add to stock or milk for soup. It is just what I wanted but had finished my canning when it came in the paper and I gave the paper to someone, forgetting about the recipe. I do so much want to get it. I am quite sure it came in October, 1922, possibly the last number in September or the first one in November. If you cannot find it on file would you please send a call for it through the paper?—Mrs. Dan Cronin, Lapeer, Mich.

Has Any Reader this Poem?—I am writing to ask if you know the name of the author of an old poem called "The Country Schoolhouse." Our teacher says it was by Nathaniel Hawthorne, but we cannot find it in our library.—Helen E. McKay.

—I have looked all thru Hawthorne's works and cannot find a poem by this name. Mr. Hawthorne wrote prose and not poetry. I cannot find a poem entitled "The Country Schoolhouse". Maybe the title is incorrect.

Books Can Be Bought.—Can you obtain for me the following books of poems? "I'm Glad I Met You." and "When All Is Sun Within." These books used to be published by the Saalfield Publishing Company, of somewhere in Ohio. Also I would like to get one called "Heart Throbs". Thanking you in advance, I remain,—W. C. M.

—The Saalfield Publishing Company is located in Akron, Ohio. I would advise you writing them for these books. "Heart Throbs" can be purchased thru the Chapple Publishing Company, Boston, Mass.

Good for Colds.—Take one teaspoonful hoarhound to one-fourth teaspoonful of lobelia and make into a weak tea. This is an old-fashioned remedy and a sure cure.—A reader.

—if you are well bred!

A church should be entered with a most reverent feeling. The object of attending divine service is to improve the spiritual nature, and hence business and everything of a secular character should be left behind when you enter the church portals.

If a stranger, you will wait in the vestibule, until the arrival of the usher, who will conduct you to a seat.

RECIPES

Green Tomato Mince Meat.—One gallon tomatoes, chopped, one gallon apples, chopped, two packages of raisins, two and one-half pounds of brown sugar, one cup of vinegar, two tablespoonfuls cloves, two tablespoonfuls of cinnamon and two tablespoonfuls of salt. Will make two-gallon jar.—Mrs. Lucius Fuller, Fife Lake, Michigan.

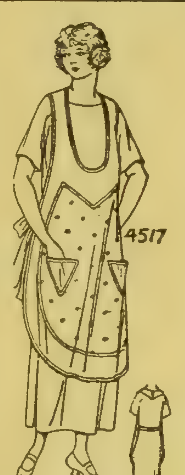
Chicago Muffins—Mix together one and one-half pints flour, half pint corn meal, two teaspoonfuls baking powder, one tablespoon sugar, one teaspoonful salt. Work in one tablespoonful butter, beat and add three eggs and one pint of milk and beat the whole quickly to a firm batter. Have the griddle hot and well

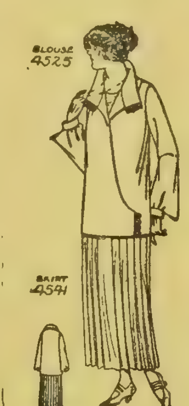
(Continued on page 22.)

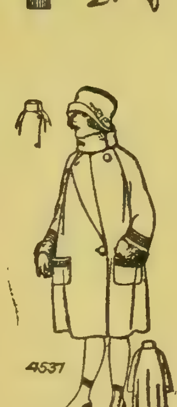
All the nutriment and flavor of the natural grain is possessed by **LILY WHITE FLOUR,** *"The Flour the Best Cooks Use,"* which also has the additional advantage of being given the extra touches of delicacy made possible by forty years' successful milling experience.

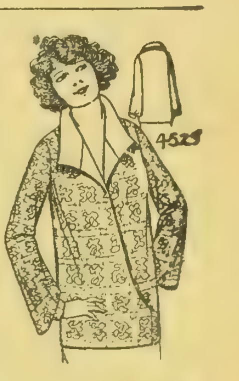
VALLEY CITY MILLING COMPANY - GRAND RAPIDS, MICHIGAN

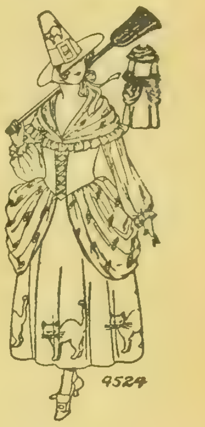
AIDS TO GOOD DRESSING

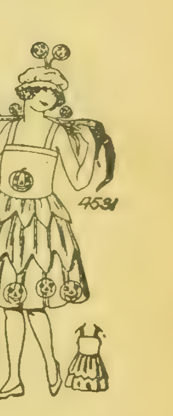












4519. A Stylish Frock.—Here is a youthful girlish design, that will lend itself readily to a development in satin, taffeta, crepe or kasha. The panel may be omitted. The Pattern is cut in 3 Sizes: 16, 18 and 20 years. An 18 year size requires 4¼ yards of 40 inch material. The width at the foot is 2¼ yards.

4525-4541. A Popular Style.—This attractive suit comprises Blouse 4525, and Bodice Skirt 4541. Twill, broadcloth or satin could be used for this style. One could have the blouse of figured or braided material. The Blouse Pattern is cut in 7 Sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. The skirt is cut in 4 Sizes: Small, 34-36; Medium, 38-40; Large, 42-44; Extra Large, 46-48 inches bust measure. To make the suit for a Medium size requires 8 yards of 36 inch material.

4537. A Jaunty Top Garment for the Growing Girl.—Velours, boliva, chinchilla, plush and other pile fabrics are attractive for this model. The fronts may be closed in double breasted style, or in revers effect as illustrated. Braid trimming and fur form a smart finish for this desirable model. The Pattern is cut in 4 Sizes: 8, 10, 12 and 14 years. A 10 year size requires 2⅜ yards of 54 inch material.

4525. One of the Season's Popular Styles.—The grace and comfort of this model has made it one of the "best sellers." It is a style that is good for flannel, velveteen, satin, silk and wash fabrics. In satin with loops in self or contrasting color it is smart with an accompanying sports skirt. The Pattern is cut in 7 Sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38 inch size requires 2⅝ yards of 40 inch material. To trim as illustrated with contrasting material will require ⅛ yard 32 inches wide.

3743. A Comfortable Set—Child's Coat and Cap.—Pattern 3743 is here illustrated. It is cut in 4 Sizes: 6 months, 1 year, 2, and 4 years. A 2 year size will require 2½ yards of 27 inch material for the coat and ¾ yard for the cap. Velvet, corduroy, serge, Bedford cord, silk, gabardine and broad cloth are appropriate for the coat and the same material may be used for the cap which is also nice for lawn, crepe, batiste, chiffon, faille and taffeta.

4517. A New and Pleasing Apron Style.—This model may be made wthout the facings. It is suitable for all apron material. Linene and percale are here featured. One could have chintz and sateen, or crepe in two colors, or, damask and organdy. The Pattern is cut in one size—Medium. To make as illustrated requires 1⅝ yard of plain, and the same amount of figured material.

4544. A Group of attractive Head Gear for Festive Occasions.—The styles here portrayed are readily developed in crepe paper, muslin, tarlatan, silk or satin, as the ocassion may require. The Pattern is cut in 3 Sizes: 22, 23, and 24 inches head size. It will require ⅞ yard for No. 1, ½ yard for No. 2, and ⅝ yard for No. 3 in 32 inch material for any size. To make crown of No. 1 of contrasting material requires ⅛ yard of 18 inches wide or wider.

4543. A Practical Corset Substitute.—Here is a splendid style for the growing girl and the young women of slender figure. It may be made of drill, jean, muslin, cambric, sateen or satin. Its lines are comfortable and admit of freedom in breathing and movement. The Pattern is cut in 4 Sizes: 12, 14, 16 and 18 years. A 16 year size requires 1¼ yards of 36 inch material. For gussets of elastic or webbing ¼ yard 9 inches wide or wider is required.

4532. A Practical Undergarment.—Cambric, nainsook, sateen, crepe and silk are suitable for this style. The Pattern provides for round neck outline or camisole top. Lace and insertion or embroidery will be suitable for decoration. The Pattern is cut in 5 Sizes: 6, 8, 10, 12 and 14 years. A 12 year size requires 2⅛ yards of 36 inch material.

4531. A Smart "Carnival or Masquerade Costume"—This may be inexpensively developed in crepe paper, which may be purchased already printed with various designs. The model would be nice in tarlatan, sateen, taffeta, or unfinished cambric. A decoration of gold or silver stars on tarlatan would be effective. The Pattern is cut in 5 Sizes: 6, 8, 10, 12 and 14 years. A 12 year size requires 4⅞ yards of 36 inch material. If upper flounce is omitted ½ yard less is required. The hat alone requires ½ yard.

4515. A Popular Apron Model.—Checked percale and linene are here combined. Crepe in two colors or gingham and chambray together would be pleasing. This is also a good model for sateen and chintz in combination or alone. If made of one material, piping or binding of figured or material in a contrasting color would be attractive. The Pattern is cut in 4 Sizes: Small, 34-36; Medium, 38-40; Large, 42-44; Extra Large, 46-48 inches bust measure. A medium size requires 4⅛ yards of 36 inch material. For waist portions, pockets and belt of contrasting material 1⅝ yards is required.

4524. A Very Attractive Costume for Masquerade, Fancy Dress Affairs, Etc.—This could be developed as "Mother Witch," "Mother Goose" or similar characters. It is also desirable as a Colonial Costume. Crepe paper would be the most inexpensive material; crepe and silk or cotton, cretonne or chintz and sateen, brocade and plain material, all are desirable combinations. The sleeve may be short and finished with a deep ruffle of lace or contrasting material; or they may be in peasant style, with gathers and heading at the wrist. The Hat may be in contrast to the costume or of self material. This Pattern is cut in 4 Sizes: Small, 34-46; Medium, 38-40; Large, 42-44; Extra Large, 46-48 inches bust measure. A Medium size requires 11⅛ yards 36 inches wide. For drapery and fichu of contrasting material 4½ yards 36 inches wide is required. Hat alone requires ⅝ yard. Without long sleeves ⅝ yard less is required.

The world's fastest shave

For Those Whiskers

For the outdoor man with a tough beard, the Valet AutoStrop Razor provides a shave that leaves the face clean, cool, and smooth. It is the only razor that sharpens its own blades.

Sold everywhere. $1.00 for complete outfit with strop and blades.

Valet AutoStrop Razor
Sharpens itself

AutoStrop Safety Razor Co., 667-1st Ave., New York

Free to Asthma and Hay Fever Sufferers

Free Trial of Method That Anyone Can Use Without Discomfort or Loss of Time.

We have a method for the control of Asthma, and we want you to try it at our expense. No matter whether your case is of long standing or recent development, whether it is present as Chronic Asthma or Hay Fever, you should send for a free trial of our method. No matter in what climate you live, no matter what your age or occupation, if you are troubled with Asthma or Hay Fever, our method should relieve you promptly.

We especially want to send it to those apparently hopeless cases, where all forms of inhalers, douches, opium preparations, fumes, "patent smokes," etc., have failed. We want to show everyone at our expense, that our method is designed to end all difficult breathing, all wheezing, and all those terrible parozysms.

This free offer is too important to neglect a single day. Write now and begin the method at once. Send no money. Simply mail coupon below. Do it Today —you even do not pay postage.

RECIPES

(Continued from page 21.)

greased to receive the muffin rings and cook to a nice brown.

Kisses—Two cupfuls powdered sugar, the whites of three eggs, two cupfuls of cocoanut, two tablespoonfuls baking powder; mix all together. Drop upon buttered paper and bake until slightly brown in a brisk oven.—Miss Burdena N., Cadillac, Michigan.

MY FAVORITE RECIPES

Pumpkin Pie.—One and one-half cups of steamed and strained pumpkin, two-thirds cup of brown sugar, one teaspoon cinnamon, one-half teaspoon ginger, one-half teaspoon salt, two eggs, one and one-half cups milk, one-half cup cream. Mix ingredients in order given and bake in one crust.

The Runner's Bible

Be ye kind one to another, tenderhearted, forgiving each other, even as God, also in Christ forgave you. (Eph. 4:32.)

If each one knew how much to his advantage, his profit, his happiness, how, upon this earth, it would be if he obeyed the commands of God, he would certainly strive with all of his power to obey. When we realize this, it is easy to forgive a brother his perverse actions, and to pity him because of his lack of understanding, helping him with love to understand.

WOMEN'S EXCHANGE

IF you have something to exchange, we will print it FREE under this heading providing: First—It appeals to women and is a bonifide exchanges, no cash involved. Second—It will go in three lines. Third—You are a paid-up subscriber to The Business Farmer and attach your address label from a recent issue to prove it. Exchange offers will be numbered and inserted in the order received as we have room. —MRS. ANNIE TAYLOR, Editor.

104—Do you know of good boy about 13 years old that wants good home?—Mrs. Myrta Reid, Muir, Mich., R. F. D.

105—If you have address of anyone wishing a housekeeper will you please send it to me?—Mrs. Sadie Fell, Lyons, Mich., R. 1.

To clean wall paper, make a paste of three cupfuls of flour, three tablespoonfuls of ammonia and one and one-half cupfuls of water. Roll it into balls and rub it over the paper. It will make it as clean as when new.

Embroidery Hoops and Cheesecloth for Cooling Dishes.—When putting puddings or other dishes out of doors to cool, use a cover made of embroidery hoops of proper size with cheesecloth put in as a piece of embroidery is. The contents will be safe from dust and at the same time the air can circulate freely. The hoops will keep the cloth from getting into the contents and also weigh just enough to keep it from blowing off.

STATE TO CONTINUE TO MAKE BINDER TWINE

(Continued from Page 3)

vised me of any change to be made nor any reduction in output and neither has the prison commission had any thought in their mind of closing this plant.

"I wish to state also that in the manufacture of twine for the 1924 harvest the raw materials are purchased in the months of May, June, July, August and September of 1923 as these are the buying months on raw materials. Our raw materials are purchased and practically delivered and a large tonnage is already made for the 1924 harvest, so there is certainly no closing of the binder twine plant this year.

"It is only propaganda that is being spread by our competitors in the manufacture of binder twine and this should be stopped. It is spread over the entire United States and if not stopped the state will suffer a big loss in the next year to come."

HOW MANY STUMPS ARE YOU PLOWING AROUND?

(Continued from page 1)

in buying new parts and equipment? How about the time and money lost while the team is laid up?"

"Not only that Bill—but do you know you're running a personal risk in addition to all this? I can take you to men who have ribs and jaws broken; teeth knocked out; shins cracked and who have suffered any number of different injuries from the sudden snapping of a sickle bar or a whiffle tree. Don't smile old boy—probably it hasn't happened to you yet, but it will, just as sure as you're standing there."

"Ye-e-es, but jes' th' same——" Bill offered feebly, but Banker Abbot wasn't through, by any means.

"Here's another thing. Look at that first stump. What's the meaning of that pile of stone around it? Think I don't know? You bet I do. It means that every time your plow or breaker turns up a stone, you pick it up and heave it at the nearest stump. In a couple of years time your field is dotted with 'em—tons of rock, thrown against the stumps, and left there. They not only spoil the appearance of the field, but they simply cut off some more tillable land and—worse than that—they provide a natural and ideal breeding place for rodents, grasshoppers, weeds and other pests.

"Yes, Bill, old boy—I'm the town banker, that's true. I'm not supposed to know much about farming —and to tell you the truth, I don't. I'm not talking farming, I'm talking MONEY, cold, hard, American dollars, and if you tell me I'm wrong I'll tell you which one of us is bluffing."

Bill shifted his chew; looked out across the field; thought long and hard—then turned to Banker Abbot and said:

"Mr. Abbot, I ain't the kind that gives up easy, but durn me and durn you too—that's the rightest kinda talk I've heard fer a long time." Banker Abbot climbed into his "flivver" and was heading up the lane when Bill called after him:

"By the way, Mr. Abbot—get me some figures on some good explosive.

THE THEORY AND THE HOUND

(Continued from page 8.)

at the animal, which halted, confidently, within a few feet of his chair.

Suddenly the sheriff, with a deep-mouthed oath, left his seat and bestowed upon the dog a vicious and heavy kick, with his ponderous shoe.

The hound, heart-broken, astonished, with flapping ears and incurved tail, uttered a piercing yelp of pain and surprise.

Reeves and the consul remained in their chairs, saying nothing, but astonished at the unexpected show if intolerance from the easy-going man from Chatham County.

But Morgan, with a suddenly purpling face, leaped to his feet and raised a threatening arm above the guest.

"You—brute!" he shouted, passionately; "why did you do that?"

Quickly the amenities returned, Plunkett muttered some indistinct apology and regained effort controlled his indignation and also returned to his chair.

And then Plunkett with the spring of a tiger, leaped around the corner of the table and snapped handcuffs on the paralyzed Morgan's wrists.

"Hound-lover and woman-killer!" he cried; "get ready to meet your God."

When Bridger had finished I asked him:

"Did he get the right man?"

"He did," said the Consul.

"And how did he know?" he inquired, being in a kind of bewilderment.

"When he put Morgan in the dory," answered Bridger, "the next day to take him aboard the Pajaro, this man Plunkett stopped to shake hands with me and I asked him the same question.

" 'Mr. Bridger,' said he, 'I'm a Kentuckian, and I've seen a great deal of both men and animals. And I never yet saw a man that was overfond of horses and dogs but what was cruel to women.' "

INVENTS NEW LAMP

Said to be Whiter and Cheaper Light than Electric or Gas.

WASHINGTON. Patents have been granted by the Government to a lighting engineer by the name of Johnson, on a new lamp for burning ordinary kerosene oil. This lamp produces a vapor from the oil which makes a blue flame that incandesces a mantel, and thus creates a very strong, soft, pure white light. As it consumes only 6% oil mixed with 94% air, it is exceedingly economical. Said to be very simple to operate, odorless, noisless, and dangerless.

F. H. Johnson, 609 W. Lake Street, Chicago, Ill. He also wants local distributors and has a very unique selling plan to offer agents. He is even offering to give one free to the first user in each locality who will help introduce this new light.—(Adv.)

OH, MONEY! MONEY!

(Continued from page 7.)

"Thank you," murmured Mr. Smith, stepping across the threshold.

Benny had already reached the door at the end of the hall. The woman began to tug at her apron strings.

"I hope you'll excuse my gingham apron, Mr.—er—Smith. Wasn't that the name?"

"Yes." The man bowed with a smile.

"I thought that was what Benny said. Well, as I was saying, I hope you'll excuse this apron." Her fingers were fumbling with the knot at the back. "I take it off, mostly, when the bell rings, evenings or afternoons; but I heard Benny, and I didn't suppose 't was anybody but him. There, that's better!" With a jerk she switched off the dark blue apron, hung it over her arm, and smoothed down the spotless white apron which had been beneath the blue. The next instant she hurried after Benny with a warning cry. "Careful,, child, careful! Oh, Benny, you're always in such a hurry!"

Benny, with a cheery "Come on!" had already banged open the door before him, and was reaching for the gas burner.

A moment later the feeble spark above had become a flaring sputter of flame.

"There, child, what did I tell you?" With a frown Mrs. Blaisdell reduced the flaring light to a moderate flame, and motioned Mr. Smith to a chair. Before she seated herself, however, she went back into the hall to lower the gas there.

During her momentary abseuce the man, Smith, looked about him, and as he looked he pulled at his collar. He felt suddenly a choking, suffocating sensation. He still had the curious feeling of trying to catch his breath when the woman came back and took the chair facing him. In a moment he knew why he had felt so suffocated—it was because that nowhere could he see an object that was not wholly or partially covered with some other object, or that was not serving as a cover itself.

The floor bore innumerable small rugs, one before each chair, each door and the fireplace. The chairs themselves and the sofa, were covered with gray linen slips, which, in turn, were protected by numerous squares of lace and worsted of generous size. The green silk spread on the piano was nearly hidden beneath a linen cover, and the table showed a succession of layers of silk, worsted and linen, topped by crocheted mats, on which rested several books with paper-enveloped covers. The chandelier, mirror, and picture frames gleamed dully from behind the mesh of pink mosquito netting. Even through the doorway into the hall might be seen the long, red-bordered white linen path that carried protection to the carpet beneath.

"I don't like gas myself." (With a start the man pulled himself together to listen to what the woman was saying.) "I think it's a foolish extravagance, when kerosene is so good and so cheap; but my husband will have it, and Millicent, too, in spite of anything I say—Millicent's my daughter. I tell 'em if we were rich, it would be different, of course. But this is neither here nor there, nor what you come to talk about! Now just what is it that you want, sir?"

"I want to board here, if I may."

"How long?"

"A year—two years, perhaps, if we are mutually satisfied."

"What do you do for a living?"

Smith coughed suddenly. Before he could catch his breath to answer Benny had jumped into the breach.

"He sounds something like a Congregationalist only he ain't that, Aunt Jane, and he ain't after money for missionaries, either."

Jane Blaisdell smiled at Benny indulgently. Then she sighed and shook her head.

"You know, Benny, very well, that nothing would suit Aunt Jane better than to give money to all the missionaries in the world, if she only had it to give!" She sighed again as she turned to Mr. Smith. "You're working for some church, then, I take it."

Mr. Smith gave a quick gesture of dissent.

"I am a genealogist, madam, in a small way. I am collecting data for a book on the Blaisdell family."

"Oh!" Mrs. Blaisdell frowned slightly. the look of cold disapproval came back to her eyes. "But who pays you? We couldn't take the book, I'm sure. We couldn't afford it."

"That would not be necessary, madam, I assure you," murmured Mr. Smith gravely.

"But how do you get money to live on? I mean, how am I to know that I'll get my pay?" she persisted. "Excuse me, but that kind of business doesn't sound very good-paying; and you see, I don't know you. And in these days—" An expressive pause finished her sentence.

Mr. Smith smiled.

"Quite right, madam. You are wise to be cautious. I had a letter of introduction to your brother from Mr. Robert Chalmers. I think he will vouch for me. Will that do?"

"Oh, that's all right, then. But that isn't saying how much you'll pay. Now, I think—"

MICHIGAN CROPS

CUTTING ALFALFA

We have a field of alfalfa one year old. We have made two cuttings this year and the third growth is about ten inches high and would like to know how late it would be advisable to make this cutting? Would it be proper to pasture this off? It is a very good stand of Grimm alfalfa.—G. H. R., Bay City, Mich.

—Your stand of alfalfa will be greatly benefited by not attempting to take a third cutting this year. A substantial top growth will aid in protecting the field during the winter and next year's crop should benefit to a more greater extent than the third cutting that could be secured this season.

After the third year alfalfa may be pastured to a considerable degree if judgment is used in not allowing stock to pasture too closely. Pasturing a stand of alfalfa in its second year is likely to do considerable damage.—J. F. Cox., Professor of Farm Crops, M. A. C.

LEARNING BY DEGREES

Foreman—"Yes, I'll give ye a job sweepin' an' keepin' the place clean."

"But I'm a college graduate."

"Well, then, maybe ye better start on somethin' simpler."—Life (New York).

8 to 12 hours a day for 8 years

'Z' engine

Says J. B. Snider, Senatobia, Miss. . . . "Eight years ago we installed a "Z" engine. It has run eight to twelve hours a day, every day of the year since and is still giving wonderful service. Our repair bill has been less than ten dollars. We would not exchange it for any other engine we have ever seen or heard of."

Over 350,000 users have approved the "Z" Engine. No matter what your power requirements, there is a "Z" Engine to exactly suit your needs. Over 5,000 dealers carry these engines in stock and will save you money on freight.

ARMY ALL WOOL HOSE

These socks are unequalled for wear and comfort. Genuine goats hair army issue. 75c Pair value.

3 pair for 99¢ plus postage

FIELD SHOES $2.97 plus postage

Sizes 9 to 12

Guaranteed to wear one year. Made for U. S. Army, of best leather soft finish inside. Three soles and steel heel plates. Cut your shoe cost by trying to wear these out, strongest shoe made.

O.D. WOOL BLOUSES $1.49

Made of O. D. Wool serge and melton with four pockets neatly tailored. U. S. Army issue slightly used but in perfect condition. Sizes 32 to 38 only.............$1.49 Plus Postage

NEW O. D. WOOL BLOUSE

Same as described above but these are brand new. Sizes 34 to 42...........$2.79 Plus Postage

ALL WOOL TROUSERS $2.88

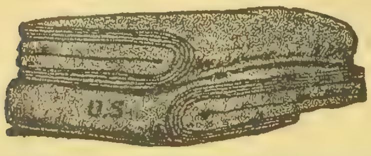
Genuine Army O. D. Trousers

Well tailored of 14 oz. O. D. serge and melton materials with 4 heavy drill pockets, double stitched throughout. Sizes 30 to 42 waist. Only ....$2.88 Plus Postage.

O.D. Wool Breeches $1.99

O. D. Wool serge and melton material, double seat which gives double wear. Army Breeches slightly used but like new. Sizes 28 to 36. ....$1.99 Plus Postage.

HEAVY O.D. BLANKETS $2.95 plus postage



Pure wool genuine army blankets made of closely woven material. Will outwear three ordinary blankets, also double the warmth. Full bed size 66 x 84 inches.

Brand New O. D. Wool Breeches as above description.........$3.59 Plus Postage.

New Khaki Cotton Breeches neatly tailored, made to wear, strong and durable, all sizes. $1.69 Plus Postage

U·S·ARMY WOOL UNDERWEAR 89¢ per garment

This underwear is made of the finest closely woven material as pictured. Cannot be duplicated for $1.50 a garment. Our low price 89c per garment, all sizes Plus Postage.

O·D·WOOL SLIP OVER SWEATER $1.15

An appealing real value all wool sleeveless O. D. slip over sweater, medium weight. All sizes. $1.15 Plus Postage

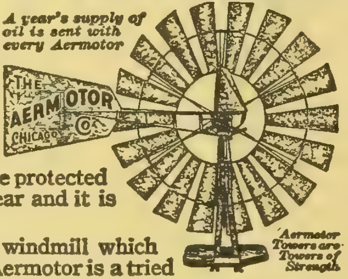
BEFORE YOU BUY A WINDMILL

Carefully consider the following facts: *A year's supply of oil is sent with every Aermotor*



THE AERMOTOR CO. CHICAGO
Aermotor Towers are Towers of Strength

The Auto-oiled Aermotor is the Genuiue Self-oiling Windmill, with every moving part fully and constantly oiled.

The Auto-oiled Aermotor has behind it 8 years of wonderful success. It is not an experiment. The double gears run in oil in a tightly enclosed gear case. They are always flooded with oil and are protected from dust and sleet. Oil an Aermotor once a year and it is always oiled. It never makes a squeak.

You do not have to try an experiment to get a windmill which will run a year with one oiling. The Auto-oiled Aermotor is a tried and perfected machine. Our large factory and our superior equipment enable us to produce economically and accurately. Every purchaser of an Aermotor gets the benefit from quantity production. The Auto-oiled Aermotor is so thoroughly oiled that it runs in the lightest breeze. It gives more service for the money invested than any other piece of machinery on the farm. The Aermotor is made by a responsible company which has been specializing in steel windmills for more than 30 years.

FARM MECHANICS

BLASTING OUT STUMPS

WITH the possible exception of blasting ditches, more dynamite is used for clearing land of stumps than for any other agricultural use. In the Pacific Northwest and in the Northern Middle West, where valuable timber land has been cut over leaving a fertile soil, dynamite by the carload is used by farmers and professional blasters for blowing out the stumps so that the land can be tilled and put to valuable uses.

In some of the Southern states dynamite is used by the carload for blowing out stumps for another purpose; viz.: to recover the turpentine that is in these stumps, the land on which the stumps are growing being very sandy and it is not of great value from a farming standpoint. So, from the blasting angle there are two ways of blowing stumps—for the sake of the land and for the sake of the wood in the stump. This article should be considered as applying only to the first named, as stumping for turpentine is done by large and well financed companies with a full equipment for doing the work in a most economical manner.

Outside of the cut-over timber lands, there are moderate sized going farms all over the country that have a number of stumps which are crying to be removed, so the subject of blasting stumps is one which should interest a large number of farm owners.

Paste this in your hat: Every stump is a problem in itself. It is almost impossible to lay down any rule for blasting which applies to the same stumps on the same farm, much less all stumps in all parts of the country.

The age of the stump, that is, the number of years since it was cut, the kind of the stump, whether oak, pine, maple or whatever; the kind of soil in which it is rooted, the ground conditions at the time of blasting, i. e., whether the soil is wet or dry, the topography of the ground, the roots' system and the equipment the farmer has; all must be taken into consideration when devising the best and most economical method of removing stumps.

The most favorable conditions are when the stump is old and rotten, the soil resistant, fairly wet, where there are no tap roots, on level land and where heavy tractors are available for helping in the operation.

Most unfavorable from a blasting standpoint are those stumps which have only recently been cut from deeply rooted trees in light, dry sandy soil on rolling ground and where no power equipment is available for helping the dynamite.

For this reason, it is impossible to get up any table which would be of sufficient accuracy to be a real help to stump blasters to show the charge of dynamite per foot diameter of stump.

For instance, a two foot, twenty year old maple stump in a heavy loam soil on level ground might easily be blasted out with one pound of 20 per cent low freezing Amonia dynamite, whereas a two foot, side hill hemlock, such as are found in the state of Washington, recently cut, might easily require sixty times as much. I grant that this is an extreme case but it illustrates the point.

The following table gives a fair idea for the beginner. It is based on old but solid stumps in fairly heavy soil on level land:

Diameter of stump in inches	No. of cartridges of Dynamite
12	3
18	4
24	6
30	7
36	8
42	12
48	15

There are two general systems of blasting stumps, one in which the least possible quantity of dynamite is used for loosening up the soil, cracking the stump, but without attempting to blow it and its roots all out of the ground. This necessitates the use of a team of horses, mules or oxen, or a tractor, after the blast, for pulling out the loosened pieces of stump either with or without the aid of a stump puller. Where teams or tractors or a stump puller are available and where labor is not expensive, and where the farmer himself has plenty of time, this method is probably the cheaper. A small charge of dynamite is placed high up, as close under the stump as possible; the effect of the charge being to blow perhaps the center part of the stump out, leaving the outside with the roots attached to, but loosened somewhat from, the soil.

The other method is to place the dynamite well below the bottom of the stump in such a way that the entire stump, roots and all are blown out at once. The only labor required in this, outside of putting down the hole and firing the charge, is to fill up the hole and pile up the fragments of roots where they can be dried and subsequently burned. This is the cheapest method where power in the shape of team or tractor is not available, but requires much larger charges of dynamite.

The relative advantages of these methods must be carefully considered by the farmer when he starts out to blast out his stumps, as the method which is most expensive for one, would be cheaper for another.

A wealthy farmer with all kinds of machinery and help would probably select the cracking method as it is called, while one not so fortunately equipped would find it much cheaper to let the dynamite do the work than to invest in stump pullers, tractors and teams.—Arthur La Motte, E. I. du Pont de Nemours & Company.

BUSHEL OF WHEAT WORTH DAY'S LABOR

THE old idea that a bushel of wheat should be worth as much as a day of labor had its origin back in the days when a great deal more labor was required to produce wheat then is required at the present time.

An accurate estimate of the labor necessary for seeding, harvesting and threshing wheat about the year 1830 indicates that about three hours of man labor were required per bushel of grain produced. Today, with modern machines for seeding, harvesting, and threshing wheat only about 30 minutes per bushel are required under average conditions. Where large acreages are handled with gang plows, tractors and combine harvesters, the human labor represented by a bushel of wheat is probably reduced to 10 minutes.

At present a bushel of wheat will buy only two or three hours of common or only about one hour of skilled labor. Is it not possible that the very efficiency with which wheat is now produced may account in large measure for its present low purchasing power? Land is a much greater factor in production today than it was in 1830, otherwise the price of wheat would undoubtedly be still lower.

FREE BOOK ABOUT CANCER

The Indianapolis Cancer Hospital, Indianapolis, Indiana, has published a booklet which gives interesting facts about the cause of Cancer, also tells what to do for pain, bleeding, odor, etc. A valuable guide in the management of any case. Write for it today, mentioning this paper. (Adv.)

STATEMENT OF THE OWNERSHIP, MANAGEMENT, CIRCULATION, ETC., REQUIRED BY THE ACT OF CONGRESS OF AUGUST 24, 1912, of The Michigan Business Farmer, published biweekly at Mount Clemens, Mich., for October 1, 1923. 1. My commission expires March 5, 1926.

FRUIT AND ORCHARD

Edited by FRANK D. WELLS

HOW PEACH TREES ARE STARTED

Will you tell the best way to handle peach pits for growing young trees? Also time of budding, and what kind of buds used?—F. H. M., Michigan.

—In the propagation of peach trees the first step is the securing of the seeds and their storage in the manner that will give the best germination. Nurserymen obtain their pits either from canning factories or from regions in which peaches grow wild, such as the mountain sections of North Carolina. Salway and Morris White are two varieties the seeds of which are especially esteemed for planting.

Regardless of from where the pits come, they should be treated in the same way. A safe rule to follow is to approximate nature's method of handling as closely as possible. Consequently the pits should be kept moist and put in a place where they will be kept at a low temperature. Just why this is so is not yet definitely determined but it appears that the seeds of the peach, unlike those of corn and wheat, must go though a rest period, or after-ripening process, before they will germinate. These processes go on best under the conditions specified, although it is still held by some that pits need be frozen to crack them.

No matter what the explanation of the result, the seeds are handled in one of two ways, either planted out of doors in the fall or "stratified." If they are planted, they are covered to a depth of 4 to 6 in. If they are stratified, they are best placed in a box in alternate layers of soil and pits, covering the pits an inch or two, hence the word "stratify" or "stratification." Leaves or damp moss may be used instead of soil, and the whole should be placed out of doors, or better, buried shallowly.

In the spring of the year before the seeds have germinated they are removed from their place of stratification and planted. Most of the pits will have cracked; in case they have not they may be cracked carefully by hand. By the first of July the peach seedlings that have grown up from the seed will be big enough to bud, probably 24 in. or more in heighth. The exact time is not overly important, for the peach can be budded over a number of weeks. The expert budder in the nursery begins his work so that he can complete the block of seedlings before they have set their bark; the longer the job, the earlier he begins and the later he works. If the bark will not slip, it is almost impossible to set the bud. A safe rule is to watch the growth of the seedlings; as long as they are growing the bark will slip. On the other hand, they must not be budded too early or the flow of sap will "flood" the bud and "drown" it. Most budding is done some time in August or early September.

Buds are taken from the current season's growth. Now it must be remembered that the peach has two kinds of buds — flower buds and leaf buds. On a fruiting tree the buds are normally in threes, a central leaf bud flanked on either side by a fruit bud. It blossoms, and that is the end. A leaf bud produces a shoot, which is what we want for our new tree.

In the nursery there is little trouble from this point, because the bud wood is taken from the one and two-year-old trees in the nursery row where practically all the buds are leaf buds. But in propagating from a fruiting tree expert nurserymen pass buds that are in threes and select rather the single buds from water sprouts or from other vigorous growing shoots. These are for the most part leaf buds.

Usually there will be 10 or a dozen buds on a "bud stick." The leaves are removed, leaving a bit of the leaf petiole by which to handle th bud. The two or three buds at the base of the stick are not used, for they are apt to lie dormant. Budding is accomplished by making a light "T" shape cut in the bark an inch or two above the crown and slipping a bud under it, on the north side of the tree if possible. The bud is then tied in place with raffia or coarse twine until it has set, which will be in 10 days or two weeks, when the string is cut. The new bud will lie dormant the remainder of the season. but the next year the seedling top is cut away and the bud will make a strong, vigorous growth—occasionally as much as 6 ft.—H. B. T.

NOTES AND COMMENTS

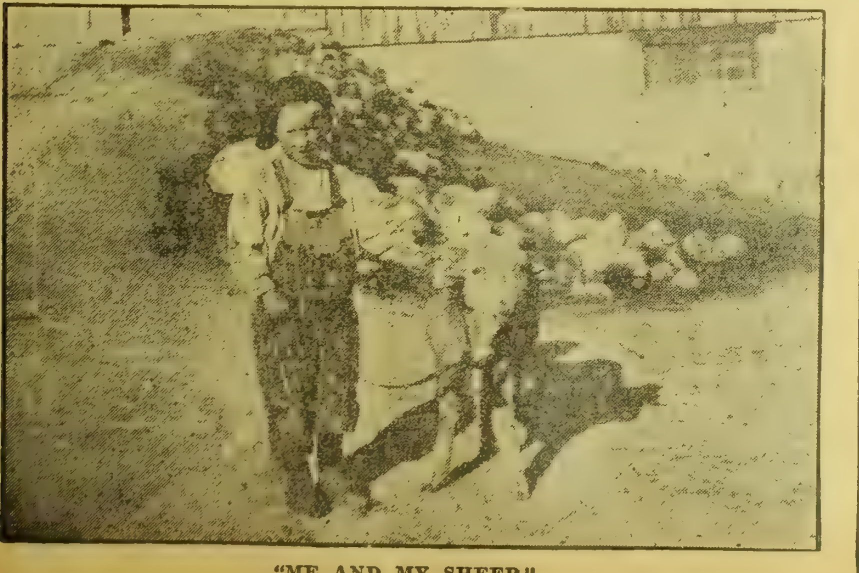
Red raspberry plants may be set in the fall if they can be moved with soil covering the roots. Some growers prefer this time to the spring.

It was formerly the practice to plant a strawberry bed in the fall. This may do if there is moisture enough. However, most growers prefer the spring to taking chances with fall planting.

If the raspberries are cleared of old bearing wood many insects will be destroyed and diseases kept in check. But then the old canes catch leaves and hold snow about the plants, so helping to protect them. In some cases this is worth while, but hardly advisable now, with Leaf Curl, Blue Stem, and other diseases threatening the berries.

It has not been many years since the Himalaya berry was introduced with great claims for merit. It was said to be thrifty, hardy, and of excellent quality and a heavy yielder. A year or two proved that it was tender, a shy bearer, though abundant enough for the quality which was poor. It was, however, thrifty, as the poor fellow who planted it found to his sorrow, tender it might be at the top, but tough enough at the root to make it a nuisance, for it was wonderfully luxuriant. It has gone its way, like many another of its kind and is now well nigh forgotten.

The J. H. Hale peach is one of the largest grown, as well as one of the firmest and best shippers. In flavor it is second rate, but better than the Elberta, which is not much to its credit, but it has one weakness alongside of the large fruit it produces some of the littlest, scrawniest pits, covered with scarcely more than fuzz and ripening the last of October, utterly worthless. The older the tree gets the worse it behaves, otherwise than this the J. H. Hale is a valuable variety.



"ME AND MY SHEEP."

GREAT FALL SALE!
Building Material and Supplies at Bigger Savings than Ever—

Buy now! Save!
Thousands of genuine bargains like these are now ready for you in this great fall sale. America's choicest stocks of high-grade, fresh, new materials embracing every needed article to build, improve and equip the home and farm. These amazingly low prices are the natural result of carefully planned purchases, which were made by us just at the right time to secure every possible buying advantage. And our savings are your savings. Mail coupon now, or better — order direct from this announcement.
HARRIS BROTHERS COMPANY

Barbed Wire Snap!! $1.40 REEL
Bought by us at less than cost of manufacturing. Made under rigid inspection. 12 gauge open hearth steel wire with 4 point barbs, 5/8 in. long spaced 3 in. apart. 58 pound reels contain 700 feet; 112 lb. reels, 1,400 ft. Coated with special formula weather resisting paint.
No. SA-200, Price, per reel $1.40
112 lb. reels $2.75

Poultry Netting
No. SA-300 Made of 19 gauge Bessemer steel wire heavily galvanized; 2 inch hexagon mesh in two heights. Bales contain 150 lineal feet. 36 inches high, per bale $2.40
72 inches high, per bale $4.75

HogFence
No. SA-6, Made of No. 11 top wire and No. 14 intermediate wire and stay wires. Spaced 6 in. apart, 3, 3½, 4, 4½, 5½ and 6 ins., spaced from bottom upwards. Barbed bottom.
26 in. high, per rod 24c
32 in. high, per rod 30c

Bathroom Outfit
Consists of white porcelain enameled bathtub, 5 ft. long, deep apron lavatory and closet outfit with white earthenware bowl and highly finished golden oak, copper lined tank with seat and cover to match. Nickel plated faucets, bath cock and supply pipes.
No. SA-166, complete $68.00

One-Piece Sink
No. SA-10, White porcelain enameled roll rim kitchen sinks, furnished complete with two faucets and trap.
Size 18 in. x 24 in. $12.00
Size 18 in. x 30 in. $13.00
Size 20 in. x 30 in. $14.00
White porcelain enameled drain board, 24 in. long, each . . . $5.50

Mixed Nails $2.25 100 lbs.
No. SA-30. New wire nails. All sizes from 3 to 40d. Handy 100 lb. keg $2.25

Hog Troughs
No. SA-7. Strong non-tip feed troughs for hogs, sheep and cattle. Heavy steel, 12 in. wide, 5 feet long, each $1.95
8 feet long $2.95
10 feet long $3.95

Pipe - Fittings
No. SA-20. Random lengths with couplings, all sizes. 1 inch pipe, per foot 5c
Big stock of pipe, fittings, and valves

Mixed Bolts $2.75 50 lbs.
No. SA-184. Mixed bolts. Sizes up to ⅞ in. diameter; 8 in. long. 50 lb. keg, $2.75.

House Paint $1.85 per Gallon
No. SA-12. Best formula won't peel, blister, fade or rub off. White, black and 26 non-fading colors. Put up in containers of 1 to 50 gals. Per gal. $1.85.

Barn Paint
No. SA-13. Guaranteed barn or garage paint. Red, yellow or maroon. Per gallon $1.35
Green, slate or red, Gal. $1.60

Heating Plants
Hot Water, Steam and Warm Air!
Don't make a decision until you get our complete proposition. Finest heating supplies including round and square boilers, radiators, pipe, valves, fittings, warm air furnaces and pipeless furnaces.
Experts to Help You
Send a rough sketch of your building showing size of rooms, size and location of doors and windows for low estimate.

Gas Engine $45
No. SA-9. Monarch engine with Webster oscillating magneto. Develops full rated horse power. Sure starter and steady worker under all conditions. 1¾ H. P. $45.00
Other sizes, gasoline and kerosene, priced low.

Corn Shellers
No. 4 $49
Watts Genuine
Buy a genuine Watts corn sheller, the world's best, at big reduced prices now. Most popular sizes.
No. SA-1. Capacity 50-75 bushels per hour with 3 H. P. Engine $22.50
No. SA-4. Watts corn sheller with cleaning system, cob stacker, and grain elevator. 75-125 bushels per hour with 4-6 H. P. engine $49.00
No. SA-4X. Watts corn sheller with cleaning system, cob stacker, grain elevator and automatic feeder. 75-125 bu. per hr. 4-6 H. P. engine . . $65.00

Roofing Snaps
Galvanized Sheets Per 100 Square Feet . $3.00
No. SA-21. Heavy weight overhauled galvanized roofing or siding sheets, 2½ inch corrugated. Good condition. Painted red. Per square of 100 square feet $3.00
No. SA22. Medium weight overhauled, painted, 2½ in. corrugated roofing and siding sheets, per square of 100 square feet $2.50
No. SA-23. New painted 2½ in. corrugated sheets, heavy weight, 22 gauge, wonderful value, per square of 100 square feet $3.50

Galvanized Wire
Smooth galvanized 9-gauge wire suitable for fences, stay wires, grape vines and all general purposes about the home and farm. Rolls weigh about 100 pounds.
No. SA-100. Price per 100 lbs. $3.25

Roll Roofing
No. SA-24. New red or grey-green crushed slate coated roofing, 85 to 95 lbs. stock on heavy felt. Per roll of 108 square feet with trimmings $1.60
No. SA-25. Smooth surfaced roofing, well saturated, heavy weight, per roll of 108 square feet, with trimmings $1.50

Millwork from America's Greatest Stocks!
Storm Sash $2.77 No. SA-89. Two-light, 1 1-8 in. thick, glazed, 26 x 28 inch glass. Outside meas. 2 ft. 6 in. x 5 ft. 3 1-2 in. clear white pine.
Fine Door $4.75 No SA-325. Panelled door, size 2 ft. 6 in. x 6 ft. 6 in., 1 3-8 in. thick, Clear fir. Each $4.75

Stamp Out ABORTION and Bring Profits Back

Don't let Abortion kill your calves and eat up your profits. Stop it with Bowman's Remedy.

The Bowman Remedy has been a success wherever used. It cures Contagious Abortion in cattle and hogs, and puts an end to attendant ills, such as retained placenta, white scours and calf pneumonia. In a majority of cases, it has cured sterility caused by Abortion.

Backed By a Record of Positive Results

The success of the Bowman Remedy is not mere chance. It has stamped out all Abortion from the herds of hundreds of breeders—men who had tried everything else they knew but with no success

Write me today

ERICK BOWMAN
Discoverer Bowman's Remedy

You can't afford to gamble on future immunity. Each Abortion means more loss. Investigate the Bowman Remedy at once. Get full information and names of prominent breeders who have used it. Send me a postal today

Guarantee

I guarantee to bring every cow or sow that is a breeder back to normal, healthy delivery if treated with Bowman's Remedy according to directions. In exceptional cases, where additional treatments are needed, I will furnish these free, except for shipping cost. For every animal Bowman's Remedy does not cure of Contagious Abortion, I will refund the cost of treatment.

ANGUS

WE HAVE SOME FINE YOUNG ANGUS BULLS from International Grand Champion Stock at reasonable prices. E. H. KERR & CO., Addison, Mich.

DAIRY and LIVESTOCK

HANDLING DAIRY COWS IN WINTER

THE cow that gives a full pail of milk, then kicks the bucket toward the other side of the barn, is a nuisance; but she is no more detrimental to profits than the cow that consumes a full ration, and refuses to pay for her keep. This is why dairymen are industriously weeding boarder cows from their herds. It is also true that general farmers, who keep cows as a side line, are showing renewed interest in improving their herds. This is a favorable indication of better dairy profits in the future. Each boarder cow that is removed to her proper sphere becomes an asset instead of a liability. There are few farm undertakings which pay better returns than the task of testing cows regularly, and working persistently to improve the herd.

It is more important to weed out boarder cows today than was the case in past years. Dairying, like other major undertakings, is becoming a specialized business, which means that hit or miss methods cannot be followed with any assurance of success.

Real Producers Wanted

A cow is no longer just a cow. She is either a beef, dairy or dual purpose type, or merely a scrub. And where dairying is the issue, real dairy cows are essential to success. This is especially true during the autumn and winter months when expensive feeds make up the ration. Exhaustive experiments have been conducted in order to determine whether scrub cows will pay for their feed, and leave absolutely nothing in the form of profit to pay for the labor of feeding and caring for them.

This is why dairymen and general farmers are anxious to eliminate boarder cows from their herds. The only way to proceed with any assurance of success is to test the cows systematically (keeping a record of each cow's production), then move the boarders to the stockers' corral, or to market. Some cows don't give a profitable flow of milk because the nourishment from their ration goes into beef. Other cows will eat greedily, give little milk, and still refuse to fatten. Where the nourishment goes is a mystery. But there is no mystery connected with the fate of such a cow when she is owned by a man who is putting his dairy business on a profitable basis.

Get Rid of "Boarders"

When cows are running on pasture, and getting their fill of cheap, succulent feed, the presence of boarders isn't so serious a menace to profits; but when the winter feeding season approaches, every boarder in the herd should be removed as speedily as possible. Last winter a farmer was milking twenty cows, and stated that he wasn't making any money. Later on his attention was directed to five boarder cows in the herd. He marketed these animals, and found his expense for feeding the herd showed a substantial reduction, while his net profit showed a proportionate increase. Today he is testing his cows regularly.

After the boarders are eliminated, the value of a well balanced ration becomes apparent. Where there are any number of cows in the herd, the best of rations will not balance the inevitable loss due to the presence of boarders.

On the farm where cows are kept as a side line it is desirable to feed home grown products as far as possible. This plan furnishes a market for surplus grain and hay, and reduces the cash outlay for feed. Silage and legume hay form an effective combination for dairy cows, and the growing popularity of silos is one of the most favorable indications for better profits from dairying.

Silage Useful Feed

There are several reasons why silage is the greatest "all around" feed for dairy cows. Its succulent nature is decidedly beneficial to the production of milk, and at the same time is better than "patent medicine" for toning up the cow's digestive tract, and her entire system as well. Those who have fed dairy cows without including succulent feed in the ration appreciate the difficulty of keeping up the milk flow, without excessive outlay for expensive feed. Silage is not only an economical feed; but also is unsurpassed for milk production.

Providing mouldy or spoiled silage is kept from the cows, there is no danger of indigestion. They may not eat silage freely at first; but will soon acquire a taste for it, and will be silage enthusiasts throughout the winter.

"The first year I fed silage to dairy cows I made the mistake of not balancing the ration properly," explained a farmer. "I believed silage could be fed alone with good results; but later experience showed me the necessity of combining it with protein feeds so the ration would be balanced. I fill my silo with corn or sorghum crops, which make a succulent feed, rich in carbohydrates, and by including alfalfa hay in the ration, I secure heavy milk production. I find any legume hay is suitable for balancing the silage ration. It is highly important to feed an abundance of rough feed. Millet hay, stover, fodder, etc., makes good roughness for milk cows. The animals appreciate a variety of feed. Giving a variety of rough feeds is especially important where silage is not included in the ration.

"I grind corn, before mixing the grain rotation for cows. I used to feed whole grain; but too much of it was wasted, and the cows didn't thrive as they do on a ration of ground grain. It's much easier to feed a balanced ration when the grain is ground. Bran and linseed meal are excellent for balancing the grain ration. Linseed meal is one of the best conditioners I have used. It is also a valuable aid for increasing and maintaining the milk flow.

"Reduce feeding costs by providing adequate shelter for my cows. A dry, well bedded stall assists a cow to produce a profitable milk flow. When cows stand out in a cold rain, and lack a dry place to sleep, the best ration obtainable won't counteract the detrimental effects of exposure."—Farm and Ranch.

EATON DAIRY FARMERS MAKE PROGRESS

DAIRY progress is on a firm foundation in Eaton county. The county will soon have three cow testing associations, which will weed out the slackers and spot the high producers. The North Eaton association is to be divided into two organizations. One of these will function around Milliken, Vermontville and Belleville, while the other will operate in the townships of Oneida, Delta or Windsor.

In addition to the cow testing association, the bovine tuberculosis campaign now being launched will eliminate the diseased cattle. With the low producers and diseased cattle eliminated, Eaton county will be a long way on the road toward better dairying.

VETERINARY DEPARTMENT

HORSE OVERHEATED

I have a horse that was overheated. She was a four years old colt when broke and worked on a farm that summer and last spring about six weeks, but as to whether the mare was hurt last spring or this summer do not know. But, after working six weeks this spring, the work being completed, she was turned into the pasture field and let run till the second week in July. She was then taken from the field and put on a gravel haul on the road. All went fine for a week and the team sweat good but a week to the day they quit sweating and went panting. I fed her soda, salts and saltpeter and she quit it for a while but when it is a hot day she will pant a lot.—J. A., Cass City, Mich.

—This is a condition that usually disappears after the horse gets to be five or six years of age. There is not much that you can do in the way of giving medicine to remedy this condition. Whenever the mare gets to panting badly, go slow with

Aspirin

Say "Bayer" and Insist!

BAYER

her and do not overdo her or it might result in heat stroke.

The following has been used with apparent success in some cases: Potassium acetate, two ounces; milk sugar, four ounces; powdered resin, four ounces; and powdered juniper berries, four ounces. Mix the above and give one ounce of the mixture three times daily.—John P. Hutton, Associate Prof., Dept. Surg. and Med., M. A. C.

GROW NEW HOOF ON HORSE

Will you kindly give me a remedy to grow a new hoof on a horse. He had a stone bruise a year ago and it stopped the growth of the hoof in one place. Now he cannot be shoed until a new hoof can be grown.—C. V. D., Auburn, Mich.

—Rapidity of the growth of the hoof wall varies, amounting in a month to from one-sixth to one-half of an inch. The average monthly growth in both shod and unshod horses of both sexes, is about one-third of an inch.

The three principal things necessary to stimulate the growth of horn are moisture, cleanliness and exercise. I would suggest that you clean out the hoof once daily and sponge it with cold water. If the hoof is sponged once daily it will absorb enough moisture to keep it elastic. The hoof should also be dressed about every four weeks to keep it level. It requires from nine months to one year for complete hoof renewal in the horse. No hoof ointment has any direct influence upon the growth of horn.—John P. Hutton, Associate Prof., Med. and Surg., M. A. C.

THE EXPERIENCE POOL

Bring your everyday problems in and get the experience of other farmers. Questions addressed to this department are published here and answered by you, our readers, who are graduates of the School of Hard Knocks and who have their diplomas from the College of Experience. If you don't want our editor's advice or an expert's advice, but just plain, everyday business farmers' advice, send in your question here. We will publish one each week. If you can answer the other fellow's question, please do so, he may answer one of yours some day! Address Experience Pool, care The Business Farmer, Mt. Clemens, Mich.

CURE FOR COW THAT LOSES MILK

IN your issue of August 18th I saw where Mrs. L. K., Bad Axe, had trouble with cow losing her milk. Would say if they would milk the cow three times a day and get a box of Kow Kare at the drug store, price 65c, and give according to directions it is the best thing to do that I know of. We have tried it and it will most always effect a cure, anyhow it is worth trying out, if it is a good cow and they most always are when they lose their milk.—C. N. L., Avoca, Mich.

WOULD STOP LOSS OF MILK

I would say to Mrs. L. K., of Bad Axe, if she would soak the cow's teats after milking in strong alum water I think it would be a great benefit. If she wants to learn more about it write me a private letter and I will give our experience.—Mrs. H. T. H., Remus, Mich.

GOING RABBIT HUNTING?

ON October 15 the rabbit, the snow-shoe rabbit, and the fox squirrel hunting season will open. Ardent hunters might well persue the regulations of the State Department of Conservation regarding the hunting of these animals: "It is unlawful to use ferrets or other rodents in hunting. (Farmers and fruit growers may use ferrets to hunt rabbits on their own lands on permit issued by the Director of Conservation). It is unlawful to sell snow-shoe rabbits—commonly called jack rabbits. It is unlawful for residents to ship game animals to any part thereof out of the state.

A doctor, an architect and a bolshevik were discussing as to the priority of their occupations.

The doctor said:

"When Adam's side was opened and a rib removed to make a woman, there was a surgical operation—medicine was the oldest trade."

The architect said:

"Yes, but when the earth was made, out of chaos, there was a building process, the use of materials according to a plan. The architect's is still older."

The bolshevik smiled and said:

"But who supplied the choas?"—Exchange via The Standard.

Some fellows never think they are having a good time unless they do something they shouldn't.

NEW PROCESS STOPS RUST ON FENCE

Farmers Saved Millions of Dollars

Rust and corrosion eat up and destroy many thousands of rods of wire fence every year. The zinc coating on ordinary fence doesn't last as long as it really should,—soon cracks or peels off, letting the fence go to rust and ruin. The makers of SQUARE DEAL FENCE have now perfected a new process for treating fence wire which is guaranteed to resist rust,—which will not crack or peel and makes fence wire last much longer than before.

This new process is called **"GALVANNEALING"** and it means just what it says. Square Deal **"GALVANNEALED"** wire passes through a gigantic heat treating furnace where the zinc is literally welded right on to the wire, producing a tough, elastic rust resisting covering that sticks as tight as the skin on your fingers and will not clip or peel off. Our new fence catalog explains all about this new **"GALVANNEALING"** process and also illustrates the famous line of Square Deal Fence with its picket-like, one-piece stay wires and big, sturdy, crimped strand wires which keep it tight and trim the whole year round,—known by "The Knot That Never Slips."

FREE We want to send you a copy of this catalog telling about this wonderful new process, FREE and postpaid to every farm owner. We will also include FREE a copy of Ropps New Calculator (worth 50c) the handy little book that saves figuring, tells value of crops, interest, weights, measures, sizes of barns, bins and answers thousands of farm questions. Write today for Free copies of these two valuable books. **Keystone Steel & Wire Co., 4824 Industrial Street, Peoria, Illinois.**—(Adv.)

DEVELOPING POULTRY INDUSDUSTRY ALONG SAFE LINES

PROGRESS in poultry breeding has suffered somewhat from the tendency on the part of utility and standardbred breeders to develop their stocks along somewhat different lines. Many utility breeders, in their efforts to develop heavy-laying strains, have overlooked standardbred qualities and frequently their stocks have suffered through deterioration in constitutional vigor. The standardbred breeder, on the other hand, sometimes has laid undue emphasis on standard points of minor importance irrespective of the development of the egg-laying proclivities of his stock.

The danger to the poultry industry because of the inclination toward two extremes is noted by Dr. Morley A. Jull, a new man in charge of poultry investigations of the United States Department of Agriculture. So far as the great majority of standardbred and utility breders are concerned, Dr. Jull is of the opinion that everyone should agree that the maintenance of standardbred qualities is fundamentally important. One might really say that the poultry industry of the United States is founded on the standardbred industry. Not only should practically every poultry raiser keep purebred poultry, but his stock should signify something more. It should signify standard quality to a fairly high degree, and should be free from the more important disqualifications. It is desirable above all else, for the best development of the industry, to maintain the more significant standard qualities of the breeds , even where egg production is the principal object in view.

Extreme Care Is Necessary

It is obvious, as Dr. Jull points out, that when one is breeding for standard points and egg production at the same time progress must be relatively slower than where only a single objective is sought. That perhaps is the crux of the whole breedwont to develop one line to the total exclusion of the other. In this connection, two important things must always be kept in mind. First, since seperate breeds and varieties long since have received official recognition, all poultry breeders should exercise reasonable efforts to maintain breed and variety characteristics. Second, since the continued expansion of the poultry industry depends in a very large measure upon the productive capacity of the birds kept, standardbred breeders naturally should be expected to give some consideration to economic qualities.

The chief difference between the practice of some standardbred breeders and utility breeders is largely a matter of degree. The object in view should determine the method of procedure in breeding operations. If the breeder wishes to develop Silkies, Frizzles, or certain varieties of Games, for instance, to the highest possible state of perfection in respect to body type and feathering characteristics, he is certainly justified in adopting as standard points whatever may please his fancy. In fact, breeding for fancy points has done much to stimulate interest in the science and art of breeding. On the other hand, if the strictly commercial poultryman is interested exclusively in egg production he may be justified in running his plant more or less on the factory plan. The keeping of birds that are just "chickens" in order to make a living is justifiable, as long as a living can be made. These two phases of the breeding industry, however, are incidental to the principal point which Dr. Jull discusses in this article.

Standard Qualities Important

The poultry industry of the United States, which has atained a magnitude of such great value, has been developed for the most part through the extensive breeding of Brahmas, Anconas, Leghorns, Orpingtons, Plymouth Rocks, Rhode Island, Wyandottes, and other breeds. It is in connection with the breding of these breeds particularly that there must eventually be more or less common ideals as between the utility and standard breeds. The safe line of development in the breeding industry would seem to be to preserve the beautiful while developing the useful. Those who admit that we must have pure breeds must also admit, to be logical, that we must try to maintain certain standard qualities of those pure breeds. Those who insist upon maintaining all standard qualities as nearly perfect as possible must surely admit that the economics of the poultry industry demand that the great majority of the stock of the country must lay enough eggs to make keeping profitable.

The very keen demand for heavy laying strains has sometimes led to injudicious practices and has frequently produced harmful results. In many cases breed type and other characteristics have been neglected and constitutional vigor has been lowered. Sometimes, also, the size of the birds is below standard and there has been evidence of decreased egg size. The value of high individual egg records from a breeding standpoint has often been overemphasized. In this connection the fact should not be overlooked that flock averages are much more insignificant than individual records.

There have been certain features in the management of many flocks which seem open to question. There has been very extensive use of pullets as breeders when it is becoming more apparent that yearling birds lay larger eggs, which produce larger and stronger chicks. Constitutional vigor is certainly inherited, but the extremely poor hatches of the past season would indicate that breeders in general are not paying enough attention to this important problem. Then again, many breeders feed rather heavy rations to their layers to force production and then use the eggs for incubation purposes, and this practice may be a major cause of poor results.

Room for Better Results

On the other hand, Dr. Jull believes that breeders can adopt a system in the management of the breeding stock that will give much better results. The breeding stock on the investigational plant at Beltsville, Md., over which Dr. Jull has charge, is not fed a forcing ration. Electric lights are not used and the breeders are given as much free range as possible. In fact, the plant is being so arranged that certain parts will be allowed to lie idle once every three or four years. Moreover, every effort is being made to maintain high standard quality while developing laying abilities, this having been the custom for the past several years.

If breeders were more moderate in their demands in respect to increased egg production, Dr. Jull contends that it would be possible to maintain standard qualities and to conserve constitutional vigor to a greater extent than is now being done in so many cases. The poultry industry of the United States should be developed along stable lines. Breeders should endeavor to build on a solid foundation of combined standard and utility qualities. Such seems to be the safe line of development of the poultry industry.

JERSEY BLACK GIANTS

I would like all the information I can get on Jersey Black Giants. I would like to hear from some who had experience with them. Are there any characteristics peculiar to the breed that make them hard to raise? Are the prices asked for eggs and stock in keeping with the value of mature birds?—H. E. C., Washington, Mich.

—We have endeavored to get some information on the history of this breed but very little is known as to its origin. A majority of breeders seem to think that they are closely related to the Black Java and others seem to think there is Orpington blood infused in this breed because quite a high percentage of certain strains throw white skinned and white shanked stock. There are sev-

ABORNO LABORATORY
82 Jeff St. Lancaster, Wis.

eral breeders in this State now specializing in this breed.

The Jersey Black Giants are heavier than any of the American breeds and will frequently attain a weight of nine or ten pounds in the case of matured males. From the standpoint of production they have not been developed sufficiently to offer very keen competition with other general purpose breeds such as the Plymouth Rock, R. I. Red, and Wyandotte. The fact that the typical specimens, are yellow fleshed, grow rapidly, and finally attain a heavier weight than any general purposes breed, makes them practical for either roasters or capons. The price demanded for stock at most times is not in keeping with the true value of this breed unless in turn one intends to sell eggs for hatching, and breeding stock only.—E. C. Foreman, Professor of Poultry Husbandry, M. A. C.

FUR DEPARTMENT

THE YEARLY CROP YOU DON'T HAVE TO PLANT

LONG ahead you have planned to plant crops that will make your farm pay every dollar that is in it. Otherwise, you would go broke. You make the pigs, chickens and cows raise their crops right on through winter, when the ground is not producing. You have to, these days.

But even then, are you getting the most of every crop that the place grows?

The fur crop, for instance—for it is a crop, and is so handled and regarded. Perhaps you have thought that this is a kid's crop, but as far as that goes, you have undoubtedly heard men say that "butter and eggs are the wife's little side line" when your experience will show that this contemptable little side line has meant to may farmers the difference between a square meal and a mighty lean one.

Now winter time is coming along. The fur crop has been growing on your farm all summer. With the harvest time right in front of you, you may not be giving it a thought. That is simply wasteful.

We all know the pestiferous skunk—like the poor he is ever with us. Take a little journey along the creek; maybe the mink family is neighboring with you, too. And Br'er 'possum—easy picking. Also little Henry Raccoon—you probably know him—he's well thought of. Likewise Mr. Muskrat. They all are valuable to you.

Does it keep you scratching your head to find work to chink in the hours for that hired man you've simply got to keep through the winter? Well, it would not be surprising if he likes to trap. So you have at hand the elements for making a tidy bit of money that is either going to waste, or being paid to some-one else.

And there's no fun in that!

Why not send to one of the big fur houses for full information about trapping and prices? The reliable ones will be more than glad to steer you right. Study the matter. Learn the simple methods of setting traps for the different animals, and —this is important—the proper ways to handle and prepare the pelts you will get. Get ready now. Order your baits and the sizes of traps suited to the kind of animals that live near you.

If you don't think that anybody is picking up money at this business, observe the thousand and one ways that fur is now being used in the making of women's apparel. A world of money is being spent that way!

The crop grows, of itself. You only have to harvest it and ship it.

Mrs. Sylvester's sister was visiting at the farm one day. At dinner young Billy Sylvester started cutting up.

"If that were my boy I wouldn't stand his nonsense at meal times," said the sister. "I'd give him a good spanking."

"But you can't spank a child on a full stomach," remonstrated Mrs. Sylvester.

"You don't have to. Simply turn him over."

The way some fellows save for a rainy day, you'd think they expected to wear rubber boots and carry an umbrella for quite a while.

Cured His Rupture

I was badly ruptured while lifting a trunk several years ago. Doctors said my only hope of cure was an operation. Trusses did me no good. Finally I got hold of something that quickly and completely cured me. Years have passed and the rupture has never returned, although I am doing hard work as a carpenter. There was no operation, no lost time, no trouble. I have nothing to sell, but will give full information about how you may find a complete cure without operation, if you write to me, Eugene M. Pullen, Carpenter, 59-K Marcellus Avenue, Manasquan, N. J. Better cut out this notice and show it to any others who are ruptured—you may save a life or at least stop the misery of rupture and the worry and danger of an operation.

MARKET FLASHES

MARKET SUMMARY

Wheat and corn active. Other grains unchanged. Beans steady. Butter and eggs quiet. Poultry weak and unsatisfactory. Supply large. Vegetable market quiet and inclined to be easy. Apples in good supply and steady. Good cattle active, others move Slowly. Trading in sheep steady to strong with prices higher. Hogs steady to lower.

(Note: The above summarized information was received AFTER the balance of the market page was set in type. It contains last minute information up to within one-half hour of going to press —Editor.)

FOOTE'S MARKET LETTER

BY W. W. FOOTE

The Farmer's Outlook

FARMERS who diversify their crops are in much better shape financially than the single crop farmers, and many of our Michigan wheat farmers have been hard hit by the fall in prices for that grain. Farmers who grow corn extensively expect to obtain good prices for the new crop, and undoubtedly there will be very large numbers of cattle, hogs and sheep prepared for the future market, for the great bulk of the crop is always used mostly in the farms where grown. "The direct consequences of abundant crops is the immediate increase in the purchasing power of the farmer," Armour & Company say in their monthly review. The packing industry had a good month during September. The demand for meats is active. The outstanding feature of the present price situation is a narrowing of the spread between general commodity prices and prices of farm products, according to the monthly letter of the National Association of credit men. "A year ago in August general commodity prices were 18 per cent above the prices for farm products," the letter states. "In August, this year, general commodity prices were only 8 per cent above the prices for farm products. The position of the farmer as a whole has improved vastly over a year. ago. Credit men look for better business for the remainder of the year, as compared with 1922."

Wheat Prices Rally

More hopeful conditions surrounding the wheat market explain the recent advance in prices, and it has been suggested that wheat farmers can help matters by being in no hurry to get their holdings marketed, while feeding some wheat on the farms will lower the available supply to some extent. Statistically, the situation shows no particular changes, and it is universally admitted that American farmers have raised entirely too much wheat, forgetting that war crops are no longer needed and that a return to pre-war crops is the only proper course. Wheat prices have moved up to above those of a year ago, but they are much lower than two years ago and are decidedly too low to afford a living return to our farmers. Our wheat exports are falling far below those of a year ago, while the visable supply in the United states is up to 64,000,000 bushels, comparing with 32,350,000 bushels a year ago. Late week advances in the Chicago market put December wheat up to $1.09⅝, comparing with $1.06½ a year ago, holders feeling much encouraged. Cash lots of No. 2 hard sold for $1.16.

The Wheat Outlook

An encouraging feature of the wheat market is the recent formation of co-operative organizations to export wheat from this country, these to be promoted by the directors of the war finance corporation, with the approval of the administration. The plan does not contemplate any new legislation. The director of the corporation has left Washington for the west to canvass the possibilities of inducing financial and agricultural interests to join in organizing associations or corporations such as proposed. It is suggested that one or more corporations be formed under the state laws in states where marketing of wheat at satisfactory prices is a serious problem. Such corporations would be able to obtain loans either from the war finance corporation, from ordinary banks, or from the new intermediate credit banks.

Corn, Oats and Rye

The visible corn supply in this country is down to insignificant proportions, and prices are much higher than a year ago with meagre exports. Much of the corn of the new crop is soft, but it will be largely utilized for stock feeding purposes. It is recalled that in 1917, when early frosts worked incalculable injury to corn, cash lots advanced to $2.89 in November, breaking to $1.85 at the month's close. Oats have been fed lavishly on the farms owing to relatively low prices, and much was wasted. The oats visible supply is placed at 16,514,000 bushels, comparing with 35,968,000 bushels a year ago; that of rye at 15,188,000 bushels, comparing with 8,180,000 bushels last year. Exports of oats and rye are much smaller than last year. Cash sales of No. 2 yellow corn are reported on the Chicago Board of Trade at $1.03, while December corn sells at 76 cents, comparing with 60⅞ cents a year ago. December oats sell at 4½ cents, comparing with 38½ cents a year ago; and December rye at 72¾ cents, comparing with 70½ cents last year.

Cattle Feeding Popular

On the whole, the year has been a prosperous one for the cattle feeding industry when conducted right, but prices obviously cannot stand up under such enormous supplies as were received during recent weeks in Chicago and other markets, and big breaks took place from the previous high values. There has been a very wide spread in prices, as was natural under such an influx of ordinary grassy offerings, but even the better class shared in the fall. Unusually large numbers of western range grass cattle arrived in the Chicago market, and these added greatly to the depression, coming into competition with the farm-fed cattle of similar grading. Quite recently there was a marked falling off in the cattle receipts, due to the fall in prices, and this caused quite a rise. Following the sensational declines in prices in the Chicago market caused enormous receipts in recents weeks, the receipts for the first week of October fell off to 61,800 head, comparing with 79,681 a week earlier, and prices moved up 50 cents to $1. Beef steers sold at $7 to $9 for the cheaper lots and up to $11.75 to $12.75 for the better class, several sales being made at the top price. There was not much trading below $9 nor above $12.75. Butcher cows and heifers sold largely around $3.75 to $8.10, the best heifers bringing $11.25. Canner cows sold as low as $2.25 to $3, and stockers and feeders sold fairly at $4.50 to $8.25, few selling as high as $7.50. Calves sold at $6 to $12.75.

The Hog Industry

As happens every year, hog marketing during the autumn period has been on a big scale, and prices have had the usual declines. Prices have widened out of late, with choice heavy butcher hogs topping the market because of their gowing scarcity, the receipts running very largely to the lighter weights of undesirable grading. The best heavy and light butchers sold at the same prices, being considerably above the best light bacon hogs, and inferior lots of light hogs showed especial weakness. The late receipts of hogs in the Chicago market averaged in weight 243 pounds, being eight pounds less than a year ago, and it is evident that scarcity of old corn and its dearness have caused farmers to curtail the hogs' daily rations. Meanwhile the domestic and foreign consumption of American hogs is unusually large, lard selling higher than a year ago and cured meats lower. Combined receipts in twenty markets for the year to late date amount to 31,407,000 head, comparing with only 24,529,000 for the corresponding time last year. There is a little improvement in the Chicago market due to somewhat smaller receipts, hogs selling at $6.85 to $8.40, comparing with $6.90 to $10 a year ago; $6 to $8.50 two years ago; $7.85 to $8.90 eight years ago; and $4.35 to $5.27½ eighteen years ago.

Stocks of Provisions

Official figures make the aggregate stocks of pork in Chicago and other western packing points on the first of October amount to 32,094 barrels, comparing with 37,795 barrels a month earlier and 31,348 barrels year ago. Combined lard holdings amounted to 48,902,000 pounds, comparing with 79,433,000 pounds a month earlier and 47,904,000 pounds a year ago. Stocks of cured hog meats aggregated 251,486,000 pounds, comparing with 314,231,000 pounds a month earlier and 207,817,000 pounds a year ago.

Farmers Buy Feeding Lambs

During recent weeks range lambs have been received in Chicago and other western markets in extremely large numbers, and great numbers were taken by feeders at about as high prices as those paid for the best killers, while breeding ewes had a large sale, many farmers taking up the sheep industry. Late Chicago sales were made of mutton lambs at $9 to $13.75, feeder lambs going at $12.50 to $13, breeding ewes at $6.25 to $12.50 and bucks at $2 to $2.75. Wethers sold at $5 to $9, ewes at $2 to $6.75 and yearlings at $8 to $10.85. No Michigan farmer should remain out of the sheep industry at this time.

WHEAT

Farmers who are holding their 1923 crop of wheat have gleaned considerable comfort out of the fact that the wheat market at Detroit has been on the upper trend during the past fortnight, the price advancing from $1.09 to $1.14 for No. 2 white. During most of the period the wheat market was quiet and had a steady tone. The country is full of dealers who are inclined to be bears, believing in lower prices in the immediate future, but in spite of these the market continues to advance. The strong feeling was due to the talk of government help and also to the strength of the corn market. Country offerings to arrive continue small as farmers are not inclined to sell believing that prices will go higher, and mills all over Michigan are reported to be in need of wheat. Feed and flour are some stronger and prices higher. The foreigners at present are apparently not interested in our wheat. Chicago reports receipts for last week amounted to 677,000 bushels and shipments were 316,000. According to market students, on the face of the wheat situation the world over it looks like a weak market. There is an abundance of wheat and buying is moderate. American wheat being higher in price than Canadian, Europe has given us very little business the past few weeks, making most of her purchases from our northern neighbor.

Prices

Detroit—Cash No. 1 red, $1.14⅛; No. 2, $1.13⅛; No. 3, $1.10⅛; No. 2 white, $1.14⅛; No. 2 mixed, $1.13½.

Chicago—Cash No. 2 red, $1.12¾; No. 2 hard, $1.11½@1.14⅛.

New York—Cash No. 2 red, $1.26½; No. 2 hard winter, $1.23½.

Prices one year ago—Detroit, Cash No. 2 red, $1.16; No. 2 white and No. 2 mixed, $1.14.

CORN

Corn followed the trend of wheat during the past few weeks and as a result the price at Detroit is now well above a dollar and this gain is strong in tone on all markets. The gain at Detroit last week amounted to nine cents. Advances in price were noted on all markets, and at Chicago cash corn reached a high peak for the past three years. Dealers at Chicago also report dealing in future deliveries was very active, stimulated by a shortage of old corn and the delay in getting the new crop in condition to be marketed. Rainy weather has caused the farmers considerable trouble in harvesting their crops and it is said there is much soft corn.

Prices

Detroit—Cash No. 2 yellow, $1.09; No 3, $1.08;

Chicago—Cash No. 2 mixed, $1.04@$1.04¾; No. 2 yellow, $1.04@1.05.

New York—Cash No. 2 yellow and No. 2 white, $1.24½; No. 2 mixed, $1.23½.

Prices one year ago—Detroit, Cash No. 2 yellow, 73c; No. 3, 72c; No. 4, 70c.

OATS

Oats have also shared in the strength shown by the wheat market and prices at Detroit are nine cents higher than two weeks ago. However, dealers are not expecting oats to continue to hold their present level. Receipts are large while the country offerings to arrive remain small. Receipts at Chicago last week were larger than those one year ago.

Prices

Detroit—Cash No. 2 white, 50c; No. 3, 47½c.

Chicago—Cash No. 2 white, 43¾@46c; No. 3, 43@44½c.

New York—Cash No. 2 white, 54@54½c.

Prices one year ago—Detroit, Cash No. 2 white, 47c; No. 3, 45½c; No. 4, 43c.

RYE

Active milling has caused rye to come to the front during tthe past week and heavy sales of rye flour have been reported. The trade considers rye the cheapest grain on the list, and foreigners feel that rye flour is the best buy. Gains at Detroit last week amounted to two cents for cash No. 2. Other large markets showed about the same gain.

Prices

Detroit—Cash No. 2, 78c.

Chicago—Cash No. 2, 72c.

Prices one year ago—Detroit, Cash No. 2, 77c.

BEANS

The tone is firm on pea beans at most markets but prospects of higher prices in the near future are not considered very good. Trade last week was as good as sellers anticipated and it was an easy matter to sustain prices. According to reports, the 1923 crop has been damaged quite severely by rain, and the farmers in many sections report their beans will be heavy pickers. It is said that the rains during September and the early part of this month cut the bean crop down several hundred thousand bushels in Michigan. The Michigan crop is expected to represent at least 65 per cent of all of the white beans grown in United States this year.

Prices

Detroit—C. H. P., $5.75 per cwt.

Chicago—C. H. P., $6@6.30 per cwt.

Prices one year ago—Detroit, C. H. P., $5.50 per cwt.

POTATOES

The research department of the American Farm Bureau Federation has made a careful study of the potato market outlook and we are quoting their conclusions below:

"The total commercial movement of potatoes thus far this year has been about 20 per cent less than to the same date last year. In the last five weeks there has been the usual fall increase in shipments and they have been more nearly equal to the corresponding time last year than heretofore. As a result, prices have declined and are the lowest of the season but there is reason to believe that the market is close to bottom and should rebound.

"On a per capita basis, the estimated yield is 3.5 bushels. The average in the last twenty years has been 3.6 bushels, while last year it was 4.1 bushels. In the past, a yield of less than 3.6 bushels per capita has usually resulted in an advance in prices from the heavy marketing season in the fall to the following winter while the reverse trend has generally characterized years when the per capita output was above that figure.

"Since there is no opportunity to carry a potato surplus over from one year to the next and export demand is negligible, potato prices tend to rise with small yields and decline with large ones with more regularity than is true of most other crops. Last year the white potato yield was the largest on record and about 60 million bushels above average consumption. The sweet potato yield also was a record breaker. Prices were extremely low throughout the fall and winter so that some potatoes were left undug, many were fed to live stock and others got out of marketable condition while in storage. The total carlot movement from producing sections was only 6 per cent larger than in the preceding year when prices were much higher.

"Because of the disastrous returns on the 1922 crop, the acreage planted this year was reduced ten per cent. The latest forecast of a yield of 390 million bushels is fourteen per cent less than a year ago and practically the same as the 1917-1921 average. Frosts are reported to have done considerable damage to late-planted potatoes in Minnesota, Wisconsin, and Michigan since the government's estimate was compiled.

"Compared with last year, the crop is larger in the intermediate states such as Ohio, Indiana, Illinois, Missouri, Kansas and Kentucky. New Jersey and Virginia, however, show decided reductions. The late states, such as New York, Michigan, Wisconsin, Minnesota, North Dakota, Nebraska, Colorado and Idaho have crops from 10 to 33 per cent less than last year. Maine is an exception with an increase of 27 per cent.

"Since the main crop is dug chiefly in September and October, and since local warehouses are inadequate to take care of a full crop in order to distribute it through the season, the carlot movement from producing sections rises to a decided peak in October. Many of the potatoes so shipped go into storage elsewhere so that unloads at the leading consuming centers do not increase commensurate with the gain in loadings at country points. On January 1, 1923, there were reported to be 125 million bushels of merchantable potatoes in storage in the United States, of which 15 per cent were held by dealers and 85 per cent by growers.

"With prospects of a smaller commercial movement and maintenance of urban purchasing power, the prevailing price level should remain considerably higher than last fall and winter. Export demand cuts but little figure. In the year ending June 30, 1923, 3 million bushels were exported, or about the usual amount. In the same twelve months, 613,016 bushels were imported. This is less than the average due to unattractive prices here and to tariff restrictions."

It is said that considerable quantities of good quality potatoes from Minnesota and North Dakota are coming into the state and hurting the market for Michigan producers by forcing the price down in certain Michigan cities as well as in the territory outside the state in which Michigan producers have to sell. These northern potatoes have put the price down to a level that farmers of this state declare they cannot dispose of their crop now without taking a loss and they are witholding shipment. Jobbers claim that the crop in this state will run short of that of a year ago by about twenty per cent.

Prices

Detroit—Michigan, $1.33 @ 1.66 per cwt.

Chicago—Northern whites, $1.15 @1.35; Red River Ohios, $1@1.20 per cwt.

Prices one year ago—Detroit, Michigan, $1.30 per cwt.

HAY

Light receipts during the past couple of weeks have caused the hay market to remain firm. The demand continues good for the best grades of all kinds of hay, while the low grades and damaged hay is not wanted. Farmers are too busy with fall work to haul hay to market, and most of the hay that is being sold is of the poorer grade.

Prices

Detroit—No. 1 timothy, $21.50@22; standard and light mixed, $20.50@21; No. 2 timothy, $19@20; No. 1 clover mixed, $18@19; No. 1 clover, $18@19 per ton.

Chicago—No. 1 timothy, $27@28; timothy and clover mixed, $24@26; No. 2 timothy, $24@26; No. 1 clover, $22@24; No. 2 clover, $18@20 per ton.

Prices one year ago—Detroit, Standard timothy and light clover, $15.50@16; No. 1 clover, $14@14.50 per ton.

APPLE MARKET OUTLOOK

Prospects for marketing the 1923 commerical apple crop are about the same as for last year's crop. The yield is not enough larger than in 1922 to indicate an overloaded market, the percentage of late varieties which usually sell best appears to be greater, wage and employment conditions point to an excellent domestic demand and Europe is said to have a poor crop so that export sales should run large.

Domestic demand should be as good or better than last year. Wage and employment conditions in the towns and cities where most of the commercial crop is consumed are excellent. In addition, there is a normal annual increase of one or two per cent in total population and even more in urban population which offsets part of the increase in this year's commercial crop.

Export demand should be better than last year. Great Britain, the chief foreign buyer has a small crop of inferior quality and much the same is true on the Continent. The South American market is quite promising. In the year ending June 30, 1923, 3,491,244 boxes and 592,581 barrels of apples were exported plus 12,827,250 pounds of dried apples, making a total equivalent to around 7 per cent of the commercial crop.—American Farm Bureau.

PRITCHARD'S
WEATHER
FORECAST
INTERPRETED BY THE STARS

Week of October 14

THIS week begins with fair, cool weather but about Monday temperatures will begin moderating considerably in Michigan and by Tuesday, the latest, unsettled and threatening weather is expected.

Showery weather, some high winds and in sections some very heavy down pours of rain are to be expected during the middle part of week, especially Wednesday and Thursday.

Fair weather will begin in this state about Friday and during Saturday the temperatures will be on the increase, this latter condition continuing until the middle of next week.

Week of October 21

Temperatures will be rising during the first part of this week, the weather becoming quite warm for the season about Monday. This condition will be partially due to the storm period that will drop considerable rain or snow fall in its journey across the United States and will affect Michigan the first three days of this week.

A rapid change to cooler is expected in this state about Tuesday with a further drop Wednesday and during the middle part of the week the weather will be fair and cool.

Thursday and Friday will be rainy and stormy in this state but as the barometer is expected to be rising again on this latter day, we look for a rapid clearing up and settled, clear weather for the end of the week.

For the balance of October we look for fair, settled weather in the state but during early part of November a moderately strong wind storm may be expected to sweep Lakes Michigan, Huron and Superior and the adjoining lands.

Look for the feeding instructions in every sack.
Question – What is a uniform dairy ration?
Answer – A uniform dairy ration is one in which – the kind of ingredients – the quality of ingredients – the quantity of each ingredient and the feeding value of the finished product are never changed
Question – Do you know of a dairy ration that can really be called uniform?
Answer – yes – just one
LARRO

Weed seeds, oat hulls, sweepings, oat clippings, straw, ground hay and all other fillers are absolutely barred from Larro. You don't pay grain prices for worthless, dangerous trash when you buy Larro.

Every pound of *finished* Larro passes over a powerful electro-magnet. That keeps out nails, wire and other junk found in all feeding stuffs.

There's no guesswork about Larro. Thousands of dairymen know they have more money at the end of the month, after paying the feed bill, when they feed Larro than they have with any other ration—they *know* it keeps cows in the best of flesh and condition, because they're feeding it every day.

Don't risk a cent. See your Larro dealer today or write to us. We'll show you a quick, easy way to make more money than you can make on any other ration.

The Larrowe Milling Company, Detroit, Michigan

Made by Specialists in Dairy Feed Manufacture.

Farm Financing.....

The United States Government

Authorizes the First Joint Stock Land Bank of Cleveland

To Loan Money to Farmers

In the States of Michigan and Ohio.

At a low rate of interest for 33 years, with privilege of paying in 5 years if desired, for following purposes:

1. To buy farm land.
2. To provide buildings or other improvements.
3. To buy farm equipment, machinery, fertilizers or livestock.
4. To pay off debts incurred for agricultural purposes.

Money quickly available to good farmers with experience who own good and well managed land. No commissions charged for making loans. No stock investment required.

For full particulars of this opportunity to save money, write:

The First Joint Stock Land Bank of Cleveland
Guardian Bank Building Cleveland, Ohio.

Detroit Beef Company

offers its services to the *Farmers of Michigan* as a high class, reliable commission house for the sale of *Dressed Calves* and live poultry. Write us for information how to dress and ship calves to market. $250,000 capital and surplus. 34 years in business in the same place and same management.

Trail Blazers

ALL over the Great West is written the record of the pioneers who blazed the first trails that guided civilization in its westward march.

As settlers followed, Montgomery Ward and George R. Thorne blazed a new trail to them, being first to fill their wants direct by mail and in the complete spirit of the Golden Rule.

Trail Blazers—Business Pioneers we were, and are. Fifty-one years have but given us experience. We stand today more alert, forward looking, searching out new methods in manufacture and trade to secure for you better goods and bigger values and greater savings.

Trail Blazers of over fifty years ago, Montgomery Ward & Co. still clings to this spirit of leadership—we are the Oldest Mail Order House and Today the Most Progressive.

All over America

This Book is Now Saving Millions of Dollars for the American People

The opportunity is now yours to Save Money on nearly everything you buy — for the Farm, the Home and the Family.

You have a copy of this book—or a neighbor has one. Because into every state, into every city, into every county all over America the Montgomery Ward & Co. Catalogue has gone, bringing its opportunity for money saving this Fall.

Montgomery Ward & Co. Is Working Constantly to Keep Prices Down

Over Forty Million dollars' worth of merchandise has been bought and manufactured especially for this Catalogue, bought when prices were the lowest—articles of steel were manufactured when steel prices were down, leather goods when hide prices were low.

Our buyers have actually searched the important markets of the world in their determination to secure these bargains for you—*to help hold prices down, to make your savings larger.*

Are You Using This Book?

Are you taking full advantage of your money-saving opportunity? Is your family buying from this book?

You can save many dollars this season *if you use this Catalogue*, if you buy from it regularly, if you study this book and see for yourself the saving it brings to you.

Ward Quality—*And* low prices

Never, in over fifty years, have we intentionally sacrificed quality to make a low price. We offer no price baits on unserviceable merchandise.

It is our policy to sell only goods of Ward Quality—the kind of goods that stand inspection *and use*. So a low price at Montgomery Ward & Co. is always a low price on reliable goods of standard quality.

We believe it takes both standard quality *and low price* to make a bargain. And every bargain we offer is a reliable, serviceable article that will give you entire satisfaction.

Begin today saving money by using this book. Begin today sending all your orders to Ward's—where your patronage is always appreciated, where for over fifty years every customer has always been given a square deal.

MONTGOMERY WARD & CO.
CHICAGO KANSAS CITY ST. PAUL
PORTLAND, ORE. FT. WORTH

Your Order will be Shipped in Less than 48 Hours

Our new perfected system of filling orders is now over a year old.

And our records prove that during the past year nearly all orders were shipped in less than 48 hours.

48 hour service is our promise to you. But we do better than our promise—because a large percentage of our orders are actually shipped within 24 hours.

So you can order from Montgomery Ward & Co. and feel sure that nearly every time your order will be shipped in less than 48 hours, and frequently within 24 hours.

The Oldest Mail Order House is Today the Most Progressive

BEFORE YOU BUY A WINDMILL

Carefully consider the following facts: **The Auto-oiled Aermotor** is the Gennine Self-oiling Windmill, with every moving part fully and constantly oiled.

The Auto-oiled Aermotor has behind it 8 years of wonderful success. It is not an experiment. The double gears run in oil in a tightly enclosed gear case. They are always flooded with oil and are protected from dust and sleet. Oil an Aermotor once a year and it is always oiled. It never makes a squeak.

You do not have to try an experiment to get a windmill which will run a year with one oiling. The Auto-oiled Aermotor is a tried and perfected machine. Our large factory and our superior equipment enable us to produce economically and accurately. Every purchaser of an Aermotor gets the benefit from quantity production. The Auto-oiled Aermotor is so thoroughly oiled that it runs in the lightest breeze. It gives more service for the money invested than any other piece of machinery on the farm. The Aermotor is made by a responsible company which has been specializing in steel windmills for more than 30 years.

For full information write AERMOTOR CO. Chicago Kansas City Dallas Minneapolis Des Moines Oakland

MAKE YOUR OWN BURNER

Save from $10 to $15 by sending today for complete set of plans and list of parts necessary, with instructions to assemble for making your own oil burner to fit any stove or range. Save money in your heating bills by burning kerosene oil instead of coal or wood. Burns 95% air and 5% kerosene. No more wood to chop. No worry during coal strikes or shortages; simply turn the handle and presto! a fire hotter than coal, and cheaper! So simple that anyone can make it. We furnish important parts. Send two dollars today, your check, draft, or money order to R. E. ARCHER, 9214 St. Paul, Detroit, Michigan.

Current Agricultural News

MICHIGAN BOY WAS CHAMPION JUDGE AT DAIRY SHOW

AT the recent National Dairy Show held at Syracuse, New York it was a Michigan boy that proved to be the best college student judge of dairy cattle. Competing against 87 of the best college student judges in the country, Charles D. Miller, of Eaton Rapids, stood first with both Holstein and Jersey cattle and ranked high enough with the other breeds to win first place with the highest percentage ever turned in at the show. The Michigan Agricultural team, of which Miller was a member, finished in seventh position.

While M. A. C. teams have stood high before in the national competition, this is the first time that the premier honors among individuals have been brought back to the state.

The Michigan club boys judging team also won high laurels at the big show finishing third among 20 teams from states scattered all over the country, Illinois and Connecticut won first and second places, respectively.

The Michigan team was composed of James Gallup of Gaastra, Iron county; Starr Northup, Northville, Wayne county; Rolland Stein, Ann Arbor, Washtenaw county; and Glenn Livermore, Romeo, Macomb county. A fitting team at the same show was composed of Wayne Clark, of Sand Creek, Lenawee; and Harland Andrews, of Adrain, Lenawee county.

TOP COW AT DAIRY SHOW COMES TO MICHIGAN

Although prices crossed the $1,000 mark several times in the Holstein sale at the National Dairy Congress, the average price of the sale was $324.05 for 119 head. Berlwood stock Farms of California sold a cow for $1,450 and a heifer for $1,500. A butt calf only a few weeks old from the above farm brought $1,305. The heifer was bought by John Winn of Rochester, Mich., and the cow by the Detroit Creamery Co., Detroit, Mich.

ENTRIES FOR HAY AND GRAIN SHOW CLOSE NOVEMBER 10

ENTRIES in the International Grain and Hay Show which will be held in connection with the International Live Stock Exposition in Chicago, December 1st to 8th, close on November 10th.

Classifications are offered for Ten Ears of Corn, Single Ears of Corn, Flint Corn, Junior Members Corn, Wheat, Oats, Rye, Barley, Kafir, Milo, Soy Beans, Field Beans, Cow Peas, Field Peas, Red Clover, Alsike Clover, Sweet Clover, Alfalfa, Timothy and several varieties of hay. The premium list, offered by the Chicago Board of Trade, amounts to $12,000,00 in cash prizes in addition to a large number of valuable trophies and ribbons.

In order to equalize the competition, the United States has been divided into eight regions and only crops grown in the same region will compete in the preliminary classes. A new division is in effect this year which it is expected will bring out a much larger number of entries, especially in the corn division.

The growth of this department of the world famous International has been phenomenal. In 1919 it was inaugurated with 1,500 entries. The following year this was increased to 2200 to be followed in 1921 by a record of 3312. At the last show the entry books showed 4039 exhibits in competition, from practically every state in the Union and Province of Canada. It is expected that at the coming show more than 5000 samples will be on display.

Detailed information can be secured by addressing Grain & Hay Show Dept., International Live Stock Exposition, Union Stock Yards, Chicago, Ill.

POULTRY SHOW AT GRAND RAPIDS

The Michigan Poultry Exposition will be held at Grand Rapids, Michigan, from November 27th to December 1st. Complete information on exhibits, etc., can be had by writing J. A. Hannah, Secretary, R6, Grand Rapids, Michigan.

FROM HERE AND THERE IN MICHIGAN

Lake Linden—Two new smelters, each having capacity of 200,000 lbs. daily, under construction, costing $2,000,000.

Grand Rapids—Construction of Richard Storage Company's large warehouses completed. New Naylor Furniture Company building on Grandville avenue completed.

Greenville—Contract let for erection of $20,000 glove factory.

Holland—Dutch Plant Food Laboratory Company with capital stock of $100,000 to build factory, 75 people to be employed. Construction of new railway depot under consideration.

Manistee—Work of dredging local harbor completed.

Mackinaw City—Construction of new $40,000 dock to be started.

Detroit—Ford Motor Company has accepted bids of American Shipbuilding Company and Great Lakes Engineering Works for two 600-ft. ore boats to be used between Lake Superior ports and the River Rouge. Pere Marquette's capital expenditures for equipment, improvements and betterments in current fiscal year will exceed $11,000,000. Third avenue between LaBelle avenue and Midland avenue to be opened and paved.

St. Johns—Building construction on Silver Black Fox Farm nearing completion.

Reed City—Extensive improvements on streets progressing rapidly.

Hart—Storage plant with capacity of 5,000 bbls. nearing completion.

Belding—New St. Patrick's Catholic church completed.

Mt. Pleasant—Central Gas Company constructing 100,000 cu. ft. storage tank at local plant.

Lapeer—Contract let for construction of new high school.

Saginaw—Contract to be let for erection of $80,000 Methodist church on Jefferson avenue.

Lansing—Grand Ledge highway to be improved.

Monroe—County has heavy grape crop, first time in many years. Toledo road under construction to be finished in December.

COUNTRY PARISH ENJOYS RADIO SERMONS, SAYS A. B. COOK

AS to our experience with the radio say that we have had one in our home ever since they first became available. We have lately placed one in the County Church. It is entirely practical in home or church. I just came home from church where I and my family and my hired helps' families and a lot of other county families heard a ten thousand dollar minister just as plainly and just as satisfactorily, unless we would study the cut of his clothes, as did those who sat in the church; in fact a rather old lady told me after church that it was the first sermon in twenty years that she had heard every word of. She is a little "hard of hearing." We had Herbert Hoover at our church Monday evening. The church music today was simply grand and every Wednesday evening we open the church and give selections from various programs which are available in the evening. The very best in thought, given by the thinker via the expressed word and the best in music by the best musician is available to us all. Anyone who appreciates the best in these lines will appreciate the radio. The price of the outfit in our church is $365.00. To the best of our knowledge it includes every improvement known to the business. None better at any price. Yours for all that goes to advance conditions of country life.—A. B. Cook.

EDITOR'S NOTE: The church referred to by Mr. Cook is the one discussed in the story on page 4.

Bean Prices Lower Till February, Then Higher

Michigan Dealer Reviews Trend of Prices On 1922 Crop and Declares Conditions Warrant Opposite Trend This Year

By B. A. STICKLE

VERY few business men manifest an interest in the past of any commodity except in so far as what has happened may have an influence on, or contain a basis for, drawing an opinion as to what to expect in the future. Accordingly, before we make any statements as to market conditions for the present and future, we think it advisable to hurriedly review what happened in a marked way on the 1922 crop.

The 1922 acreage showed considerable increase over 1921; growing conditions were favorable right up until harvest time. In fact, a small percentage, possibly 15 per cent of the crop, was harvested under ideal conditions. Then, covering the period between September 1 and September 19, we had intermittent heavy rains. The rainfall at Saginaw, approximating 5 per cent, during this period is typical of the entire state. There were not long enough dry periods between the rains to enable the farmers to take their crop off the field; after the 19th there were no rains and it was then that the beans were harvested.

With the first few deliveries the market declined very rapidly; prices to the grower reached as low as $3.75 and prices to the trade as low as $4.50. The trade "tasted blood" of the new beans, and accordingly demand started. Everything was held up during the period of rains, and for three weeks virtually nothing was sold; by that time demand, particularly for high price futures and due to the fact that the old stocks had been reduced to the minimum by the buying trade on account of the extremely high prices of the summer of 1921, was extremely heavy.

Elevators Overpaid Growers

The Michigan elevators overpaid the grower; that is, they paid the farmer more than the market would warrant on the particular day that they bought the beans. The only way, therefore, that they could realize a profit on their purchases was to force the market higher. Accordingly, we experienced a decided advance up until the first of the year. By January 1, 1922, prices averaged as high as they did any time during the year. Of course all of the elevators, and farmers remember what happened a year previous, when during June and July prices advanced to approximately $10 in Michigan. Elevators, accordingly, carried more beans than they should have, and the growers in turn retained on the farm a large percentage of the beans which they raised, in hopes that the spring and summer of 1922 would show a repetition of 1921. What happened?

Prices being forced so high early reduced consumption of Michigan beans and invited the importation of Rumanians and Kotenashis. These were brought in in large quantities and offered at a price sufficient under Michigan to get the business, particularly along the Atlantic Seaboard. A good many cars of Danubians were consigned to interior markets where even when they were not sold acted as a club over consumption and caused the buyers to purchase domestic beans very cautiously. As the season progressed and the Michigan shippers commenced to realize that beans were not moving out fast enough to clean out the old crop before the 1923 crop would be ready, price cutting started and we had just as marked a decline as we had an advance earlier in the season. The whole situation could be attributed to two factors; first, elevators paying more to the growers than the beans were worth on the day they bought them; second, elevators and growers both holding for an anticipated advance in the spring, which was made impossible by the reduced consumption, foreign competition and too many beans.

Whenever a situation like this arises certain Michigan interests and brokers start the cry of manipulation. It is only at times like this when you hear of need of advertising to market the Michigan crop, or of sales agencies, or some proposed reform or another. There was no manipulation; it simply was due to the short sighted policy on the part of the Michigan interests.

Possibilities of 1923 Crop

We now come down to where we can view the possibilities if the 1923 crop more intelligently.

The average acreage is approximately 23 per cent larger than the 1922, whereas the 1922 acreage was in turn approximately 63 per cent greater than the 1921. Yields per acre this year will average no higher than last year, but the increase in acreage will give us a million and a half or two million bushels more this year as compared to last, or, reducing this in terms of Michigan cars, we ought to have this year around 2,250 to 3,000 cars more than a year ago.

A number of factors influencing this crop can be contrasted to conditions as they existed when the 1922 crop started to move.

First.—There were not as many future beans sold this year as there were a year ago; whereas beans for September last year were sold at around $6.50 to $7, this year they were sold at $5.50 to $6. Elevators having them sold, therefore, feel more like sitting back and waiting for decline rather than to jump in and buy hurriedly as they did a year ago, for then they could even advance the market over what it was during September and still have a handsome profit in their futures.

Second.—The old crop of beans in Michigan this year were not cleaned up as they were last season. Stocks in the terminal elevators were not as light this year as they were last. In addition there were several hundred cars of imported beans lying around in different markets waiting for a sales opportunity and in addition, the same as last year, new crop foreign beans, particularly Kotenashis, are being quoted at attractive prices for deferred shipment.

Third.—Demand for beans has not started as heavily as yet as it did a year ago, and if beans are delivered freely by the growers in Michigan now we could not help but have considerable decline, for there is hardly enough demand to take care of the few beans which have been delivered to date.

Fourth.—Last year over a period of approximately nineteen days we did not have five consecutive drying days; this year we had five consecutive drying days from September 13 to 17 inclusive. During this period a good percentage of the Michigan crop was taken care of.

Fifth.—This year as contrasted to last, both the elevators and growers realized that there is an extremely big crop of beans, and notwithstanding the damage from dry weather during the summer and damage from rains during harvest we will have a big crop of Michigan beans to market.

Sixth.—Both growers and elevators also realize that if prices get above $5.50 to $6 we will again be inviting heavy importation of imported beans, which will naturally result in reducing the consumption of domestic varieties.

Seventh.—Last year there were substitution of white beans in a good many markets (which prefer to use pintos) on account of the extremely short pinto crop, and resultant high prices on the Colorado and New Mexico product. This year pintos in Colorado and New Mexico have been growing under almost ideal conditions and the shippers there believe they will have approximately three times as many beans as they did a year ago.

Eighth.—Michigan bean men, particularly the jobbers, realize that there is considerable big acreage of white beans being raised this year in Idaho and Montana. They also realize that the production of small whites in Colorado is approximately the same as it was a year ago, whereas there is a considerable increase in the production of large whites.

Ninth.—The elevators realize that the quality of the Michigan beans this year will approximate that of last.

As we sit down and review the above contrast we cannot help but believe that the trend of the market this year will be just about the opposite of what it was a year ago. In other words, we look for lower prices to rule between now and say February 1, and higher prices after that date. We are hesitant, however, about making any definite predictions, for there are approximately 40 to 50 per cent of the Michigan beans still unsecured, and weather will have considerable bearing as to the condition in which these are harvested. We believe firmly, however, that the trade would not rush in and buy beans on an advancing market; on the other hand, we believe that if Michigan prices are held at a reasonable basis there will be absolutely no difficulty in marketing our bean crop at fair prices. By fair prices we have in mind $5@5.50 Michigan.

Price Fixing By the Government Holds No Hope for Wheat Farmers

DEMAND has developed in some of the wheat sections for the United States Government to set a fixed price for wheat. In the minds of those who desire it, this usually means a guaranteed minimum price. If the natural price set by supply and demand was below the guaranteed price, the Government would purchase and store enough wheat to bring the natural price up to level of the guaranteed price. If it was necessary for the Government to dispose of its purchases at a loss, the deficit would be met out of taxation.

The guaranteed price, according to its proponents, would be based on cost of production plus a profit. Costs of production vary. If average costs were used as a basis, only a little over half of the farms would receive a fair profit. Presumably the price would be adequate to cover the costs of the bulk of the producers, say 75 to 80 per cent.

The high cost producers would be forced into other lines of production. Usually this would most affect the states which appear anxious for a fixed price, namely, the Dakotas and Minnesota. They are among the states where cost of production per bushel are likely to be high because yield per acre is likely to be low. Yield per acre is the biggest factor in determining costs per bushel.

The guaranteed price might be put just high enough to induce the growing of the proper volume of wheat. This would yield a profit to the low cost producers but would not satisfy the high cost producers who are the ones demanding the fixed price.

A guaranteed price to be of any benefit to those who want it, would most certainly be higher than the present price and would cause additional planting when it is generally agreed that there is already excess production and that there must be a readjustment of farming which will include a smaller wheat acreage.

Penalty for Overproduction

Some proposals meet the certainty of overproduction by including a penalty on producers in the form of a tax graded according to the size of the carryover. One such plan proposes:

1. A minimum or base price calculated in advance of each crop season for the four crops—wheat, corn, oats and cotton—according to the fixed formula:

Average general price index number 1906-1914 divided by average price of crop 1916-1915 equals.

Average general index number in year of production divided by X (base or minimum price).

2. A corporation chartered by the Federal Government for the purpose of buying any amount of each commodity offered for sale to it at the base price.

3. A tariff adjusted to prevent the import of each commodity to sell below the base price.

4. All sales for export to be made or controlled by the corporation.

5. The funds to finance the operations of the corporation to be obtained by a loan or tax contributed pro rata by each bushel or bale, etc., of each crop when and as sold by the farmer.

6. The tax to be collected under and required by federal statute and the collections to be turned over to the corporation by the Government,

7. The size of the tax to be announced before planting season of the crop on which it will be assessed and to depend upon the size of the carryover from the previous crop.

Another plan, in the words of the proposer, is stated as follows:

"Granting that we need 600,000,000 bushels of wheat a year to take care of our domestic requirements and possibly a small exportable surplus, I have ascertained that about 45,000,000 acres will, one year with another, produce this amount.

"Now my idea is to have the Government say that it will buy whatever surplus there is from this acreage a.., let us say for illustration, $1.75. Then for every 200,000 acres put in above the amount called for, take 10 cents off the guarantee. I think the psychology of this would be to cause farmers to get together

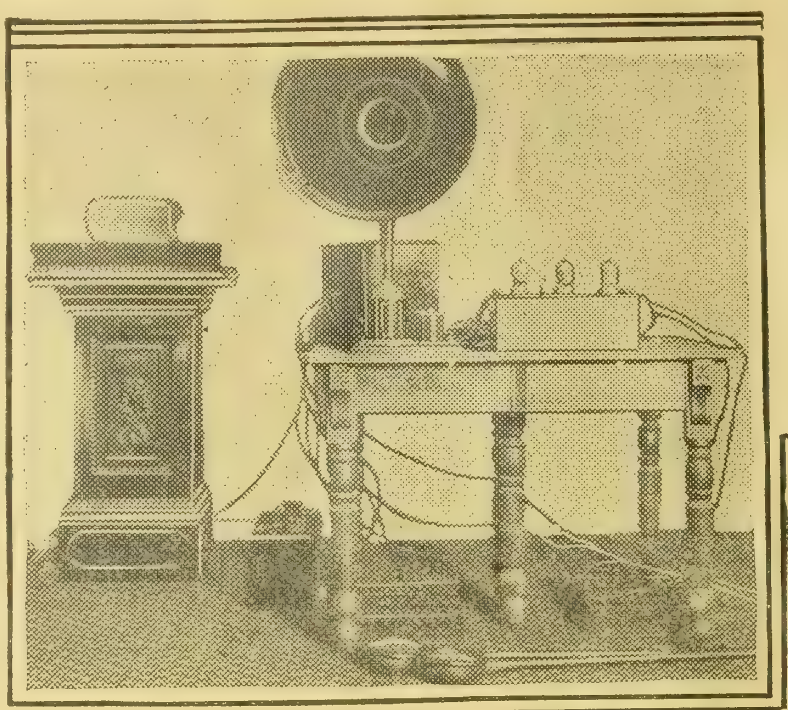
Radio Becomes Preacher in Country Church

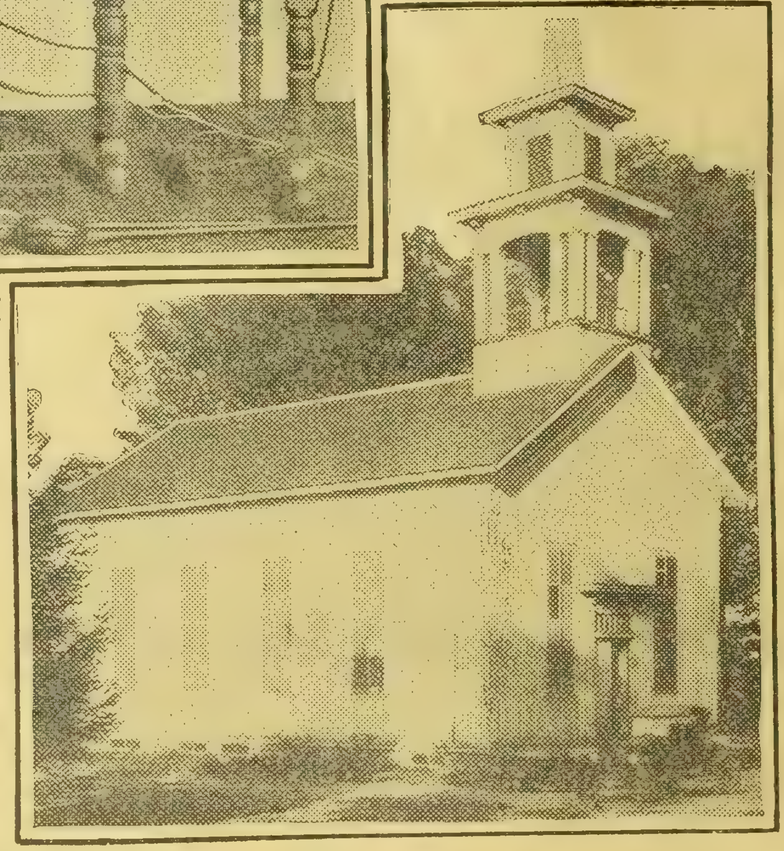
Members of Maple River Parish Could Not Afford to Hire Pastor So They Purchased Radio Receiving Set and Loud Speaker and Now Listen to Sermons from Detroit

SEVERAL different times we have read articles regarding radio in which ministers have been quoted as saying that radio was the work of the devil as it kept people away from church; they stayed home and listened to services over their radio receiving set instead of going to church. These ministers are rather short-sighted and I think they would admit as much if they visited some Sunday a little church located several miles southwest of Owosso, Michigan.

The Maple River church was organized eight years ago on the community basis under the control of the Maple River Sunday School Association and up to six months ago had a pastor. Since that time they have been trying to hire another minister but, according to members of the community, they could not secure the services of an able man for the amount of money the community was able to pay. Several weeks ago Mr. A. B. Cook, master of the Michigan State Grange suggested to the leaders that they install a radio receiving set in the church and receive some of the fine sermons broadcasted from Detroit and other large cities. The idea sounded good to them and several got together to defray the cost and less than a month ago the set was installed. Now on Sunday morning the members of the little parish assemble for services as of old but instead of the minister stepping behind the pulpit and announcing the first hymn one of the leaders in the church steps to the receiving set on a table beside the pulpit, turns the current on, adjusts the apparatus and the congregation listens in on the services from one of Detroit's largest churches, as broadcast by one of the two powerful stations in that city.



LEFT: The radio receiving set used by the pastorless Maple River parish to get sermons from Detroit.



RIGHT: The radio equipped Maple River Church near Owosso, Michigan.

Near the pulpit is a large loud speaker through which the voice of the Detroit pastor comes in such volume that it can be heard in all corners of the room. No eloquent gestures drive home the good points of the sermon as of yore. Some inventor in the future may devise some apparatus that will not only reproduce the voice of a preacher several hundred miles away but will pound the pulpit for emphasis as well. Then the next inventor will have to contrive some kind of a radio receiving set that will hurry to the door at the conclusion of the services to shake hands with the members of the congregation as they file out. However, in spite of the few shortcomings, the Maple River Parish claim they were well pleased with what they heard. At the conclusion of the first radio sermon one of the members was asked by an outsider how the congregation liked it and he replied, "We enjoyed the service very much and I shouldn't wonder if we'd continue. It costs a whole lot less to maintain a radio set that to hire a good minister."

The passing of years has seen the number of country churches with barred doors and boarded-up windows increase until in many sections farmers who go to church are obliged to drive to the nearest town. And many live at such a distance from town that they cannot go to church every Sunday. It looks like the folks of Maple River church have solved their problem in a way that any congregation in Michigan might follow. Farm leaders believe that radio will solve the country church problem and that within a few years there will be hundreds of radio equipped country churches in Michigan. And the day may come when all country churches will have a radio receiving set on the pulpit instead of a minister behind the pulpit and each state will have a central broadcasting station and each Sunday a sermon by a nondenominational minister will be broadcast—who can tell?

Sunday need not be the only time when the receiving set is of use. The church can be made a community center and the young folks can get together one, two or three nights a week. An older member of the church can come with them and they can sing some hymns, read some from the Bible and then turn on the radio and listen to good music, singing, or a lecture. One station may be broadcasting an opera; another dance music; another, a lecture by some famous man; or you may hear those songs that were popular fifty years ago; the air is full of music and voices all evening. It will be good amusement for the rural girls and boys and make life on the farm more of a pleasure.

When Will Dollar Now Worth Sixty Cents Be Worth Hundred Cents Again?

WE dare say there isn't a man in this country that has not asked himself and his neighbor this question: "When will the dollar be worth a dollar again?" And the answer was, "I don't know." The man who gives his answer in this article, Mr. George E. Roberts, is perhaps better qualified to give a correct answer than any other man in the country. Regardless of whether you agree with him or not his opinion is of interest.

WHEN will the dollar be worth a dollar again?

That was the problem for the solution of which I went to George E. Roberts, vice-president of the National City Bank of New York, formerly Director of the United States Mint under five administrations and internationally famous as an economist.

I put my question to him in this fashion: "According to the financial authorities the dollar is now about 60 points above pre-war par or, in other words, it takes $1.60 today to buy what you could buy for a dollar in 1914. When is a dollar going to be worth a dollar again?"

Must Produce

"When we produce enough goods to restore the balance," replied Mr. Roberts promptly. "Money is simply a measure of production and the answer to high prices is simply- produce more goods."

"Is there not a limit? Is there not a point at which we reach over-production?" I queried.

"There is no such thing as over-production. It is an impossibility." There was a finality about the tones of that answer which did not encourage argument but if you want information you cannot afford to be discouraged.

"It is something that is talked about a great deal at least," I suggested.

"That is unfortunately true and is due to the fact that people use words loosely and do not do much thinking about economic subjects. A very little reflection will show how absurd it is to talk about over-production. Are the wants or desires of any ordinary human being ever satisfied? Does not the man who lives in a four-room apartment want to move to a six-room apartment and the man in the six-room apartment to a larger one? Does every family that wants a piano or an automobile own one? Did you ever hear of a woman (the twinkle was very obvious now) who had enough clothes? Human wants are infinite and grow unceasingly. If they ever were satisfied life would become stagnant and civilization would make no further progress."

The Armory at Muskegon, Michigan where the Michigan State Grange is holding sessions this week.

"Well," I persisted, "what do people mean when they talk about over-production?"

"They mean that production is not properly balanced, that labor is not properly distributed. They mean that too many people are engaged in one industry and too few in another. During the war prices of everything went up fairly evenly because there was a huge demand for practically every commodity. But prices have not come down evenly because the demand for some things has been greater than that for others. The farmer has suffered because agriculture was the first industry to get back on its feet in Europe and that was at once reflected in a falling off in demand for American farm products. On the other hand the demand for houses has been greater than the limited supply with the result that we have had a serious condition in that direction."

"How can we get a better distribution of labor and restore the balance to production?" I asked.

Unions Could Aid

"The labor unions and labor leaders could give powerful help in solving that problem," answered Mr. Roberts. He swung around in his chair and looked thoughtfully out of the window toward the skeleton of a great office building that was slowly and noisily taking shape. "I do not want to harshly criticize any-

THE STORY TO DATE

MR. STANLEY G. FULTON, 50-year old bachelor and possessor of twenty million dollars, calls on his lawyer and they discuss the disposition of this large fortune after its owner's death. The lawyer is in favor of giving the money to colleges or charities while Fulton is opposed to these ideas. He remembers that he has some distant cousins and decides to leave the money to one of them, but first he determines to learn which one will use it to the best advantage. To find out who is the worthy one he, through his lawyer, gives each cousin $100,000 to use as they will. He then grows a beard and, under the name of Mr. John Smith, goes to the town where these cousins reside to observe how they spend the $100,000.

(Continued from October 13th issue.)

THERE came a sharp knock at the door. The eager Benny jumped to his feet, but his aunt shook her head and went to the door herself. There was a murmur of voices, then a young man entered the hall and sat down in the chair near the hat-rack. When Mrs. Blaisdell returned her eyes were very bright. Her cheeks showed two little red spots. She carried herself with manifest importance.

"If you'll just excuse me a minute," she apologized to Mr. Smith, as she swept by him and opened a door across the room, nearly closing it behind her.

Distinctly then, from beyond the imperfectly closed door, came to the ears of Benny and Mr. Smith these words, in Mrs. Blaisdell's most excited accents:—

"Mellicent, it's Carl Pennock. He wants you to go auto-riding with him down to the Lake with Katie Moore and that crowd."

"Mother!" breathed an ecstatic voice.

What followed Mr. Smith did not hear, for a nearer, yet more excited, voice demanded attention.

"Gee! Carl Pennock!" whispered Benny hoarsely. "Whew! Won't my sister Bess be mad? She thinks Carl Pennock's the cutest thing going. All the girls do!"

With a warning "Sh-h!" and an expressive glance toward the hall, Mr, Smith tried to stop further revelations; but Benny was not to be silenced.

"They're rich—awful rich—the Pennocks are," he confided still more huskily. "An' there's a girl—Gussie. She's gone on Fred. He's my brother, ye know. He's seventeen; an' Bess is mad 'cause she isn't seventeen, too, so she can go an' play tennis same as Fred does. She'll be madder'n ever now, if Mell goes auto-riding with Carl, an'—"

"Sh-h!" So imperative were Mr. Smith's voice and gesture this time that Benny fell back subdued.

At once then became distinctly audible again the voices from the other room. Mr. Smith forced to hear in spite of himself, had the air of one who finds he has abandoned the frying pan for the fire.

"No, dear, it's quite out of the question," came from beyond the door, in Mrs. Blaisdell's voice. "I can't let you wear your pink. You will wear the blue or stay at home. Just as you choose."

"But mother, dear, it's all out of date," wailed a young girl's voice.

"I can't help that. It's perfectly whole and neat, and you must save the pink for best."

"But I'm always saving things for best, mother and I never wear my best. I never wear a thing when it's in style! By the time you let me wear the pink I shan't want to wear it. Sleeves'll be small then—you see if they aren't—I shall be wearing big ones. I want to wear big ones now, when other girls do. Please, mother!"

"Mellicent, why will you tease me like this, when you know it will do no good? —when you know I can't let you do it? Don't you think I want you to be as well-dressed as anybody, if we could afford it? Come, I'm waiting. You must wear the blue or stay at home. What shall I tell him?"

There was a pause, then there came an inarticulate word and a choking half-sob. The next moment the door opened and Mrs. Blaisdell appeared. The pink spots in her cheeks had deepened. She shut the door firmly, then hurried thru the room to the hall beyond. Another minute and she was back in her chair.

"There," she smiled pleasantly. "I'm ready now to talk business, Mr. Smith."

And she talked business. She stated plainly what she expected to do for her boarder, and what she expected her boarder would do for her. She enlarged upon the advantages and minimized the discomforts, with the aid of a word now and then from the eager interested Benny.

Mr. Smith, on his part, had little to say. That that little was most satisfactory, however, was very evident; for Mrs. Blaisdell was soon quite glowing with pride and pleasure. Mr. Smith was not glowing. He was plainly ill at ease, and, at times, slightly abstracted. His eyes frequently sought the door which Mrs. Blaisdell had closed so firmly a short time before. They were still turned in that direction when suddenly the door opened and a young girl appeared.

She was a slim little girl with long-lashed star-like eyes and a wild-rose flush in her cheeks. Beneath her trim hat her light brown hair waved softly over her ears, glinting into gold where the light struck it. She looked excited and pleased, yet not quite happy. She wore a blue dress, plainly made.

"Don't stay late. Be in before ten, dear," cautioned Mrs. Blaisdell. "And Mellicent, just a minute, dear. This is Mr. Smith. You might as well meet him now. He's coming here to live—to board, you know. My daughter, Mr. Smith."

Mr. Smith, already on his feet, bowed and murmured a conventional something. From the starlike eyes he received a fleeting glance that made him suddenly conscious of his fifty years and the bald spot on the top of his head. Then the girl was gone, and her mother was speaking again.

"She's going auto-riding—Mellicent is with a young man, Carl Pennock—one of the nicest in town. There are four others in the party. They're going down to the Lake for cake and ice cream, and they're all nice young people, else I shouldn't let her go, of course. She's eighteen, for all she's so small. She favors my mother in looks, but she's got the Blaisdell nose, though. Oh, and t'was the Blaisdells you said you were writing a book about, wasn't it? You don't mean our Blaisdells, right here in Hillerton?"

"I mean all Blaisdells, wherever I find them," smiled Mr. Smith.

"Dear me! What, us? You mean we'll be in the book?" Now that the matter of board had been satisfactorily settled, Mrs. Blaisdell apperently dared to show some interest in the book.

"Certainly."

"You don't say! My, how pleased Hattie'll be—my sister-in-law, Jim's wife. She just loves to see her name in print—parties, and club banquets, and where she pours, you know. But maybe you don't take women, too."

"Oh, yes, if they are Blaisdells, or have married Blaisdells."

"Oh! That's where we'd come in, then, isn't it? Mellicent and I? And Frank, my husband, he'll like it, too,—if you tell about the grocery store. And of course you would, if you told about him. You'd have to—'cause that's all there is to tell. He thinks that's about all there is in the world, anyway,—that grocery store. And 'tis a good store, if I do say it. And there's his sister, Flora; and Maggie— But there! Poor Maggie! She won't be in it, will she, after all? She isn't a Blaisdell, and she didn't marry one. Now that's too bad!"

"Ho! She won't mind." Benny spoke with conviction. "She'll just laugh and say it doesn't matter; and then Grandpa Duff'll ask for his drops or his glasses, or something, and she'll forget all about it. She won't care."

"Yes, I know; but—Poor Maggie! Always just her luck." Mrs. Blaisdell sighed and looked thoughtful. "But Maggie knows a lot about the Blaisdells,' she added, brightening; "so she could tell you lots of things—about when they were little, and all that."

"Yes. But—that isn't—er" Mr. Smith hesitated doubtfully, and Mrs. Blaisdell jumped into the pause.

"And, really, for that matter, she knows about us now, too, better than 'most anybody else. Hattie's always sending for her, and Flora, too, if they're sick, or anything. Poor Maggie! Sometimes I think they actually impose upon her. And she's such a good soul, too! I declare, I never see her but I wish I could do something for her. But of course, with my means—But, there! Here I am running on as usual. Frank says I never do know when to stop, when I get started on something; and of course you didn't come here to talk about poor Maggie. Now I ll go back to business. When is it you want to start in—to board, I mean?"

"To-morrow, if I may." With some alacrity Mr. Smith got to his feet. "And now we must be going—Benny and I. I'm at the Holland House. With your permission, then, Mrs. Blaisdell, I'll send up my trunks to-morrow morning. And now good-night—and thank you."

"Why—but Mr. Smith!" The woman, too, came to her feet, but her face was surprised. "Why, you haven't even seen your room yet! How do you know that you'll like it?"

"Eh? What? Oh!" Mr. Smith laughed. There was a quizzical lift to his eyebrows. "So I haven't, have I? And people usually do, don't they? Well—er —perhaps I will just take a look at— the room, though I'm not worrying any, I assure you. I've no doubt it will be quite right," he finished, as he followed Mrs. Blaisdell to a door halfway down the narrow hall.

Five minutes later, once more on the street, he was walking home with Benny. It was Benny who broke the long silence that had immediately fallen between them.

"Say, Mr. Smith, I'll bet ye you'll never be rich!"

Mr. Smith turned with a visible start.

"Eh? What? I'll never be—What do you mean, boy?"

Benny gigled cheerfully.

" 'Cause you paid Aunt Jane what she asked the very first time. Why, Aunt Jane never expects ter get what she asks, pa says. She sells him groceries in the store, sometimes, when Uncle Frank's away, ye know. Pa says what she asks first is for practice—just ter get her hand in; an' she expects ter get beat down. But you paid it, right off the bat. Didn't ye see how tickled Aunt Jane was, after she'd got over bein' surprised?"

"Why—er—really, Benny," murmured Mr. Smith.

But Benny had yet more to say.

"Oh, yes, sir, you could have saved a lot every week, if ye hadn't bit so quick. An' that's why I say you won't ever get rich. Savin' 's what does it, ye know —gets folks rich. Aunt Jane says so. She says a penny saved 's good as two earned and better than four spent."

"Well, really, indeed!" Mr. Smith laughed lightly. "That does look as if there wasn't much chance for me, doesn't it?"

"Yes, sir." Benny spoke soberly, and with evident sympathy. He spoke again, after a moment, but Mr. Smith did not seem to hear at once. Mr. Smith was, not a little abstracted all the way to Benny's home, though his good-night was very cheerful at parting. Benny would have been surprised, indeed, had he known that Mr. Smith was thinking, not about his foolishly extravagant agreement for board, but about a pair of starry eyes with wistful lights in them, and a blue dress, plainly made.

In the hotel that night, Mr. John Smith wrote the following letter to Edward D. Norton, Esq., Chicago:

My Dear Ned,—Well, I'm here. I've been here exactly six hours, and already I'm in possession of not a little Blaisdell data for my—er—book. I've seen Mr. and Mrs. James, their daughter, Bessie, and their son Benny. Benny by the way, is a gushing geyser of current Blaisdell data which I forsee, I shall find interesting, but embarrassing, perhaps, at times. I've also seen Miss Flora, and Mrs. Jane Blaisdell and her daughter, Mellicent.

There's a "Poor Maggie" whom I have not seen. But she isn't a Blaisdell. She is a Duff, daughter of the man who married Rufus Blaisdell's widow, some thirty years or more ago. As I said, I haven't seen her yet, but she, too, according to Mrs. Frank Blaisdell, must be a gushing geyser of Blaisdell data, so I probably soon shall see her. Why she's "poor" I don't know.

As for the Blaisdell data already in my possession—I've no comment to make. Really, Ned, to tell the truth, I'm not sure I'm going to relish this job, after all. In spite of a perfectly clear conscience, and the virtuous realization that I'm here to bring nothing worse than a hundred thousand dollars apiece (with the possible addition of a few millions on their devoted heads—in spite of all this, I yet have an uncomfortable feeling that I'm a small boy listening at the keyhole.

However, I'm committed to the thing now, so I'll stuff it out, I suppose,— though I'm not sure, after all, that I wouldn't chuck the whole thing if it wasn't that I wanted to see how Mellicent will enjoy her pink dresses. How many pink dresses will a hundred thousand dollars buy, anyway,—I mean pretty pink dresses, all fixed up with frills and furbelows?

As ever yours,
Stan—er John Smith.

CHAPTER IV

In Search of Some Dates

Very promptly the next morning Mr. John Smith and his two trunks appeared at the door of his new boarding-place. Mrs. Jane Blaisdell welcomed him cordially. She wore a high-necked, long-sleeved gingham apron this time, which she neither removed nor apoligized for —unless her cheerful "You see, mornings you'll find me in working trim, Mr. Smith," might be taken for an apology.

Mellicent, her slender young self enveloped in a similar apron, was dusting his room as he entered it. She nodded absently, with a casual "Good-morning, Mr. Smith," as she continued at her work. Even the placing of the two big trunks, which the shuffling men brought in, won from her only a listless glance or two. Then, without speaking again, she left the room, as her mother entered it.

"There!" Mrs. Blaisdell looked about her complacently. "With this couch-bed with its red cover and cushions, and all the dressing things moved to the little room in there, it looks like a real sitting-room in here, doesn't it?"

"It certainly does, Mrs. Blaisdell."

"And you had 'em take the trunks in there, too. That's good," she nodded, crossing to the door of the small dressing-room beyond. "I thought you would. Well, I hope you'll be real happy with us, Mr. Smith, and I guess you will. And you needn't be a mite afraid of hurting anything. I've covered everything with mats and tidies and spreads."

"Yes, I see." A keen listener would have noticed an odd something in Mr. Smith's voice; but Mrs. Blaisdell apparently noticed nothing.

"Yes, I always do—to save wearing and soiling, you know. Of course, if we had money to buy new all the time, it would be different. But we haven't. And that's what I tell Mellicent when she complains of so many things to dust and brush. Now make yourself right at home, Mr. Smith. Dinner's at twelve o'clock, and supper is at six—except in the winter. We have it earlier then, so's we can go to bed earlier. Saves gas, you know. But it's at six now. I do like the long days, don't you? Well, I'll be off now, and let you unpack. As I said before, make yourself perfectly at home, perfectly at home."

Let alone, Mr. Smith drew a long breath and looked about him. It was a pleasant room., in spite of its cluttered appearance. There was on old-fashioned desk for his papers, and the chairs looked roomy and comfortable. The little dressing-table carried many conveniences, and the windows of both rooms looked out upon the green of the common.

"Oh, well, I don't know. This might be lots worse—in spite of the tidies!" chuckled Mr. John Smith, as he singled out the keys of his trunks.

At the noon dinner-table Mr. Smith met Mr. Frank Blaisdell. He was a portly man with rather thick mutton-chop whiskers. He ate very fast, and a great deal, yet he still found time to talk interestedly with his new boarder.

He was plainly a man of decided opinions—opinions which he did not hesitate to express, and which he emphasized with resounding thumps of his fists on the table. The first time he did this, Mr. Smith, taken utterly by surprise, was guilty of a visible start. After that he learned to accept them with the serenity evinced by the rest of the family.

RADIO DEPARTMENT

145,000 FARM RADIO SETS

THE speed with which farmers have taken up radio is shown in a recent survey made by the United States Department of Agriculture. County agricultural agents estimate that there are approximately 40,000 radio sets on farms in 780 counties. This is an average of 51 sets per county. Applying the average to 2,850 agricultural counties a total of more than 145,000 sets on farms throughout the country is estimated.

The county agent's estimates cover every state. In New York it is estimated that in 37 agricultural counties there are 5,502 sets on farms. The county agent for Saratoga County, New York, reported 2,500 sets in the county. In 51 counties in Texas there are 3,085 sets. Forty-three counties in Illinois show 2,814 sets; 26 counties in Missouri, 2,861 sets; 42 counties in Ohio, 2,620 sets; 40 counties in Iowa, 2,463 sets, and 26 counties in Kansas, 2,054 sets. New Jersey, Pennsylvania, Michigan and Minnesota have between 1,000 and 2,000 sets each.

INSTALLS BROADCASTING SET

APPANOOSE County, Iowa, Farm Bureau has installed a radio broadcasting outfit. This is the first county organization in the United States to install a sending apparatus.

Station XYZ, as it is known, has attracted wide attention in Iowa. The broadcasting outfit, 100-watt telephone, has an antenna current of 4 amperes. The maximum range is 1,200 miles; the normal range, 250 miles.

There are eighty receiving sets on Appanoose County farms. Each day at noon the latest news and market reports are broadcasted. This system takes the place of tedious hours at telephone sending market news and like information to individuals.

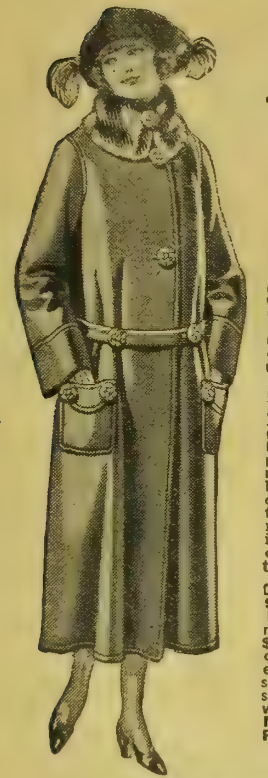
Any Bargain Shipped On Approval!

Send No Money

Not only do we claim that these are the biggest bargains in the U. S. A.—we are ready to prove it at our own risk—not yours. We don't ask you to take our word. We invite you to select any articles on this page and order them entirely on approval. You be the judge when goods arrive. If you are not delighted with their quality and positively amazed at their dollar-for-dollar value, simply return the shipment and you will not lose a cent.

Don't send one cent. Just letter or postcard brings you any of these smashed price bargains. Merely give Name and Number of Each Article You Want. Also State Size and Write Your Name and Address plainly to Avoid Delay. Pay Nothing till goods arrive—then only the amazing bargain price and postage. If you are not delighted with your bargain for any reason at all simply return the goods and your money will be cheerfully refunded. **ORDER NOW.** If you buy NOW, you'll BUY RIGHT.

PAY ONLY WHEN GOODS ARRIVE

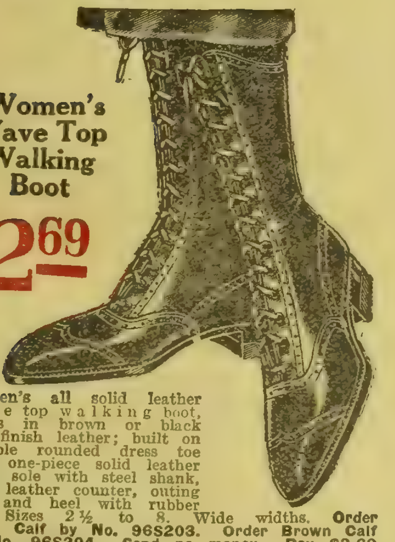


Fur Trimmed Thibet Coat For Women

$5.98

Another sensational value in a warm winter coat. This becoming model is of splendid Thibet cloth in choice of rich brown or navy blue. The ample collar is of genuine brown Coney fur. Coat is finished with all-around self material belt and two patch pockets trimmed with pretty buttons. Imitation cuff is also button trimmed. Coat measures about 48 inches long, and comes in sizes 34 to 44 bust.

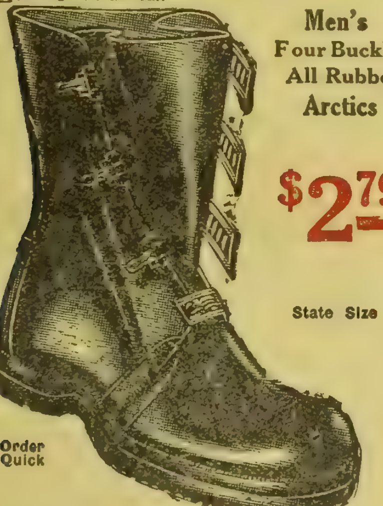
Order Brown by No. 96E7094. Navy by No. 96E7096. Send no money. Pay $5.98 and postage on arrival for either color. State size wanted. Order similar style Black with plush collar by No. 96E7097, Price $3.98.



Women's Wave Top Walking Boot

$2.69

Women's all solid leather wave top walking boot, comes in brown or black calf finish leather; built on sensible rounded dress toe last; one-piece solid leather inner sole with steel shank, solid leather counter, outing sole and heel with rubber tip. Sizes 2½ to 8. Wide widths. **Order Black Calf by No. 96S203. Order Brown Calf by No. 96S204. Send no money. Pay $2.69 and postage on arrival.**



Men's Four Buckle All Rubber Arctics

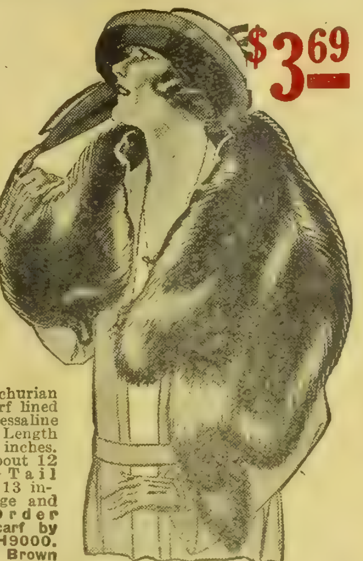
$2.79

State Size

Order Quick

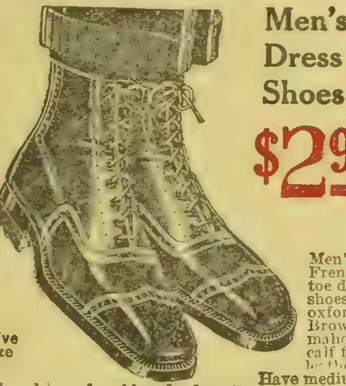
Guaranteed best quality all rubber 4-buckle hi-cut arctic. Made with double corrugated soles and reinforced seams. Snow-excluding tongue. Men's sizes 6 to 15. Wide widths. Can be washed and cleansed. Send quick. **Order by No. 96A990. Send no money. Pay $2.79 and postage on arrival.**

Manchurian Wolf Scarf



$3.69

Manchurian Wolf scarf lined with Messaline silk. Length about 44 inches. Width about 12 inches. Tail about 13 inches, large and bushy. **Order Black Scarf by No. 96H9000. Order Brown Scarf by No. 96H9001. Send no money. Pay only $3.69 and postage on arrival.**



Men's Dress Shoes

BABES IN THE JUNGLE

A Complete Short Story by O. HENRY America's Greatest Short Story Writer

Copyrighted, 1920, by Doubleday, Page & Co.; published by special arrangement with the Wheeler Syndicate, Inc.

MONTAGUE SILVER, the finest street man and art grafter in the West, says to me once in Little Rock: "If you ever lose your mind, Billy, and get too old to do honest swindling among grown men, go to New York. In the West a sucker is born every minute; but in New York they appears in chunks of roe—you can't count 'em!"

Two years afterward I found that I couldn't remember the names of the Russian admirals, and I noticed some gray hairs over my left ear; so I knew the time had arrived for me to take Silver's advice.

I struck New York about noon one day, and took a walk up Broadway. And I run against Silver himself, all encompassed up in a spacious kind of haberdashery, leaning against a hotel and rubbing the half-moons on his nails with a silk handkerchief.

"Paresis or superannuated?" I asks him.

"Hello, Billy," says Silver; "I'm glad to see you. Yes, it seemed to me that the West was accumulating a little too much wiseness. I've been saving New York for dessert. I know it's a low-down trick to take things from these people. They only know this and that and pass to and fro and think ever and anon. I'd hate for my mother to know I was skinning these weak-minded ones. She raised me better."

"Is there a crush already in the waiting-rooms of the old doctor that does skin grafting?" I asks.

"Well, no," says Silver, "you needn't back Epidermis to win today. I've only been here a month. But I'm ready to begin; and the members of Willie Manhattan's Sunday School class, each of whom has volunteered to contribute a portion of cuticle toward this rehabilitation, may as well send their photos to the Evening Daily.

"I've been studying the town," says Silver, "and reading the papers every day, and I know it as well as the cat in the City knows an O'Sullivan. People here lie down on the floor and scream and kick when you are the least bit slow about taking money from them. Come up in my room and I'll tell you. We'll work the town together, Billy, for the sake of old times."

Silver takes me up in a hotel. He has a quantity of irrelevant objects lying about.

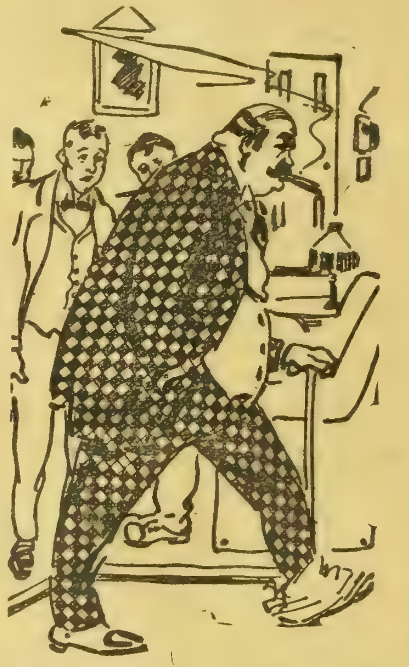
"There's more ways of getting money, from these metropolitan hayseeds," says Silver, than here is of cooking rice in Charlestown, S. C. They'll bite at anything. The brains of most of 'em commute. The wiser they are in intelligence the less perception of cognizance they have. Why didn't a man the other day sell J. P. Morgan an oil portrait of Rockefeller, Jr., for Andrea del Sarto's celebrated painting of the young Saint John!

"You see that bundle of printed stuff in the corner, Billy? That's gold mining stock. I started out one day to sell that, but I quit it in two hours. Why? Got arrested for blocking the street. People fought to buy it. I sold the policeman a block of it on the way to the stationhouse and then I took it off the market. I don't want people to give me their money. I want some little consideration connected with the transaction to keep my pride from being hurt. I want 'em to guess the missing letter in Chic—go, or draw to a pair of nines before they pay me a cent of money.

"Now there's another little scheme that worked so easy I had to quit it. You see that bottle of blue ink on the table? I tattooed an anchor on the back of my hand and went to a bank and told 'em I was Admiral Dewey's nephew. They offered to cash my draft on him for a thousand, but I didn't know my uncle's first name. It shows, though, what an easy town it is. As for burglars, they won't go in a house unless there's a hot supper ready and a few college students to wait on 'em. They're slugging citizens all over the upper part of the city and I guess, taking the town from end to end, it's a plain case of assault and Battery."

"Monty," says I, when Silver had slacked up, "you may have Manhattan correctly discriminated in your perorative, but I doubt it. I've only been in town two hours, but it don't dawn upon me that it's ours with a cherry in it. There ain't enough rus in urbe about it to suit me. I'd be a good deal much better satisfied if the citizens had a straw or more in their hair, and run more to velveteen vests and buckeye watch charms. They don't look easy to me."

"You've got it, Billy," says Silver. "All emigrants have it. New York's bigger than Little Rock or Europe, and it frighten's a foreigner. You'll be all right. I tell you I feel like slapping the people here because they don't send me all their money in laundry baskets, with germicide sprinkled over it. I hate to go down the street to get it. Who wears the diamonds in this town? Why, Winnie, the Wiretapper's wife, and Bella, the Buncosteerer's bride. New Yorkers can be worked easier than a blue rose on a tidy. The only thing that bothers me is I know I'll break the cigars in my vest pocket when I get my clothes all full of twenties."



Mr. Morgan begins to walk up and down swearing in a loud tone of voice.

"I hope you are right, Monty," says I; "but I wish all the same I had been satisfied with a small business in Little Rock. The crop of farmers is never so short out there but what you can get a few of 'em to sign a petition for a new post office that you can discount for $200 at the county bank. The people here appear to possess instincts of self-preservation and illiberality. I fear me that we are not cultured enough to tackle this game."

"Don't worry," says Silver. "I've got this Jayville-near-Tarrytown correctly estimated as sure as North River is the Hudson and East River ain't a river. Why, there are people living in four blocks of Broadway who never saw any kind of a building except a skyscraper in their lives! A good, live hustling Western man ought to get conspicious enough here inside of three months to incur either Jerome's clemency or Lawson's displeasure."

"Hyperbole aside," says I, "do you know of any immediate system of buncoing the community out of a dollar or two except by applying to the Salvation Army or having a fit on Miss Helen Gould's doorstep?"

"Dozens of 'em," says Silver. "How much capital have you got, Billy?"

"A thousand," I told him.

"I've got $1,200," says he. We'll pool and do a big piece of business. There's so many ways we can make a million that I don't know how to begin."

The next morning Silver meets me at the hotel and he is all sonorous and stirred with a kind of silent joy.

"We're to meet J. P. Morgan this afternoon," says he. "A man I know in the hotel wants to introduce us. He's a friend of his. He says he likes to meet people from the West."

"That sounds nice and plausable," says I. "I'd like to know Mr. Morgan."

"It won't hurt a bit," says Silver, "to get acquainted with a few finance Kings. I kind of like the social way New York has with strangers."

The man Silver knew was named Klein. At three o'clock Klein brought his Wall Street friend to see us in Silver's room. "Mr. Morgan" looked some like his pictures, and he had a Turkish towel wrapped around his left foot, and he walked with a cane.

"Mr. Silver and Mr. Pescud," says Klein. "It sounds superfluous," says he, "to mention the name of the greatest financial—"

"Cut it out, Klein," says Mr. Morgan. "I'm glad to know you gents; I take great interest in the West. Klein tells me you're from Little Rock. I think I've a railroad or two out there somewhere. If either of you guys would like to deal a hand or two of stud poker I—"

"Now, Pierpont," cuts in Klein, "you forget!"

"Excuse me, gents!" says Morgan; "since I've had the gout so bad I sometimes play a social game of cards at my house. Neither of you ever knew One-eyed Peters, did you, while you was around Little Rock? He lived in Seattle, New Mexico."

(Before we could answer, Mr. Morgan hammers on the floor with his cane and begins to walk up and down swearing in a loud tone of voice.)

"They have been pounding your stocks today on the Street, Pierpont?" asks Klein, smiling.

"Stocks! No!" roars Mr. Morgan. "It's that picture I sent an agent to Europe to buy. I just thought about it. He cabled me today that it ain't to be found in all Italy. I'd pay $50,000 tomorrow for that picture—yes, $75,000. I give the agent a la carte in purchasing it. I cannot understand why the art galleries will allow a DeVinchy to—"

"Why, Mr. Morgan," says Klein; "I thought you owned all of the De Vinchy paintings?"

"What is the picture like, Mr. Morgan?" asks Silver. "It must be as big as the side of the Flatiron Building."

"I'm afraid your art education is on the bum, Mr. Silver," says Morgan. "The picture is 27 inches by 42; and it is called 'Love's Idle Hour.' It represents a number of cloak models doing the two-step on the bank of a purple river. The cablegram said it might have been brought to this country. My collection wil never be complete without that picture. Well, so long, gents; us financiers must keep early hours."

Mr. Morgan and Klein went away together in a cab. Me and Silver talked about how simple and unsuspecting great people was; and Silver said what a shame it would be to try to rob a man like Morgan; and I said I thought it would be rather imprudent myself. Klein proposes a stroll after dinner; and me and him and Silver walks down toward Seventh Avenue to see the sights. Klein sees a pair of cuff links that instigate his admiration in a pawnshop window, and we all go in while he buys 'em.

After we got back to the hotel and Klein had gone, Silver jumps at me and waves his hands.

"Did you see it?" says he. Did you see it, Billy?"

"What?" I asks.

"Why that picture that Morgan wants. It's hanging in that pawnshop, behind the desk. I didn't say anything because Klein was there. It's the article as sure as you live. The girls are as natural as paint can make them, all measuring 36 and 25 and 42 skirts, if they had any skirts, and they're doing a buck-and-wing on the bank of a river with the blues. What did Mr. Morgan say he'd give for it? Oh, don't make me tell you. They can't know what it is in that pawnshop."

(Continued on Page 17)

What the Neighbors Say

APPROVES OF USING CONVICTS TO BUILD ROADS

DEAR EDITOR—I was much interested in the article in your issue of the Business Farmer of September 15th, on the subject of the use of convict labor on the public highways, and your editorial comment thereon. The plan is a good one, and it has been in successful use in Colorado for a number of years. I was surprised that no reference was made to Colorado's experience since that state was a pioneer in that particular method of using its convict labor.

For many years I have had a very firm conviction that every state should provide work on highways, or elsewhere when conditions are such that work on highways cannot be done, for all men who are without employment and in need of financial assistance. The state in such cases should pay a wage that would make it possible for the men to provide for themselves and their families the absolute necessities of life when used in the most economical way, but the wage should be much below that paid by private enterprise so that every laborer would seek a position with a private employer and get off the public payroll just as soon as possible. With this provision made for the unemployed charity in other forms should be discontinued. The man who would refuse to work should be refused food and clothing. If he had a family and refused to work to provide for them under this plan, he should be placed under arrest as a vagrant and dealt with as such.

I realize that this plan would not meet with favor with organized labor, but I have no sympathy whatever with the idea that a man must have work in a particular selected trade at a wage fixed by a union, or not work at all. My idea is that every man should be required to earn what he gets, and if he gets charity he should pay for it in the one way in which he can pay—with his labor. But labor provided as charity should not compete with private enterprise in point of wages.

I believe this is good common sense, and that is the kind that should guide us in all business transactions, and especially in matters of a public character. We must not allow ourselves to get into such position as England finds herself today. That country is paying out millions to maintain men who are doing nothing, and many of whom want to do nothing. There are those in this country who will force this situation upon us if possible, and we cannot afford to permit it.

And I want to say that I enjoy your publication, and I am sure you are giving your readers much of value in each and every issue. Very truly yours—W. E. Menoher, Lake Worth, Fla.

TWO WIDELY DIFFERING ACCOUNTS

A SERVANT of the profiteers writes in his letter of September 15th: "Here, we are busily laying up enormous sums of money for rainy days—the American farmer is enjoying the best period in the history of agriculture."

The above are undoubtedly samples of the new formula now being given to the farmers by the press agents of monopoly in an effort to arrest the discontent that prevails in the rural districts. Evidently the special interests are already beginning to feed the public such campaign food as shall, if possible, save the Esch-Cummins law and the Fordney-McCumber law from being repeated at the next session of Congress. To the above excerpts from the market letter we desire to subjoin one from a Minneapolis editor of September 18th:

"We are aware of the fact that the farmers in the Northwest are not so prosperous as before. Many have not made anything the last two or three years. Some have gone bankrupt, and others are on the verge of bankruptcy. That is why they have meetings all over the country and discuss all kinds of means and methods to improve the situation. It seems strange that in a rich and prosperous country like ours the farmer producing the foodstuffs should be brought to such a position that he cannot make a living. It is, of course, self-evident that there is something wrong with the distribution of the wealth of the nation. Someone is receiving too much for his services, and others too little. We cannot place the blame on Europe and foreign countries and say it is because they cannot and do not buy our products. Government statistics show that the average annual exports of 15 food products before the war amounted to 9,203,056,874 pounds, the fiscal year of 1923 shows an export of 25,053,036,160 pounds. The farmers are selling more than ever in the foreign market, and there is no reason why there should be such a spread between what the farmer sells and what he buys. Somebody must be juggling with the prices and discriminating against the farmer and interfering with the law of supply and demand. While we have plenty of coal, sugar, and gasoline, the prices have remained the same, except on gasoline, which recently was forced down. There has been too much price fixing by private corporations. It may be possible that the centralized control of money and credits and the fixing of the discount rates may have considerable to do with the prices in the open markets. It is beyond the power of the government to give rain and sunshine, to make the shiftless and indolent prosperous, but it is within the power of the government to protect the people against excessive profiteering and so to control the distribution of the nation's wealth that the producing class and the honest laborer receive a fair share. Farmers, small town bankers, professional men, and merchants in the Northwest are unanimous in demanding some kind of relief for the farmer, for the basic industry of the nation.

What has been said in the statement from the Minneapolis editor about the Northwest applies equally as well to the farming sections of Michigan.—A. J. Raftshol.

IN THE GOOD OLD DAYS

HAVE been a reader of the M. B. F. for a long time and have seen many good things that were of interest to the farmer. I am a farmer. I was raised on the farm but I live in town. Have lived in Gratiot county all my life which is over fifty years. Have seen Gratiot county in its good old pioneer days, when farming was not what it is today. Wheat was around a dollar. I have gone with my father to mill and would get about forty pounds of flour for a bushel of good wheat. Why can't we now? Wheat is as good today as it was fifty years ago. Well, the comeback is: It costs more to build the grist mill today than it did the old stone mill. I will admit that. No argument there but this is what I don't understand why the farmer don't have anything to say. He cannot go to the grist mill and get his wheat ground and get his flour and bran and middlings; it is all one-sided. The miller will pay, suppose, one dollar a bushel, and sell his flour for $1.15 for 24½ pounds, when wheat should make from 36 to 40 pounds of flour and have some bran and middlings, and his sack back, which my father did not sometimes. I have attended lots of mass meetings and have never heard it spoken of. Must be a graft somewhere. Somebody says the millers' association. It may be so, I don't know.

I should like to hear from some of the other farmers as to their views of this little talk. This should be given consideration as a serious proposition and not as a joke.— J. E. H., Ithaca, Mich.

There had been a difference of opinion in the preacher's family and youthful Elizabeth thought she had received the worst of it.

So at prayer time she was resentful and unhappy, but she went through her usual petitions.

"O Lord," she finally prayed, "make all the bad people good. And, God, if you can, please make all the good people nice."World Outlook.

Another Innovation
THE Overland
CHAMPION
$695 f.o.b. Toledo
Trunk Extra

Observe the generous loading space back of the front seat—50 cubic feet of clear space with square corners.

Note also that front seat adjusts backward to make tall people comfortable without crowding people in rear seat.

Front seat adjusts forward to put foot pedals in easy reach of short people. Adjustable to three positions.

Here at last is restful sleep on camping trips, with seats and upholstery made into full length, full width bed on floor.

See the large, comfortable seating capacity and the wide doors both front and rear—no seat climbing.

America's Only Versatile Car

Willys-Overland now presents the first real all-purpose car—the new Overland Champion! Exclusive features, utilities and economies! Benefits never before offered the farmer, the dairyman, the stockman, the business-man and the American family!

The new Overland Champion fits itself to you. Both front and rear seats are adjustable forward and backward to accommodate short people and tall people—no stretching for pedals—no leg cramping!

Both front and rear seats and upholstery are entirely removable. Take out the rear seat and upholstery and you have 50 cubic feet of clear space for farm tools, truck, groceries, milk cans, luggage, camping duffle—anything!

For camping, front and rear seats and upholstery make up into a wide restful bed the full length of the body!

Doors both front and rear—like the famous Willys-Knight Coupe-Sedan! Real ease, without seat tilting or climbing, when getting in or leaving the car—for loading and unloading bags, boxes, tools and cans.

A handsome family car with body of steel, and washable blue Spanish long grain upholstery. A sturdy work car of unmatched utility, cradled on Triplex springs (Patented).

An all-year car. And above all, *Overland quality and reliability, with astonishing economy!*

See the new Overland Champion quickly!

Touring $495, Roadster $495, Red Bird $695, Coupe $750, Sedan $795; f. o. b. Toledo. We reserve the right to change prices and specifications without notice.

BLUING GUN BARREL

Will you be kind enough to tell me how to blue a gun barrel? I want to blue the barrel of my shotgun and thought you could help me?—M. E., Shiawassee County, Mich.

—The parts you intend to blue should be carefully cleaned and polished, using a very fine emery cloth for polishing and finishing with crocus cloth. Great care should be taken to see that no finger marks are left on the steel. The barrel bore and magazine bore should then be plugged with cork so that the acid cannot get inside and injure the parts. Next dip the parts to be blued into nitric acid, taking care to keep the acid off hands and clothing. Leave in the acid until the proper blue color appears, then remove, rinse with clear water and oil to prevent rusting. Do not expect a first class job the first time you do this as it is really quite difficult to produce a good finish.

RIGHT TO GARDEN

I would very much like your advice concerning small matter that is troubling me at the present time. We have rented a house and lot by the month here for over a year and have a very fine garden. Recently we bought a place and expect to move soon and I wonder if I am entitled to my garden that I have cared for until it is near maturity or if I give up possession of the house I lose control of my garden.—Mrs. M. H., Ann Arbor, Mich.

—If you are renting the house on a monthly basis, I am of the opinion that after you have once given up possession you could not re-enter for the purpose of harvesting your garden, unless you can make some arrangement with the next tenant whereby he would allow you to do so.—Asst. Legal Editor.

HAVE RIGHT TO CHANGE ROAD

We have a State Reward Road which goes through our farm and now the road authorities want to make this road wider and cement it. It is 18 feet gravel and 30 foot road bed. It is gravel and dirt now. They want to change this road in some places and make it on an old stage road. Some of this road is closed now, most of it has been for years. The road authorities claim they have the right to go where they like and make roads and we as land owners have nothing to say nor get any pay for our land. I understand a road must be four rods wide. Most of them are not that wide. We hear we must give land enough to make this road 100 feet wide and if we refuse to give it they have the authority to take it and we have nothing to say about it.—Wm. S., Portland, Mich.

—The authorities having control and jurisdiction over this highway have the authority to change its location. Whether the "old stage road" may now properly be used for highway purposes without compensation to the adjoining landowner depends upon whether the old stage road has ever been abondoned for highway purposes. If so, the adjoining landowners is entitled to compensation if it is to be taken for public use. The question might also arise as to the width of the road. Assuming that the old stage road has not been abandoned but that it is less than 100 feet wide, and assuming also the correctness of the statement that it is proposed to make the new road 100 feet wide, then the adjacent landowners are entitled to compensation for the value of the land to increase the width of 100 feet.—State Highway Department.

LARGE WHITE GRUBS

What will destroy those large, white grubs that work on both strawberries and potatoes? We plowed over an acre last fall and replowed it this spring and fitted it up and set to strawberries. It was heavily fertilized with home fertilizer, but those grubs have worked in the plants and in some places have cut them out completely. The plants were worked and cultivated and weeds kept down. The grubs are also working in the potatoes, this ground before plowing had been in corn, quite heavy land and the plants that are left are looking fine. Would also like to ask if lime is good to use on strawberry ground and if so, how much?—Mrs. E. N., Charlevoix, Mich.

—The large white grub that works in strawberries and potatoes is the larva of the June beetle. These creatures take three years in the ground and, therefore, the beetles appear every third year in numbers.

Now, the damage is done by the white grubs the year after the beetles fly since that is the year the white grub gets most of its growth. The beetles lay their eggs in grass-sod and in strawberry beds by choice, and it is therefore good policy to avoid putting strawberries, potatoes or corn or anything that is very susceptible to white grub attacks on land that was in strawberries or grass-sod the year previous, provided that was a year in which the beetles were numerous.

If one studies this statement carefully they will find the whole matter explained. One may have to read it carefully two or three times to get the meat out of the nut but the whole principal of white grub control is stated in this paragraph.

Unfortunately it is impossible to kill the white grubs when they are in the soil. Fertilizers have little effect and there is rally almost nothing that one can do to improve the situation except by so managing his rotation as to avoid putting crops likely to be attacked in land that was in strawberries or grass-sod the year previous.

Another unfortunate feature of the white grub situation is that the white grubs seem to appear every third year and one gets confidence in between attacks and forgets that they are due again three years from the last attack. With this explanation it is usually easy to get by and to put in something not likely to be injured. Land that was in grass-sod the year the bettles flew can be utilized for raising small grains because small grains get by pretty well in spite of the grub. There are also many natural enemies of the white grub which gradually thins them down so that in a few years time they will be well weeded out.—R. H. Pettit, Professor of Entomology, M. A. C.

MINOR'S WAGES

I would like to know if an orphan past eighteen can draw his own wages or must he be twenty-one. I have one working for me and the people who adopted him claim the money. I would like to know if I pay one party would I be compelled to pay the other party?—A Subscriber, Harbor Beach, Mich.

—If the boy has been legally adopted, the adopting parents would have a right to collect his wages.—Asst. Legal Editor.

LAW WILL COMPEL PARENT TO SUPPORT CHILD

Can you tell me if there is any way to make a man give his daughter, who is not 18 years old, enough money to clothe herself. This girl gets two dollars a week in the summer from him to buy everything she has, but at least six months out of the year she has nothing. He is not a poor man but owns a productive farm of some hundred or more acres. Has $1,650 in bank, besides bonds and other money not on deposit. Can there be anything done about this matter and what are the rights of a girl 18 years of age? She does all his housework on his farm as her mother isn't living, also he has no one but her to support.—A Subscriber, Deckerville, Mich.

—The law will compel a parent, who is able to do so, to support his children until they reach the age of majority. I would advise you to consult your local prosecuting attorney in regard to your case.—Asst. Legal Editor.

KILL CABBAGE LICE

Could you tell me how to kill cabbage lice? My cabbage is just covered with lice and I have tried different things but nothing helps.—H. M., Utica, Mich.

—Cabbage lice are difficult to kill although they may be killed by a strong spray of nicotine and soap suds at this season of the year. We have also been successful in controlling them in the past by a spray of one ounce of pyrethrum, or Persian insect powder, to a gallon of water. This is a little expensive and each louse must be hit to be killed in any case.—R. H. Pettit, Professor of Entomology, M. A. C.

FUR DEPARTMENT

TRAPPERS "TUNE UP"

WHEN a man puts his rifle away in the spring, not to be used until fall, he coats it heavily with grease and lays it up in a safe place. Then when the good old snap gets back into the air, and he gets the itch to be shooting again, he gets it out and cleans away all of the heavy grease and inspects every moving part and the inside of the barrel to see that it is in true fighting trim—not a speck of dust or rust or gummy grease anywhere.

He shoots it a few times to get his hand in—and usually learns that it is surprising what strangers he and a gun have become through the inactive months. That's inevitable.

Take trapping now. Just as a man loses the "feel" with a rifle he does with the woods and the habits and doings of the animals that wear the money-making pelts. And this is time for the trapper to be unlimbering for the season.

Get out into the woods where your trap line will soon be. You will find that there have been a lot of little changes that you ought to know about before you get down to business. Where you knew of such-and-such a fur-bearing family last season, there's an entirely different one today. You'll want to remember that. Creeks that were full last year may be pretty dry this year. Runways, slides, dens, that you knew about may be deserted. Time to be spotting the new ones.

Another thing. The smell, the feel, the looks of the woods, is going to tune you up for just the right start. A record year!

Overhaul your traps, and see that they are working smooth as grease. See that your supply of stretchers is complete for every kind of pelt. And the baits. It you make your own, it's high time to be about it. Or, if, like most trappers, you have been successful with the prepared baits, lay in a supply of fresh, strong ones. The paste baits are meeting with favor, owing not only to their powers of attraction, but to the convenience and safety with which they may be carried.

Watch your favorite magazines for new hints and shortcuts. Be loaded for bear, this year, the minute the season opens.

From present indication your best efforts in preparing furs will be well worth while. Already the mogratory birds have been moving south for several weeks. Blue birds were seen on their way back south far earlier than usual. Reports from the great lakes region told of returning ducks as early as the nineteenth of August. The fur market has a husky look to the wise ones. It ought to have when we remember the shortage in certain lines, and the general prosperity that always makes the fur business good.

The stores that sell women's apparel also tell a mighty encouraging story. Fur collars predominate on women's cloth coats. Fur trimmings for gowns of all sorts. Even veils with mink tails on them! Can you imagine it?

Get that woods-tang back into your blood. Lay out your campaign like the general you are. Have everything shipshape for the opening gun, for man the going will be good this year!

A CLOUD OF WITNESSES

A SERMON BY REV. DAVID F. WARNER

TEXT:—"Therefore, let us also, seeing we are compassed about with so great a cloud of witnesses, lay aside every weight, and the sin which doth so easily beset us, and let us run with patience the race which is set before us, looking unto Jesus, the author and finisher of our faith."—Heb. 12:1, 2a.

RECENTLY, a Philadelphia businessman was asked for a contribution to Sunday school work. "No," said he, "the day of the Sunday school has gone by." And, friendly reader, if you have any such notion, and were, as I am writing this, sitting with me in the great state convention of Sunday school folks of Pennsylvania,—well, you would have a renewing of mind. I hear Dr. Fisher now on"Our Educational Ministry." He is telling us that the outstanding emphasis of the church today should be on Christian education. And the aroused, living Church is seeing that not only the Sunday school, but the vacation church school, and week-day religious instruction, are needed adjuncts of the church.

I am sitting in an arena among multitudes of witnesses, listening to some gladiators of Christ instructing how to strip for the Christian race, how to lighten up the weights, and how to lay aside sins by keeping one's eyes on Jesus, the Author and Finisher of our faith. And under the inspiration you are "pressing on toward the mark."

Well, just to think of it, words are significant things, aren't they? By words thou shalt be justified, or condemned. By reading the words of the Book we may know its heart. By considering your words, we know your heart. Words carry with them the imprint of character. "The Word became flesh and dwelt among us." And we behold the character of Jesus' life and the "stamp of His genius." Aye, day by day, in this convention, "Quiet Folks" Gordon has been assuring us "softly," that "The Master is here;" that we shall quietly slip our hand into the Unseen Hand, knotted and torn, to know that our Lord "lived again," and "lives."

And so, these words of the Covenant in our text, are saying that life must have definiteness of aim. All the fabric of life goes to pieces without this. All aims are shabby aside from the incarnating of the words and spirit of Jesus. And then the race track of life is laid out. And by whom? Then again, we must run with "patience," with steadiness.

But now, I am looking at the great and challenging motto of the convention. Greatness! Do I want it? Well, in the spirit of this motto lies the way. Will I pay the price? Aye, listen, "Not to be ministered unto, but to minister." This is the motto. Here is the mystery of greatness. This is why the Countryman of Galilee was, and is forevermore, great. But there are other mottoes and I am reading. "They shall grow who believe they can." "Only dead fish float with the tide." "It is not the leap at the start, but the steady going-on that gets there." "Service is not so much a thing to be talked about as it is a thing to perform." And so on.

Now, I hear Dr. Gordon on "The Ministering Teacher." Yes, that is what the motto said. And, incidentally I hear these words, a too "closely mortised theology" today; and "what a man really is, is what he is when it is dark and the lights are out;" and again, "You scratch the skin of the usual skeptic and you'll find a dirty sinner underneath." Right here we go into a short Wanamaker memorial service. And who was Jno. Wanamaker? A great merchant. Yes, but listen. Someone is just now reporting that when Jno. Wanamaker was a boy he bought a Bible and paid for it on the installment plan. "This," said Mr. Wannamaker, "was the greatest investment of my life."

Well, all this is mountain-top inspiration. We have been soaring "as on eagles' wings." But someone is just now saying, "It is not so necessary for the church to be fitted with wings, as to be fitted to men." And again, "That the church is a laboratory rather than a place for oratory." Really, M. B. F. folks, does that interpret our task? Is it true that the church is not close enough to men? That we are not ministering to our neighbor as we do to ourselves? Well, I am now hearing Mr. Herman Eldredge, of Erie, relate this incident. The tide in the bay of Fundy had gone out and had taken with it a little girl. Many men saw her struggling in the surf. They gathered on the shore. But they said that they dare not go in. And suddenly, there rushes up a young high school athlete. He throws one end of the life line down at the feet of the men, and the bouy out into the tide. He strips and plunges in and gets the bouy to the little girl; then—ah, then, but the men forgot to pull. The brave swimmer, with the little girl, went down! The monument to his heroism is standing there today. But, men of the church of the living God, are you forgetting to pull.

It is now evening, and three thousand people are hearing Dr. Marion Lawrence of Chicago, emphasize "Cooperation" in his characteristic manner. Do you believe him when he says, "Denominationalism does not reach to heaven?" And that we must cooperate more intensely if we are to get every boy and girl. And that canvas in front of me is telling a sad tale, this:—that fifty-seven per cent of the population of this great state is not in any church. Here is a clear challenge to friendly and urgent cooperation.

And now, the music of our heart is carried along with that of the soloist in the "Ninety and Nine." Then there followed Dr. Hugh Magill, of Chicago, who, it seemed to the writer, struck the living notes that go to make up the symphonic challenge of Christian life. "Under an adequate program," he said, "We are on the eve of a great religious awakening." And broadened and intensified his appeal by reporting favorable attitudes on the part of representative Jews and foreigners, and finally quoted Harry Lauder as saying at a Rotary banquet, "Who leans his head on the breast of eternal truth and hears the heart-beats of the Son of God, he is the man of vision who can lead the way."

And to-night there is to speak such men as Frank B. Willis, U. S. Senator from Ohio, and Dr. Chas. L. Goodell of New York City. And I am sure they will sound again the call to girdle ourselves to lead the world out into a knowledge of and devotion to God as revealed in Jesus Christ. But, it is a matter of strength for our weakness to know that the church is making a progress in Godward vision and manward sympathy. But, said the late president, Warren G. Harding, we must hurry.

BIBLE THOUGHTS

THE GOODNESS OF GOD:—Thou openest thine hand, and satisfiest the desire of every living thing.—Psalm 145:16.

WHENCE COMES TROUBLE?—When he givieth quietness who then can make trouble?—Job 34:29.

WITH ALL YOUR HEART.—And ye shall seek me and find me when ye shall search for me with all your heart.—Jeremiah 29:13.

SHALL DO EXPLOITS:—The people that do know their God shall be strong, and do exploits.—Daniel 11:32.

PERSONAL SELF GOVERNMENT:—He that hath no rule over his own spirit is like a city that is broken down, and without walls.—Proverbs 25:28.

BE IN EARNEST:—Whatsoever thy hand findeth to do, do it with thy might.—Ecclesiastes 9:10.

REAL SERVICE:—By love serve one another.—Galations 5:13.

YEA, YEA, AND NAY, NAY:—Let your communication be, Yea, yea; Nay, nay: for whatsoever is more than these cometh of evil.—Matthew 5:37.

BE SURE YOU ARE RIGHT:—There is a way which seemeth right unto a man, but the end thereof are the ways of death.—Proverbs 14:12.

ROUGE REX
1,000-Mile Shoes
Cordovan Horsehide Double-Tanned

Nashville, Mich., May 19, 1923
Hirth-Krause Co.,
Grand Rapids, Michigan
Gentlemen:

I am sending you the shoes in question. The size is 7 1-2.

These shoes were purchased from George Dean in September, 1919, and have been worn every day at hard work ever since. They have given me excellent service, in fact the best service of any shoe I ever wore. I have had four pairs of taps put on them, and you can see that the uppers are good for several more pairs.

The Hirth-Krause Rouge Rex Brand will be my brand from now on, and I am always glad to recommend them to anyone. I am

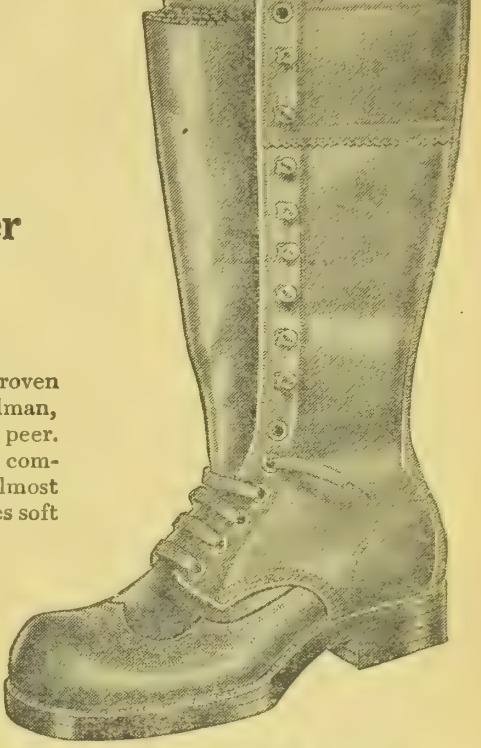
Yours truly,
(Signed) HALE B. SACKETT

Ask for

The Forester

407- 6 in. Smoke
477-14 in. Smoke
414-16 in. Smoke
467-18 in. Smoke

A "he" man's shoe of proven merit for the woodsman, oilman, or hunter, this shoe has no peer. It fits ankle and instep as comfortably as a low shoe. Almost impossible to wear out. Dries soft after wetting.



Dries Out Soft After Wetting

Easy to Wear but Hard to Wear Out

All leather used in Rouge Rex 1,000-mile horsehide work shoes is double-tanned by our own private process in our own tanneries.

We make no other shoe. Our entire organization is devoted to producing the world's strongest work shoe. We do our own tanning because it assures us the best leather. Horsehide is naturally the toughest leather used by man. For centuries it has been known as the strongest leather for dress shoes. Big league baseballs have horsehide covers because it is the only leather strong enough to stand such hard knocks. So we use it exclusively in Rouge Rex work shoes.

By our exclusive method of double-tanning we make it soft and pliable as buckskin. And it always stays soft. Other leathers dry out hard after wetting. Rouge Rex horsehide shoes dry soft as velvet. Wear them in water, mud and slush as often as you please. They'll always dry soft and comfortable.

We buy select horsehides for our leather. And only the choice Cordovan cut is used in Rouge Rex 1,000-mile shoes. Notice how thick the leather is—yet how soft it feels. Double-tanning means double wear and double comfort, too. You can wear these shoes in all kinds of weather. No matter how wet they get they dry out soft and pliable.

You'll find real economy in the wear they give. Rouge Rex horsehide shoes usually wear at least 1,000 miles. We are told they actually wear 3,000 and 4,000 or more. If you are naturally hard on shoes, you'll find them the most economical shoes you ever wore. And you'll enjoy new foot comfort at the same time.

There's a Rouge Rex horsehide shoe for every need. For farm or railroad, mines, oil field or woods, there's a special model that exactly suits conditions. And all are the same tough, pliable double-tanned horsehide.

If your dealer cannot supply you with Rouge Rex 1,000-mile shoes we'll see you are supplied by our nearest dealer. Write for catalog.

Rouge Rex Comfort Shoe

Tender feet welcome these shoes. They're soft and flexible as a moccasin. Yet wear like iron. A typical factory or dry weather shoe so light you don't realize they are on duty. Ask for 435 in Chocolate; 434 in Tan. Both are outing models. 495 in Chocolate Blucher.

"The Farm Paper of Service"

CHILD LABOR IN BEET FIELDS

IN the last issue we pointed out the obligation which was placed upon the beet growers of Michigan to clear their skirts of the charges which are being given wide publicity that children are employed in the beet fields of Michigan and constitute a national scandal which is comparable only to the employment of child labor in the cotton mills of the south. Mr. A. B. Cook, master of the Michigan State Grange, and a member of the state board of agriculture, issued a long statement in Lansing last week in which he indicated that the charge was being made against the Michigan beet-grower himself for the employment of his own children in this work.

What statements we have read were largely directed to the employment of the children of imported labor, and the facts which Mr. Cook brought out that the illiteracy of children between ten and sixteen years of age in Saginaw County was only four and three-tenths per cent, did not, we believe, take into consideration the fact that it is impossible to keep a check on the children of labor imported to do this work and who migrate from one point to another during the season.

Otherwise the statement by Mr. Cook is to be commended, and it would be fortunate if other beet growers would come forth and state the facts. We offered in our last issue to publish these facts in THE BUSINESS FARMER because we believe they are of vital interest and should be given publicity. We would like to hear from beet growers themselves as to conditions in their own neighborhood, because this is a matter which must be brought from under cover and we consider it a direct aspersion at the state of Michigan, a state which has maintained a reputation for being one of the foremost agricultural states in America in the point of culture and education. Certainly the state which founded the first agricultural college on the American continent cannot afford at this late date to be blemished by a charge such as that now made regarding the employment of child labor in our beet fields.

THE "SEVENTEEN YEAR" WAR

IF we went to press daily we might keep our readers informed as to the status of the open war between the state board of agriculture and Governor Groesbeck.

As it is, we can only report the latest news from the front which is, that Herman H. Halliday, secretary of the board and of the Michigan Agricultural College, was instructed to make formal requisition upon O. B. Fuller for $75,000 of the $150,000 appropriated by the last legislature for extension work of the college.

As the auditor general cannot issue a voucher without the approval of the administrative board which will undoubtedly be refused, it is expected that the next move of the state board of agriculture will be to force this into the supreme court of the state and decide for all time the issue involved, which is, as we have stated many times, based on whether the county agents can be paid in part by organizations or other than the state or federal governments. The Governor claims they cannot be, and severely criticizes the former plan under which the Michigan state farm bureau has largely contributed to the salaries of the various county agents.

Apparently our readers are little interested in the battle being waged and are rather waiting for the smoke to clear away, to find out what it is all about. We have had little correspondence regarding it and were it a matter of great interest to the farmers of Michigan our mail would be loaded.

LLOYD-GEORGE IN AMERICA

ONLY this week in the great pavilion at Chicago where are held the International Livestock Shows, we listened with some fourteen thousand others to the remarks of a distinguished visitor to this country and one of the truly great men of our generation, Mr. David Lloyd-George, wartime Prime Minister of Great Britain.

His message to the American people was one which gave small credit to the present occupation of the Rhur district by the French and Belgians, and he stated clearly England's position in opposing this drastic action against which he is very bitter.

He thoroughly approves the suggestion of our Secretary of State, Mr. Hughes, that a committee composed of all the Allies, including the United States, be organized to meet and formulate a fair amount of reparation which Germany could and would pay.

He pointed out that previous to the occupation of the Rhur district, which contains all of the iron and coal deposits which were left to Germany under the Treaty of Versailles, that Germany had paid in actual gold to the Allies for reparations and occupation expense over two billions of dollars, and this in addition to the thousands of tons of ships, of railroad material, and other merchandise which she had delivered to France and Belgium.

The present drastic action, he said, could only force upon all classes of the German people a bitter resentment which at this very hour is fomenting into a red wave which may sweep, supported by the temperamental mass of Russians, the whole of Europe into a wild abyss.

No one could listen to the Honorable Lloyd-George and not be impressed with the broad vision and the sincereity of this little Welshman, who has held the fate of the world in his very fingers and has had kings and queens at his call!

WANTED: MORE EGGS FROM MICHIGAN!

ALTHOUGH Michigan has made an enviable reputation in the production of baby chicks and altho they are largely from egg-producing breeds does not seem to bring up the average of egg shipments from this state, if we are to take the record of the number of eggs received in New York during the month of August, when out of a total of 527, 751 cases only 7,867 cases came from the state of Michigan, while Illinois supplied 95,371 cases and Iowa supplied 94,782 cases. Either of these states supplying more than ten times as many as came from Michigan, and even far away California shipped 35,566 cases over three thousand miles to place them on the New Yorker's breakfast table!

There ought to be a lesson in this. Can it be that the growth of the metropolitan cities in Michigan has taken our supply of eggs so that we are no longer exporters? It would be interesting to see the figures on egg receipts for the city of Detroit. It is our prediction that Michigan poultry men are supplying only a small proportion of the eggs consumed in this market.

There is no excuse for any farmer in the state of Michigan not producing a generous quantity of eggs for market in view of the price which this commodity has maintained and from all indications will maintain, over a long period.

Eggs and dairy products are the two surest cash producers on the farm today, and with the rapid development of Michigan's metropolitan sections and our proximity to the great centers of population in this country there is no reason why either Illinois or Iowa should surpass us in the number of eggs produced for the New York market.

No one can produce eggs at so low a cost as can the farmer who supplies most of the feed from by-products or from his fields. There is of course a limit to the number of hens which should be kept on each farm, but it is our prediction that not one Michigan farm in a hundred is overstocked with poultry at this time, and not one in ten is keeping half as many as could be maintained at a profit.

HELP FROM ARGENTINE

WITHIN the past week it has developed that leaders in a radical movement can be of benefit; but to some other country than their own. Argentine, that great proressive country south of the Equator, has passed a price fixing law which it is expected will redound to the direct benefit of the livestock producers in the United States.

In late years the Argentine with its millions of acres of grazing land has come into the world's meat market with livestock produced at such low cost that it was a serious competitor with the product of our own land and has seriously influenced our prices.

This recent bit of radical legislation has forced the price of these products upward to the direct benefit of the producer in the United States, and already the Chicago packers have gone on record that they will buy no product from the Argentine until the present law is repealed. There must therefore, follow an immediate period when the United States will be called upon to supply the meat needs of the greater part of the world's market.

The world is getting smaller all the time. Perhaps some day the producers of all lands will get their heads together in a sort of a league of nations and then they can fix prices which will allow a fair profit above the actual cost of production, but until that day arrives there is no profit to be gained by price fixing except to someone else than whom it was intended to benefit. The result of price-fixing in Argentine would seem to demonstrate this as a fact.

....

MR. HOOVER AND MR. CHAPLIN

TWO distinguished gentlemen well known to most Americans arrived on the same train in Detroit the other morning. The one has been decorated by every nation engaged in the Great War for having accomplished valiant service in feeding the unfortunate; since the War he has been a member of the President's Cabinet and is at the present time. The other gentleman had only one decoration—that was "Champion Laugh Maker of the World!", for probably Charlie Chaplin from the silver screen has made more people laugh than any other man who ever played jester to the masses.

On arrival, it is said, Mr. Hoover, had a difficult time to find a porter for his luggage and he passed unnoticed through the great station, while all manner of folks from lowly porters to a distinguished committee of Detroit citizens welcomed with open hearts, Charlie Chaplin.

The very progress of the comedian through the streets of Detroit was a demonstration such as has been accorded few men in this generation. Bald-headed men and grey-haired grandmas argued with the children of all ages for points of vantage from which they could see "Charlie" in real life.

There is a moral in all of this.

The world loves a man who can make it laugh. Mr. Hoover, was here to tell us of those in trouble and how he was helping them. The world and all the struggling mass of humans on it have troubles of their own. We need our Hoovers, but no less do we need our Chaplins!

The world has been changed a lot during the last century but there is an older adage which is as true today as the day it was spoken:

> "Laugh and world laughs with you,
> Weep and you weep alone!"

HUNDRED CENT DOLLAR COMING BACK

ACCORDING to George W. Roberts, Vice President of the National City Bank of New York, better known as the former director of the United States Mint, and an economist of international fame the present day dollar which is worth only sixty cents is coming back to a hundred cent valuation, and the time is not far distant.

A complete interview with Mr. Roberts begins on page 4 of this issue which you hold in your hands and is worth the reading of every farmer who has been puzzling to find out how he is going to adjust his own purchases with the dollar he receives from his crop.

There is every indication these days that a change is not only certain but may come sooner than the average farmer has suspected. There is every indication that farm prices are on the upward trend, and one need not be a wild-eyed optimist to predict that before a year from now those who have remained on the farm will be glad they have stayed there and many of those who have gone into the cities to work will be sorry they did not stay on the farm and wait for the readjustment to come.

As it is, we don't want too many of those who left the farm to come back until those who remained have had a chance to recuperate!

* * *

Even our daily mail has taken on a brighter atmosphere. We hope that every farm community is planning on having a harvest festival and home-coming this year, the like of which they have not had in many past years. The outlook deserves it.

* * *

Henry Ford and Charlie Chaplin had their pictures taken together the other day. Both are millionaires because they have made millions happy!

PUBLISHER'S DESK

THE "PETITION" SCHEME

WHEN so good a paper as the "Lansing State Journal," falls circulation scheme employed by the "Farm Journal", a national farm paper published at Philadelphia, it is high time that something should be said about it, and although we mentioned the scheme in a recent issue we did not mention this venerable publication and its agents' connection with the scheme involved.

We do not believe that any legitimate subscriber to THE BUSINESS FARMER who is fit to bear that title, would fall for these slick subscription agents' schemes, but when a well known state newspaper publishes a long editorial article headed, "Farm Journal Circulating Unique Petition Among State Farmers," we think it is high time to set them right.

The "Farm Journal" agent, we understand, presents a petition which asks for a lowering of taxes. This scheme is not unique. It has been worked over and over and is almost as old as this venerable farm paper itself.

The "Farm Journal" has been working this scheme in all parts of the country for two or three years. We have never seen nor heard of the petitions going to Washington, as promised, and if they have been sent there, they certainly did not cause very much of a ripple.

They are based on the barest kind of a platitude. Asking a man to sign a petition to have taxes reduced is exactly the same as asking a hobo to sign a petition for no work and sure pay.

Can you reasonably expect any number of signatures to such a petition is going to have any effect on a sincere and well meaning representative or congressman, especially when he knows it has been collected by a farm paper in connection with its solicitation of subscription?

If any reader of THE BUSINESS FARMER has ever been presented with a "Farm Journal" petition and HAS NOT been asked by the agent presenting it to subscribe or renew his subscription to the "Farm Journal" we would like to hear from him.

This petition scheme is a subscription scheme, pure and simple, and the agents who handle it make big money—more than the average farmer can make. A good place to make your mark when such a petition is presented is just under the coat tails of the man who presents it with a well-shod toe of your boot!

THE OIL HEATER

IN our last issue we asked from this page for our readers' experience with the Oliver oil burner and others of similar make, because we are daily in receipt of inquiries regarding these heaters which are being entensively advertised and largely purchased by people in rural districts who have not the facilities of natural or artificial gas.

In the Experience Pool below you will find a number of letters selected from those that have been received, some of which are favorable and some unfavorable to this method of heating. We will have to leave it to our readers to gather from this experience the respective merits of these machines.

I cannot help but believe that this is one of the most valuable services which we can render to our many thousands of readers, and the Experience Pool should be one of the largest and best read departments in this weekly, because if you will bring your problems in we will publish them where not less than 100,000 people, most of them farmers on farms in Michigan, will read and if they have had experience pass it along to you.

This ought to help take some of the gamble out of farming and farming methods. The Experience Pool is a wide open department. You can ask any kind of a question and get the experience of other farmers, their wives or families without any cost to yourself. On the other hand, when you see a question in the Experience Pool which concerns something that you have had experience with you ought to be just as willing to take the time to give your experience. This is the kind of cooperation that cannot help but pay all concerned. We hope our readers will make more and more use of the Experience Pool department.

THE EXPERIENCE POOL

You asked about the Oliver Oil Gas Burner. We bought a No. 10 Burner and put it in our Renown cook stove last November and have used it every day since. Like it fine for cooking and baking. Perhaps it would not work well in all cook stoves. Would not care to have one in the heater in the living room as it makes too much noise. Wish to say they give a lot of heat. Even heats the water in the reservoir. Only light one burner unless I am in a hurry.—Mrs. Theo. Bulgrin, Marine City, Mich.

It will give plenty of heat in a cook stove or range but to bake with it you must remove the back wall. The worst feature is the tremendous noise. You cannot hear anyone at the door nor hear the telephone while the burner is in operation. These are objections which they are silent on. We have had one but have discarded it. Respectfully, G. Sprang, White Pigeon, Mich.

I have one of the burners and use it in my cook stove and will say it is the worst fuel eater known. It takes at least four gallons every ten hours to run it if you use it for heat and then keep it turned low just so it don't smoke. I tested it out and found it took five times the oil they said it did. I only use it in summer now to bake with. It makes the best heat to bake with that can be found, but a dirty smoky, greasy thing, hard to generate but after you fuss a long time and get it going it bakes fine. That is all I care for it. It is no good to use in coal stove or furnace as they recommend. It would smoke the glass black. If I had not bought it I would not have it in the house. I hope this will be of benefit to your readers. Respectfully, Mrs. A. G. McDavis, Oxford, Mich.

We sent for two burners, one for the range and one for the heating stove. We gave them a thorough trial and found they were not what we wanted or would not do what they said they would so we created them up and sent them back. We had paid for them in advance and understood that if they were not satisfactory we would get our money back, which I think was $19.00. I won't be sure about the price but that was it or near it, and we have never heard from them since. That was five years ago. They were not honest then so I don't believe they are now. We are now using an oil burner called "The Gloria." I have a burner in the range and one in the furnace. The one in the furnace is for summer use only, to heat the water in the tank. That is not hot enough for winter use, but the one in the range is fine for heating or baking or boiling clothes. Have had it nearly a year. Respectfully, Mrs. W. H. Buskirk, Grandville, Mich.

We have lots of wood, so will burn the Oliver only in hot weather but will say the burner is all right and does just what they claim it will do. I have it in my range and can bake anything I have ever tried to. If we had to buy our fuel I believe it would be as cheap as anything. We have had so many benefits from your valuable paper I though it would be nice to pass some along. Mrs. J. L. Pratt, R4, Ionia, Mich.

We purchased one this spring and can't afford to burn it because it uses so much oil and is dirtier than soft coal. If one writes anything about it to the company they have some excuse that we do not understand running it. We had to take it out of the stove entirely and they won't take it back as they agreed. We installed it as they directed and couldn't get any satisfaction. Yours sincerely, W. P. Fender, Lake Odessa, Mich.

I have one, the first summer it did all right but the next summer I only used it a short time and it wouldn't burn well. There are other oil burners better than this. My neighbor has one called the Thomas, I liked

A Department for the Women

Edited by MRS. ANNIE TAYLOR

DEAR FOLKS—I am wondering if you would be interested in sending in any article and pictures that you might have that tells about the work you are carrying on in your community. I am sure we all would be interested in any work that the different groups of women are doing and use our dept. as a means of reaching 70,000 women. Read what the government is doing to help the child welfare in our country. I would be pleased to receive any quilt pattern or any home-made device that helps make the work easier. Let me hear from you. I still want some recipes on canning meats for our cookbook.

Your Friend,
Mrs Annie Taylor

Address letters: Mrs. Annie Taylor, care The Business Farmer, Mt. Clemens, Michigan.

"WHEN THE FROST IS ON THE PUNKIN"

WHEN the frost is on the punkin and the fodder's in the shock,
And you hear the kyouck and gobble of the struttin' turkey cock,
And the clackin' of the guineys, and the cluckin' of the hens,
And the rooster's hallylooyer as he tiptoes on the fence;
O, it's then's the time a feller is a-feelin' at his best,
With the risin' sun to greet him from a night of peaceful rest,
As he leaves the house, bareheaded, and goes out to feed the stock,
When the frost is on the punkin and the fodder's in the shock.

* * *

Then your apples all is getherd, and the ones a feller keeps
Is poured round the cellar-floor in red and yeller heaps;
And your cider-makin's over, and your wimmen-folks is through
With their mince and apple-butter, and theyr souse and sausage, too!
I don't know how to tell it—but ef sich a thing could be
As the angels wantin' boardin', and they'd call around on me—
I'd want to 'commodate 'em—all the whole-indurin' flock—
When the frost is on the punkin and the fodder's in the shock.

CHILD WELFARE WEEK

THE health of the American child has at last become recognized as one of the most important problems the nation has to deal with. The women interested in childwelfare have been fighting for this recognition ever since we had a chance to speak for ourselves.

This last week in Detroit the annual convention was held and those of you that have radio receiving sets must have heard Mr. Herbert Hoover, Secretary of Commerce and Dr. Geo. E. Vincent, President of the Rockefeller Foundation give their splendid talk on what is being done to help save our babies for better manhood and womanhood. If I am not mistaken the funds laid aside for this work by the government is $350,000.00.

CONSOLIDATION OF SCHOOLS

THERE are now over 12,000 consolidated schools in the rural districts, towns, and small cities of the United States. They have taken the place of approximately 50,000 little one-teacher schools. During the year 1919-20 over 1,000 new consolidated schools were established. This is truly a hopeful sign for the future.

Consolidated schools equalize educational opportunities. Those of standard type are rapidly becoming the strongest schools in our educational system. They are all the result of an attempt to equalize from the bottom up. They have been created by concentrating the wealth and energy of areas that before consolidation dissipated their efforts on very poor kinds of schools. They withdraw nothing from the top of the school system. On the contrary, they have added much to it. They equalize by bringing the poorest schools up not only to the average but to the best.

The consolidated school provides for children in the rural districts, large, new, modern buildings, with auditoriums, gymnasiums, and rooms for science, agriculture, shop work, cooking, etc., in addition to classrooms, and good modern heating plants. Large consolidated schools offer to all boys and girls in these small districts, no matter how poor they may be, the privilege of an accredited four-year high school when they have completed the grades.

The larger schools, too, do not deprive parents of the help, comfort and companionship of their boys and girls during the high school age, the age when adolescents can be most useful about the home; the age when parental protection and guidance are most needed.

In strictly rural communities consolidated schools generally offer every educational advantage known in our well-graded city schools. We need more of them if we expect to give our country boys and girls a fair chance. The consolidated school offers not only the usual standard course of study and book knowledge, but also a social training impossible in the one-teacher school. Literary societies and debating clubs vitalize the program of studies. Team work on the athletic field, under the direction of competent coaches, instructors, and directors, are just life's greatest lessons of fair play, the "golden rule," cooperation, and, finally, success.

The consolidated school provides school buildings and grounds designed to safeguard and promote the children's health, supplies them with an abundance of mechanical means necessary for work and recreation, and develops in them an idea of the aesthetic. In this respect, the consolidated school of the country has many natural advantages over the best of the city schools. More room for play space, gardens, and outside laboratories may be had for less expense.

The consolidated school gives a considerable choice of subjects, in addition to the essential ones, so that the child may follow the lines of his own interests or necessities. It provides a group of professionally trained, experienced, and supervised teachers with whom he may become acquainted.

The services of a physician or nurse, or both, are sometimes provided to prevent or stop in its inception and sickness among the children. The school is the means of interesting the community in the betterment of its own life to keep pace with the ideals set before the children.

Transportation, sanitary and safe, to and from school is furnished for all children residing any great distance from the school plant.

The consolidated school may cost more because it is necessary to transport the pupils from their homes to the school. If, however, we count costs in terms of better schools and happy children, we certainly receive much greater returns for the money we spend. Would the patrons of these consolidated schools go back to the old way? In Iowa 1,400 farmers living in 56 consolidated school districts were asked this question, and 9 out of every 10 answered "No."

There are 186,000 one-teacher schools in the United States and some of them are so small that only two or three pupils were in regular attendance. In one of the States during the school year of 1922 over 1,300 of these small schools had an enrollment of 10 pupils or less per school, and over 2,200 more of the same small schools had an average enrollment of not more than 11 to 15 pupils. To maintain a school for only 15 pupils is a very expensive proposition for the taxpayer.

It is a poor investment and a waste of public-school funds to pay a teacher a good salary and then provide them with only one-half the number of pupils he can easily instruct.

Of course, no one would for a moment think that the 186,000 one-teacher schools could or even should all be consolidated in a short time, but ultimately the one-teacher school must give way in most cases to the consolidated school.

WHERE DOES HEALTH EDUCATION BEGIN?

THE man in the car stopped to look at the good-looking farm. The fields were yielding large crops; the stock was in fine condition. Well-made sheds housed the newest and most efficient farm machinery and an auto for travel.

"How many pigs have you?" asked the traveler.

"Just a hundred and nine," said the farmer. "That boar over yonder took first prize at the country fair. He's a full-blooded Duroc."

"You certainly know how to raise pigs, Mr. Farmer."

"I ought to; I've sure made a study of raising hogs. You have to get good stock and then raise them right."

"Your corn looks fine, too."

"Yes, it's going to be a bumper crop."

"I suppose anybody could raise corn around here," ventured the traveler.

"Anybody that's a mind to learn how and willing to work. You have to know how to raise corn; you have to know about the soil, and the seed, and how to raise the crop. I've got the best machinery anywhere around; and it pays. A man can't afford these days to buy inferior stock or tools; and then he's got to keep everlastingly on the job."

A child came running out into the yard, brown as a berry, but thin and sleepy looking.

"How many children have you?" asked the traveler.

"Nine!" replied the raiser of prize pigs. "Some family, eh?"

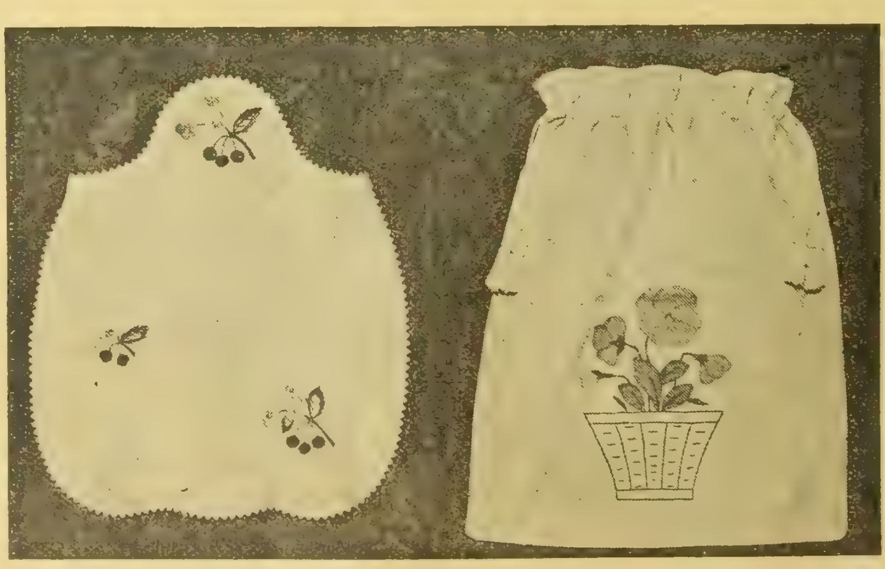
"And I suppose you and your wife have made a study of how to raise a prize family of children?"

"Now you're kiddin' me! I reckon what's good enough for their dad is good enough for them."

"But is it? You don't expect your small pigs to eat what your big hogs eat. You don't make prize hogs that way. When you're growing a prize pig you don't say 'It's going to get no more than its mother had,' but 'what does this pig need?'"—and that pig won't get it unless you give it to him. You know every point of a prize hog; do you know every point of a prize 6-year old girl or boy? Or a 10-year old? Or a 2-year old?"

" 'Pears as if it's goin' to rain," said the farmer. "I'll have to be getting the cultivator under the shed. It's new this year and I don't want it to get wet and rust. If you want to keep good machinery you just have to take care of it."

For Our Christmas Sewing



The illustrations above are very attractive gifts to make for our Christmas remembrances and who wouldn't like one of these adorable appliqued unbleached muslin laundry bags and the ladies tea apron with bright silk ribbon ties.

405—Laundry Bag—Size 20x27. This bag is made of Unbleached Muslin. Applique patches included. Takes one skein of each of the following colors to embroider: Purple, Lavender, Brown, Yellow and Green. Price, 50c.

406—Ladies' Tea Apron—Stamped on Unbleached Muslin. Floss to complete. Price, 50c.

Address your orders to the Pattern Department, The Business Farmer, Mt. Clemens, Mich.

Mothers Problems

HOME-WORK

NO sooner does a child start in school than he wants to bring his book home. He wants to show Mamma and Daddy his lesson, and, if he is ambitious, he wants to be helped a little on his lesson so that he may have a perfect recitation the next day.

Such an attitude is highly commendable. Help at home has sent many a child skipping through the grades. But home-help must be wisely and carefully given, else it proves detrimental, rather than beneficial, to the child.

Ascertain first of all the methods your child's teacher uses in the different studies. If she does not teach the alphabet, but instead teaches reading wholly by sounds, do not tear down her good work by laboring with your little child over the alphabet. She'll never thank you for such hindrance to her system, and, worst of all, your child will not be benefitted.

However anxious you are for your child to get ahead, do not do his work for him. As he gets into the higher grades and is confronted by real problems in arithmetic and by compositions to write, do not, in your eagerness to help him, do his work for him and expect him to receive a 100 per cent grade when examinations come.

I know a mother who cut and made a bungalow apron for her little girl who was supposed to cut and make one as home-work in her sewing class. The girl took the apron to school, expecting to receive full credit for the work she hadn't done. The teacher, however, was suspicious. She didn't accuse. Instead, however, she asked this little girl to demonstrate the cutting and making of an apron to the class! The child was all at sea. She ended up in a tearful confession. It was not her fault she had been dishonest; it was the fault of her mother who had easily persuaded her that she could make the apron and the child would receive her credit.

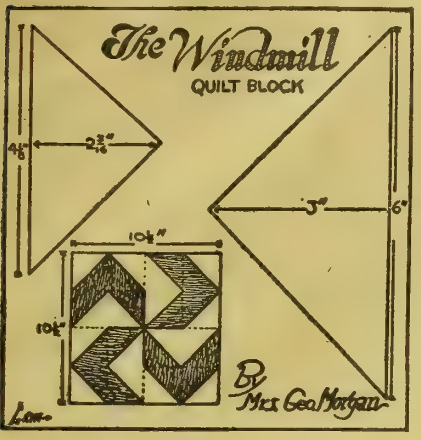
Home-help properly given is of untold value to both the ambitious and the backward child—but it must be both properly and conscientiously given.

HARD ON THE NERVES

Red patterned wall paper, glaring lights and shiny furniture are three things that are responsible for many attacks of nerves. The neutral walls, soft indirect lighting, with shaded lamps for reading, and of quiet furniture in good taste is greater than any one can quite realize.

Personal Column

Back Issues of Magazine—Could you help me through the Farm paper if any readers would sell or let me read two back numbers of the "People's Home Journal" April and May 1923? —Mrs. G. Shouwink, Sparta, Mich., R. 2.



THE WINDMILL QUILT

The design above and directions were sent in by one of our readers and I hope it will be a great help to you in planning your next pattern.

Any two colors are nice or one can use mixed colors. It is very simple to cut and can all be sewed on machine, it is the way four blocks are sewed together that form windmill. One can use all pieced blocks or every other one plain goods to set together with.—Mrs. Geo. Morgan, R3, Vicksburg, Mich.

The Runner's Bible

(Copyright by Houghton-Mifflin Co.)

Pleasant words are as a honey-comb sweet to the soul, and health to the bones. Prov. 16:24.

A word fitly spoken is like apples of gold in pictures of silver. Prov. 25:11.

For out of the abundance of the heart the mouth speaketh a good man out of the good treasure of the heart bringeth forth good things. Matt. 12:34-35.

Finally be ye all likeminded, sympathetic, loving as brethren, tender hearted, humble minded. - Pet. 3:8.

—You need the message your brother carries, be receptive of it. A critical attitude on your part will give him cause to say, "I do not know why but I am never my best with that person." Be lovingly expectant, and without effort the message will come that will bless both him and you.

—if you are well bred!

Enter the church quietly, removing the hat, and never replacing it until the door is reached again at the close of the service.

If a stranger, and accompanied by a lady, you will precede her, and follow the usher up the aisle until the pew is reached, when you will pause, allow her to pass in, and you will follow, taking seats at the further end if you are first, so that you will not be disturbed by later arrivals. It is no longer a custom, as formerly, for the gentleman to step into the aisle and allow the ladies that are strangers to pass to the inside.

WOMEN'S EXCHANGE

IF you have something to exchange, we will print it FREE under this heading providing: First—It appeals to women and is a bonifide exchanges, no cash involved. Second—It will go in three lines. Third—You are a paid-up subscriber to The Business Farmer and attach your address label from a recent issue to prove it. Exchange offers will be numbered and inserted in the order received as we have room. —MRS. ANNIE TAYLOR, Editor.

106—Lovely percale and gingham quilt pieces also plush and wool pieces to exchange for anything useful.—Mrs. Geo. Morgan, Vicksburg, R3, Michigan.

107—Room and board for girl or woman in exchange for assisting in work. Must love children. Write Michigan Business Farmer., Sunshine.

RECIPES

Soda Crackers—Several months ago I saw in the Business Farmer a request for a recipe for home made soda crackers. I watched eagerly for an answer but have never seen any. I am sending one, which we think is very good.

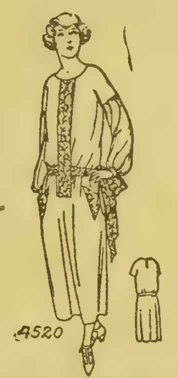
For sponge use one-half yeast cake (one-third ounce), one pint warm water (scant), six or seven cups flour (one and three-quarter pounds), pinch of salt. Mix together about six or seven o'clock in the evening. Sponge should be quite stiff. Rub little lard over the top and cover with a cloth. Set away over night to raise. If flour is very cold warm it some in the oven. Next morning about eight o'clock you add the following ingredients to make a firm stiff dough: one-half cup warm water, one-third cup lard (three ounces), two cups flour (10 ounces), one and one-half even teaspoons

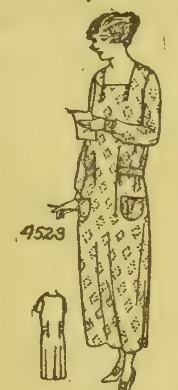
(Continued on page 17.)

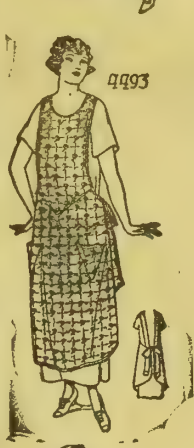
It is significant that more **LILY WHITE FLOUR**, *"The Flour the Best Cooks Use,"* than any other high-grade flour, is used by Michigan women.

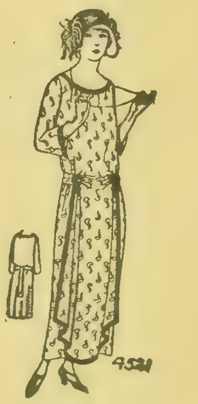
VALLEY CITY MILLING COMPANY - GRAND RAPIDS, MICHIGAN

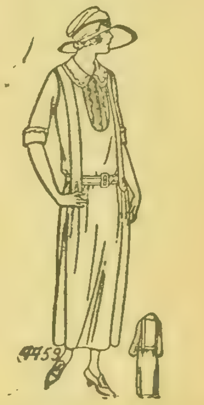
AIDS TO GOOD DRESSING

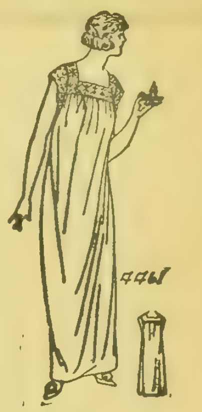












4461. A Pretty Night Gown.—This is a very attractive model, that lends itself well to a development in batiste, voile, crepe, crepe de chine, silk or satin. The yoke could be of lace or embroidery. Hemstitching or drawnwork would be attractive for decoration on plain material. The Pattern is cut in 4 Sizes: Small, 34-36; Medium, 38-40; Large, 42-44; Extra Large, 46-48 inches bust measure. A Medium size requires 3⅝ yards of 36 inch material. For yoke and sleeves of contrasting material, ½ yard 36 inches wide is required.

4542. A Smart Skirt Style.—This model is good as a suit skirt, or for separate wear. Moire, satin or twill as well as all sports materials could be used for its development. The Pattern is cut in 7 Sizes: 25, 27, 29, 31, 33, 35 and 37 inches waist measure. A 29 inch size requires 5¾ yards of 36 inch material. The width at the foot is 3½ yards.

4493. An Attractive Apron Style.—Pretty English chintz was used for this model, with bindings of black sateen. This is a good model for gingham, percale and also for rubberized materials. The Pattern is cut in 4 Sizes: Small, Medium, Large and Extra Large. A Medium size requires 3½ yards of 27 inch material.

4523. A Simple Serviceable Morning Dress.—This is a very pleasing and comfortable model. It will develop well in gingham or percale, and is also good for damask, jersey, serge and other wool fabrics. The sleeve may be finished in wrist or short length. The Pattern is cut in 7 Sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38 inch size requires 4¼ yards of 40 inch material. The width at the foot is 2 yards.

4538. A Smart Frock for Juniors.—Kasha cloth in a new shade of brown, with banding of satin would be good for this style. Taffeta too would be appropriate also rep in any of the colors now in vogue. The sleeve may be finished in wrist or elbow length. The Pattern is cut in 3 Sizes: 12, 14 and 16 years. A 14 year size requires 3¾ yards of 40 inch material.

4459. A Pretty Frock.—Here is a model that will look well in silk or crepe and also in printed cotton, linen or gingham. The guimpe is finished separately, and the sleeveless dress may be worn without it, if so desired. It is in "slip on" style. One could have the guimpe of contrasting material. The Pattern is cut in 7 Sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38 inch size requires 6⅛ yards of 32 inch material. To make the guimpe of contrasting material will require 1¾ yard 40 inches wide. Width at the foot is 2¼ yards.

4520. A Simple Frock for Many Occasions.—Youthful and pleasing is the model here depicited. The "peasant" sleeve is a newly revived feature. As here shown figured and plain voile are combined. One could have satin or taffeta with georgette for the full sleeves. The width of the skirt at the foot is 1¾ yard. The dress may be finished without the full sleeve portions and without the plastron, making a very serviceable and practical model. The Pattern is cut in 3 Sizes: 16, 18, and 20 years. An 18 year size requires 5⅛ yards of 40 inch material. For sash plastron and pockets of contrasting material ⅞ yard is required.

4468. A Practical Simple Play Dress.—Comfort is the principal feature expressed in this model. It slips on over the head, and provides for an opening at the inner seam. The sleeve may be finished in wrist or elbow length. The Pattern is cut in 4 Sizes: 6 mos. 1, 2 and 3 years. A 1 year size requires 1¼ yards of 36 inch material.

4522. A Popular Style for Stout Figures.—Here is a good model for mature figures. The panel front is finished with concealed pockets. The sleeve shows the new circular cuff. Wool rep with facings of satin or moire would be appropriate for this dress. The Pattern is cut in 7 Sizes: 36, 38, 40, 42, 44, 46, and 48 inches bust measure. A 38 inch size requires 3¼ yards of 54 inch material. The width at the foot is 1⅞ yard.

4521. Ladies Costume.—Figured silk or crepe could be used for this model. It is charming in its style lines, very graceful, and becoming to most figures. The skirt is independent of the waist, which is in "sliip on" style. The Pattern is cut in 6 Sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38 inch size requires 5⅝ yards of 40 inch material. The width at the foot is 2 yards.

4536. A Pretty Frock for Mother's Girl.—Figured and plain foulard is here combined. This is a pretty style for crepe de chine, with trimming of plaited frills on the panels and waist. The sleeve may be in short, or wrist length. The Pattern is cut in 4 Sizes: 8, 10, 12, and 14 years. A 12 year size requires 3⅝ yards of 40 inch material. To make as illustrated will require 2⅛ yards of plain and 1⅛ yard of contrasting material.

4526. A Stylish Blouse with New Features.—Flannel, satin or moire could be used for this design. Bands of embroidery, brading or piping would be good for trimming. The Pattern is cut in 6 Sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38 inch size requires 2½ yards of 40 inch material.

Galvannealed
the Triple-Life Wire
Cuts Fence Costs in Half—
is GUARANTEED to last 2 to 3 times longer in any standard test and to have 2 to 3 times heavier zinc coating than ordinary galvanized wire. It should last many years longer; therefore, cost far less than you paid for your present fence.
"Galvannealed" wire amalgamates the rust-proof zinc coating INTO the steel; galvanizing merely lays it ON. That's what will make "Galvannealing" last so much longer than ordinary galvanized wire.
Stiff stay wires and well crimped line wires locked together with the famous little Square Deal Knot so tight they are guaranteed never to slip, make Square Deal a firm, long-lasting, economical fence. 50c copy of Ropp's New Calculator sent free to landowners who write for catalog that tells all about the new high test, Triple-Life "Galvannealed" wire.

If Ruptured Try This Free
Apply it to Any Rupture, Old or Recent, Large or Small and You are on the Road That Has Convinced Thousands
Sent Free to Prove This
Anyone ruptured, man, woman or child, should write at once to W. S. Rice, 529C Main St., Adams, N. Y., for a free trial of his wonderful stimulating application. Just put it on the rupture and the muscles begin to tighten; they begin to bind together so that the opening closes naturally and the need of a support or truss or appliance is then done away with. Don't neglect to send for this free trial. Even if your rupture doesn't bother you what is the use of wearing supports all your life? Why suffer this nuisance? Why run the risk of gangrene and such dangers for a small and innocent little rupture, the kind that has thrown thousands on the operating table? A host of men and women are daily running such risk just because their ruptures do not hurt nor prevent them from getting around. Write at once for this free trial, as it is certainly a wonderful thing and has aided in the cure of ruptures that were as big as a man's two fists. Try and write at once, using the coupon below.
Free for Rupture
W. S. Rice, Inc.,

The Children's Hour

DEAR girls and boys:—How time does fly. Here it is less than a week from Hallowe'en and it seems that but a very short time ago we were celebrating the fourth of July. Next will come Thanksgiving, then Christmas; in fact, only a few weeks and it will be 1924.

I suppose you are planning on having a party or attending one Hallowe'en evening. What great fun we had at country parties when I was a boy. I do not mean that on the evening of Hallowe'en we would go around the neighborhood and play mean tricks on people. No indeed, I never could see any fun in doing that. The fun we had was at the party where we played all kinds of games such as fortune telling, bobbing for apples, etc. And the room would be decorated with jack-o-lanterns, witches, cats and moons cut from black paper, then in each corner was a small shock of corn, while jack-o-lanterns made from pumpkins, with candles in them, were used to light the room. My how spooky it seemed! But everybody was happy and enjoyed the feeling of mystery and ghosts.

This issue we are publishing the drawings that won the prizes in our recent contest. I think they show that some of the readers of the Children's Hour have considerable talent, don't you?—UNCLE NED.

THE DOG'S CHOICE

IN the early days, the Earth was divided by a chasm. On one side lived Man, the Animal Who Thinks, on the other side lived the Animals Who Do Not Think. It did not occur to any of the animals, not even the Wise Elephant, to try and jump across the chasm.

Except one.

Dog sat on the edge of the chasm, ears cocked, and whined. He crouched as though to leap. The other animals paid no heed.

"Come!" cried Man.

The chasm was very wide. Yet a look of answer came in Dog's brown eyes, and he lept. Too wide was the chasm! Only Dog's forepaws struck the further side of the abyss.

But Man stooped down, lifted Dog firmly and placed him on the hither side of the chasm, among the Animals Who Think.

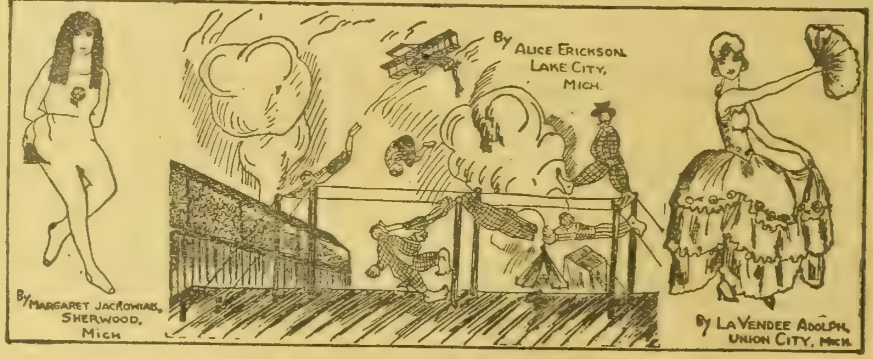
A daring attempt for a good ambition will always have some success.

OUR BOYS AND GIRLS

Dear Uncle Ned:—May I come in? I wrote to you once before but it was not in print. I am ten years old. My birthday was the 21st of January. Have I a twin? I have a big brother in Greenville, Pa. I have been through the state of Michigan from north to south and it was sure a nice trip. I have one sister and two brothers. We have 80 acres of land, and for pets I have a cat named Tom and a calf named Polly. There is no school this week as we have beet vacation. I wish some of the cousins would write to me for it is very lonesome. Well as my letter is getting long I will close with a riddle. What eats and eats and never gets full? The one who guesses it I will write to. Your loving niece—Onahlee Lockwood, Pompeii, Michigan.

Dear Uncle Ned:—It is said that when the nest becomes crowded that some of the birds are pushed over the edge, but I hope that I won't be the one that is pushed over the edge this time. I had one of my letters published when I was about ten years old. I have written several times since but I guess I was pushed out of the nest each time. Isn't the weather getting cold? All of the flowers are frosted and it seems so lonesome when the leaves fall from the trees. My sister younger than me likes autumn, but I suppose it's because her birthday is in October. But I love spring. Don't you, Uncle Ned? I guess I'd better describe myself. I am five feet two and one-half inches tall, have brown hair, black eyes and am dark complexioned. I was fifteen years old on the 11th day of May. Have I any twins? I know of one. Her name is Cora Spaelma. We have been corresponding since August. We have sent each other our pictures, so we nearly know each other even though we haven't seen one another. Now, Uncle Ned, I want to ask you a question. Couldn't we have a space on the children's page each week for a few pieces of poetry? I for one, love poetry and I think there are others that do too. The children that write letters could send any good poem they find. Now, boys and girls and Uncle Ned how do you like the idea? I graduated from the tenth grade this June, but as we haven't a twelfth grade here I quit, for I didn't want to go away from home, much as I wanted to go through the twelfth grade. Then my mother needs me at home as my father is working on a dam at Bamfield. I was reading Eleanor Stovel's letter, where she was telling about her visit to the Niagara Falls. I also have seen the Falls, but I was only five years old when I was there, so I don't remember it very well. Two years ago this summer my mother and two of my sisters went out to Kansas and Missouri. They went for one of my sisters' health, as she has been sickly since she was five years old. I stayed with my married sister. Oh! but I was lonesome. Well, Uncle Ned, I must close or you surely won't print my letter. Your loving niece,—Gladys Corbin, Stanwood, Michigan.

—Yes, I guess we can spare some space for one or two pieces of poetry each issue if the cousins want us to. Maybe some of the girl and boy poets who are members of the Children's Hour can send some original poems. Who will be the first one to do that?



By Alice Erickson, Lake City, Mich.
By Margaret Jackowiak, Sherwood, Mich
By LaVendee Adolph, Union City, Mich.

THE PRIZE WINNING DRAWINGS

Dear Uncle Ned:—Your delightful Children's Hour interests me so much that I have decided to join your merry circle. I am just a small town girl of the northern part of Michigan. I am a lover of the woods and I enjoy many tramps and camping trips in the woods. The spring of the year seems so fresh looking. It seems like everything is coming to life after being dead all winter. In the fall of the year, the woods are so pretty and delightful. Just like a kid, I love to drag my feet in the fallen leaves. The spring and fall are my favorite seasons, I am also a lover of reading and I read a lot. My favorite authors are Zane Grey, Harold Bell Wright, and Henry Knibbs. Those who have read "Rambling Kid", how did you like it? Didn't you fall in love with the "Kid"? I did, and I thought the whole story was just fine. Another story I like very much is "Heart of the Desert." If any girl between the ages of sixteen and twenty who lives in Mesick, Michigan, would care to write to me I would appreciate it very much. Also other members who would write to me, will receive an answer to their letters. Best wishes to Uncle Ned and all the cousins. Sincerely yours,—Josephine Damon, Box 86, Sidnaw, Michigan.

Dear Uncle Ned:—I wrote once before but I guess the letter found the waste basket. So I am going to try it again. I will describe myself before I tell anything else. I am 4 feet 11 inches tall, weigh 90 pounds, have blue eyes, and red hair. I am light complexioned so I have freckles. I am 11 years old. My birthday is the 6th of March. Have I a twin? If I have I wish he or she would write to me. I will answer every letter I get. I am in the sixth grade but I may take the seventh grade test next spring. Our school started a month ago. I like to go to school and wish everybody would, don't you, Uncle Ned? This is the first year we have had the twelfth grade. I have a mile and a half to walk to school. We had our first test last Friday. I got 80 in spelling and grammar, 97 in arithmetic, 85 in geography. Haven't gotten the other papers yet. I I hope I pass. There are six in our class. There are 16 in our room; six 6th graders, eight 8th graders, and two 7th graders. Our 7th graders are dumb. They are just like me. Ha, ha. I live on a 280 acre farm. We have several cows, and four horses, three cats, one dog. Well I guess I will give room for other letters. Will close. Your Nephew,—Harry Firestone. P. S.—I hope this letter will jump over the waste paper basket.

Dear Uncle Ned:—I was surprised to see my letter in print, so after all the waste paper basket did not catch my letter. Gladys Carlson and Edna McIntyre did not guess my age right, so they better try again. For two weeks my mother went for a visit with my brother and his wife, her sister and husband, in an auto. Cora Spartons, sent in the words of "Star of the East." for Iris Arnold, and you, Uncle Ned said she had them, would you please send the words to me? I know the tune, but not the words. I like that song don't you Uncle Ned? I also have been taking music lessons, but I stopped taking them because my teacher was so busy. But I will take them again after a while. Just think Uncle Ned, I have three nieces, their names are Goldie, Ethel and Doris. My one sister is married and two brothers, they each have a baby girl. Ethel calls me Dusty, and Doris calls me Dot-ta. I will have to ring off and let some of the other cousins use the line once. I am getting rather selfish. Good-bye. Your loving niece,—Dorothy Postma, R. 1, Box 8, Rudyard, Michigan.

Dear Uncle Ned:—Here comes another jolly farmer girl of eleven years to join your merry circle. I have read the Children's Hour many, many times. I have a girl friend who wrote a letter over four years ago to the M. B. F. asking the boys and girls to write. Several wrote and she is now corresponding with four. So I am going to ask the boys and girls to write to me and see if I can do as well. I will be in the 5th grade when school starts. We are getting a new state trunk line past our house so there is lots of work around here for men. Don't you want a job? Ha! Ha! It has been terribly hot and dry up here for some time but it is raining tonight and we are all very glad. We have some nice lakes up this way to go bathing in. My two girl chums and I went swimming yesterday and we had a glorious time. One lake is a resort, people come from far and near and live in the cottages during their vcations. Your niece,—Miss Nellie Watkins, West Branch, Michigan, R2, Box 65.

Dear Uncle Ned:—May I join your merry circle? We take the M. B. F. and enjoy it very much. I have read the Children's Hour for over a year. I am in the 8th grade at school. My age is between 13 and 17. Who guesses my age will receive a long letter from me. My birthday is on the 7th day of September. Have I a twin? My home is 2½ miles from Argyle, but I work at my sister's in Argyle. I am testing cream for the Shedd Creamery, and like it fine. I have long brown hair, blue eyes, and light complexion. I am five feet tall. My father lives on an 80 acre farm, has a large cottage, and a big barn. We have 8 cows, 6 calves, 4 cats, 1 hog, 4 horses, 100 chickens and about 60 little chicks. I have seven sisters and two brothers. One of my sisters live at Tyre. She also has a cream station. Four of my sisters are married. Two of them home and my two brothers are home also. I have two sisters in Detroit, one is married. I think I have said enough for this time, so will close, hoping to become your niece soon. Will some of the boys and girls write me a letter soon?—Helen Darr, Argyle, Michigan.

Address all letters to the Children's Hour as follows:

RECIPES

(Continued from page 15.)

salt, one even teaspoonful soda. Dissolve the soda in the warm water and pour it over the sponge. Break sponge up well, mix in the salt. Work the dough well and set aside in warm place for two and one-half hours until it starts to break on top. Now turn the dough onto the flour dusted board on table, pound with rolling pin and roll out to a thin sheet and fold over from both ends. Repeat this rolling and folding over a number of times, until the dough feels quite smooth and pliable. Then you can roll it out quite thin and prick or dot with fork. Cut out now with small round cutter or into square crackers and bake in ungreased pans in a hot oven. However the pans must be thoroughly heated in the oven before you lay the crackers on them as this makes the crackers light and flaky. If the crackers are placed on the hot pans quickly and put in oven immediately, they will require only a few minutes for baking.

Sour Milk Cake—I find good things in our paper so I am going to send my choice cake recipe. One cup of sugar, one-half cup of cocoa; then add one-fourth cup of butter in one-half cup of hot water and stir, add three-fourths teaspoon soda in one-fourth cup of sour milk or buttermilk, one cup flour; add last, one egg white beaten to a stiff froth. Flavor with vanilla and pinch salt and bake in moderate oven. You will find this a very good cake. Any frosting can be used. When frying chicken place spider in oven and see how nice your chicken will be.—Ethel Short.

MY FAVORITE RECIPES

Fresh Apple Pie—Five or six sour apples, one-third cup sugar, one-fourth teaspoon grated nutmeg, one-eighth teaspoon salt, one teaspoon butter. Pare, core and cut apples in eights, put around a plate one-half inch from edge, and work towards center until plate is covered, then pile on remainder, mix sugar, nutmeg, salt, lemon juice, and grated rind and sprinkle over apples. Dot over with butter. Wet edges of under crust, cover with upper crust, and press edges together. Bake forty to forty-five minutes in moderate oven. A very good pie may be made without lemon. Cinnamon may be used instead of nutmeg.

WHEN WILL DOLLAR BE WORTH ONE HUNDRED CENTS AGAIN?

(Continued from Page 4)

one," he went on after a pause, "but the labor unions have been very shortsighted in their policy of trying to restrict the numbers in indivilual organizations. I believe in the American working man. I believe in his patriotism and in his desire to be fair and generous, but he does not understand and the result is that he too often acts in defiance of his own best interests.

"The average American worker centers all his attention on a struggle for higher wages. He thinks that money is something that is of value in itself and does not realize that it is only a convenient means of exchange and is worth only just as much as the goods behind it. It ought to be easy to see that it is better to get $20 for which you can get $20 worth of goods, than to receive $30 which can be exchanged for only $15 worth of goods.

"I was talking to a man in the building industry today and he was telling me about the extraordinary way the unions have placed restrictions about apprentices and their persistant efforts to keep men out of their organizations. Of course, they are merely trying to improve their condition and in that they have my fullest sympathy. The trouble is that they are going exactly the wrong way about it. They are really making things worse for themselves. They have forced wages up, it is true, but they have also forced up the expense of living for not only themselves but for everyone else. this kind of artificial and false prosperity in one industry means depression in other industries, which means in turn a falling off in production and a lessened value for the dollar. If the building industry could command all the workers it needed wages might not be so high, but they would buy more and that would bring prosperity to a hundred other industries.

"The same thing holds true in the coal industry. The anthracite unen policy of the building trades bodies with the result that there is a shortage of labor in the anthracite fields and a great surplus in the soft coal regions. That kind of thing is happening all over the country with equally disasterous results. We can never get the proper balance in production until there is a free interchange of labor so that men can move without restriction in those directions where their services are most needed."

The Russian Way

"Can the Government offer any help in solving that problem?" I asked.

"No," said Mr. Roberts, with unions have followed the same mistakusual emphasis. "This is the kind of thing that has happened in Russia. People are always wanting to lay all their troubles on the Government and think that a law will remedy anything. You can not dictate to a man what kind of work he is to do and where he is to do it. He must be given a free choice."

"Then what is the remedy?"

"Education. The fundamental principles of economics are very simple and do not require any great mental ability to grasp. The first thing Americans have got to learn is the meaning of money. This foolish idea that high wages mean prosperity must be gotten out of their heads. The only real prosperity is spelled production and everything that interferes with production interferes with prosperity. That ought to be easy to understand but apparently it is not. Before a man is elected head of a labor organization he should be required to take an examination in the first principles of economics. The Government might help by making simple economics an obligatory subject in our schools."—The Detroit News. (Copyright by United Publishers News Service.)

BABES IN THE JUNGLE

(Continued from Page 8)

When the pawnshop opened the next morning me and Silver was standing there as anxious as if we wanted to soak our Sunday suit to buy a drink. We sauntered inside, and began to look at watch-chains.

"That's a voilent specimen of a chromo you've got up there," remarked Silver, casual, to the pawnbroker, "But I kind of enthuse over the girl with the shoulder-blades and red bunting. Would an offer of $2.25 for it cause you to knock over any fragile article of your stock in hurrying it off the nail?"

The pawnbroker smiles and goes on showing us plate watch-chains.

"That picture," says he, was pledged a year ago by an Italian gentleman. I loaned him $500 on it. It is called 'Love's Idle Hour,' and it is by Leonard de Vinchy. Two days ago the legal time expired, and it became an unredeemed pledge. Here is a style of chain that is worn a great deal now."

At the end of half an hour me and Silver paid the pawnbroker $2,000 and walked out with the picture. Silver got into a cab with it and started for Morgan's office. I goes to the hotel and waits for him. In two hours Silver comes back.

"Did you see Mr. Morgan?" I asks. "How much did he pay you for it?"

Silver sits down and fools with a tassel on the table cover.

"I never exactly saw Mr. Morgan," he says, "because Mr. Morgan's been in Europe for a month. But what's worrying me, Billy, is this: The department stores have all got the same picture on sale, framed, for $3.48. And they charge $3.50 for the frame alone—that's what I can't understand."

NEW LAMP BURNS 94% AIR

Beats Electric or Gas

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. Government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94% air and 6% common kerosene (coal oil).

The inventor, A. R. Johnson, 609 W. Lake St., Chicago, Ill., is offering to send a lamp on a 10 day's FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him to-day for full particulars. Also ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month. (Adv.)

1 teaspoonful equals 2 of many other brands- That's why CALUMET The Economy BAKING POWDER

Goes Farther—Lasts Longer.

Never use heaping spoonfuls when you bake with Calumet—Use level spoonfuls because it contains more than the ordinary leavening strength. No other baking powder will produce bakings at such a low cost. Calumet is economical—sure.

Help your
MOULTERS MOULT

If you want your hens to moult naturally—

If you want them back on the egg job promptly—fall and winter laying—

Then you must make sure that your moulters are healthy and hungry.

They must eat lots, and be able to digest what they eat.

That's just what

Dr. Hess Poultry
PAN-A-CE-A

does for your moulting flock.

It's a tonic that begins with the appetite—improves a hen's whole system.

It has Iron that keeps the paleness away, makes the combs and wattles red—the blood rich.

Pan-a-ce-a starts the food the egg way as soon as the moult is over.

No time lost.

No dormant egg organs after the moult, where Pan-a-ce-a is fed.

Tell your dealer how many hens you have. There's a right-size package for every flock.

100 hens, the 12-lb. pkg. 200 hens, the 25-lb. pail
60 hens, the 5-lb. pkg. 500 hens, the 100-lb. drum
For fewer hens, there is a smaller package.

Poultry for Profit

HINTS ON MARKETING TURKEYS

TURKEY time's a-coming! If you want top prices for your birds, here's a few tips from the United States Department of Agriculture.

Range fattening is more satisfactory than pen fattening, the department says. Begin fattening about three weeks or a month before marketing, and proceed gradually by feeding lightly on corn in the morning and again in the evening a short time before the turkeys go to roost. Increase the quantity of corn fed gradually until the birds are getting all they will eat. Be careful not to feed new corn too heavily until the turkeys have become accustomed to it, to prevent digestive troubles.

Good sized, well matured birds in good condition for fattening can often be marketed to best advantage at Thanksgiving. Small, immature turkeys should be held until Christmas, for further fattening, but if the birds are unthrifty market them at once. Sales outlets to raisers within express shipping distance of good markets are local consumers, local buyers and dealers, more distant buyers or dealers and carlot shippers, and receivers or commission merchants of live or dressed poultry in the large cities. To determine the best available outlet study shipping charges and keep in touch with both local and distant buyers as to price. Distant buyers will mail quotations on request.

Most producers market their turkeys alive. Shipping dressed turkeys to markets is justified only when making local sales or there is an unusually favorable outlet for the dressed product. Shipping coops should be high enough to enable the birds to stand up. A coop three feet long, two feet wide and twenty inches high will accommodate five or six turkeys. Overcrowding may result in bruising which detracts from the market value; overcrowding may also cause death and complete loss.

If the birds are on the road only a few hours, do not feed before shipping. If they are on the road a longer time water and feel liberally to prevent shrinkage in weight. Ship in time to place the turkeys on the market a day or two before the holiday. Late arrivals may reach on overstocked market, and arrival after the holiday usually means lower prices.

Killing and dressing birds is simple when properly done. Hang up the turkeys by their legs and with a single stroke push the point of a sharp knife up through the roof of the mouth into the brain. When properly done this operation paralyzes the bird and loosens the feathers so that they come out easily Then sever the veins in the throat just beyond the skull for bleeding. The turkey should be dry picked, and plucked clean. Thoroughly cool the carcass after plucking, inasmuch as failure to remove all animal heat promptly will result in early spoilage. Cool either by hanging outdoors if the temperature is between 30 and 45 degrees, or by immersing in cold running spring water or ice water.

When thoroughly chilled, the carcasses are ready for shipment. A barrel is a convenient shipping container. Place a layer of cracked ice in the bottom of the barrel, then a layer of turkeys, followed alternately by layers of ice and turkeys, and topped off with a layer of ice. Tack burlap over the top of the barrel.

Caution! If you are building up a permanent turkey business be sure to retain as many of the finest, largest, quickest growing young birds needed to rear the next year's flock and send the rest to market.

QUALITY OF EGGS

HOW many eggs does your flock average? What was the highest individual production?

How much do your eggs weigh per dozen? How shapely are they? Is their color uniform or is it a bit uncertain?

The foregoing are two sets of questions worthy the consideration of any poultryman. The former set usually receives the bulk of thought, and hens are bred with a view to number of eggs rather than size, shape and color. Quality of course, includes much besides size, shape and color, but these are prominent points and go a long way toward determing the market value.

It is exceedingly common to find small eggs in the nests along with the medium and large. It is just as common to find eggs with certain very noticeable characteristics that render them unattractive for the market. For instance, among the white eggs there is one that shows distinct touches of brown. There is one that shows a tendency toward being speckled—a shower of little brown spots on it. There is one with a rough, unfinished point to the shell. Among the brown eggs there are pales and darks; eggs with even coloring or uneven.

Now it may be plain prejudice on the part of city folks that use our eggs, but they want uniformity. They want a white egg they want it beautifully white. If they like the brown they want it uniformly colored.

Likewise, they want eggs that fill the little compartments of the cartons reasonably snugly. Every purchaser of eggs at the grocery store feels that he is cheated if he can feel and hear the eggs roll about in the carton; even one loose egg gives an uncomfortable feeling.

The point at issue is that number of eggs is not the only evidence of a valuable hen. The producer of 200 eggs in a year that grade No. 1 or fancy is worth more than the producer of 210 or even 225 that grade low.

Therefore, is it not time for more attention to be paid to the second set of questions at the head of this article? Is it not time for the poultryman to become as careful about the size, shape and color and general quality of the eggs laid by individual hens in his breeding flock as about the number of eggs they lay?

As stated before, quality includes much more than size, shape and color, but the other elements are more easily controlled. Feeding and care of the eggs after laying are outstandingly important in the matter of getting quality. The feeding is more of a scientific matter than the care, perhaps, but plenty of fresh water, plenty of green feed, a grain and mash ration balanced and fed, according to the many experiment station recommendations, and charcoal, grit and oyster shell are the fundamentals of feeding. Care means among other things, frequent gathering during warm weather, keeping in well-cooled quarters and early delivery to market.

Did you ever break an egg into a saucer and try to pick it up with the thumb and fingers of one hand? Try it. You can not pick up a saucerful of water that way. If you can lift the entire egg, leaving only a little moisture in the saucer, the likelihood is that it will qualitfy as a first-class egg. At least, the cook in the high-class restaurant or hotel depends to a large extent upon this test when considering an offering of eggs. But you may depend upon it that an egg that has been held a long time and become stale will not thus pick up. Neither will it if it has remained in the nest several hours after being laid. Nor does quality hold up when improper feeds are given, though usually a hen goes on a strike and will not lay at all if she gets feed that is lacking in some essential in the production of good eggs. Hens do not cheat you; they will not put poor material in their products if there is a chance to avoid it.

FREE BOOK ABOUT CANCER

The Indianapolis Cancer Hospital, Indianapolis, Indiana, has published a booklet which gives interesting facts about the cause of Cancer, also tells what to do for pain, bleeding, odor, etc. A valuable guide in the management of any case. Write for it today, mentioning this paper. (Adv.)

Pit Necessity to Properly Protect Manure

THE loss of fertilizing elements in barnyard manure amounts to millions of dollars every year on American farms. This is a direct loss, suffered by the individual farmer, although in many cases he has not been aware of it because he was not thoroughly conversant with the fertilizing value of manure, and consequently did not take the proper precautions to conserve it. But through the work of agricultural experiment stations and agricultural colleges, the enormity of this loss has been definately established, and lack of information is no longer a valid excuse for a farmer losing large sums of money on his manure.

The Indiana Agricultural Experiment Station estimates that one-third of all the manure is wasted. In the opinion of this institution Indiana farmers alone lose more than $24,000,000 a year in fertilizing elements of farm manure. This loss comes from the failure to save the liquid content; uncontrolled fermentation of the manure; and leaching, or the washing out of soluble plant food. Pound for pound the liquid content is worth more than the solids and the greatest single item of loss is the liquid content. Where the manure is thrown outside the barn, with no protection, the liquid content soaks into the ground, the plant food is washed out by the rain, and uncontrolled fermentation largely destroys the value of the remainder. The New Jersey Agricultural Experiment Station found in a test case, that over half of the fertilizing value of barnyard manure was lost by exposure, while in Maryland a test of eighty tons of manure showed a loss of two-thirds of its value in one year.

MANURE VALUES

	Tons Yearly	Value Per Ton	Annual Value
Horse	5.2	$6.09	$31.67
Dairy Cow	8.5	4.56	38.76
Other Cattle	4.0	5.47	21.88
Sheep	0.4	9.66	3.86
Hog	0.6	6.19	3.71

To give proper protection to barnyard manure, leak-proof pits are a necessity. Frequently farm work makes it impossible to haul manure out on the field daily, so such a pit is required to properly store it. If thrown on the ground, liquid content is lost, but if kept in a proper pit this valuable part of the manure is saved, and may be kept indefinitely.

Concrete pits will not leak. A simple and inexpensive form of concrete pit may be built like a shallow enclosure alongside the barn, located so that it is easy to throw manure out of barn windows into the pit and likewise easy to load from the pit into the manure spreader. As it is usually not practical to use enough bedding to absorb all liquids, a cistern should be built near the pit to hold the unabsorbed portion. For the cistern and pit floor use concrete mixed in the proportion of one sack of portland cement to two cubic feet of pebbles. The proportion for the walls should be 1:2½:4. The walls of the pit should be built first. When the floor is placed a one-half inch space should be left around the edge which is later filled with tar to make a watertight joint. For ten cows a pit 16 feet long by 16 feet wide and 4 feet deep is large enough. For 20 cows the pit should be 24 feet long by 20 wide and 4 feet deep.—W. G. Kaiser, Agricultural Engineer.

RADIO BECOMES PREACHER IN COUNTRY CHURCH

(Continued from page 4)

Parties can be held in which both old and young participate and thus revive that friendly, neighborly spirit that is fast disappearing in our rural communities. Talk it over with your neighbors and then open that little church down on the four corners that has been closed for several years.

DAIRY and LIVESTOCK

BREEDS OF DAIRY CATTLE

BEGINNING with this issue The Business Farmer will publish a series of articles on the five breeds of dairy cattle that have attained considerable prominence in the United States. These articles are prepared by a specialist in dairy husbandry of the U. S. Department of Agriculture and were recently issued in bulletin form. The first to be discussed is the Holstein-Friesian cattle. Watch for these articles.

Origin and History

In the low countries bordering on the North Sea, especially in the northern part of Holland, Holstein-Friesian cattle have been bred for centuries. The land is rich and fertile and pastures are exceptionally good. Different names have been used to designate the breed, both in Europe and America, among which the following are the more common; North Hollander, Holland, Netherland, Holstein - Friesian, Dutch, Dutch-Friesian, and Holstein. The last is the name usually used in this country, although Holstein-Friesian is the official name.

Importations and Distribution

The Dutch settlers in the State of New York probably were the first to import individuals of the Holstein-Friesian breed, but the first importations of which records exist were made between 1857 and 1862 by W. W. Chenery, of Massachusetts, and many of our present-day animals are descended from these importations. For a time the trade in imported Holsteins flourished, but in recent years very few animals have been imported, owing largely to the quarantine which, on account of contagious animal diseases, has been in effect a large part of the time against continental European countries.

Holsteins have grown greatly in numbers and popularity in recent years, owing in a great degree to the increased demands of large cities for market milk. Cattle of the breed are most numerous in the Eastern and Middle Atlantic States, with the Middle Western and Pacific sections next in order. With the exception of the Jersey, there are more Holstein cattle in the United States than of any other dairy breed.

Characteristics

A universal characteristic of the Holstein-Friesian cattle is the black and white color of their coats. The sharply defined and contrasting colors of jet black and pure white give them a very striking appearance. Although either color may predominate, black below the knees is objectionable. Purebred animals with any red or gray in their coats are ineligible to registry.

In disposition Holsteins are docile, even tempered, and not excitable; in fact, they are rather lazy in general habits, as shown in their poor "rustling" ability in grazing scanty pastures. They are large consumers of feed, especially roughage, and do best when plenty is readily available.

The Holstein is the largest of the dairy breeds. It has a large, bony frame, which often is smoothly covered over all parts. Cows at maturity vary in weight from 1,100 to 1,800 pounds (average about 1,250 pounds); bulls range from 1,500 to 2,500 pounds (average about 1,800 pounds). The calves are usually thrifty and vigorous at birth and make rapid growth. The birth weight varies from 70 to 110 pounds, in some cases exceeding even the latter figure. Heifers reach maturity in frame at about 4 years, although increases in body weight occur up to 6 or 7 years of age. As a breed the Holstein shows good constitutional vigor.

Production

From the point of view of quantity of milk produced, Holsteins average higher than any other breed. The percentage of butterfat, however, which averages lower than that of any other dairy breed, tends to counterbalance the advantage of a greater milk production. The butterfat of Holstein milk is in the form of very minute globules, and

FINDLAY BROS., R 5, Vassar, Mich.

for that reason the cream does not rise rapidly on the milk. The small globules are an advantage, because the milk is not liable to churn in shipping. Holstein milk has little color.

Families

The families of Holsteins are very numerous, and it is difficult to determine which are the more important. Probably the following are among the more widely known: Aaggie, Abbekerk, Artis, Beets, Burke, Butter Boy, Carlotta, Clothilde, Colantha, De Kol, Fayne, Gerben, Hartog, Hengerveld, Johanna, Korndyke, Mechthilde, Mercedes, Mutual, Netherland, Ormsby, Pietertje, Pietje, Pontiac, Sarcastic, Segis, Spofford, Vale, and Veeman.

FALL DAIRYING

OCCASIONALLY we hear objections urged against dairy farming due to the fact that it is a year-a-round job. While this is in a sense true, it is offset by the fact that the income is as continual as the labor. To make fall dairying successful, there are a number of things that must be taken into consideration. If fall dairying is looked after at this season of the year, a splendid opportunity for profitable production is offered during the latter months of the year. Now is a good time to get everything ready in the way of stable quarters and the food supply. It is also a good time to get together the late fall and winter herds. Keep the cows now coming fresh in the best milking condition and they will be the ones of greatest profit during the next nine months.

If you have not enough cows look about for more and be careful to select those that will freshen soon. Feed them well until they calve and then give them all the food they want. This is a good time of the year to test the cows and find out what they are doing in the way of production. It does not pay to keep a poor cow in the herd if a good one can just as well take her place. Neither does it pay to carry on winter dairying with a lot of strippers unless they have been good milkers all spring and summer, and you are keeping them out of respect for what they have been.

This is a good season of the year to look around for a good dairy sire if you are needing one. You will have him to use in December and January, the best time for breeding cows intended for milking. Get, if possible, a sire out of a very good milker as he is more likely to transmit the qualities of his dam than his sire.

At this season of the year it is a good time to get together the winter feed for the stock. Provide plenty of good hay and fodder. The silo should be filled. Have plenty of good straw close at hand. It can't be put to better use than under the milk cow often during the winter. A good warm stable with plenty of windows for light and ventilation is necessary where cows are kept for winter dairying and it is quite as necessary to have a good floor in the stall so that the animals can be kept in comfort and in a clean condition.

Plan a yard close to the barn where the cows can be kept to themselves and not be bothered by colts and steers. In this yard have water, salt and hay always on hand so that the cows can get at it when they feel so inclined.

We have suggested a pretty good program for one season. There is no danger that it will all be done, but there are some things that can be done this fall, which will make fall dairying a successful undertaking.

WASTE BY POOR STORAGE

THERE is a fearful waste in this country caused by poor storage of grain on the farm. The principal loss is caused by moisture and rodents. Old makeshift bins and cribs that have long passed their usefulness are still housing valuable grain. By water and snow leaking in much grain is damaged by mould, must and decay, and little holes on every corner admit rodents that destroy great quantities of grain every year. It is estimated that two hundred million dollars worth of grain is destroyed annually by rodents.

The housing of our grain is of the greatest importance because it not only prevents a fearful loss but also protects the price, allowing a crop to come on the market as it is used or needed, and avoiding the dumping of grain either in a warehouse or on the market speculators which tends to lower the price.

Sheet metal bins and cribs have been tested out for several years and are giving splendid satisfaction. They have the advantage of being fire, rat and moisture proof, and grain housed in them can be used as collateral on loans or advances. Nothing is safer than good grain housed in a safe place. These bins can be locked up and the key turned over to the banker or party who makes the loan. The renter can divide his crop with the land owner, and each can hold his share in a safe and secure place until it reaches the market. The time has come for better and more permanent buildings, and we will see more of these metal storage bins used in the future, for they are filling every requirement.—A. L. Haecker.

GOVERNMENT BULLETINS OF INTEREST IN NOVEMBER

A SMALL list of Farmers' Bulletins and Circulars of general interest during November is believed to be of value to our readers. Copies may be obtained free by addressing the Office of the Secretary, Publications, United States Department of Agriculture, Washington, D. C., as long as the supply lasts. Specify number and name and whether Farmers' Bulletin or Department Circular.

Farmers' Bulletin 754, The Bedbug; 847, Potato Storage and Storage Houses; 910, Sweet Potato Storage; 1091, Lining and Loading Cars of Potatoes for Protection from Cold; 1096, Frost and the Prevention of Damage from it; 1105, Care of Mature Fowls; 1160, Diseases of Apples in Storage; 1186, Pork on the Farm: Killing, Curing, and Canning; 1194, Operating a Home Heating Plant; 1210, Measuring and Marketing Farm Timber.

Department Circular 238, U. S. Grades for Potatoes Recommended by the United States Department of Agriculture.

RAISING THE SKIMMILK CALF

GOOD results in calf raising require that the milk fed be fresh. One of the common causes of indigestion, and its most pronounced symptom, scours, is feeding stale milk. It is possible to use sour milk successfully if the calf is once accustomed to it and if it is fed in the same condition regularly. Feeding milk that has been standing 24 hours, or even 12 hours, is dangerous. Milk that is not really sour but old and stale is far more dangerous than milk that is soured with a pure acid taste. The younger the calf the more sensitive it is to the condition of the milk.

Fortunately the farm separator has solved the problem of getting good milk for calf feeding wherever cream is sold.

Another cause of sickness in hand raised calves is feeding from dirty pails or cans. Every utensil that comes in contact with milk which is to be used for calf feeding should be kept as clean and scalded as thoroly as tho the food was to be used by the family. We have seen a farmer take a can of skimmilk out to the calf lot, take the pail off the top of a post and proceed to feed the calves. When he was through the bucket was again turned over the post. Feeding a bunch of calves in a pig trough is sometimes done. Sooner or later calves compelled to drink milk under such conditions will be sick with a bad case of scours and the owner will probably say he never did have any luck with skimmilk calves.

It is just as important to keep the pen clean in which calves are kept in the barn. Experience has taught many men that calves will not do well in a damp, dirty pen or stall. Under such conditions pneumonia is almost certain to give trouble. The calf needs all the sunlight it can get. In arranging the barn do not put the calf pen in a dark corner because the space is difficult to use for other purposes. The calf pen should be given the sunniest place in the barn.

An abundance of water should be available at all times. The calf needs come water in addition to that contained in the milk and wants to

(Continued on page 23.)

drink a little at a time at frequent intervals during the day. This need for water is often overlooked and the calf is thirsty as well as hungry and gorges itself with milk when it has a chance.

Salt should also be kept within reach of calves old enough to eat hay and grain.

There are a number of advantages in having calves to be raised by hand in the fall. The fall calf can be kept growing nicely on skimmilk until grass comes, then weaned and turned out to pasture without checking its growth in the least. The disadvantages of winter feeding are more than offset by the hot weather and annoyance from flies experienced by the spring calf. For the calf under six months it does not make much difference whether the roughage be grass or hay. Some prefer hay, but for the second six months grass gives much better results. In the winter season the young calf is also more certain to get the careful attention it needs than it is during the busy summer season.

Summer calves are greatly annoyed by flies and can be made more comfortable by allowing access to a darkened stable during the day time. Breeders of valuable pure-bred calves find it a good practice to inclose a small pen with fly screen for the very young calves.

If there is any other good use for the skimmilk, the skimmilk calf should be weaned at the age of six months. If the milk is needed especially for other purposes it may be cut out of the ration at five months. When the calf reaches this age it is capable of eating enough grain and hay to continue its growth unchecked after the milk is taken out. Weaning should be made gradually. The milk allowance is cut perhaps one-fourth, then after three or four days to one-half, and finally eliminated. The grain ration should be continued for some time at least after the milk feeding is discontinued. The mistake is sometimes made of cutting off both the milk and grain at once and turning the calf out to pasture to shift for itself. This is too great a change to be made at once and results in the growth of the animal being checked for two months or more.

Uncle Rube Spinach Says:

JEST TO RESUME

YES, an' mebbe to presume, or whatever the word is—I ain't writ anything in some little time 'cause my pen wuz out o' order an' I didn't have any ink an' my mind wuz—well you know what it wuz. With all the bootleg' stuff goin 'round, a man's mind might be anything but a swill bar'el. You know there's nice things 'bout hogs 'sides jest bacon an' hams? They won't drink bootleg whisky. All right, class me with 'em if you like, but I won't drink either. An' I ain't hollerin' for no five per cent stuff to take the place of the licker we used to have neither.

But, while you've been readin' my letters right along, I ain't been writin' so often. You see I am like the ol' Methodist preachers—when the "sperrit" calls say somethin'. Oh yes, the sperrit has called but bein' out of ink I couldn't answer the call.

But now that a kind friend has given me part of a bottle o' ink I'm at it agin. It won't be much to brag of 'cause I want to save my ink. But folks, there's a lot of things goin' on that riles me an' mebbe riles you. In Oklahoma the Klu Kluxes are tryin' to run things. So is Gov. Walton—they're hevin' a hot time of it taken altogether. Well, that ain't all—Detroit an' Wayne County kinda wants to run the state of Michigan—ain't it? An' they say child labor ain't used in the sugar beet fields—look up the records of these men an' mebbe you'll find they're interested in the sugar beet bizness—ets allus wise to know a man 'fore you place too much faith into 'im. In Kentucky convicts are holding a jail—a siege is on an to a day or two ago the convicts were havin' the best of it.

Farmers are at the mercy of speculators an' are losin' money on most everything they raise.

Two thousand people are killed in a year by poisoned hootch—if they didn't drink it they wouldn't be killed but that's neither here nor there so we'll say nothin' 'bout it. 45 or 50 thousand are killed by automobiles every year—some of our able statesmen, preachers an' such, want to amend the liquor laws an' make the stuff easier to git, but heve you heard one of 'em say a word 'bout easin' up on the motor laws? An' jest here let me ask what effect it would have on bootleggin' bizness if we had five per cent beer, light wines an' all the trash the five percenters advocate. They don't believe it would stop, bootleggin' neither do you or I. We had lots of 'em when s'loons wuz runnin' wide open—we would still heve 'em if the country was flooded with five per cent beer an' light wine—yes, or any other so-called light stuff. An' the congressmen are talkin' of passin' laws to help the farmer—somethin' like fixin' a price for his output. Folks, don't you see how foolish such talk is? As soon as a price wuz fixed by law to make a thing prof'table everybody would be raisin' that commodity an' the world—or government would be swamped.

I work and deem it an honor to work for the largest food factory in the world. When the supply exceeds the demand they immediately cut down the supply. If the farmers would do the same there would be no call for help from the gover'ment or from any other source—supply never has an' never will create demand. Let demand govern your work—give it a couple years' trial an' see how you come out.

An' even that ain't the worst—marriages are exceedin' births—purty nigh—an' divorces are exceedin' both—purty nigh too.

An' yet we are livin' in a free and enlightened country, what's the matter with it? The only way to help everybody 'ceptin' gamblers is to stop gamblin'. The laws won't let me shoot a in'cent little game o' craps or play a game of poker nor bet on a horse race for mebbe two bits or four bits a game, but it 'lows men to bet millions on your wheat crop, stock, cotton—the very things that make the nation rich an' honest and great. Yes they do it every day—they ain't no law agin' that so in conclusion I say—if you're goin' to be a thief be a big one—or if you're goin' to be a big'mist get 15 or 20 wives or husban's, gamble on a big scale an' the law protects you, steal a hot dog to keep your baby from starvin' an' get 20 years to life imprisonment—if you have a penknife onto you or a corkscrew it's life an' mebbe more. Now ain't it the fact?

An' yet farmers ask fer farm loans from a gover'ment that is financed by—well from farmers. Does 35 cents out of a dollar appeal to you? Dear farmer friends, that's what you are gettin' of every dollar I pay fer your stuff. Cordially yours—UNCLE RUBE.

Hundreds of Breeders Write:
"Your Remedy Cured My Herd of Contagious Abortion"

The Bowman Abortion Remedy has wiped out the old idea about Contagious Abortion being incurable. The remarkable record made by this remedy with both cattle and hogs proves that it is master of the most terrible disease known to livestock men.

Here is One of the Letters

Dec. 22, 1922.
Erick Bowman Remedy Co.,
Owatonna, Minn.

Gentlemen: In answer to your inquiry will say that we have had no trouble since our herd was treated. All cows are safe in calf and this is the first time in a great many years that we have not had trouble with cows retaining the after-birth. They are giving more milk this winter than they ever did. Yours respectfully,
JOHN G. HENDERSON.
Albert Lea, Minn.

I make no unsupported claims for the Bowman remedy. I guarantee it to be a positive cure for Contagious Abortion, retained placenta, white scours and calf pneumonia.

Nothing I could say for the Bowman Remedy would be so convincing as the testimony of men who have used it. That's why I invite full investigation.

Write me today

If there is Abortion in your herd, I have the remedy that will get rid of it for you. Find out for yourself. The sooner you act, the sooner your losses are stopped. Send a postal today.

Guarantee

I guarantee to bring every cow or sow that is a breeder back to normal, healthy delivery if treated with Bowman's Remedy according to directions. In exceptional cases, where additional treatments are needed, I will furnish these free, except for shipping cost. For every animal Bowman's Remedy does not cure of Contagious Abortion, I will refund the cost of treatment.
ERICK BOWMAN, President.

MARKET FLASHES

MARKET SUMMARY

Wheat easy and demand slow. Corn quiet. Oats and rye unchanged. Beans firm and demand satisfactory. Receipts of butter large and demand small. Eggs higher and firm. Fair demand for poultry. Cattle strong to slow. Sheep steady. Hogs lower.

(Note: The above summarized information was received **AFTER** the balance of the market page was set in type. It contains last minute information up to within one-half hour of going to press.—Editor.)

FOOTE'S MARKET LETTER

BY W. W. FOOTE

Improved Business Outlook

REPORTS from business houses, manufacturers and bankers show a hopeful feeling, and were it not for the extreme difficulty experienced in lifting the price of wheat to a level allowing a living profit for owners, the situation would be fairly satisfactory. Everywhere it is recognized as a matter of the greatest importance that farmers should abandon the one-crop policy which is so dangerous to those who practice it, and it is fortunate that so many Michigan farmers are engaging in other lines, such as fruits, berries, grapes, poultry, etc. Huge shipments of apples are being made from Benton Harbor to Chicago, and a few days ago a train of thirty-five cars of apples, the largest that ever left Michigan, reached Benton Harbor on its trip from Bangor, Michigan, to Chicago, each car containing from three hundred to four hundred bushels of choice apples. Some of the enterprising farmers of northern Indiana are accomplishing great results from onion culture, and a farmer of Kosciusko County has grown 8,000 crates of onions on thirteen acres, which are worth $3.20 per 100 pounds delivered at the railroad. The muck land thereabouts is admirably adapted for growing onions.

A Chicago grain man who has been over the northwest says that the corn crop in Minnesota and South Dakota is in fairly good shape to move. There is a large yield there, and Minnesota is becoming a dairy state to an extent that will absorb the greater part of the coarse grains. Farmers in Minnesota, he says, are doing well where they have diversified their crops and gone into dairying. In North Dakota where they have followed this rule they are also doing better.

Advanced Farming Methods

The National Geographical Magazine for October has an intensely interesting article showing the methods that are revolutionizing farming operations. It contains a picture of a "combine" at work on a Canadian farm. This gigantic machine cuts, threshes and delivers to the wagon alongside more than one hundred acres of wheat a day. Many elderly people can remember the time when it would have required the labor of about three hundred men to accomplish the work in the same time, to say nothing of twenty-eight horses to haul the grain. Even the binder and threshing machine would call for about sixty men and forty horses for cutting, hauling in and threshing a hundred acres of wheat in a day. Another picture of bonanza farming in Canada shows work on a seven-thousand-acre farm, illustrating the character of the competition the American farmer must meet in the future. One tractor and six men do the work of twenty-eight horses and fourteen men, with horse-drawn binders. The article points out that the high cost of labor will do more than any other agency to bring about lower production costs on the farm by necessitating an increased substitution of machines for hands.

The Grain Markets

It is evident that putting wheat on a higher price basis cannot be done by applying the law of supply and demand, the farmer being out of all proportions, and after waiting for hoped for outside help, prices lost much of their recent advance. World's available stocks of wheat increased nearly 53,000,000 bushels in September, and are now estimated at 215,000,000 bushels, or 38,000,000 bushels more than last year. Europe shows no disposition to buy freely, and exports are still running far below a year ago. Minneapolis mills are grinding at 62 per cent of their capacity, against 68 per cent last year, and mill feed in that market is off $1.50 to $2 a ton. Excellent crop reports are coming from the southwest, plenty of rains having fallen. The visable wheat supply in the United States is up to 66,000,000 bushels, comparing with 33,411,000 bushels a year ago. It is obviously impossible to tell just what the future will develope, but perhaps it would be a good plan to hold back part of the crop and see what takes place. The bears place much stress upon the appearance of Russia as an exporter of wheat. With rye selling as much as 37 cents below wheat, it fails of a good export movement. Late sales were made in the Chicago market of December wheat at $1.05, comparing with $1.12½ a year ago, showing a marked recent decline.

Farmers Sell Corn

Old corn is a mighty scarce article, but the new crop is a big success, and there is a growing tendancy among farmers of the corn belt to sell as much old corn as they can spare, the prevailing impression being that market prices are good and worth taking. While predictions are fallible, it seems not unlikely that corn will settle later on a lower price basis. At any rate, the country shows more disposition to sell new corn to arrive. Not long ago yellow corn was sold in the Chicago market at $1.14 a bushel, being 11 cents higher than during the previous week, and the highest price paid since September, 1920. In recent years it sold as high as $1.85 to $2.36. Oats are not selling very high, and much is being fed on farms. All the grains are exported much less freely than a year ago; yet the visible oats supply is but half that of last year. On the other hand, that of rye aggregates 15,880,000 bushels, comparing with 9,555,000 bushels a year ago. December corn sells on the Chicago market at 75 cents, comparing with 67½ cents a year ago, while December oats sold at 42 cents, or the same as a year ago.

"Corn is selling above a profitable feeding basis as compared with the price of hogs," said Herbert J. Blum, "Government reports show that in September the ratio of the number of bushels of corn required to buy 100 pounds of live hog was 8.5 to 1, the lowest for that month in over fourteen years. In July the ratio was 7.7 to 1 and in June 7.51 to 1. The annual average for thirteen years is 11.2 to 1, and it is usually figured that when the ratio drops below 10 to 1 that feeding is not profitable. I look for farmers to sell both corn and hogs unless there is a marked widening of the difference, and corn will probably have to decline."

The Hog Problem

To feed or not to feed is the question which is bothering many stockmen owning young hogs, and a short time ago an Indiana farmer wanted to know whether he should mature his bunch of 40 youngsters averaging in weight 150 pounds. Much depends upon whether the farmer is well equipped for fattening his hogs; and it is always easy to make mistakes, but where the farmer has plenty of corn and other feeds and the pigs are healthy, and thriving, most experienced farmers, it would seem, would feel like taking a chance and wait until they tip the scales at around 200 pounds at least before marketing. If feed must be bought, it is another matter. Of course, the farmer must do a little figuring, setting down the probable cost of the corn consumed and the probable price the hogs will bring when sold. It is well to consider the enormous hog supply in the country, and lower prices for the remaining months of the year are looked for. Last week's Chicago receipts were overwhelming, and prices fell with a vengeance, large numbers being carried over nightly, with a poor eastern shipping demand. Light weights sold much lower than the heavies. The week's hog receipts were the largest since early in July, and prices were the lowest since then, closing sales being at $6.15. Heavy butchers sold highest, being 20 cents above prime bacon lots. A year ago the best hogs brought $9.65. Combined receipts in twenty markets for the year to date amount to 33,148,000 hogs, comparing with 25,802,000 a year ago.

Excessive Cattle Receipts

Last week's, Chicago cattle receipts were enormous, and after early sharp advances in prices due to moderate supplies, the later big runs sent values down at a rapid pace. Last week's receipts reached 81,600 cattle, the largest of the year, and prices were 50 to 75 cents lower. Steers sold largely at $8.75 to $11,75, the week's top being $12.85 and closing top $12.25. The better class sold at $11 and over, with pretty good lots at $9.50 to $10 and common kinds at $6.75 to $7.50. Stockers and feeders were off largely 25 to 50 cents, selling at $4.50 to $8.25, good lots being taken mainly at $5.50 to $7. The best calves sold at $11 to $12.25 and cows and heifers at $4.50 to $9.

Large Sales of Feeding Lambs

This has been a great year for the sale of range feeding lambs, and in addition to the large purchases made in the Chicago and other markets, extensive buying has been carried on in the range country. These purchases do not show up in the market receipts, so that the published statements of shipments of lambs from western markets are misleading. Michigan is a heavy buyer and feeder of lambs this year, the big corn crop raised this season acting as a stimulus, while Indiana and Illinois are going to feed heavily. The recent government report on the feeder sheep and lamb business for the year up to October 1 shows 33 per cent more gone to the country during July, August and September than last year. The present indications are that the far west will feed less lambs this year and the corn belt more. Colorado is expected to feed the usual number of lambs, and it is now thought that the aggregate number fed in the country will be much the same as last year. Feeding lambs going to the country cost less than a year ago. Breeding ewes have had a large demand all the fall, with nowhere near enough to go around, and high prices are paid, a few yearlings going as high as $12 per 100 pounds. There is no danger of over-doing the sheep business at present. The number of sheep in the United States on January 1 was only 37,209,000 head comparing with 61,504,000 in 1900, while our population increased 30,000,000. Last week's Chicago lamb market showed a decline of $1 to $1.50 sales being the lowest since a week earlier and the lowest since August. Late sales of lambs were at $9 to $12.80, feeder lambs fetching $12 to $13.

World's Potato Crop Short

The world's production of potatoes this year was more than 5,000,000,000 bushels exclusive of Russia. The fifteen countries reporting to date the crop this year is 79 per cent of last year's. Northwestern Europe produces the largest crops of potatoes, the soil being especially adapted to such production.

WHEAT

Less talk on government for the wheat farmers accounts for a weakness in the wheat market during the past week. Other conditions remained about the same as they were two weeks ago. The trade still feels that the government intends to do something to help the farmer but the buyers who loaded up during the past months have become a little nervous and are selling. The result has been lower prices. The ones who do not believe that the government will help can see nothing but lower prices in the future while there are others who will buy the moment a new plan is suggested. World news gives the market a bearish outlook. Canada is disposing of a large crop. Argentine claims to have a heavy crop while Russia is reported to be ready to feed most of Europe. In spite of these reports the market has not weakened as much as many have expected.

Prices

Detroit—Cash No. 1 red, $1.14; No. 2, $1.13; No. 3, $1.10; No. 2 white, $1.14; No. 2 mixed, $1.13.

Chicago—Cash No. 3 red, $1.05; No. 2 hard, $1.07@1.11.

Prices one year ago—Detroit, Cash No. 2 red, $1.22; No. 2 white and No. 2 mixed, $1.20.

CORN

The Detroit corn market was quiet last week and prices declined on the closing day of the week. However for the last two weeks the price at Detroit has advanced a total of six cents. Buyers expect large receipts this week as they believe that farmers are willing to sell at present price levels.

Prices

Detroit—Cash No. 2 yellow, $1.14; No. 3, $1.13.

Chicago—Cash No. 2 mixed, $1.05 @1.07; No. 2 yellow, $1.06@1.08½.

Prices one year ago—Detroit, Cash No. 2 yellow, 78½c; No. 3, 77½c; No. 4, 76½c.

OATS

There has been little change in the oat market during the past fortnight and prices at Detroit are 2 cents below what they were two weeks ago. Receipts are small and the market quiet in tone.

Prices

Detroit—Cash No. 2 white, 48c; No. 3, 46c.

Chicago—Cash No. 2 white, 42¼ @44c; No. 3 white, 40¾ @43c.

Prices one year ago—Detroit, Cash No. 2 white, 49c; No. 3, 47½c; No. 4, 45c.

RYE

Rye was steady at Detroit last week but the price was one cent lower. Demand has slowed up some according to reports. However, this seems to be a temporary lull only, and leaders in the market expect to see increased demand in the near future and higher prices.

Prices

Detroit—Cash No. 2, 77c.

Prices one year ago—Detroit, Cash No. 2, 84c.

BEANS

The bean market at Detroit became easy the forepare of the past fortnight and prices declined. Now the market seems to be again on the road to recovery. Demand has improved and the price gained on the closing day at Detroit last week. The market appears to have considerable strength. Reports reach us from the bean growing sections of the state that the new crop is yielding well, the high yields being from 25 to 30 bushels to the acre. As to the future trend of this market you will be interested in the article by B. A. Stickle appearing on page 3 of this issue. You may not agree with him but it will be well worth your time to read it. Elevators report new beans coming to market in large quantities.

Prices

Detroit—C. H. P., $5.40@5.50 per cwt.

Prices one year ago—Detroit, C. H. P., $6.60 per cwt.

POTATOES

Potatoes are easy at Detroit and in liberal supply with prices unchanged. The new crop is going to market quite rapidly and most markets report supply in excess of demand. The New England potato crop is turning out well and is of excellent quality. Reports from all sections of the country where potatoes are grown, with the exception of the west, indicate that the crop is of good quality. In the west there are several sections that report yield and quality disappointing. Farmers

Prices

Detroit—Michigan, $1.33@$1.36 per cwt.

Chicago—Wisconsin, round white, 90c@$1.10 per cwt.

Prices one year ago—Detroit, Michigan, $1.20 per cwt.

HAY

The demand for the better grades has continued good but lower grades are moving slowly. Hay prices have flucuated with supply and demand at the principal markets. While some markets are reporting a supply exceeding the demand, as a rule the opposite is the case and more strength is shown and the general average of prices is a little higher.

Prices

Detroit—No. 1 timothy, $21@$22; standard and light mixed, $20.50@$21; No. 2 timothy, $19@$20; No. 1 clover mixed, $12.50@$13; per ton.

Chicago—No. 1 timothy, $25@$28; No. 2, $22@$25; No. 1 light timothy and clover mixed, $23@$25; No. 1 clover, $21@$23; No. 2, $17@$19, per ton.

Prices one year ago—Detroit, standard timothy and light clover, $16.50@$17; No. 1 clover, $15@$16, per ton.

THE EXPERIENCE POOL

(Continued from page 13.)

better and it was three dollars cheaper. They are a fine thing if they will work right, they heat the whole stove, oven and water in reservoir. The Roberts Metallic Bath Tub Company has the best one I have seen. It costs more. I think it is worth the extra you have to pay for it. The Oliver has a small tank that has to be put six foot above the stove. It is nasty to fill. The Roberts you can put any place, and has a pump attached to tank to pump the air. The Oliver has no pump. I wish I had my fifteen dollars out of mine. I hope I am not too late to do some good. Mrs. W. E. Stevenson, R3, Milford, Mich.

There are several Oliver burners in this vicinity—some in ranges, some in heating stoves and some in big heating stoves in stores, and the owners think they are just fine, would not think of exchanging them for coal or wood now. Some have had trouble with their burners but have found that it was through their own fault—that the tank was not water tight where the outdoor tank was used, or the tank was not high enough above the burner, etc., but whenever one follows directions carefully I think he or she will like the burner very much. Of course a change to something new is harder for some than for others and if things do not go just right all the time some get discouraged, but if they will use patience and judgment and especially the Oliver directions, I believe the burner will be entirely satisfactory. Sincerely, Mrs. Norman Moyle, Mattawan, Mich.

PRITCHARD'S
WEATHER
FORECAST
INTERPRETED BY THE STARS

Week of October 28

AVERAGE conditions for this week in Michigan are not expected to vary much from seasonal although if there is any difference temperature will be a little above normal and precipitation (rain or snow) will be a little below.

Wind currents will be such during the first part of this week to induce an inflowing of air with the result that the most part of the first half will be fair with cool nights and mornings.

About Wednesday the weather will become unsettled and the temperature warmer. These conditions will intensify during Thursday at which time we expect showers and high winds. These conditions will be general during the greater part of the remainder of the week but the showers will be mostly light in character.

At the end of this week the temperatures will fall to much lower readings.

Week of November 4

The early days of this week will experience cold, fair weather in Michigan.

These conditions will gradually weaken so that by the middle of the week light showers and high winds will have reached the state and continue over Thursday when showers will be general but mostly light. Winds will also be strong, rapidly shifting to the northwest and inducing clearing skies. However, rising temperature on Friday will induce more cloudiness and during the last two days of the week unsettled weather will prevail with light rain or snow flurries general.

Moderate December

November will be an average late fall month and December will be moderately warm but wet.

PRICE FIXING HOLDS NO HOPE FOR WHEAT FARMERS

(Continued from Page 3)

to make sure that the acreage called for was not exceeded."

If the price of wheat were fixed, it is natural to assume that the prices of flour and bread would be controlled. It is also logical to assume that demand would develop for a profit to be guaranteed producers of other commodities; cotton, tobacco, and dairy products. Another step, and price fixing would be carried over into the industrial field. Where will it end? There is no line that marks a definite stopping place.

Economic Solution

The American Farm Bureau Federation has considered the wheat question an economic problem calling for an economic solution. Legislation can help and has helped by laying the foundation upon which to build the economic solution. The Farm Bureau took the leadership in demanding storage and credit legislation at Washington that would permit farmers to store their products, if in their judgment that was the profitable thing to do and finance the selling of them over the consumptive period instead of "dumping" them at harvest. The Farm Bureau has been instrumental in the passage of laws removing the legal obstructions in the path of co-operative associations. Thus, through legislation, the way has been opened for farmers to use their own initiative and intelligence in making farming profitable. The responsibility for success rests on them and not on political representatives. The American Farm Bureau believes that the responsibility is resting where it belongs.

The situation might be illustrated thus: The Government builds the concrete highways upon which merchants, bankers and farmers may operate their automobiles but it does not presume to operate the automobile of any of these individuals. It maintains the highways and enforces the traffic rules equitably to all. The Government also builds the economic highways along which the business of the merchant, the banker and farmer is carried. The responsibility of the Government is to see that the business of each may be transacted on a basis of equality. There its responsibility ends.

A price, fixed by the Government, is here taken to mean a guaranteed minimum price.

If the supply was so large that the natural price, set by supply and demand, would be lower than the guaranteed price, the Government would buy in the surplus.

It the Govenment had to dispose of its purchases at a loss, the deficit would be met by taxation.

A price satisfactory to the high-cost producers would be high enough that these producers would continue to produce wheat and the low-cost producers would plant additional acreage when it is generally agreed that the world supply of wheat is too large to sell at a profit to large numbers of farmers.

Acreage which ought to be devoted to other purposes would be used for wheat and higher taxes would be necessary.

Some proposals include provisions putting penalty for excess supply upon producers. This is proper if workable. It may be pointed out that under tho present arrangement, without a fixed price, the penalty for overproduction falls upon the growers.

Price fixing, once started, would naturally extend to numerous commodities. There is no logical stopping place. Heretofore, price regulation in the United States has been held in the field of monopoly as in th ecase of railroads or has been subject to voluntary arbitration as in the case of milk (war measures excepted.)

Price fixing would subject economic relationships to politics. Production and distribution would be controlled by government commissions. We would have a kind of socialism. With prices under political control, the farmer would find himself outvoted three to one.

The American Farm Bureau Federation considers the wheat question an economic problem that can best be solved by economic measures. Legislation can and should be and has been used in removing obstructions in the way of the economic program. This is all that should be expected from it. On farmers, and not on political representatives, rests the responsibility for profitable farming.

Fordson

"To make farming what it ought to be—the most pleasant and profitable profession in the world."

This is Henry Ford's vision of the Fordson.

Not a mere machine of so much horsepower, so many cylinders or so much drawbar pull. All are important. But much more than that—an opportunity to make farm life, your life, more productive and more worth living.

This vision of a better day on the farm has become more than a dream. The Fordson has made farming more pleasant and profitable.

How well the spirit of the builder is moulded into the Fordson through years of patient testing is proven by experience of a host of owners.

With operations organized on a more profitable basis, work done when it should be, labors lighter in proportion to results, the drudgery gone, life is really more pleasant on Fordson Farms.

Board of Agriculture Sues Administrative Board

Long Drawn-out Battle at Lansing Comes to Head When Petition for Writ of Mandamus is Filed Before Supreme Court

Playing Political Checkers at Lansing

(Last Minute Wire from the "Front".)

Lansing, Nov. 5.—The next move in the case is up to the administrative board as a result of an order issued by the state supreme court Monday compelling the administrative board to show cause on or before November 8 why a writ of mandamus should not be issued compelling Auditor General O. B. Fuller to turn over $75,000 of the extension work money required by the agricultural board.

Clare Retan, assistant attorney general, who will handle the case for the administrative board, declared Monday he probably would have his brief ready for filing Wednesday. The position of the state will be that the legislature has power to direct how appropriated funds shall be expended and can delegate authority to the state administrative board or any other state agency to see how such funds are expended.

WHAT we have been looking for over at Lansing happened last Friday when the Supreme court was formally asked to decide the issue which has befogged the situation there ever since David Friday left in the midst of a hot battle, the presidency of the Michigan Agricultural College.

There are many points, personal and political involved, but the direct issue to be decided is whether the farm bureau can, by contributing some $190,000 to the salaries of county agents in Michigan, demand a part of their services to further their own organization ends. The Governor claimed not and because the state board of agriculture refused to meet his demands finally, through the state administrative board, cut off all extension funds.

In this brief for a writ of mandamus filed by Judge William L. Carpenter, it is claimed that the Governor and his board thus assumed to exercise most unusual powers over the appropriation of the 1923 legislature for extension work by the agricultural college, in the face of the provisions of Section 8 of Article 11 of the state constitution which provides that "supervision of the college and the direction and control of all agricultural college funds shall be by the state board of agriculture."

The petition, which is made on behalf of the state board of agriculture, with Governor Groesbeck and the other members of the state administrative board as defendants, sets forth at length the complete history of this controversy between the two official bodies, and asks for a writ of mandamus to compel the administrative board to compel its instructions to the auditor general forbidding him from issuing a warrant for $75,000 to the state board of agriculture and other warrants which may properly be requested and also to compel the auditor general to issue the warrant in question.

No Order Yet

There was not a quorum of the supreme court present Friday to sit in the matter and issue an order for the administrative board to show cause why the writ should not issue. A quorum might be obtained Saturday, but it is not expected before some time next week.

"Respondent (administrative) board has assumed to command relator (board of agriculture)" declares the brief of Judge Carpenter in support of the petition. The reasons for this conclusion as set forth are:

(a) "To remove the director of extension work who has been duly appointed by relator and approved by federal department of agriculture, and to appoint in his stead another person not chosen by relator and not approved by said department of agriculture.

(b) "To invest in the person thus chosen by respondent board the exclusive power to employ all county agents and other employes engaged in said extension work, to prescribe their duties and fix their salaries.

(c) "To cut off more than $190,000 of the funds derived from private contribution and available for said extension work, although the use of such funds has been expressly authorized by said Smith-Lever act."

Stress Federal Act Effect

Much stress is laid by Judge Carpenter and John W. Beaumont, his associate counsel in the case, on the part played in this issue by the federal government under the Smith-Lever act, by which M. A. C. receives $160,000 annually for extension work from the federal department of agriculture by its matching this amount with $150,000 more, which was the object of the $150,000 appropriation for this year and next made by the 1923 legislature.

It is pointed out in the brief that Prof. Robert J. Baldwin was selected as director of extension work for the college, which is expressly approved by the United States secretary of agriculture, that in June of this year Prof. Baldwin submitted his plan of the work for the next year and that on June 15 it was approved by the federal chief of extension work, and on June 20 by the federal director of states, relations service.

That budget totaled $597,317 divided as follows: State of Michigan, $150,000; United States government, $160,000; various counties, $95,828; county farm bureaus, $191,489.

Support Farm Bureau Aid

Contracts and engagements have already been entered into for county agents and other extension workers, and that organization is now in operation, says the brief, on the basis of the budget presented. It is insisted that contributions by the local farm bureaus are beneficial and that "this is the design of the department of agriculture (federal) in order to intensify the local interest of the farmer in said extension work and to induce him to pay directly a large portion of the expense of the work that is wholly for his benefit."

Then the brief recites the various actions of the state administrative board which finally culminated in its adoption of the report by Charles J. DeLand, secretary of state and a board member, which provides that this year's state appropriation of $150,000 for extension work be withheld until the state board of agriculture comply with the following demands:

(1) That the extension division be placed in the hands of the dean of agriculture at M. A. C.

(2) That county agents receive their salaries and expenses from state, federal and county funds, "but from no other source," thus cutting out the local farm bureaus' support.

(3) That the dean of agriculture submit to the administrative board a revised budget on that basis, and then if funds are not sufficient to meet all expenses "the matter be referred to this (administrative) board for further attention."

Relative to the provision in the 1923 state appropriation act which gives the administrative board "general supervisory control" of the fund in question, the brief contends that the legislature obviously intended that the appropriation should be used "in accordance with the constitution and federal and state laws in carrying on said extension work." The attorneys maintain that the authority of the administrative board which it has assumed would interpret the state legal provision as follows:

"The appropriation made in this act shall not be turned over to the state board of agriculture unless that board agrees to expend the same in whatever way the state administrative board may determine, even though thereby the applicable constitutional provision and the federal and state laws are violated."

Owosso Farmer Makes $1500 From Ten Acres of Michigan Robust Beans

By H. C. RATHER

Extension Specialist, Farm Crops, Michigan Agricultural College.

FIFTEEN hundred dollars from ten acres of beans, numerous fields which returned $100 to $150 per acre, the exceptional achievement of an Owosso grower whose high yield went in the peak market and brought $185 per acre. These are numbered among the 1922 achievements of Michigan growers of Robust beans.

While farmers in the Wolverine state have partaken in a measure of the hardships which are the lot of agriculturists with ninety per cent wheat the great crop of navy beans, for which Michigan is famous, have been a means of averting a good deal of the disaster which has come upon the one crop farmers further west. Particularly is this true with the class of bean growers who have employed every means to produce their crop economically, for while the average grower in Michigan produced only ten and one half bushels per acre, worth on the seven dollar market about $44, the average grower of Robust beans in Michigan produced twenty-one bushels per acre and his acre income on the same basis was over $90.

Made First Bow in 1915

Robust beans first made their bow to farmers in 1915. The variety is a result of plant breeding work at the Michigan Agricultural College. For years men engaged in this work were seeking a means of combatting the ravages of bean diseases which were taking a heavy toll from the farmers' profits. The most plausible control seemed to be a variety immune or at least resistant to the diseases which caused this serious loss.

Accordingly, when Professor F. A. Spragg in his numerous trials of commercial white navy beans found a very bushy disease-free plant completely surrounded by disease stricken neighbors, he carefully increased and tested its progeny and found he had something of real merit.

The bean itself was typical of the usual run of Michigan white navy beans showing no appreciable difference in appearance, quality, or cooking character. It fitted right in with the regular run of commercial beans of this kind which have made beans from Michigan so desirable.

The habits of growth, however, proved to be distinctly individual. While not possessing entire immunity, the Robust bean, the name given to this new variety, has proven very resistant to blight and anthracnose, and mosiac seems to not trouble it.

The plant has a characteristic bushy habit of growth and retains its leaves until almost complete maturity thus receiving fullest use of leaf functions in attaining vigorous growth. Then as the crop reaches maturity the leaves fall almost in a day and a well-vined and podded plant, easily handled on the fork is left.

From three to seven days longer growing season is required for Robust beans than for some of the earlier navy beans, but early June plantings have proven very dependable in this State.

"In my first experience with this variety," says Sam Conke, a prominent bean grower in Michigan's Thumb district, "I sowed half of a large field to Robusts and the other half to my own commons. The Robusts yielded 37 bushels per acre while the commons produced 25."

Another Thumb district farmer sowed Robust and common beans in alternate rows across the center of his field and harvested them separately. The Robust outyielded the commons by nine bushels per acre. E. C. McCarty of Bad Axe was one of the original Robust growers and has conducted several variety tests under supervision of the Michigan Agricultural College. Robust beans have invariably been returned winners by from 25 to 40 per cent. Farmers from every bean growing section of the state have reported equal advantage in this improved variety and trials in New England, New York, Minnesota, and California have all indicated this superior productivity and disease resistance of Robust beans.

Disease Resistance Factor

The disease resistance is not only an important factor in yield, but decreases the picking percentage when the beans are marketed. Michigan elevators almost invariably report Robust beans as brought in by their farmers, to be the lighter pickers.

At one time some elevators believed wrinkling of beancoats to be characteristic of this variety, but a careful survey of the situation by the writer indicated this to be somewhat of an illusion. While Robust beans when wet may wrinkle and cause loss over picking machinery the same is true of commons. In fact elevators in districts which handled no Robust beans whatever. reported as much of this trouble as any, while the Finde Cooperative Elevator, a prominent member of the Michigan Elevator Exchange and whose volume runs nearly 90 per cent to Robust beans reported no excessive difficulty whatever. Robust and commons harvested under the same conditions have proved to be about alike so far as this characteristic is concerned. It is inter-

Delegates and visitors to the Fiftieth Annual Session of the Michigan State Grange assembled in front of the Muskegon Armory where the meetings were held

Grange Approves of Prisoners Building Roads

Decided Stand Taken On Important Questions of the Day at Fiftieth Annual Meeting of the Michigan State Grange at Muskegon

By CARL H. KNOPF

(Special Correspondent of The Michigan Business Farmer.)

WHERE THE STATE GRANGE STOOD AT ITS FIFTIETH ANNUAL MEETING

Endorsed:

Law enforcement.
Consolidated Schools.
Income tax amendment.
A system of uniform text books.
Private Peat's "Plan for Peace."
Use of convict labor to build roads.
Stand of State Board of Agriculture.
Work of county agricultural agents.
Enforcement of Eighteenth Amendment.
Only taxpayers shall vote on bond issues.
Establishment of state-owned cement plant.
Establishment of state-owned fertilizer plant.
All voters be able to read and write English language.
To prohibit hunting, fishing or trapping on posted land.
The Meggison system for distribution of primary school funds.

Condemned:

Tax exempt bonds.
Veto of gas tax bill.
One-man government.
Further propogation of Chinese pheasants.
False reports concerning child labor in the beet fields.

ROUNDING out a full half-century of meetings, the 1923 session of the Michigan State Grange, held at Muskegon, October 23-26, was pronounced one of the best in the history of the order. Three hundred and seven delegates were present representing seventy-five counties of Michigan. These delegates, together with the many visitors, brought the total attendance above the seven hundred mark.

Enthusiasm and determination dominated the meeting. Enthusiasm over the record made by the Grange during the past year and a determination to carry out a program of Grange organization and extension work which shall secure even greater results during the coming year.

It is very commedable of the Grange that the women have equal representation with the men. Fully half the delegates at this session were farm women. They did their share of organization and committee work and were prominent in the discussion of the various issues considered. As a meeting of earnest, progressive farm leaders, both men and women the State Grange for 1923 had no superior.

Four Big Issues in Michigan

There is no doubt as to the temper of the Grangers of Michigan. They are determined and mighty determined, especially concerning the four big issues of the present time in Michigan, namely, Income Tax, Gas Tax, Prohibition, and the State Board of Agriculture.

From the very beginning of the meeting, resolutions concerning these four subjects began pouring in from all parts of the state and left no question whatever as to what the Grange thinks. And the action taken by the delegates leaves no doubt as to what the Granges proposes to do in regard to these live questions of the day.

The address of State Master A. B. Cook of Owosso gave the keynote of the meeting. Gov. Groesbeck and the State Administrative Board were denounced for their attempt to usurp power. State Master Cook stated, "The Administrative Board seems to be supreme from the fact that it is so organized as to control very largely the legislative appropriations, and this, of course, gives it a strangle hold on all state activities. The State Board of Agriculture has had difficulty exercising its constitutionaal perogatives in directing the college's affairs. The makers of the constitution contemplated no such interference."

Gov. Groesbeck was pictured as attempting the rôle of a dictator, especially in connection with the gas tax, which measure was vetoed without regard to the wishes of the people of Michigan.

The stand taken by U. S. Senator Couzens in favor of a modification of the Volstead Act was criticised by Mr. Cook who said: "The attitude of one of our United States senators who declares in effect that the eighteenth amendment is unenforceable, a joke, and who asks for the return of old time beer, is astounding. We regard the attitude of indifference taken by many of our highest public officials in regard to prohibition enforcement as constituting the greatest reflection upon our system of government with which it has ever been confronted."

Work less hours per day and spend more time at recreation was an outstanding recommendation made by the State Master. "Does it seem the part of wisdom to work our heads off producing a surplus which others will not pay us a fair price for?" he asked. "People in other lines determine their hours of labor and the power of public opinion enforces the decision. We can, and should, do the same. With reasonable modern working hours and conditions for the farmer, no oversupply would come. One hour of labor would stand against one hour of our brothers in other industries. Our market, relieved of its overburden, could be placed on a compensatory basis and kept there. Then the farm would be a good place for young and old. Mr. Cook recommended a ten hour day, including chores, for the farm saying that it would about equal an eight hour day in the city where considerable time must be spent in going to, and returning from, work.

Higher Scale for Farm Family

The State Master also spoke of the splendid results being secured through co-ordinating the efforts of the Grange with those of the Farm Bureau and other organizations.

Mr. Cook closed his address with an appeal to the farm folks to put farming on a higher plane, to establish play grounds on the farms and to take more recreation. He stressed the importance of an increased farm income which he believes can be obtained by reducing the number of working hours and through cooperative marketing.

He asked for a square deal for the women of the farms and asserted that the boys and girls of the farms must have the opportunities and advantages which truly belong to them.

For Prohibition Enforcement

The Grange has always been one of the bulwarks of the prohibition movement and they still stand foursquare on the proposition. The first resolution to be introduced called for the strict enforcement of the Eighteenth Amendment and asserted that the only modification should be such as would make it stronger and more drastic. The vote was unanimous for the resolution.

Left: C. H. Bramble, State Overseer. Center: Mrs. Dora M. Stockman. Right: State Master A. B. Cook and wife.

Still another resolution called for strict enforcement of the law and condemned the laxity of some public official, notably those judges who are not living up to their trust.

The Grangers also promised to make law enforcement an issue whenever officials are to be elected.

Groesbeck and Administrative Board

Whenever the State Administrative Board or Gov. Groesbeck were mentioned, the fireworks immediately started. There probably has never been a convention which was more in accord on a subject than are the Grangers on the present situation in Michigan. They know exactly what they want and they intend to get what they want. If there was the slightest sentiment for the other side, it certainly never showed itself.

The Grangers did not hesitate to condemn the Governor for his veto of the Gas Tax Bill, which veto they feel was in direct opposition to the wishes of the people of Michigan. Neither did they fail to denounce the one-man government which has been built up through State Administrative Board and under the camouflage of efficiency and economy. In a resolution directed against the present system the Grange asks that a two-thirds vote of the Administrative Board be sufficient to over-ride any veto which the governor may attempt to put on their actions. At present the Governor's veto is final.

The State Grange emphasised, however, that their criticism of Gov. Groesbeck was for certain things which he has done and was not intended as political condemnation. As proof of this they passed a resolution commending the Governor for using convict labor to build roads. Further commendation was given in the form of a telegram pledging him Grange support in whatever action he takes to secure law enforcement.

Behind Board of Agriculture

Sentiment of the Grange is about 100 per cent with the State Board of Agriculture in its controversy with the State Administrative Board. Resolutions endorsing the stand of the Agricultural Board were received from all parts of the state. The convention finally passed a resolution expressing full confidence in the State Board of Agriculture and demanding that they be allowed the full exercise of the powers conferred upon them by the state constitution.

Endose County Agent Work

A resolution endorsing the present system of Agricultural Extension work in the counties started a lengthy discussion. Probably never before in Michigan has a representative body given stronger endorsement to County Agricultural Agent work than did the Grangers. Thirteen different counties were represented in the discussion and the delegates from each approved the work being done in their particular county. There was nothing but praise for the work being done by the Agricultural Agents and the resolution was passed by a unanimous vote.

Will Initate Income Tax

"Levy the taxes on those who are able to pay them," is the stand taken by the State Grange. It was decided to start petitions to initate a constitutional amendment providing for a graduated personal income tax. The proposed amendment provides that each person shall be allowed an

Oh Money! Money!

by ELEANOR H. PORTER

THE STORY TO DATE

MR. STANLEY G. FULTON, 50-year old bachelor and possessor of twenty million dollars, calls on his lawyer and they discuss the disposition of this large fortune after its owner's death. The lawyer is in favor of giving the money to colleges or charities while Fulton is opposed to these ideas. He remembers that he has some distant cousins and decides to leave the money to one of them, but first he determines to learn which one will use it to the best advantage. To find out who is the worthy one he, through his lawyer, gives, each cousin $100,000 to use as they will. Before giving them the money grows a beard and, using the name of Mr. John Smith, goes to the town where they live to find out what kind of people they are. Upon arriving in town he visits James Blaisdell, one of the cousins, where he tries to hire board and lodging. While there he meets Miss Flora Blaisdell, another cousin who is a dressmaker. They decide they cannot rent a room to him and supply him board and refer him to Frank Blaisdell's, the third cousin. He gets a room there and, passing as a writer gathering material for a book on the Blaisdell family in this country, he starts out.

(Continued from October 27th issue.)

WHEN the dinner was over, Mr. Smith knew (if he could remember them) the current market prices of beans, corn, potatoes, sugar, and flour: and he knew (again if he could remember) why some of these commodities were higher, and some lower, than they had been the week before. In a way, Mr. John Smith was well aware. That stocks and bonds fluctuated, he was well aware. That "wheat" could be cornered, he realized. But of the ups and downs of corn and beans as seen by the retail grocer he knew very little. That is, he had known very little until after that dinner with Mr. Frank Blaisdell.

It was that afternoon that Mr. Smith began systematically to gather material for his Blaisdell book. He would first visit by turns all the Hillerton Blaisdells, he decided; then, when he had exhausted their resources, he would, of course, turn to the town records and cemeteries of Hillerton and the neighboring villages.

Armed with a pencil and a very businesslike looking notebook, therefore, he started at two o'clock for the home of James Blaisdell. Remembering Mr. Blaisdell's kind permission to come and ask all the questions he liked, he deemed it fitting to begin there.

He had no trouble in finding the house, but there was no one in sight this time, as he ascended the steps. The house, indeed, seemed strangely quiet. He was just about to ring the bell when around the corner of the veranda came a hurried step and a warning voice.

"Oh, please, don't ring the bell! What is it? Isn't it something that I can do for you?"

Mr. Smith turned sharply. He thought at first from the trim, slender figure, and the waving hair above the gracefully poised head, that he was confronting a young woman. Then he saw the silver threads at the temples, and the fine lines about the eyes.

"I am looking for Mrs. Blaisdell—Mrs. James Blaisdell," he answered, lifting his hat.

"Oh, you're Mr. Smith. Aren't you Mr. Smith?" She smiled brightly, then went on before he could reply. "You see, Benny told me. He described you perfectly."

"Oh, he did? The young rascal! I fancy I should be edified to hear it—that description.'

The other laughed. Then, a bit roguishly, she demanded:—

"Should you like to hear it—really?"

"I certainly should. I've already collected a few samples of Benny's descriptive powers."

"Then you shall have this one. Sit down, Mr. Smith." She motioned him to a chair, and dropped easily into one herself. "Benny said you were tall and not fat; that you had a wreath of light hair 'round a bald spot, and whiskers that were clipped as even as Mr. Pennock's hedge; and that your lips, without speaking, said, 'Run away, little boy,' but that your éyes said, 'Come here.' Now I think Benny did pretty well."

"So I judge, since you recognized me without any difficulty," rejoined Mr. Smith, a bit dryly. "But— you—? You see you have the advantage of me. Benny hasn't described you to me." He paused significantly.

"Oh, I'm just here to help out. Mrs. Blaisdell is ill upstairs—one of her headaches. That is why I asked you not to ring. She thinks it's callers, and that she won't be ready to receive them; and she hurries up and begins to dress. So I asked you not to ring."

"But she isn't seriously ill?"

"Oh, no, just a headache. She has them often. You wanted to see her?"

"Yes. But it's not important at all. Another time, just as well. Some questions—that is all."

"Oh, for the book, of course. Oh, yes, I have heard about that. too." She smiled again brightly. "But can't you wait? Mr. Blaisdell will soon be here. He's coming home early so I can go home. I have to go home."

"And you are—."

"Miss Duff. My name is Duff."

"You don't mean—'Poor Maggie'!" (Not until the words were out did Mr. Smith realize quite how they would sound.) "Er—ah—that is—" He stumbled miserably, and she came to his rescue.

"Oh, yes, I'm—'Poor Maggie.' " There was an odd soothing in her expressive face that Mr. Smith could not fathom. He was groping for something—anything to say, when suddenly there was a sound behind him, and the little woman at his side sprang to her feet.

"Oh, Hattie, you came down!" she exclaimed as Mrs. James Blaisdell opened the screen door and stepped out on to the veranda. "Here's Mrs. Blaisdell now, Mr. Smith."

"Oh, it's only Mr. Smith!" With a look very like annoyance Mrs. Blaisdell advanced and held out her hand. She looked pale, and her hair hung a bit untidily about one ear below a somewhat twisted pyramid of puffs. Her dress, though manifestly an expensive one, showed haste in its fastenings. "Yes, I heard voices, and I thought some one had come—a caller. So I came down."

"I'm glad—if you're better," smiled Miss Maggie. "Then I'll go, if you don't mind. Mr. Smith has come to ask you some questions, Hattie. Good-bye!" With another cheery smile and a nod to Mr. Smith, she disappeared into the house. A minute later Mr. Smith saw her hurrying down a side path to the street.

"You called to ask me some questions?"

Mrs. Blaisdell sank languidly into a chair.

"About the Blaisdell family—yes. But perhaps another day, when you are feeling better, Mrs. Blaisdell."

"Oh, no." She smiled a little more cordially. "I can answer to-day as well as any time—though I'm not sure I can tell you very much, ever. I think it's fine you are making the book, though. Some way it gives a family such a standing, to be written up like that. Don't you think so? And the Blaisdells are really a very nice family—one of the oldest in Hillerton, though, of course they haven't much money."

"I ought to find a good deal of material here, then, if they have lived here so long."

"Yes, I suppose so. Now, what can I tell you? Of course I can tell you about my own family. My husband is in the real estate business. You knew that, didn't you? Perhaps you see 'The Real Estate Journal.' His picture was in it a year ago last June. There was a write-up on Hillerton. I was in it, too, though there wasn't much about me. But I've got other clippings with more, if you'd like to see them—where I've poured, and been hostess, and all that, you know."

Mr. Smith took out his notebook and pencil.

"Let me see, Mrs. Blaisdell, your husband's father's name was Rufus, I believe. What was his mother's maiden name, please?"

"His mother's maiden name? Oh, 'Elizabeth.' Our little girl is named for her—Bessie, you know—you saw her last night. Jim wanted to, so I let him. It's a pretty name—Elizabeth—still, it sounds a little old-fashioned now, don't you think? Of course we are anxious to have everything just right for our daughter. A young lady soon coming out, so—you can't be too particular. That's one reason why I wanter to get over here—on the West Side, I mean. Everybody who is anybody lives on the West Side in Hillerton. You'll soon find that out."

"No doubt, no doubt! And your mother Blaisdell's surname?" Mr. Smith's pencil was poised over the open notebook.

"Surname? Mother Blaisdell's? Oh, before she was married. I see. But, dear me, I don't know. I suppose Jim will, or Flora, or maybe Frank—though I don't believe he will, unless her folks kept groceries. Did you ever see anybody that didn't know anything but groceries like Frank Blaisdell?" The lady sighed and shrugged her somewhat heavy shoulders with an expressive glance.

Mr. Smith smiled understandingly.

"Oh, well, it's good—to be interested in one's business, you know."

"But such a business!" murmured the lady, with another shrug.

"Then you can't tell me Mrs. Rufus Blaisdell's surname?"

"No. But Jim—Oh, I'll tell you who will know," she broke off interestedly; "and that's Maggie Duff. You saw her here a few minutes ago, you know. Father Duff's got all of Mother Blaisdell's papers and diaries. Oh, Maggie can tell you a lot of things. Poor Maggie! Benny says if we want anything we ask Aunt Maggie, and I don't know but he's right. And here I am, sending you to her, so soon!"

"Very well, then," smiled Mr. Smith. "I don't see but what I shall have to interview Miss Maggie, and Miss Flora. Is there nothing more, then, that you can tell me?"

"Well, there's Fred, my son. You haven't seen him yet. We're very proud of Fred. He's at the head of his class, and he's going to college and be a lawyer. And that's another reason why I wanted to come over to this side—on Fred's account. I want him to meet the right sort of people. You know it helps so much! We think we're going to have Fred a big man some day."

"And he was born, when?" Mr. Smith's pencil was still poised above an almost entirely blank page.

"He's seventeen. He'll be eighteen the tenth of next month."

"And Miss Bessie, and Benny?"

"Oh,, she's sixteen. She'll be seventeen next winter. She wants to come out then, but I think I shall wait—a little, she's so very young; though Gussie Pennock's out, and she's only seventeen, and the Pennocks are some of our very best people. They're the richest folks in town, you know."

"And Benny was born—when?"

"He's eight—or rather nine, next Tuesday. Dear me, Mr. Smith, don't you want anything but dates? They're tiresome things, I think—make one feel so old, you know, and it shows up how many years you've been married. Don't you think so? But maybe you're a bachelor."

"Yes, I'm a bachelor."

"Are you, indeed? Well, you miss a lot, of course,—home and wife and children. Still, you gain some things. You aren't tied down, and you don't have so much to worry about. Is your mother living, or your father?"

"No. I have no near relatives." Mr. Smith stirred a little uneasily, and adjusted his book. "Perhaps, now, Mrs. Blaisdell, you can give me your own maiden name."

"Oh, yes, I can give you that!" She laughed and bridled self-consciously. "But you needn't ask when I was born, for I shan't tell you, if you do. My name was Hattie Snow."

" 'Harriet,' I presume." Mr. Smith's pencil was busily at work.

"Yes—Harriet Snow. And the Snows were just as good as the Blaisdells, if I do say it myself. There were a lot that wanted me—oh, I was pretty then, Mr. Smith." She laughed, and bridled again self-consciously. "But I took Jim. He was handsome then, very—big dark eyes and dark hair, and so dreamy and poetical-looking; and there wasn't a girl that had set her cap for him. And he's been a good husband to me. To be sure, he isn't quite so ambitious as he might be, perhaps. I always did believe in being somebody, and getting somewhere. Don't you? But Jim— he's always for hanging back and saying how much it'll cost. Ten to one he oesn't end up by saying we can't afford it. He's just like Jane,—Frank's wife, where you board, you know,—only Jane's worse than Jim ever thought of being. She won't spend even what she's got. If she's got ten dollars,- she won't spend but five cents, if she can help it. Now, I believe in taking some comfort as you go along. But Jane—greatest saver I ever did see. Better look out, Mr. Smith that she does not try to save feeding you at all!" she finished merrily.

"I'm not worrying!" Mr. Smith smiled cheerily, snapped his book shut and got to his feet.

"Oh, won't you wait for Mr. Blaisdell? He can tell you more, I'm sure."

"Not to-day, thank you. At his office some time, I'll see Mr. Blaisdell," murmured Mr. Smith, with an odd haste. "But I thank you very much, Mrs. Blaisdell," he bowed in farewell.

CHAPTER V

In Miss Flora's Album

It was the next afternoon that Mr. Smith inquired his way to the home of Miss Flora Blaisdell. He found it to be a absolutely shabby little cottage on a side street. Miss Flora herself answered his knock, peering at him anxiously with her near-sighted eyes.

Mr. Smith lifted his hat.

"Good afternoon, Miss Blaisdell," he began with a defenertial bow. "I am wondering if you could tell me something of your father's family."

Miss Flora, plainly pleased, but flustered, stepped back for him to enter.

"Oh, Mr. Smith, come in! I'm sure I'm glad to tell you anything I know," she beamed, ushering him into the unmistakably little used "front room." "But you really ought to go to Maggie. I can tell you some things, but Maggie's got the bible. Mother had it, you know, and it's all among her things. And of course we had to let it stay, as long as Father Duff lives. He doesn't want anything touched. Poor Maggie—she tried to get 'em for us; but, mercy! she never tried but once. But I've got some things. I've got pictures of a lot of them, and most of them I know quite a lot about."

As she spoke she picked up from the table a big red plush photograph album. Seating herself at his side she opened it, and began to tell him of the pictures, one by one.

She did, indeed, know "quite a lot" of most of them Tintypes, portraying stiffly held hands and staring eyes, ghostly reproductions of daguerreotypes of stern-lipped men and women, in old-time stock and kerchief; photographs of stilted family groups after the "he-is-mine-and-I-am-his" variety; snapshots of adorable babies with blurred thumbs and noses—never had Mr. John Smith seen their like before.

Politely he listened. Busily, from time to time, he jotted down a name or date. Then, suddenly, as she turned a page, he gave an involuntary start. He was looking at a pictured face, evidently cut from a magazine.

"Why, what—who—" he stammered.

"That? Oh, that's Mr. Fulton, the millionaire, you know." Miss Flora's hands fluttered over the page a little importantly, adjusting a corner of the print. "You must have seen his picture. It's been everywhere. He's our cousin, too."

"Oh, is he?"

"Yes, 'way back somewhere. I can't tell you just how, only I know he is. His mother was a Blaisdell. That's why I've always been so interested in him, and read everything I could—in the papers and magazines, you know."

"Oh, I see." Mr. John Smith's voice had become a little uncertain.

"Yes. He ain't very handsome, is he? Miss Flora's eyes were musingly fixed on the picture before her—which was well, perhaps: Mr. John Smith's face was a study just then.

"Er—n-no, he isn't."

"But he's turribly rich, I s'pose. I wonder how it feels to have so much money."

There being no reply to this, Miss Flora went on, after a moment.

"It must be awful nice—to buy what you want, I mean, without fretting about how much it costs. I never did. But I'd like to."

"What would you do—if you could—if you had the money, I mean?" puerled Mr. Smith, almost eagerly.

"Well, there's three things I know I'd do. They're silly, of course, but they're what I want. It's a phonygraph, and to see Niagara Falls, and to go into Noell's restaurant and order what I want without even looking at the prices after 'em. Now you're laughing at me!"

"Laughing? Not a bit of it!" There was a curious elation in Mr. Smith's voice. "What's more, I hope you'll get them—some time."

Miss Flora sighed. Her face looked suddenly pinched and old.

"I shant. I couldn't, you know. Why, if I had the money, I shouldn't spend it—not for them things. I'd be needing shoes or a new dress. And I couldn't be so rich I wouldn't notice what the prices was—of what I ate. But, then, I don't believe anybody's that, not even him." She pointed to the picture still open before them.

"No?" Mr. Smith, his eyes bent upon the picture, was looking thoughtful. He had the air of a man to whom has come a brand-new, somewhat disconcerting idea.

Miss Flora, glancing from the man to the picture, and back again, gave a sudden exclamation.

"There, now I know who it is that you remind me of, Mr. Smith. It's him—Mr. Fulton, there."

"Eh? What?" Mr. Smith looked not a little startled.

"Something about the eyes and nose." Miss Flora was still interestedly comparing the man and the picture. "But, then, that ain't so strange. You're a Blaisdell yourself. Didn't you say you was a Blaisdell?

"Er—y-yes, oh, yes. I'm a Blaisdell," nodded Mr. Smith hastily. "Very likely I've got the—er—Blaisdell nose. Eh?" Then he turned a leaf of the album abruptly, decidedly. "And who may this be?" he demanded, pointing to the tintype of a bright-faced young girl.

"That? Oh, That's my cousin Grace when she was sixteen. She died; but she was a wonderful girl. I'll tell you about her."

"Yes, do," urged Mr. Smith; and even the closest observer, watching his face, could not have said that he was not absorbedly interested in Miss Flora's story of "my cousin Grace."

It was not until the last leaf of the album was reached that they came upon the picture of a small girl, with big, hungry eyes looking out from beneath long lashes.

"That's Mellicent—where you're boarding, you know—when she was little." Miss Flora frowned disapprovingly. "But it's horrid, poor child!"

"But she looks so—so sad," murmured Mr. Smith.

"Yes, I know. She always did." Miss Flora sighed and frowned again. She hesitated, then burst out, as if irresistably impelled from within. "It's only just another case of never having what you want when you want it, Mr. Smith. And it ain't 'cause they're poor, either. They ain't poor—not like me, I mean. Frank's always done well, and he's been a good provider; but it's my sister-in-law—her way, I mean. Not that I'm saying anything against Jane. I ain't. She's a good woman, and she's very kind to me. She's always saying what she'd do for me if she only had the money. She's a good housekeeper, too, and her house is as neat as wax. But it's just that she never thinks she can use anything she's got till it's so out of date she don't want it. I dressmake for her, you see, so I know—about her sleeves and skirts, you know. And if she ever does wear a decent thing she's so afraid it will rain that she never takes any comfort in it!"

"Well, that is—unfortunate."

"Yes, ain't it? And she's brought up that poor child the same way. Why,

(Continued on page 22.)

Federal Reserve Makes Short Time Loans Possible

Expert on Rural Credit Explains How the Federal Reserve System Helps the Farmers

By JOHN H. KRAFFT

THIS is the second article of a series of four by Mr. Krafft on financing agriculture. In this article he discusses short time loans for operating capital, which are made by the local banker, and which the banker can re-discount with the Federal Reserve Bank. The third article of this series will follow in an early issue.

THE local banker is often looked upon as an individual who is collecting interest rather than a person who is a material factor in building up communities and who is a counselor in the business affairs of his customers. Undoubtedly, there are cases where the first opinion is well warranted, however, instances of this kind are rather the exception to the rule. There is no business institution in this country that has done more towards the building up of communities than have the small country banks, especially those whose management is far-sighted enough to see that the profits and the success of the bank are dependent upon a real service and that the more prosperous their customers are the more profitable the bank will be. There is no community which really is a good community unless it is properly financed, and, a wide awake banker realizing this fact, does everything possible to not only amply but properly finance his customers, and thereby finances the community.

The business of banking is a very old one. The first banks we have record of were the"money changers" in the Greek Temples who used to sit upon a bench to transact their business. From this we derive the word "bank". A bank is an institution which is serving a dual purpose. Its first obligation is towards its depositors and its second obligation is towards its borrowers. This fact has been taken into consideration by State and National Governments with the result that there have been laws passed regulating the banking business.

These laws require a bank to invest a certain amount of capital, depending upon the size of the community and the volume of business transacted, and then require the bank only to loan on certain conditions. In most banks there is a double liability on their stock investment. This liability acts as an added protection to the depositors by making the bank management doubly careful in seeing that there is no loss to the stockholders of the bank, due to its not strictly enforcing the laws under which the bank is operating. Every borrower from a bank feels that he is entitled to credit; however, in many instances these borrowers who do not care to loan their funds to another man under the same conditions they find themselves. A bank, having a very material obligation towards its depositors, naturally would not accept a loan of this type, even though the law under which they are operating allowed it.

There are three factors which usually determine the extension of credit—character, capacity and capital. Character is a very necessary business qualification. It is not formed in a short time but is established through years of practice of honesty and industry. A banker also must take into consideration the capacity of the application for work, and his ability to earn through his industry and honesty. Capital is an indication of a man's worth in dollars and cents, and may consist of lands, live stock, equipment of anything else of sound worth. Any man with character and capacity who has shown that he is able, through these requisites, to accumulate is entitled to credit, and, under ordinary conditions, will find no trouble in obtaining credit.

Credit implies confidence. It is only through this confidence that credit transactions are possible and confidence can exist only where good character exists. There is very little chance of success in any undertaking without good character. A strong character has fixed habits of honesty, industry and thrift. "He can look the whole world in the face" and has nothing to conceal. When he needs the help of a bank he gives the banker all the facts regarding his business, and because he gives this confidence he wins the confidence of the banker. A successful man considers his credit standing his most valuable asset and aims to maintain this standing. The old saying "honesty is the best policy" means that it pays to be honest, however, this is not the reason why honest men are honest.

In addition to honesty, there is another factor which materially enters into the extension of credit, and that is good management. A man may be very careful as to his promises and yet not deserve credit. A man may bear a good reputation and may have enjoyed a reasonably good income for a number of years but he has arrived at middle age and has not accumulated anything. He has shown that he lacks the ability to manage his affairs and has not the determination to save money, and has not the faculty of adjusting his expenses to his income. A bank is a public servant, but that does not necessarily mean that they must serve those who are unfair in business or lack the elements of business judgment. The reputation of being a thrifty and careful person is the best assurance of receiving financial help when needed.

Wrong ideas have too often prevailed about the owing of money, and those unfamiliar with business often shy against credit and debt. They are not able to distinguish between wise and unwise debts. Debts created for pleasure are an abuse of credit and have ruined many persons. Debts for a sound investment, almost without exception, prove profitable provided the borrower has the necessary requisites to obtain credit.

It is the aim of all progressive banks to extend the maximum available credit to the right type of borrowers. No institution which we have has been more instrumental in building up and improving communities than have the small country banks. These institutions are the corner stone of our financial structure. Half of the deposits in the United States, it has been estimated, come from banking institutions located in villages of two thousand population or less, or from strictly agricultural sections. The manager of this type of bank is usually an individual who has grown up in the community and knows the conditions of the community and all of the individuals living in it and is a man who has usually built his own success and the success of his institution upon a service to the community.

The fact that banks in certain communities have not been able to take care of all of the financial needs of the community does not always mean that the bank has been negligent in giving service. The demand for money in certain sections is, at times, larger than can be taken care of by bank deposits in the community. This is especially true of the newer sections. Another factor which enters into this is the fact that money has a tendency to flow towards the financial centers. This has always been true and always will be true. This fact was one of the reasons for the establishment of our Federal Reserve System. This System has proven its soundness in many ways, but if it had served no other purposes than that of creating twelve financial centers in the United States instead of one, it would have proven its worth. Banks in the country communities often find that an excess of money from a certain community has drifted into the financial centers; usually through the sale of stocks and bonds. For this reason the Federal Reserve Banks, the banks operating under the Federal Farm Loan Act, and the Intermediate Credit Banks have been chartered by the Government for the purpose of re-distributing the funds, which have been accumulated, into the place where they are most needed.

The banking business, the same as agricultural and many other businesses, has undergone a very decided change in the last few decades. There was a time in the earlier history of our country when the small local banker tried to take care of the financial needs of the community. In the older sections they were able to do this to a more or less satisfactory degree. In the newer sections, however, it was impossible to give any adequate service. Naturally, it took years of careful study and experience to build up by successive stages of financial system which would assure a fair distribution of funds to all sections, and this has been accomplished. It is impossible for the average country bank to finance all of its farmer customers' needs and the needs of the community in which it operates. In the future these banks, to some extent at least, will have to avail themselves of the facilities offered by the banks chartered under the Federal Reserve Act, Federal Farm Loan Act and the Intermediate Credits Act. Country banks are realizing this more every day and as they realize it are more and more using the facilities offered them by these institutions with very satisfying results to their customers, the community in which they are operating and the banks themselves.

These Federally chartered institutions were created primarily to provide sufficient capital, and also on a type of contract suited to the needs of the borrower. No class of men as a whole have hailed the coming of these banks more heartily than have the country bankers. The country banker in the last few years has gone through the farmers' difficulties with them. If anyone has an idea that this is not a fact that idea will be readily dispelled if you will take a glance over the history of farming for the last few years. Since 1914 the men engaged in banking have gone through a period of ups and downs which thoroughly tested character and ability.

First, we had the Great War, which upset trade conditions and shook the faith of investors in material values, then followed the equally unexpected demand and a high price for farm products. Our Country's entry into the War still further increased this demand. Then, followed the close of the War and a few years of wild extravagance and speculation, undoubtedly due to the sudden release of our population from the privations and strains of War and also to the warped sense of moral and material values invariably brought about by War. Then, we had a sudden relapse from which we are slowly recovering. The farmers found themselves staggering under a load of unmarketed products, and the market for farm lands reflected the same history—first the scramble for lands at any price and then the drop in values. When the drop came the local banker often held the bag and was just as much interested as the farmer in working out of a bad situation.

During periods of large profits such as we passed through after the last War it is rather surprising that a great volume of debts are created and very few debts paid off. Our easy money went to luxuries, high price land, and, we all know, a considerable part into high priced crops which did not return to the producers their expense of production. These few years of large income and lavish spending saw a large increase in the debts of the farmers. The one thing which has saved the farming industry from very serious trouble is the fact that farmers before the War were comparatively light borrowers. However, this debt was very rapidly increased during and after the War but in the last year or two gradually decreased, which clearly demonstrates the truth of the previous statement—that debts are created during prosperous times and paid off during the less prosperous times.

The credit for a sounder financial condition of the farmer at the present time than it was a few years ago is largely due to the country banks and to the service given to these country banks by the banks chartered under Federal Acts. The local bank has always been and must continue to be the mainstay of the farmer for credit needs. They have rendered a real service to the farmer but have had to face several difficul-

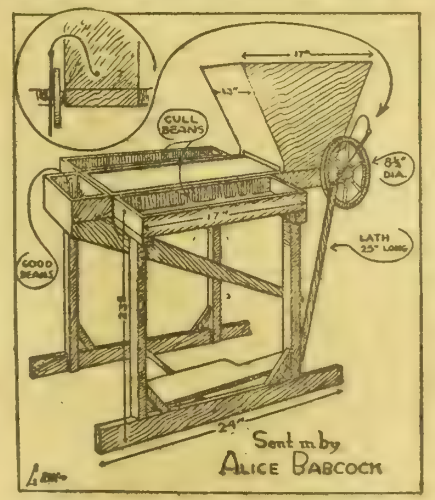
(Continued on Page 11)

Plan For a Home-Made Bean Picker

OUR readers are showing a decided interest in the idea of picking their beans at home and the ones who own home-made pickers are many and they answered our call for plans for a bean picker that any farmer can make. We are only publishing one this issue but we have several more on hand that we will print in the near future. We closed the contest November 1st and hope to be able to announce the winner in our next issue.

The plan for the picker shown here was sent in by Mrs. Alice Babcock, Sherman, Michigan. Her husband made it several years ago. She writes as follows:

"He used just such lumber as he happened to have, some smooth dressed and some sawed by him to fit his needs. The rollers were made from rollers in an old binder, one wheel was of metal, and another picker he made a wooden circle wrapped firmly with binder chain for weight. The belt is made of several thickness of a grainbag, machine stitched, on one and of binder canvas on the other. It runs over a smooth board between the rollers and the boxed frame around is beveled till it is easy to slide beans over. The throat of the hopper fits snugly enough at the back so that beans may not pass under if the belt is reversed. A wooden piece is inclined in the throat toward the front which meets the metal slide, the opening being adjusted to regulate the feed. The wire loop keeps turning the beans from packing and on the move. A tin on the end of the chute keeps the beans directed down into the container. After being oiled and run awhile they work smoothly and are made neat. The lower front is like a sewing machine with no obstructing cross pieces. Our pickers are firmly built also. Our son suggests that a wheel or crank could be placed on the left with two pedals used to overcome the tendency to stop on center, also chutes could be made for the cull beans.



"We picked one winter when the price was high and reckoned almost a day's wages each evening besides having the culls for hogs and chickens. We are sure it pays when the pick is heavy. The work is pleasant, even fascinating and can be done in stormy weather."

Washtenaw Club Members Take Annual Outing

One Hundred Twenty-Seven Boys, Girls and Leaders of Washtenaw County Attend Only Exclusive County Club Camp in Michigan. Third Year Pronounced Most Successful

THE third consecutive year of the Washtenaw County Boys' and Girls' Club Camp, held at Camp Birkett, the Y. M. C. A. Camp on Silver Lake, was by far the most successful, 127 boys, girls and leaders attending. This is the only exclusive County Club Camp in Michigan and is entirely self supporting, each boy or girl bringing bread, beans, potatoes, tomatoes, eggs, etc., for the week, and in addition a fee is charged to pay rent of camp, pay cook, and buy supplies such as meat and milk which must be fresh. The aim of those in charge is to give the campers useful instruction and at the same time a good outing.

The boys occupy the camp the first week and the girls the second. Thru the kindness of Mr. L. Reiman in charge of the U. of M. Fresh Air Camp, Mr. Lockwood, Naturalist and Indian Chief and wife spent a day at Camp and entertained at Camp Fire. A senior scout from Ann Arbor spent the week at Camp and assisted in instruction, first aid, rope splicing, knot tying, etc. Mr. V. O. Nelson, secretary Y. M. C. A. gave excellent instruction in swimming and resuscitation.

Dairy extension specialists took up milk testing, judging, fitting and showing calves. Professor Bartlett, head of the U. of M. botanical department, came out for a day each week and gave intensely interesting talks on his subject and travels.

During girls' week, Miss Elda Robb, assistant state club leader, took up basket weaving, making artificial flowers, sewing, canning, judging and games.

The evenings were spent in Camp Fire entertainment. Talks were given by Dr. G. G. Alway, Ann Arbor; Professor Bartlett, U. of M.; Professor Ford and Dr. Pittman, State Normal College; Mr. L. Reiman, University Y. M. C. A.; Mrs. Dora Stockman, East Lansing, and others.

Saturday of each week a picnic was held to which parents and friends were invited.

Boys' Week

Boys arrived at camp on Monday bringing supplies, bread, beans, potatoes, tomatoes, eggs, etc., for the week and in addition were required to pay a fee. The county club camp is entirely self supporting. The fee pays rent of camp, which is secured from Y. M. C. A., pays the cook and buys supplies such as meat and milk which must be fresh. Monday evening at Camp Fire, Mr. L. Reiman, graduate of U. of M. and in charge of U. of M. fresh air camp, gave an excellent talk, led in songs, yells, etc. At Monday Camp Fire Vaughn Christensen, Eagle Scout from Ann Arbor was introduced, arriving at Camp for the week having charge of singing, games and first aid.

Tuesday, three other advance scouts from Ann Arbor assisted Christensen and instructed in first aid, trail blazing, songs, games, etc. At Camp Fire that evening, Dr. G. G. Alway of Ann Arbor gave an excellent talk on "Cleanly Habits" and incidentally told of some of his war experiences.

On Wednesday, Professor H. H. Bartlett head of the botanical department U. of M., spent the day at Camp, took the campers for a hike explored an old lake bottom, found small deposits of peat and in addition did a little "snake charming." That evening he entertained at Camp Fire with intertaining items of his visit to the island of Sumatra.

Part of the morning the next day was spent in putting up tents and beds for the club girls who occupied camp the week following. Mr. V. O. Nelson, secretary of the Y. M. C. A., Ann Arbor, gave an interesting and valuable drill on life saving and resuscitation. Messers. E. H. Hent and C. F. Hoffman, dairy department, M. A. C., took up milk and cream testing and fitting, showing and judging dairy cattle. At Camp Fire, Professor Ford of the State Normal College, Ypsilanti, gave an interesting talk telling stories of early days and Indian life in Michigan. Mrs. L. Seamans of Ypsilanti entertained with readings.

A group of the boys who attended the Camp on Silver Lake. Fine looking bunch of young farmers, aren't they? Mr. Lockwood, the naturalist is the one standing at the back, wearing a white shirt.

Friday, through the kindness of Mr. L. Reiman, "Dad" Lockwood, naturalist and an Indian Chief and his squaw, from the U. of M. fresh air camp, spent the day with us. The former entertained with nature study work, entomology and excellent lecture on birds. The Indians entertained at Camp Fire with songs, yells and dances.

Saturday was picnic day. All parents and friends were invited for picnic dinner. The fathers defeated the boys in a baseball game in the afternoon and after a "goodbye swim" all left for home.

Second Week of Camp

On Monday of the following week the girls took possession of the Camp and what a time they had. At the end of the week we asked Mary Murray, county champion in Garden Club 1922, and member of the Garment and Poultry Clubs this year, how the girls enjoyed the Camp and if they wanted to go back next year. Her answer left no doubt as to the popularity of the annual event.

A group of industrious club members learning how to make baskets at Camp Birkett. Miss Robb, assistant state club leader in the foreground acted as instructor.

"This is the third consecutive year we have had the privilege of attending the Camp and we think it has been better each year," said Mary. "The first year the boys and girls were all there at the same time but the last two years the boys have gone one week and the girls the next. We think the last plan is better.

"This year the boys enjoyed their vacation from July 30th to August 4th. Then we girls went August 6th and before night came 9[illegible] girls and leaders had arrived. We were very glad to have Miss Robb with us. We enjoyed a splendid supper and a good night's rest that night. The most of us slept in tents. We thought that those who wanted to sleep in huts didn't know a good thing when they saw it. Our bunks were something the shape of a pig crate with wire stretched across top and bottom, then two could sleep on top and two on the bottom.

"Each morning two inspectors would go and look in our tents and then they would pin a flag on the front of the neatest. Most of the mornings we arose bright and early. We had setting up exercises and then could go in for a swim if we wanted to. After breakfast was over and the dishes washed we had classes and were taught to make paper flowers, sachet bags, night birds, reed baskets and organdie flowers.

"We ate in the club house. There were eight tables and most of them seated twelve people. After dinner we had an hour in which to rest or write letters. Then we had classes again.

"Each evening we had a ball game. Mr. H. S. Osler, county agricultural agent, came every night and showed moving pictures. We all enjoyed them very much, too. After movies we had Camp Fire. Each day we looked forward to this part of the day's program with great anticipation and we were never disappointed in it either for A. L. Watt, county club agent, always had something nice planned and Miss Robb had plenty of good songs.

"Tuesday night Dr. G. G. Alway from Ann Arbor came and gave us a talk on health. That night it rained very hard and it almost seemed as though our tent had been through a war. for some of us were obliged to take up our beds and walk. while Miss Robb sought shelter for us in one of the huts, and the Good Samaritan took us in.

"We were allowed to go out in a boat any time we wanted to if we were accompanied by a leader.

Parents and Friends Welcome

"All our parents and friends were welcome to visit us any time, but we did have some unwelcome visitors while we were there. Three wandering puppies seemed to like Camp Birkett, too.

"One night I was quite startled when I felt something kiss me right "plumb" on the lips. I turned our flash light on and discovered that one of the pups was in bed with us. I might have known the poor little fellow was in trouble, for in the meantime Miss Robb was hunting for him and I guess he came to us for protection. Miss Robb proceeded to take them up to a cottage and let them go, but they thought she wanted to run a race with them so they almost beat her back to Camp.

"The next night she and one other leader determined to conquor the villians, so they took them up to the club house and shut them under a crate. That night our sleep was not disturbed in the least but the next morning Mrs. Biedermann, our cook, said they kept her awake all night.

"On Thursday evening Mrs. Dora Stockman gave us an interesting talk which was thoroughly enjoyed by all. Great was the excitement that night, as it was stunt night. Each group was plotting and planning so they could take the rest by surprise. The stunts included an Indian dance, a play, mock wedding and an operation. We girls in our tent wrote a paper called "Dew Drop Inn News," for that was the name of our tent. We wrote items of interest about the leaders and the girls. We also had jokes about them but tried not to have anything which would hurt any ones feelings in any way. After stunts were over, we gave Miss Robb, Mrs. Biedermann and Mr. A. L. Watt each a small gift to show our appreciation for what they were doing for us. Then we children went to bed and I dare say that the leaders stayed up a little longer and talked over the events of the day.

Take Hike on Friday

"On Friday afternoon we took a long walk. Professor H. H. Bartlett of the botanical department, U. of M., went with us and told us about the different flowers and weeds and showed us an old lake bed. After the hike we had a short service in memory of our lake President, Mr. Warren Harding. We sang two hymns, prayer was offered, Mrs. A. A. Schoen read an item from the paper and Mr. Bartlett told us a little about Mr. Harding's life.

"That night Miss Robb had to go home. We were very sorry to have her go but were glad she could be with us for even that short time. Mr. Bartlett gave us a splendid Camp Fire telling of his experience on the island of Sumatra. Mr. Earl Martin, the manager of our county fair, came and talked to us one evening.

"Saturday morning we spent most of our time getting our things packed ready for home. All the parents were invited for a picnic dinner. After dinner we chose up sides and had a good ball game. Then we departed and went to our homes.

"We will never forget these happy times we've had together, neither will we forget how good the leaders were to us. Although we know that each leader did all they could," said Mary, "we realize that Mr. Watt and Miss Robb had a great deal of work to do and that most of the responsibilities rested upon them."

WASHTENAW CLUB MEMBERS BIG WINNERS AT FAIR

THIS year is the first time Washtenaw county boys and girls exhibited live stock, canning and sewing at the Michigan State Fair, and the winnings and honors they won were far in excess of those won by the club members of any other county on the size of exhibits. Of the 33 head of live stock exhibited all except two won individual prizes. In the Shorthorn class they won all prizes and they went down the balance of the list of live stock with winnings about as numerous. In the judging contests Washtenaw county team finished first competing with 17 counties in general stock judging, and won the honor to represent Michigan at the International Live stock Exposition, at Chicago in December, all expenses paid. In the dairy dairy judging contest Washtenaw won first, being 53 points ahead of the winners of second place. Fifteen teams competed in the dairy

Beyond the dreams of the Pioneers

Of the mile-long, high-level bridge now being built across the Hudson near Albany on the New York Central, the New York *World* says:

"The great cut-off at Castleton on the Hudson * * * * will be a boon to all the people of New York State and to five times as many beyond its borders. * * * *

"The Castleton cut-off is a notable example of those modern railway problems which concern rather improving old lines than the opening of new ones, for the cheaper movement of traffic grown vast beyond the dreams of the pioneers."

From a drawing made at Castleton, Sept., 1923, by Herbert Morton Stoops.

DIVIDE SEED ON 50-50 BASIS

I am just letting my fields to be worked by B and B furnishes all of the seed and does all of the work and B gives me one-third, and B cuts the hay and he gives me one-half the hay as I furnish all of the clover seed. Now what share of the clover seed ought I to get if B should cut that?—A. J. C., Laingsburg, Mich.

—The clover seed should be divided on the same basis as the hay, that is 50-50. However, the landlord should share the expense of hulling the clover seed in the proportion as the crop is divided.—F. T. Riddill, Research Asst. in Farm Management, M. A. C.

WHO GETS PROPERTY?

Will you please give me some information in a case like this. If my mother died and left no will and had no joint deed would everything fall to my father? I am the only child. Can I hold a share and how much? My husband and I bought the property and my father charged me full value for the farm and besides charged 6 per cent interest. Please let me know what chance I have, if any.—Mrs. B., Traverse City, Michigan.

—If your mother died intestate, i. e. without having made a will, her real property would descend to you as the only child. However, if the title to the farm was in your fathers name, it would not be a part of your mother's estate and of course would not descend to you. One-half of her personal property would descend to you and one-half to her husband.—Asst. Legal Editor.

WAS FENCE IN PROPER PLACE?

Have I cause for action to collect damages in the following matter: Contractors grading highway No. 12, took down my fence damaging some of my crop and left it lying on the ground, my crops being unprotected. It will cost me quite a sum to put this fence up and I have hard work to meet my taxes. A. H. P., Gould City, Michigan.

—If your fence is in the proper place the contractors would have no right to take it down and leave it down, and you would have a right of action against them for damages.—Asst. Legal Editor.

EXEMPT FROM SCHOOL

At what age is a child exempt from school in the country?—S. A., Yale, Mich.

—A child might be exempt from attending school in a country district if such child is sixteen years of age or such child is exempt from attending country school if he has secured an eighth grade diploma and is not yet sixteen years of age if there is no high school maintained in the district in which he lives. If such child attended a city district where there was a continuation school maintained and he had not completed ten grades of work or its equivalent and was under seventeen years of age, he would be required to attend such continuation school during the eight hours per week required by law.— W. L. Coffey, Dept, of Public Instruction, Lansing.

BELIEVES LAND ASSESSED TOO HIGH

I have 160 acres that I am using for pasture. It is so hilly it cannot be farmed or used for anything but pasture land. I bought it for $1,000 on a contract. The same spring I bought it it was assessed for $1,400 then the state raised it to $1,600 but now it is back to $1,400. You told me last spring to write the State Tax Commission, and I did so, and they told me to meet the board of review in the township in which the land is located. I did that but could get nothing done. I understand that land cannot be assessed for more than its cash value but I did not know how its cash value might be determined, without it would be by the sale price. Has the supervisor of board of review a right to assess it for more? I wanted to pay my taxes this year under protest and do you think I could make a complaint that it was assessed too high, the valuation being $400 more than I paid for it on a contract?—J. J. M., Beulah, Mich.

—The assessed valuation of property is fixed in accordance with the judgment of the assessing officer. An appeal, however, may be taken to the State Tax Commission if the owner of property believes that the assessment of his property is excessive and greater than the value of the property.

Taxes may be paid to the Township Treasurer under protect. The owner of the property, if the taxes are paid under protest, must commence suit within thirty days from the time of payment of the taxes. The assessment will then be reviewed by the Court.

It is presumed that property is assessed at its cash value.—O. B. Fuller, Auditor General.

DEALER LIABLE FOR PRICE

I shipped a crate of 18 fat hens weighing 99 pounds to a Detroit poultry dealer on June 7th. Eleven days later he mailed me my check and paid me the market price of June 18th or at time of mailing the check which was five cents per pound lower than on date I shipped the hens. I would like to know if there is any way I can collect the difference which I consider due me? I also requested him to return my empty coop by express immediately and have failed to receive it. I have written him in regard to this matter and have failed to get a reply. Would I be allowed to advertise his dishonesty?—Mrs. Wm. C., Minden City, Michigan.

—The poultry dealer would be liable to you for the price of the poultry at the time he received it. You might send your claim to a lawyer for collection.—Asst. Legal Editor.

OWNERSHIP OF FRUIT

Will you please answer my question in your paper? Does the fruit on a tree belong to the man who owns the tree? We have a mulberry tree whose limbs hang over the fence of our neighbor. This neighbor does not want me to get my berries nor does she want them herself.—Mrs. L., Elsie, Michigan.

—Fruit on a tree belongs to the owner of the land on which the tree grows, even if some of the branches protrude over the land of another.—Asst. Legal Editor.

CONTROVERSEY OVER HIGHWAY

I would like to know through the Farmers Service Bureau about the following: A and B both own farms adjoining highway which never was traveled much. It is the main state road. Has C the right to chase his cattle on this road if A does not want them there and has C the right to shoot at A's dog when going after cattle to chase them back? What can be done?—W. W., Metz, Mich.

—The adjoining land owner owns the land to the center of the highway, subject only to the right of the public to use it for hiighway purposes. C would have no right to use the highway in front of A's farm for the purpose of grazing his cattle. C would have no right to shoot A's dog unless the dog was unnecessarily injuring his cattle, and if he does this he would be liable to A for damages.—Asst. Legal Editor.

POTATO PRODUCERS' ASS'N. MEET AT GAYLORD, NOV. 8

THE Michigan Potato Producers' Association is holding a meeting on Thursday of this week, at Gaylord during the Top-O-Michigan Potato Show. The meeting begins at 1:30 P. M. with Thomas B. Buell, President of the Michigan Potato Producers' Association, presiding as chairman. F. C. Gaylord, of Purdue University, will talk on seed, soil and spud success. F. E. Fogle, M. A. C., discusses the construction and ventilation of potato storage houses. Potato storage diseases and their control will act as a subject for J. E. Kotila of the College, and W. P. Hartman of the state department of agriculture will talk on standardization.

FEDERAL RESERVE MAKES SHORT LOANS POSSIBLE

(Continued from Page 7)

ties. Often the time required on a loan by a farmer was longer than the bank could safely give and the large demands of farmers at certain times of the year were too heavy for most banks to carry; also, the large demands coming from all over the country at about the same time placed the larger city bank with which the smaller banks were doing business into a position where they could not meet the demand.

One of the principal features of their Federal Reserve System is the fact that through it our financial resources are pooled. If there is a heavy demand for credit, this pool can be used for relief or if any particular section has large credit requirements the banks of this System can be used to distribute the burden over the whole country. This System has proven itself of great value; however, from an agricultural standpoint it has not been as satisfactory as it has to other lines of business in which there is a quicker turn over than there is on a farm. The Federal Reserve Act placed a limit on the banks operating under this Act to take as collateral notes which do not run over ninety days, with the exception of agricultural paper, which was limited to six months and last Spring this time was raised to nine months. This time limit of nine months now very satisfactorily takes care of the excess short time loans of farmers which the country bank can re-discount with the Federal Reserve Bank, but does not take care of longer time loans for the purposes of raising and maturing cattle, etc. However, the Intermediate Credit Banks have been established to take care of this type of paper.

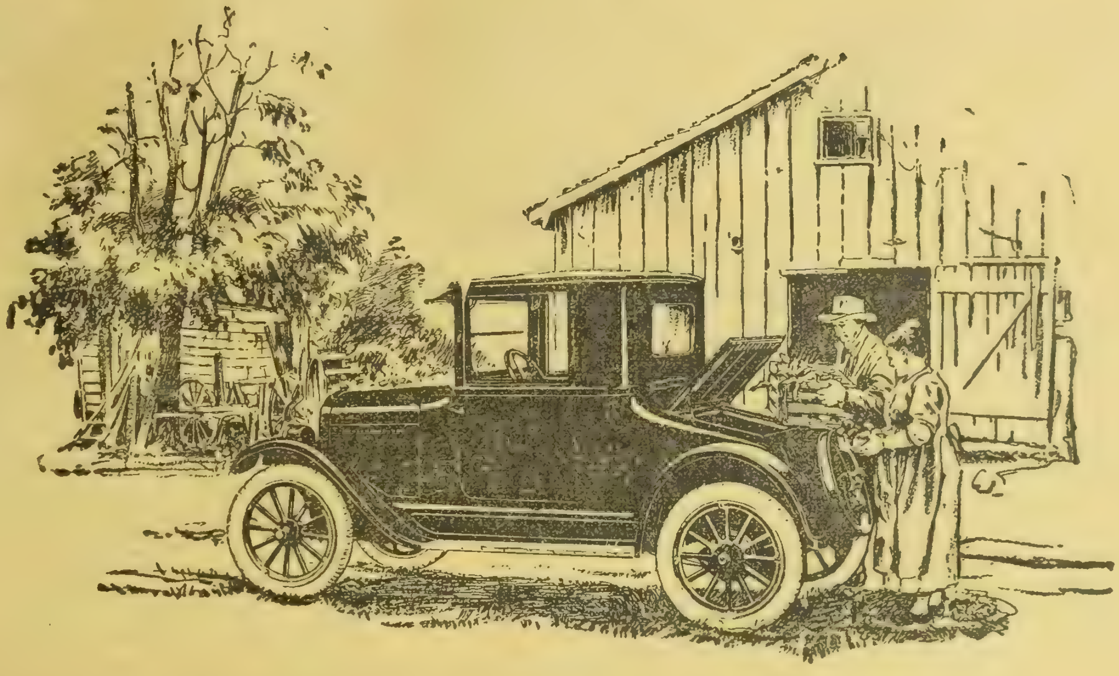
Not all of the country banks are members of the Federal Reserve System. These Banks, however, receive an indirect service from the Federal Reserve Banks through their city correspondents, who have been enabled to take as collateral many millions of paper which they could not have done had they not had access to the facilities offered by the Federal Reserve Banks. Whenever a country bank finds itself in a position where it cannot take care of all of the needs for short time loans from its customers and it is a member of the Federal Reserve System it can take this paper to the Federal Reserve Bank and use it as collateral on loans. These notes offered as collateral must be taken up in at least nine months and must come from borrowers who are entitled to credit—that is, from men who show a financial statement which warrants the extension of credit—and who use the funds for agricultural purposes. The local bank must guarantee the payment of these loans and naturally can only make such loans as will meet the collateral requirements of the Federal Reserve Bank.

The facilities offered country banks by the Federal Reserve Banks and the foresight and sincere interest of the average country banker in farming has been responsible for our being on a sounder financial footing. The job the banker had was a very difficult one and if he had not used foresight would still be very sick instead of on the way to recovery. The success of any institution is primarily dependent upon its customers. Poor customers mean failure—good customers success. The average business success of today is due to a better service rendered to its customers and this is as true of the banks as of any other type of organization. The farmer with a good reputation who has shown signs of thrift will find when he goes to his local banker for a loan that the banker will not only meet him half way but will often go farther. The success of the country banks is closely allied with the farmers success. The lack of cooperation between the banker and the farmer would not only be unsound but foolhardy. The cooperation of the country banker with the farmer has been very clearly demonstrated in the past and especially in the last few years. If you need financing and are entitled to it go to your banker and lay all of your cards cn the table and you can rest assured that you will get a square deal.

for Economical Transportation

CHEVROLET

Every Farm Needs Two



EVERY farm needs two automobiles, one of which should be a closed model Chevrolet.

The open touring car is best for general farm use, carrying passengers or perhaps miscellaneous bulky produce or merchandise, but for cold or rainy weather, and for church or social use the family needs a closed car, either a 2-passenger Utility Coupé, as illustrated, or the 5-passenger Sedan. The extra large rear compartment is a feature of the Coupé.

These closed cars are very finely made, furnished, upholstered and trimmed. The windows are of plate glass and can be lowered, providing as much air as an open car, yet affording full protection against wind, rain, snow or cold when raised.

With a second car on a farm, one is always available for those at home when the other car is out.

The low prices of Chevrolet make the ownership of two cars feasible for most farm families.

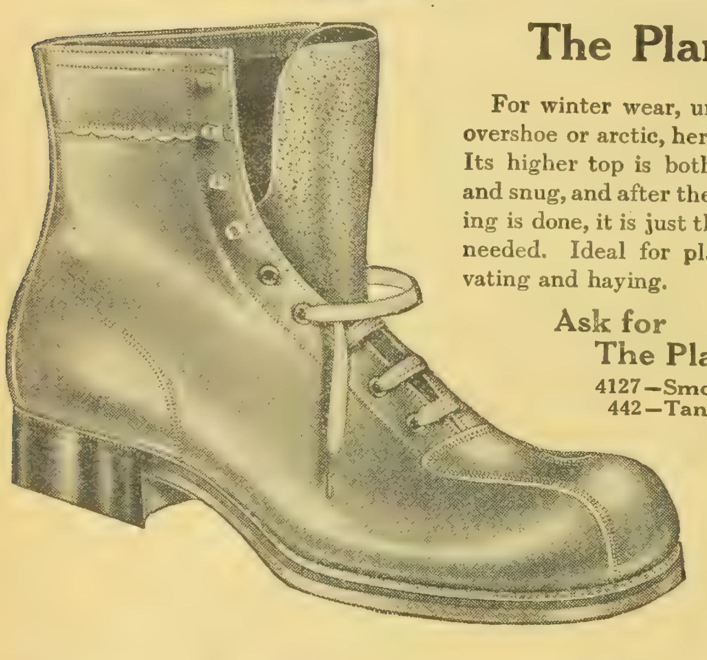
ROUGE REX
Cordovan Horsehide Shoes
Wear 1,000 Miles—Always Stay Soft

February 13, 1921

It will be three years this Fall since I bought your Rouge Rex shoes and after having put three pairs of new soles on them, they are good yet. I wore them most of the time. They are the best fitting and easiest walking shoes I have ever worn. They are certainly made to stand the wear, and are always soft and pliable, summer and winter.

There are six of us and we are all going to buy your shoes. My neighbor asked me when I was going to wear this pair out; and I told him that if I knew that I could get another pair, I would do so. He said he would, too.

Yours truly,
(Signed) WALTER HOFF,
R. No. 1 West Saginaw, Mich.



The Planter

For winter wear, underneath an overshoe or arctic, here is the shoe. Its higher top is both comfortable and snug, and after the spring plowing is done, it is just the shoe that's needed. Ideal for planting, cultivating and haying.

Ask for
The Planter
4127—Smoke
442—Tan

Stays Soft in Any Weather

A 1,000-Mile Shoe—
From Tanners to You

Every man knows what it is to dry out wet shoes. The leather drys out stiff as a board, hard and uncomfortable.

Now this discomfort is ended. For, thanks to our exclusive, secret, double-tanning process, the Rouge Rex shoe dries out after every soaking as soft as new buckskin. *This amazing shoe stays soft.* No other shoe made like it!

We tan the leather in our own tannery.

We take selected horsehide of the superfine quality, formerly used for expensive Cordovan shoes and Cossacksaddles—the toughest, longest-wearing leather known. Yet by our secret tanning process we give this wear-resisting leather the softness and pliability of buckskin. It never loses its softness—and it wears and wears and wears. For we even increase its natural durability.

Rouge Rex
Comfort Shoe

Tender feet welcome these shoes. They're soft and flexible as a moccasin, yet wear like iron. A typical factory or dry weather shoe, so light you don't realize they are on duty. Ask for 435 in chocolate. 434 in tan. Both are outing models. 495 chocolate Blucher.

Unusual Economy
Work Shoes for All Purposes

We operate our own tannery and our shoe factory as one organization. This effects very large economies. So every Rouge Rex shoe is very low priced when you consider the quality.

There is a Rouge Rex for every use. For field and shop, for lumbering and hunting, for the mines and the oil fields. The Planter model shown assures dry, warm feet in blizzard weather. The ever-soft leather in every model assures perfect comfort always. This new-day hoe is the one all men want.

If your dealer cannot supply you write us and we will see that you are supplied from our nearest dealer.

OUR UNQUENCHABLE HOPE: THE MAN

A SERMON BY REV. DAVID F. WARNER

TEXT: "A man shall be a hiding-place from the wind, and a covert from the tempest". Isaiah 32:2.

THE story goes, that one Diogenes, with his latern, cynically goes about in the day time in search of a man. But this was in ancient Athens when political life was weakening. Yet, is the prophet Isaiah also saying that there is great need of a man to put righteousness into the social and political life of Jerusalem? Is he defying universal experience when he says there is yet to come a man who shall become the world's hiding-place from the tempests of danger? And have we yet come into that day when we believe there is but one man who can give full value and meaning to this prophecy? Well, in the face of all human experience, it seems a puzzling prediction. And, yet, Faith continues to proclaim and so Hope, that that man is Jesus Christ.

Jesus Christ brought a religion. a way of living that is a matter for this world as well as the future. And from the day of accountability until death, not pleasure, not merchandising or farming, not making of a living; but religion, the making of a life after the pattern of The Man, is the chief concern of mortals here below.

Even yet, our undying hope for refuge is in men who live so close to human need on the one hand, and so close to the heart of the Eternal, on the other. We hope to have editors after the way of The Man. Yet, we have so many un-Manly editors; editors who are used by the large interests to exploit men rather than help them; who are catering to the favor-seeking men and corporations. Press reporters are asked to bring in a definite character of news, and if it is not that, it is doctored up in the office. "Woe unto you, scribes, Pharisees, hypocrites! cleanse first the inside of the cup and platter that the outside thereof may become clean also." Woe unto you, pharisaical editors, who put appearance above reality making life mere play and a farce. The press may be helpful or dangerous. What a spiritual fragrance would spread thruout our land if the editors of magazines, of country weeklies, and of great city dailies, would come out in unsparing denounciation of the evils and the extensive publication of the good.

We hope for Christian lawyers. Lawyers exist for the adjudication of legal wrongs. As officers of our court system they, are expected to assist in the administration of justice. But some of them, for gain tho small, will barter away their souls and induce others to do so. I was sitting in the office of a city lawyer. A poor boy came in for some advice. He went out. The lawyer complained to me because the boy offered him no fee. Verily, what pettifoggers and social leeches! (No, not all.) But our schools continue to turn out too many men whose great ambition is to get place as counsel for some blood-thirsty corporation. Shame! And yet, hope revives, for "in that day" we are to have lawyers who will be arbiters of differences after the principle of arbitration in the eighteenth chapter of Matthew as laid down by The Man. "Woe, unto you, scribes, Pharisees, hypocrites! for ye tithe mint and anise and cummin, and have left undone the weightier matters of the law; justice, mercy, and faith." And woe unto you lawyers who put all things on the same level in morality.

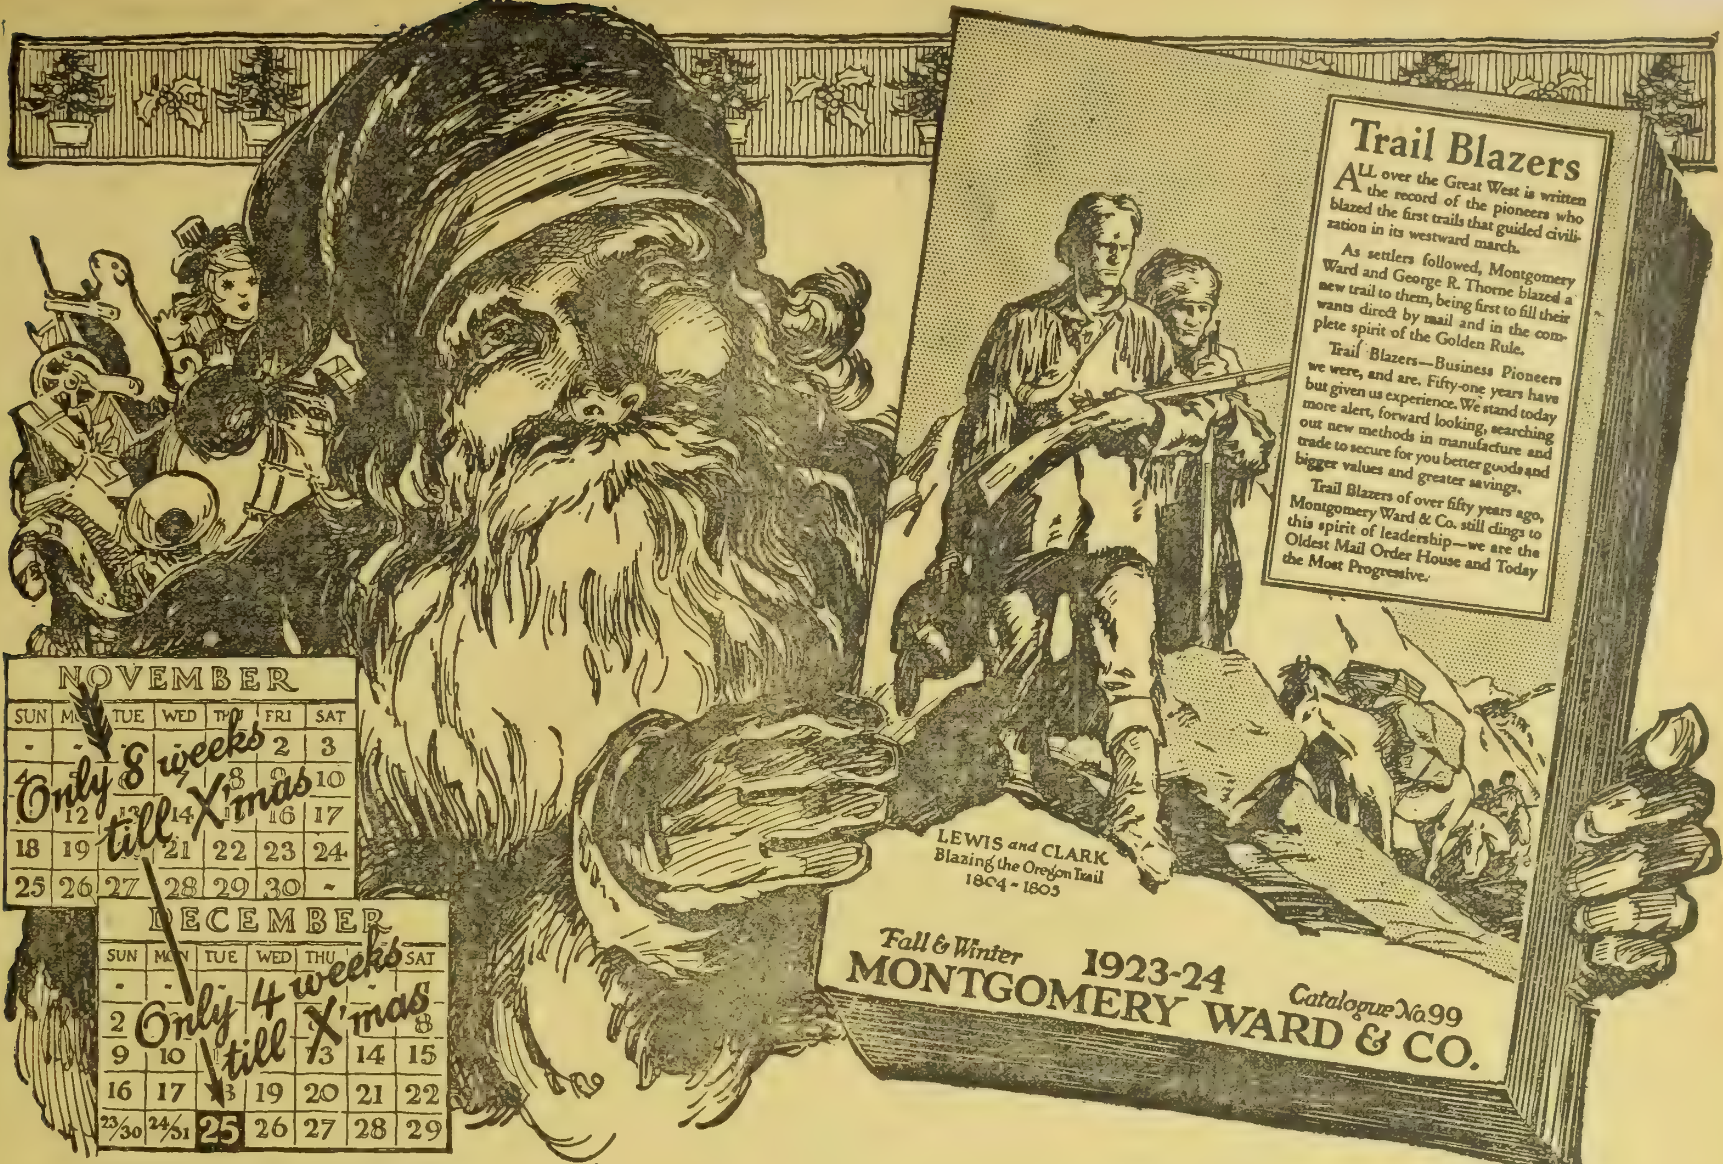
We hope for Christian businessmen, more of them. Such will promote business co-operation and bring producer and consumer closer together. Then we may say farewell to Mr. High-Cost-of-Living. We hope for business men, who, in interpreting their work, will not lose sight of The Man. But the spirit of competition, rather than co-operation; and of unearned gains and love of speculation, have led to dangerous combines and monopolies, and socially harmful alliances with politics. "In business, not slothful, fervent in spirit, serving the Lord" says the spirit of The Man.

We hope for Christian businessed after the manner of The Man. We ministers need Christ. In the days following the Reformation, when rationalism was running riot in Germany, it is said the typical sermon was on "the value of general charity, good agriculture, duty of the citizen, care of bees, and similar collateral themes." Is history repeating itself? Have you known of any pulpits where sermons on politics, war, the liberty loan, the status quo in government, and similar thems had the right-of-way? Well, should this condition continue, we may look for the adulteration of our hymns and our worship, the leaving of the Bible out of our schools, and the spiritual element out of our education. Anything else but preaching Christ cheapens and degrades the pulpit and encourages Christendom to swing over into rationalism and materalism. We read that in the days of English Deism at the beginning of the Wesley movement, the clergy were devoted to amusements, had little conception of the sanctity of their office and the spiritual care of the common people. Is this too common today? Then let us hope for more John Wesleys. Surely, we need preachers after the boldness of The Man. Preachers who will condemn sin in the church as well as out, in high places as well as low. Any hireling can denounce the street peddler and petty gambler, but it takes a pulpit hero to stigmatize corporation law-breakers and tax-dodgers, and any and all respectable sinners; and then out of love, insist on the social ideals of The Man Jesus.

We hope for farmers who care most about the idealism of The Man. Farmer friends, of course you know you control that which contributes most to the maintenance of life. You know that men cannot live without the industry of the soil. Ours is a basic occupation. Then, will we take selfish advantage of society? This is tempting. Yet, it is extremely fascinating to know and to feel what possibilities for serving mankind. have the plowman and the sower. But this calls for Christian vision. "The vision of a man is the correct measure of the man," says Carlyle. Behold the rural Galilean, who but for the Cross for mankind's sake, could have exploited all creation.

Everywhere we need, and we hope for, a revival of Gospel religion and of friendship with the Unseen Man. How we do need Christian motive and purpose in every walk and word and wish of life! The life of today must needs have morality at its center to save it. This is to say that it must have religion. I am increasingly convinced as the days go on that nothing but the religion of The Man can save men and nations. "Tongues" and "knowledge" are not enough, says the apostle Paul. Culture will not avail. To bring our blase children to know and to feel the white holiness of Jesus Christ; this is where we must build our future. I believe the religion of Jesus in practice, and that alone, will give necessary attention to the children, the poor, the sick, the imprisoned; and that only will rid our land of thievings, hold-ups, the traffic in drink, the terrible ravages of the social evil, and will give happy employment to all. Some American bankers were banqueting in China. The conservation passed to the alarming embezzlement of public funds in recent years. A Y. M. C. A. secretary asked if he might be allowed to ask two questions. How many of you men attended church and Sunday school when you were boys? All hands went up. How many of your boys are attending church and Sunday school today? No hands up.

Now, the fall elections are near. What shall we hope for? Whom shall we vote for? The self-seeker and the man or women drunken with political ambition? A man cannot be better than his ideal. Only worthy purposes makes a man worthy. My candidate must be a person who has a clear vision of the just laws, and fair ideals, and happy service that should prevail among us. Be he church member or no, I want him to see the light of that city or community where reigns the Golden Rule. **And, I want him to believe** that such a commonwealth can, and and will some day, be established.



Trail Blazers

ALL over the Great West is written the record of the pioneers who blazed the first trails that guided civilization in its westward march.

As settlers followed, Montgomery Ward and George R. Thorne blazed a new trail to them, being first to fill their wants direct by mail and in the complete spirit of the Golden Rule.

Trail Blazers—Business Pioneers we were, and are. Fifty-one years have but given us experience. We stand today more alert, forward looking, searching out new methods in manufacture and trade to secure for you better goods and bigger values and greater savings.

Trail Blazers of over fifty years ago, Montgomery Ward & Co. still clings to this spirit of leadership—we are the Oldest Mail Order House and Today the Most Progressive.

Christmas Is Just Around the Corner. So start today choosing your Christmas Gifts

20 Complete Christmas Stores in Your Montgomery Ward Catalogue

Twenty complete Christmas stores, hundreds and hundreds of gifts, everything suitable for Christmas is pictured in your Montgomery Ward Catalogue.

Toys, games, books, jewelry, all the season's novelties, all kinds of practical presents—everything to please Man, Woman, Child or Infant is offered in this complete catalogue.

If you do not know what to give, your catalogue will make you a hundred suggestions. It will be your best aid to choosing the right gift for every friend and relative.

And in this great Christmas Catalogue everything is ready now. You do not need to wait until Christmas is at hand to make your selections. You have before you now in your Ward Catalogue everything you will want to buy for Christmas.

Start Today Selecting Your Gifts for Christmas

The weeks before Christmas pass by quickly. So start today looking through your Catalogue and select your gifts carefully. There is an increased pleasure both in giving and receiving a carefully selected and appropriate gift.

There are no "Christmas Profits" in Montgomery Ward prices

There are no Holiday prices, no "Christmas profits." You pay the lowest price of the year for every Christmas gift. You buy from Ward's Catalogue at the normal, everyday price.

Your saving in buying from Ward's is, therefore, greatly increased at Christmas time. So study your Catalogue. See for yourself the saving. See for yourself how much farther your money goes, how many more presents you can buy. No one need to be omitted from your Christmas list if you let Ward's Catalogue be your Christmas guide, your Christmas store.

Order Your Christmas Gifts Early. Christmas is just around the corner

We are ready now to handle all Christmas orders. Our stocks of Christmas goods are now complete. Everything is ready. So order now.

Get out your Ward Catalogue today. Don't put it off till Christmas time. Don't wait till some things are gone.

Start today making up your Christmas list. Order early.

RELIABLE ADVERTISERS

We will not knowingly accept the advertising of any person or firm who we do not believe to be thoroughly honest and reliable. Should any reader have any cause for complaint against any advertiser in these columns, the publisher would appreciate an immediate letter bringing all facts to light. In every case when writing say: "I saw your advertisement in The Michigan Business Farmer!" It will guarantee honest dealing.

"The Farm Paper of Service"

AN OPEN LETTER TO MR. KELLEY

"Enclosed find check for one dollar for which please continue your paper. I want to tell you something. The farmers have got where they haven't got a darn bit of faith in the whole works, from the farm papers to the governor himself. The cards are stacked so we get cold-decked at every deal but I suppose we have got to support you all someway.

After a hard fight we succeeded in stopping the T. B. test in Jackson County. It had been carried on here for two years and 80 per cent of us considered it the hardest blow ever dealt the cattle industry of our county. Beside we do not believe it amounted to anything. I'll bet we will never see a word of it in a farm paper just the same. Yours,—J. D. Kelley, Cement City, Michigan."

MY Dear Mr. Kelley:—You say "the farmers have got where they haven't got a darn bit of faith in the whole works from the farm papers to the governor himself!"

We will not attempt to answer for the Governor. And we will not attempt to answer for any other so-called "farm-paper", but we will challenge your right to include THE MICHIGAN BUSINESS FARMER, (if that was your intention) in that aspersion.

From the day the first copy of this publication went into the mails, it has been published with one goal always before us—the greatest possible service to the farmers of our home state.

We have never hesitated to attack any individual or proposition no matter how formidable, if we believed it menaced the farming business in Michigan. We have championed every farmers organization plan which had behind it a sincere purpose. We have never been biased by politics, religion or organization affiliations.

NOR WILL THE BUSINESS FARMER EVER BE!

This is the only farm paper owned and edited in Michigan to-day and we would be traitors to our trust if we deviated one iota from this declaration of principles which has been our beacon from the start.

Now, Mr. Kelley, if there is any subject of interest to the farmers of Michigan which cannot or will not be discussed in these columns, whether we personally favor or disfavor it, I want to know what it is.

We maintain a department known as "What the Neighbors Say", under which appears in each issue letters from our readers on all manner of subjects. These letters appear just as they are received by us. We welcome them and print them, whether we agree with them or not. We believe this is part of the service expected of us and that we have no right to shut our columns to any reader who has a message for the farmers of Michigan.

Now, Mr. Kelley, if we have made it plain to you where we stand, we thus publicly invite you to state the farmers problems particularly in regard to the tuberculin testing of cattle, and your message will be printed in these columns. And I will not hold you, Mr. Kelley, to your bet that you would never see a word of it in any farm paper, either!—GEORGE M. SLOCUM, Publisher

BEAN CAMPAIGN A FLIVVER

IT ought to be apparent to the bean growers in Michigan that they will have to take over the marketing of beans into their hands.

When New York, California and Colorado, the other great bean producing states, agree to a campaign in which they will pay their share of the cost of a $50,000 advertising campaign to increase the sale of beans to the consumers in America, and when that plan goes on the rocks because of the shortsightedness of a few jobbers in Michigan it is high time that this state produced a leader who can initiate a strong organization of bean producers that will specialize only in handling this commodity and preparing it for market.

There is every reason why an organization of this kind can be as successful as those in the west, whereas a selling agency, organized to handle all manner of farm products, perishable and otherwise, quickly finds itself in very difficult waters.

Michigan beans will always hold an enviable place on the bean market in the United States. They are not a perishable crop; it is not difficult to prepare them for market, and THE BUSINESS FARMER was first, as you know, to encourage the farmers and their families to hand-pick their own beans and prepare them ready for market in their own homes, or with cooperatively owned machinery in their own neighborhoods.

A good organizer in a central office, with branches in the bean markets, could dispose of all the beans produced in Michigan and promote their sale at a cost so small to the individual bean grower that it would not be noticeable.

Then when another plan came forward, to promote the sale of beans and to which other states had agreed to pay their share, there would be no question but what the Michigan bean grower's association would raise this fund over night.

Where is the man who will step forward from the bean growers ranks or from the bean jobbers ranks and offer to take over the organization of a strong bean growers association in the state of Michigan?

There is a wide open opportunity here for some young man to show his mettle. He must be a man who knows how and where to sell beans and whose counsel can be taken by the men he is representing. The farmers of this state will be quick to recognize such a man and we will through the columns of THE BUSINESS FARMER, do all we can towards making his plans a success.

Perhaps we had best not close this comment without recognizing the many bean jobbers in Michigan who do realize the importance of cooperating with the growers and of increasing the consumption of Michigan grown beans. It is unfortunate that these men cannot work out a plan which would prove satisfactory to the bean growers and which would utilize their own equipment and facilities already built.

These men know the market and if they will lay their cards on the table and go fifty-fifty with the bean growers on the possible profits we would be just as anxious to see such a plan tried. Particularly because we believe in using the material we have at hand, if it is possible and practicable.

GOLDEN ANNIVERSARY OF THE GRANGE

THE Michigan State Grange celebrated its fiftieth annual convention at Muskegon the week of October 23rd to 26th.

We are proud to present in this issue a complete report by our staff correspondent of the proceedings of this meeting, which should be of interest to all farmers in Michigan whether members of this particular organization or not.

The Michigan State Grange has an enviable record over the fifty years since its organization in Michigan, when it was one of the pioneers in this great national organization that now has members in every state in the Union.

The Grange pioneered much of the organization and cooperative work which has been taken up by later organizations and carried forward with slight changes, but always with the principles behind it which the Grange leaders in its inception formulated.

The Grange has come to be recognized because of its age and experience as the counselor for the younger and often more impulsive organization and it has many times proved a good balance wheel when radical leaders would have led the farmers of this country into some will-o-the-wisp mirage.

We have never known a community where a local Grange was established that was not blessed by its environment. The Grange has meant not only the meeting place, the center of community interest, the place where men and women of the same calling could meet on equal grounds and discuss their mutual problems, but it has been the great educator which need recognize only as its superior the country school itself.

We are proud of the Michigan State Grange and we are proud of its leaders, who for fifty years have kept stainless the record of its work in this great state.

We know we bespeak the sentiments of every farmer in Michigan, no matter what his organization affiliation, when we wish the Michigan State Grange Godspeed and add our sincere congratulations and sincere hope that the second half of the century may see even greater accomplishments than have the fifty years just passed.

I COME TO SERVE!

THE cover design of this issue is a famous artists conception of the modern crusader who goes forth with the single purpose of relieving suffering, binding up the wounds and rehabilitating those who are unfortunate enough to be overtaken by calamity. He searches the world to find where he may be of assistance and his motto is "I come to serve!"

The American Red Cross has been first on every field of battle, first at every natural calamity, first at the bed-sides in every epidemic, no matter where in the world, since it was first organized.

We hope it will never again have to go upon the field of battle to ease the pain and scourge of War, but the natural calamities, fire, earthquake, flood and cyclone, will always be reaching out in some part of the world and exacting its penalty of helpless humans.

Within twenty-four hours after the earthquake, which so recently visited those congested islands in the Pacific, the American Red Cross had great ships loaded with provisions, medical supplies, nurses and doctors. That very gesture of good friendship to Japan in her hour of need will do more to cement a fellowship between the peoples of that far nation and our own than all the Jingoists on both sides can bolster up in another decade.

To give our share, no matter how small the contribution is, to the American Red Cross during the annual roll call which begins November 11th and closes November 29th is a privilege which every true Americans holds sacred. No wonder it is called the "greatest mother in the world!"

PAY-AS-YOU-GO ROADS

PAY for your highways as you build them, says Governor Groesbeck, in outlining plans for highway construction during the year 1924. There is not a farmer in Michigan who will not say "Amen" to this proposition, because, as we have continually pointed out, no sane man can defend continued issuing of bonds which mortgage the whole future prosperity of this state.

If Governor Groesbeck's administration is to be given credit for no other accomplishment, certainly his road building program and the changes he has made in the plans under operation when he took over the office have been commendable. He can well point with pride to the fact that under his administration only $2,000,000 have been issued for highway bonds; that he has placed several hundred prisoners on the roads and that a greater mileage has been built at a lower cost than at any time since the complete highway program was adopted.

Having given the Governor credit for what he has done for good roads we must necessarily take him to task for vetoing the gasoline tax which has now been adopted by most of the states having a large registration of automobiles and trucks. There is every good reason for a gasoline tax. Lieutenant-Governor Thomas E. Reed, speaking at the Farmer's Picnic at Bear Lake, Manistee County, said recently, "The gas tax is the only fair method of paying for Michigan's great highway program, considering the fact that people from all over the continent drive over the highways of the state, and I believe that we will have that law in the near future."

We harbor the idea that even the Governor himself regrets now the action he took and is trying to make amends for it in the hope that he can have a successful highway building program well under way before the next legislature meets, when it is a certainty the gasoline tax will be inaugurated in this state.

MICHIGAN NEVER SO PROSPEROUS

DEPOSITS in Michigan's 572 State banks, two industrial banks and 12 trust companies which declined $93,305,350.26 during the year ending September, 1921, are now, as shown by a statement issued by the Michigan Department of Banking as of Acts 10, this year, to be the largest in the history of the State.

The recovery from the decline in the year of the last quarter of 1920 and the first three quarters of 1921, has been continuous. From Sept. 15, 1922, to Oct. 10, 1923, just 13 months the increase has been $124,481,258.94, of which $40,818,0085.15 was in commercial deposits and $83,693,285.79 in savings deposits.

For the five-year period the increase in commercial and savings deposits combined has been nearly 100 per cent, or from $59,724,468.65 to $1,099,375,782.21.

And not all of this increase has been registered from the cities of Michigan either! Country banks report that a large proportion of their obligations from farmers have been liquidated and in the face of the agricultural calamity howlers, farmers have largely paid up the money borrowed during the periods of so-called "good-times".

PUBLISHER'S DESK

AN EXCEPTION TO PROVE THE RULE

THERE is an old adage that "There is an exception to every rule" and it mav be that we have found it in the case of the knitting machine manufactured by the Home Profit Hosiery Company, Rochester, New York.

Late in October, at the earnest solicitation of our New York representative, the publisher stopped off at Rochester and visited the five-story home of this company. We met Mr. H. B. Watson, the general manager, and through his courtesy were able to make a careful investigation into the manufacture of the machines, the plan of selling to the user, the method of collecting the home work, supplying the raw material and paying for the work done. We also saw the finished work, as sent in by women from all parts of the country, being sterilized, matched, pressed, wrapped and placed in standard attractive hosiery boxes for the retail trade.

There was every indication that a legitimate work-at-home business was being operated here and that this company has many hundreds of satisfied operators who are shipping their material regularly, was demonstrated.

We have always stated in these columns that it was not the desire of the Publisher to use this department to work an injustice on any industry because of the misconduct of any individual in that industry.

We have had a great deal to say about auto knitters and yet we must confess that we have never had a complaint registered against the Home Profit Hosiery Company, although we have had any number against other companies in this same line, many of which we have adjusted to the satisfaction of our readers, but not without some pressure being brought to bear from this office.

We have the assurance of Mr. Watson that the interests of our readers will always come first and that they must be satisfied before he will consider the transaction closed. Under these circumstances we feel that it is no more than right that we should state the facts as we found them on a personal visit to this company at Rochester, and we should be pleased to hear from any of our readers who are familiar with it or who are now employed by it.

A NEW ONE FROM ILLINOIS

I wish to know if you can tell me anything in regard to the reliability of the Bankers Investment Bureau, 320 E. Clay St., Roodhouse, Ill., which claims to furnish a list of over 200 land buyers' names and addresses for two dollars and claim they do not charge any commission for selling your land in this way. In the first place I answered an ad in the "Lansing State Journal" of Mrs. W. Roberts of 320 E. Tray, Roodhouse, Ill., and when my answer came it was from the Bankers Investment Bureau, 320 E. Clay St., Roodhouse, Ill., and made me a special offer of over 200 names of buyers if I would send in within a certain date and as I didn't pay any attention they sent me a second letter which I will enclose for you to see, and extended the special price offer to Oct. 16. Will you please let me know what you can about this as soon as possible.—F. Y., St. Johns, Mich.

IN the first place if the Bankers Investment Company had the right kind of a proposition and buyers waiting for your farm they would not need to advertise under a fictitious name and a fictitious address to secure business. Legitimate business houses do not stoop to such methods.

In the second place if they were certain of selling your farm to one of their two hundred buyers as their circular would indicate, they would be glad to offer to do all of the work for a three or five per cent commission, which you would probably be glad to pay, on the actual sale of your property. Like most concerns of this kind we figure that the chief revenue of the Bankers Investment Bureau is the two dollars for listing which they receive from those who fall for their scheme. We suggest that you spend this two dollars in advertising in your local county paper or your state farm paper. We have known of a great number of farms to be sold on this basis but we never have known one to be sold by the kind of scheme that the Bankers Investment Company have offered to to you.

SELLING STILLS BY MAIL

"Is it any wonder that the manufacture of home brew prospers when advertisements like the enclosed card, are promiscuously circluated thru the mails?"

AND the circular our good friend encloses is headed "New Model Boiler and Storage Can", but the picture is of a copper still already to hook on the coil and altho the type plainly states that it is for boiling and storage, anyone with a child's intelligence would know that it is for making whisky.

But if there were any doubt left in your mind as to the intent of the machine advertised, it would be quickly dispelled by the announcement of copper-tubing at 30c per foot and "Liquor Flavouring Extracts: Rye, Bourbon, Scotch, Irish, Gin, Brandy, etc., at 75c per bottle" which appears on the same circular.

Now mind you, this circular was delivered by a United States government employee in the mail-box of a farm home which had not asked for it and had no desire for it and yet, if purchased, it would be shipped again through the governments mails to their door-step. A complete rum-making outfit that would terrorize a neighborhood and give the sheriff a merry chase to discover it!

No, dear madam, it is no wonder that there is almost as much drinking of alcoholic liquors in many sections as there was before prohibition, when circulars of this kind flood the mails and every city and town has its "Malt and Hop Stores" which sell the identical material this circular offers.

SELF-HELP

"The Pelman Institute wants $39.00 cash out of me for a course in Pelmanism. I am interested in almost anything that leads to mental and financial advancement. Do you think this Pelmanism is real goods and worth the money, or is it a fake?"

I HAVE read over the circular you sent with your letter and altho I do not doubt but what the Pelman books are valuable if you will read them, I am sure that you can get just as much good value by asking for the right kind of books at your local public library, and you will be ahead just $39.00 cash that they ask you for the course.

If you have money to burn, maybe you can get full value out of this course, but our experience is that most people sign up for these correspondence courses and never finish them. There is no question but what they are valuable, but they are only worth as much as you put into them. Ask your local library for some of Orison Swett Mardens books on self-help, nothing better was ever written.

SAVED MANY TIMES

DEAR Editor: You will find enclosed one dollar to extend my subscription two years. We like THE BUSINESS FARMER it has saved us many times the cost. I wrote to one of the knitting machine concerns intending to purchase one but after reading about them in M. B. F., I wouldn't venture. I was also going to write Warren McRae, but think I will let such men alone. A word to the wise is sufficient, and your paper is always on time with the best of advice. We farmers have hard enough times as it is without being taken in on these gilt edge advertisements. Let the good work go on and may many more be benefited by your timely warnings.—G. M. H., Cadillac, R. No. 2, Mich.

Steel rail mills of the country, with one exception, are booked to capacity until next June. Railroads are expected to place between 20,000 and 25,000 cars and considerable tonnage of track fastening.

Farm Financing.....

Every farmer should know the United States Government authorizes

The First Joint Stock Land Bank
of Cleveland

To make long time farm loans, at lowest rates of interest, WITHOUT COMMISSIONS, repayments to be on easy plan of 1% per year in addition to interest. Loans authorized:

1. Up to 50% of the land.
2. Up to 20% of amount insurable buildings add to land.
3. To farmers who own good and well managed security.

Loan value determined by a Government appraiser. Thus the government protects the farmer by determining the value the land, limiting interest rates, prescribing the terms and conditions of the loan, and by prohibiting commissions. For complete information of this opportunity to save money write

D., Minn., Ohio, Ind., Ill., Wis., Mich., Iowa, Nebr., Mo., Kan., or Okla. Give corrrect names and addresses. Write plainly. This offer is open only to one person in each family. Only one list of 8 names wanted from each person; no one person may receive more than one pencil. Offer not open to those who sent list of names previously unless different names are sent. SUCCESSFUL FARMING, 193 Success Building, Des Moines, Iowa

What the Neighbors Say

TWO MANY WILD THEORIES

EDITOR—A man who was supposed to be one of the leaders in trying to form a National Farmer-Labor party said in a recent speech that he didn't favor a Farmer-Labor party but favored farmers and laborers uniting against the predatory interests.

Now I protest there are no predatory interests that form any class of the people in this country. Such statements foment class hatreds and are used to exploit votes. One of our great blessings in this country is an abundance of capital and efficient business and I believe the capitalist and businessman are just as honest and patriotic as the farmer and laborer.

Of course, there are some bad men in all classes. If it were not so we wouldn't need punitive and regulatory laws. Many statements commonly made to influence voters have no foundation in fact. One such is the goverment guaranty of railroads. Now the government doesn't guarantee the railroads anything, not even immunity from strikes and hold-ups.

It is said the Esch-Cummins law should be repealed. Do they mean the railroads should be left without any regulation whatever? It seems to me it should be amended and strengthened so that differences could be composed, strikes averted, and the people provided with continuous and efficient transportation.

The Federal Reserve Board is denounced and blamed for deflation of prices of agricultural prices. The Federal Reserve law was passed for the express purpose of providing an elastic currency. Anyone can see that it took more money to carry on business during the war with its high prices and intense activity than now. That it takes more money to move the wheat crop when wheat is $2.00 per bushel than when it is only $1.00 per bushel. There is plenty of money with which to do business and the Federal Reserve Board is in no way to blame for the low price of farm products. Inflation of the currency is one of the greatest catastrophies that can happen to any country.

The commission to value railroad property, the Railroad Labor Board, the Interstate Commerce Commission, the Supreme Court, the Judiciary, Judges and Legislators, in fact every government agency in sight is denounced and yet they demand government ownership of everything.

We want neither commission nor facistism in this country but we will have both if any considerable amount of the wild theories advocated at the present time are enacted into laws. The recent experience of Italy along those lines should be a lesson to us. —K. S. Wood, Boyne City, Mich.

STATE PENSION FOR OLD

MR. EDITOR:—Why not pension the old rather than some of these young widows? I know one who has four children and is drawing $25.00 per month and also keeping house for a widower with three children. He is a strong man able to support them without her getting $25.00 per month. When they get pension why do they give it where two families agree to live in the same house as one family? She said she has been advised to live so and still draw a pension. If the state upholds such why not pension the helpless? There are some who think she is not entitled to it.—A Reader, Fenwick, Mich.

NO SMALL CHILDREN WORKING IN BEET FIELDS

DEAR EDITOR:—I have just read about your child labor in the Michigan beet fields. I think that fellow is trying to raise a big stink to help destroy our sugar industry. I think he is the one the state police should square up. I have spent the biggest part of my life on the farm and have failed to find one child of five or six years old that does much in the sugar beet fields. I have one that is nine years old and every time he has a chance he is in the field doing something and he is a lot better off there than if he was in the city doing mischief or getting crippled up by machines or sticking his nose where he has no business. We have too many people now who are trying to make a living now spreading all kinds of propaganda. They are the ones that ought to be attended to first. I will say again that a child of five or six years old cannot top beets. He might happen to pick up a knife to play with and hurt himself with it, that is how accidents happen. For weeding they are no good at that age, they might try but that is all.—Joseph Fargett, Bay County, Mich.

MADE SOME PROGRESS IN PAST 50 YEARS

EDITOR—The present situation for the farmer can not continue. California farmers are letting their fruit rot on the trees for the wholesaler is not placing orders with the canneries.

If the farmers could organize and do as factory owners do—put a price on their crops—and then the state could set a maximum price farming might be different. Say a bottom price of 60 cents per bushed and a top price of $1.00 per bushel fob the farm for the potatoes—a bottom price of $1 and a top price of $1.50 per bushel for apples fob the farm; a bottom price of $1 and a top price of $1.50 for wheat fob the farm; 60 and 80 cents for oats; so that the city dweller would know the spread between farmer and consumer and stop speculation and corners. Also stop robbing the city man with $4 or $5 per bushel crops when there is a food shortage.

The North Carolina Farmers Union shows that there was a refusal by the Secretary of Agriculture to permit Dr. Spillman's cost of Production figures for farmers to be printed. That farmers were supposed to produce and know nothing.

While the world has so far been ruled by fear, and kept in darkness by ignorance and false doctrines, yet we have made some progress in the last 50 years. We have abolished negro slavery, the saloon, stopped gambling on horse racing, closed the Louisana lottery, given the vote to women, adopted Initiative and Referendum in 16 states, and in spite of Mutt and Jeff, the movies, divorce scandles in the dailies, and the base ball and prize fight scores, Lincoln was right when he said you could not fool all the people all the time. There is considerable sober thinking going on today.—Ezra R. Averill, R. 5, Grand Rapids, Mich.

BUSINESS BACKING THE BIBLE

DEAR EDITOR:—I am quoting the following from the Literary Digest of March 13, 1923. The references to the Bible are my own:

" 'The only sure foundation for business and national safety is not great and plentiful markets, ships on the seas and trained forces to protect and maintain our interests at home and abroad, but religion,' and it is not a denominational journal which tells us this, but a business publication. Recently the attention of the Manufacturers' Record (Baltimore) was called to a revival which is reported to be sweeping over Mississippi, and, in the words of Howard S. Williams, Editor of the Hottersburg American, to be creating 'a better feeling in Mississippi today between men of all classes than ever before.' The Record feels therefore, a moral compulsion to note the phenomenon is of more than local or passing interest. 'The very foundation of individual, national and worldly prosperity,' says the Baltimore periodical, 'is religion.' 'Without the guiding influence of religion and the power it has over mankind this nation would soon sink back into barbarism, and no business in it would be safe. Eliminate from any community the churches and property of all kinds would become worthless.' This we are told is the lowest point of view from which to study the influence of religion on the individual or on the world. The Record emphasizes its views by asserting: 'This country needs a genuine revival (individual nationwide) of old time religion—the religion that accepts the teachings of the Bible as Divine; a religion that makes the employer honest with his employees and the employee honest with his employer; a religion that makes every adherent of it through and through honest and honorable, in every transaction and in every relation of life; a religion which uplifts, which makes men realize that in the literal fulfilling of the teachings of the Golden Rule there is safety, and nowhere else is there safety for business or for society. The lack or absence of this kind of religion takes from men the moral backbone to stand out in the open and fight wrong wherever intrenched, regardless of their personal or business safety. Every man who seeks to fight wrong under the guise of some secret organization hasn't the moral courage to fight in the open and lacks the inspiring power of true religion. The spirit of the Golden Rule must dominate every factory and every farm. The man who cheats, sells bad goods or who tries in any way to take advantage of another, is by that fact sapping his own moral fiber. Only through a nation-wide revival of the religion of the Cross brought about by an individual confession of sin and turning from our wicked ways can save the work from chaos. The world is in turmoil through failure of religion to function fully in our hearts and lives.' " 2 Tim. 3:1-5; 1 Tim. 6:6-10; 1 John 1:8-10; Luke 6:31—M. A. C., Grand Haven, Mich.

RADIO DEPARTMENT

FARM RADIO NEWS COVERS COUNTY

AGRICULTURAL reports are now being broadcast by radio telegraph as well as by radio telephone direct from the United States Department of Agriculture at Washington through the Arlington radio station. The new service is designed to speed up the dispatching of market news and is the result of co-operative arrangements with the Navy Department to establish remote control stations in the Department of Agriculture.

With the use of radio and wire telegraphy the Department of Agriculture has established the most complete and efficient market news service to farmers and other agricultural interests developed anywhere in the world. Farmers in practically any section of the country can now receive reports of agricultural prices and movements at the leading market centers the same day, and in many cases within a few hours after the news develops. Trained market reporters in the markets collect the information and file it for immediate dissemination by telegraph and radio.

"FARMING AIN'T WHAT IT USED TO BE

A RECENT issue of the New York Herald tells about George Elkins, Buncombe, Ill., who at 97 years of age is declared to be the oldest active farmer in the country. He has affidavits to prove that for 75 years he has been working the farm on which he lives. His first "forty" was acquired during the presidency of Millard Fillmore. His next 120 acres cost him only 12½ cents an acre.

Says Mr. Elkins:

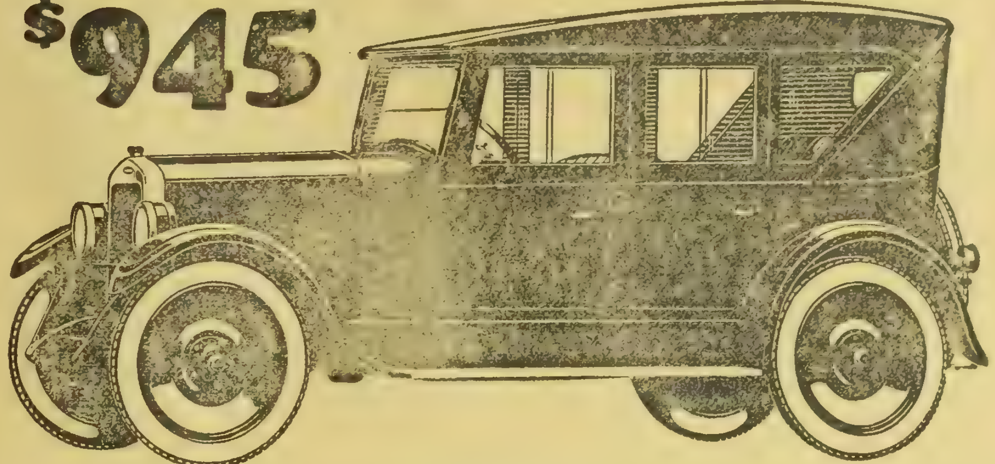
"If a person is always getting mad and worrying about little things that come up it's bound to cut down his years. Some folks spend all their time using themselves up trying to get even with the other fellow. There has been a heap of changes in the last eighty years. Farming ain't what it used to be. Even fifty years ago. When I first started we could raise ten bushels of corn on the same amount of land it takes for three bushels now, and we didn't have a whole lot of newfangled things to put it in with either."

Mr. Elkins' chief criticism of his business is that the same amount of land which produced 10 bushels of corn 50 years ago, gives him only three bushels today. That is, if 50 years ago Mr. Elkins raised 50 bushels of corn per acre, today he is getting only 16 or 17 bushels. No wonder he complains! And he is quite right: Farming ain't what it used to be!

In some way we did not receive the September 29th issue of your paper. We missed it. Please may we have a copy? Your paper is read by us all and we do enjoy it. So thankful it is a clean, wholesome paper, trying to help instead of hinder.—Bruce Barron, Kent County, Michigan.

Oakland Six Touring Car

$945



Glass Enclosed Comfort

for only $60 *more*

For only $60—you can equip any True Blue Oakland Touring Car with a new Glass Enclosure designed by the factory, and built to fit perfectly with Oakland's new-type permanent top and its weather-tight windshield.

This Glass Enclosure is quickly installed or removed, and is absolutely rattle-proof. Only your own eyes can fully tell you how perfectly it fits, how fine it looks, and how comfortable it is on cold and stormy days.

Farmers will particularly appreciate its sturdy construction—its ability to provide all of the comforts of a closed car, and yet to negotiate the roughest roads and steepest hills with the ease and agility of an open car.

See this Enclosure installed on a True Blue Oakland Touring Car—the car with the highly developed six-cylinder engine, the sound and simple four-wheel brakes and the centralized controls. See it at your dealers—its usefulness and comfort will truly amaze you!

RHEUMATISM

A Remarkable Home Treatment Given by One Who Had It.

In the year of 1893 I was attacked by Muscular and Sub-acute Rheumatism. I suffered as only those who are thus afflicted know, for over three years. I tried remedy after remedy, but such relief as I obtained was only temporary. Finally, I found a treatment that cured me completely, and such a pitiful condition has never returned. I have given it to a number who were terribly afflicted, even bedridden, some of them seventy to eighty years old, and the results were the same as in my own case.

I want every sufferer from any form of muscular and sub-acute (swelling at the joints) rheumatsim, to try the great value of my improved "Home Treatment" for its remarkable healing power. Do not send a cent; simply mail your name and address and I will send it free to try. After you have used it and it has proven itself to be that long-looked-for means of getting rid of such forms of rheumatism, you may send the price of it, one dollar, but understand, I do not want your money unless you are perfectly satisfied to send it. Isn't that fair? Why suffer any longer when relief is thus offered you free? Don't delay. Write today.

The Children's Hour

INDOOR MAGIC

Magician's Maxim: Never tell your audience what you are going to do before you do it.

* * *

Can you "palm" a coin?

This is the first thing for a young magician to learn.

Place a quarter in the palm of your hand. Grip it by pressing the ball of the thumb upwards. Practice till you can hold a coin this way, even when your hand is upside down, without seeming to have anything there at all. Many tricks are based on this—for instance:

Magic Production of a Coin: Come forward with a coin palmed in your right hand. Show your left hand, back and front, as empty. Then, as if to emphasize what you say, give it a slap with your right, leaving the coin. Now show your right hand empty, at the same time pulling up your sleeve with your left to mask the presence of the coin.

Close your left hand and, after one or two passes over it, produce the coin.

OUR BOYS AND GIRLS

Dear Uncle Ned:—As I haven't written in quite a while I thought I would write a few lines. How is the weather down there in Mt. Clemens lately? It is kind of rainy here. It has rained here for two or three days now and I hope it will quit now pretty soon. Well I suppose most of the boys and girls are getting ready for Halloween now. Pretty soon they will have to be getting ready for Christmas, and probably it won't be long before the ground will be white instead of brown. I wish some of the boys and girls would write to me. The trees begin to look like fall now don't they, with different colored leaves on them?—Lawrence Chapman, 923½ Pine Ave., Alma, Michigan.

Dear Uncle Ned:—I have never seen a letter in your paper from our town, Marcellus, and I fear that some of you may not know there is such a place, it is for that reason that I am writing. I have read "The Children's Hour" for some time and enjoy it immensely. I live on a farm near Marcellus, and I am in high school. Uncle Ned, I have often wondered just what kind of a person you really are. I read of the romance brought about through your page in the M. B. F. and I think that you should feel quite encouraged. I am not going to sign my name but to anyone who will write me through the page of the M. B. F. as "The Marcellian" I should be very glad to carry on a correspondence with. I suppose I have taken space enough but I guess I forgot to tell you that I am a girl. I am hoping that this little missive won't find its way to your waste paper basket or I shall surely feel that Marcellus is not on the map. I hope I'll see in one of your near future issues a letter headed "The Marcellian" from someone, and I surely will answer it with joy. Bye-bye.—"The Marcellian."

Hello Uncle Ned:—I hope you have room on your page for a little northeastern girl to settle her letter in. Or maybe it'll settle in Mr. Waste Paper Basket. Well, Uncle Ned, I have been a silent reader of the M. B. F. and the Children's Hour for over four years. But the reason I did not write was that I did not know your address, until this week's issue and right at the top of the page I saw it. I live on the farm with my mother, father and three sisters. I suppose there is someone who would like to know what I look like. I am a girl of 13 on the 13th day of May. Have I a twin? I have blond hair (which is bobbed) a very light complexion, am 4 feet 11 inches tall, weigh 113 pounds. The autumn leaves are beginning to fall again. My but this summer has gone fast, hasn't it, Uncle Ned? School has started again. I go to school every day. I am in the 8th grade. Well Uncle Ned I will have to close for this time as it is my bedtime. With love to all. Your niece,—Leona Seder, Alger, Michigan. P. S.—Boys and girls, write to me.

Dear Uncle Ned:—I have been a silent reader of the boys' and girls' page for several years. I attend the North Branch high school and will be a senior next year. The 13th of July I was seventeen years old. I am a blonde and have light brown hair, brown eyes, and weigh one hundred and ten pounds. One of my four brothers and two of my three sisters are married. I live on a 160-acre farm, two and one-half miles from North Branch. I would like to hear from some of the boys and girls and promise to answer all letters received. This is getting rather long for my first attempt so I will say good-bye. Your niece,—Teresa Kreiner, North Branch, Michigan.

Dear Uncle Ned:—Please send Mr. Waste Basket on an errand so he will not see this. I read all of the letters from the boys and girls page and enjoyed them very much. As it is the custom, I will describe myself. I will be 16 on Thanksgiving Day, am 5 feet and 9 inches tall and weigh about 140 pounds. I live on a farm of 80 acres and help my father with the farm work. The answer to Doris Margaret Scott's riddle is a "well". I have one sister who is older than I. I will enter high school this fall. Well I will close with a few riddles: Round as an apple, busy as a bee, prettiest little thing you ever did see. If you throw a stone into the water what does it become? I would like to hear from some of the boys and girls. Well, good-bye to you. Your nephew,—Lloyd Laubaugh, R. 3, Delton, Mich.

Dear Uncle Ned:—May I enter your merry circle? I wrote you once before, two years ago, but I hope you won't care because I am writing again. I will describe myself: I have dark brown hair, dark brown eyes, am 4 feet and 6 inches tall, weigh 64 pounds, will be in the eighth grade next year, and will be 13 years old the 27th day of October. Have I a twin? If so write, and I will surely write you a big letter. We have lots of tame rabbits here. Do you like rabbits, Uncle Ned? I do, and can get ours to sit right in my lap. I also like poetry, flowers, and small children. My best friend has moved away to Muskegon, and I miss her so. I dread to start to school on that account. My father works at Bamfield, but my mother, my sisters, Gladys and Sherlie, and myself are on the farm. Hoping my letter escapes the waste basket, I remain, your loving niece.—Leah Corbin, Stanwood, R. 1, Michigan.

Making Chair Castors From Bottle Caps

BOTTLE caps may be fastened to the ends of chair or table legs in such a way that the furniture may be pushed over the floor or carpet easily, and the floor will not be scratched nor the carpet torn. These bottle cap castors will be found both strong and durable.

Get four bottle caps and four short flat-headed nails. The cork lining should be left in the caps.

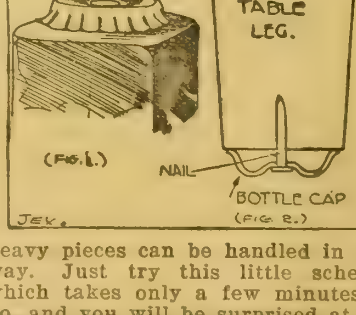
Turn the chair or table upside down, so that the ends of the legs are uppermost. Make a hole in the center of each leg, preferably with an awl or drill. Failing these tools, drive a nail part-way in and then pull it out, straight.

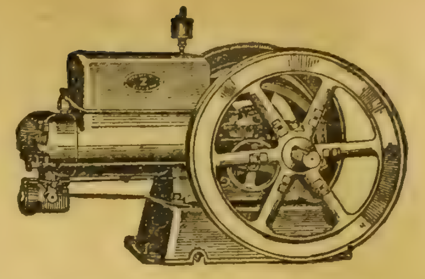
Place a bottle cap on the end of each leg and drive a nail carefully through the center, so that the nail enters the hole already made in the wood. Drive carefully until the head of the nail is level with the bottle cap.

Now hold the blunt end of a large nail on the head of the nail in the bottle cap, and then hammer on the point of the large nail until the head of the smaller nail is driven down below the level of the bottle cap, as shown in Fig. 2. Take care not to dent or wrinkle the tin bottle cap in any way.

You have thus made a polished surface on the bottom of each leg of the piece of furniture.

When you have fastened all four bottle cap castors in this way, turn the chair or table over and see how easily it slides over the floor. Even heavy pieces can be handled in this way. Just try this little scheme, which takes only a few minutes to do, and you will be surprised at the results.





"Starts every time Hot or Cold"

FAIRBANKS-MORSE

'Z' engine

C. E. Sumner, Nettleton, Miss., says: . . . "Three years ago I bought a 'Z'. I have not spent one penny for repairs. It starts every time you call on it; makes no difference, hot or cold. Uses less fuel for power developed than any other I ever ran." . . . . R. H. Kingsbury, Fort Worth, Texas, says: . . . "I have been using a 'Z' engine for about three years for irrigation. I have never suffered a loss due to insufficient water."

Over 350,000 users have approved the "Z" Engine. No matter what your power requirements, there is a "Z" Engine to exactly suit your needs. Over 5,000 dealers carry these engines in stock and will save you money on freight.

1½ H. P. "Z"	(Battery Equipt)	$ 54.00

U. P. ADAPTED TO RAISE GREEN MOUNTAIN SEED POTATOES

THAT the soils and climatic features of the Upper Peninsula of Michigan are particularly adapted to the raising of Green Mountain certified seed potatoes; that there is an urgent and almost nation-wide demand for this variety of seed, and that the farmers of the Upper Peninsula of Michigan are overlooking an unusual commercial opportunity in failing to give more attention to this agricultural feature is the opinion Chris Bemis, Manager of the certified seed department of the Michigan Potato Growers Exchange of Cadillac, Michigan, who recently visited the peninsula in the interest of the seed potato production.

Mr. Bemis visited most of the agricultural communities throughout the peninsula, and in company with several of the county agricultural agents, visited some of the best potato fields.

"While it is true that there may be some over-production of common table stock, there is a decided lack of the certified seed potato variety, which is now in such urgent demand", Mr. Bemis declared. "We are receiving constant and urgent calls through our Exchange for carload lots of Green Mountain, Russett Rurals, Irish Cobblers, Early Ohio, and other varieties of certified seed potatoes from practically every section of the country.

"The great need right now is for the Green Mountain variety. We have had, for the most part, to meet the demands for the other certified seed variety from our lower Michigan fields. Green Mountain seed, however, is typically adapted to the soil and climatic conditions of the Upper Peninsula of Michigan. Thus far, we regret to say, only one potato grower in the Upper Peninsula of Michigan has met our inspection requirements, and that man is John Delongchamp of Champion, Mich., and we have purchased his entire crop for this year. We are making every possible effort to encourage the Upper Michigan farmers to adopt this feature of agriculture. We understand that a few have started in on the Russett Rural variety. We do not believe that this is advisable for the upper Michigan territory; largely for the reason that conditions in the lower peninsula are much more favorable for this variety, and we have been able to secure a more desirable product from that section of the state, and our demand for that particular type is not so urgent at this time.

"I could place ten carloads of certified Green Mountain seed today, if I could get them, at top market prices; and we could almost definitely assure raisers of Green Mountain seed a twenty to forty per cent increase on their income on each acre, as compared with the common table stock variety, which the upper Michigan farmers are now raising. We hope that next year will bring about some tangible results."

CLUB MEMBERS WHO FINALLY ATTEND COLLEGE

THE results of a survey to determine the number of former boys' and girls' club members enrolled or students at the Michigan Agricultural College has just been made public by R. A. Turner, the state club leader. At the opening of the school year in September there were 57 former club members in the freshman class, or 10.7 per cent of the entire enrollment for the class. In the sophomore class 27 were found that were former club members, or 6.8 per cent of the class. The junior class contained 2 less but the per cent of the class was 7.8. In the senior class the number dropped to 21 and the per cent to 7.7. The total number attending who were formerly members of boys' and girls' clubs was 130, or 8.4 per cent of the total enrollment.

THANK YOU!

Please accept my thanks for the good work you are doing and what you have done and are doing for me. If I can only afford one paper it shall be the good M. B. F. as I love it from cover to cover. It is such a good, honest, clean, large-typed paper. We are all in love with Curwood's stories. Please give us more of them. They are good, clean, manly stories. Yours truly,—Mrs. Jennie Quick.

Marketing Your Products

October in Michigan railroading is always the month of peak load. Coal is coming in; crops are rolling out. To so handle this additional traffic that it may be carried smoothly and without interruption to the normal year-round flow of raw materials and finished products is a task which finds every employee of Michigan's twenty-four railroads, keyed and ready.

Our personnel is at its highest point of efficiency.

Our rolling stock is in virtually 95% perfect repair condition.

Our road beds are in better shape than at any time since the disaster of Government operation. We have bought 620 miles of new rail this year.

Two seasons of prosperity of Michigan have permitted us to invest this year in new locomotives, cars and other betterments the record breaking sum of $75,980,881.26.

Despite restrictions such as handicap no other business, Michigan railroads are solving—not their problem—but the problem of transportation that naturally follows the industrial, social and economic expansion of a prosperous state.

Do you notice and experience this improvement in your transportation? Tell us frankly and fully.

Upon the attitude of you people of Michigan towards your railroad system rests much of the future prosperity of your state.

Edited by **MRS. ANNIE TAYLOR**

DEAR FOLKS:—I have been very anxious to have you know more about the Hot Lunches for the rural schools and although I am able to give you just a brief idea, because of space, I have some bulletins on this subject and would be pleased to send one of them to you. Be sure and read the Recipe column. It has our Thanksgiving Dinner and may have one or two new suggestions. Maybe you would like some special dish for Thanksgiving that you have thought of having but haven't the recipe. Write me and I will try and help you out. If you are using the hot lunches in your community I would appreciate any letters telling of how you manage so that we all may enjoy your advanced ideas.

Your Friend,
Mrs Annie Taylor

Address letters: Mrs. Annie Taylor, care The Business Farmer, Mt. Clemens, Michigan.

EARLY TRAINING

IN a basket, all day,
I must sleep the hours away;
And it does no good to cry,
For they simply let me lie.
No one rocks or coddles me;
I am being "trained" you see.

There are roses on the wall,
But the basket is so tall
I can only see the flowers
When, at the appointed hours,
I am lifted out with care,
To be taken down the stair.

After I am dressed and fed,
Back I go again to bed.
Sleeping, waking, there I lie,
And it does no good to cry.
I shan't have a bit of fun
Till this being "trained" is done.

EATING FOR HEALTH

AMONG the dietetically important vegetables—and one, moreover, that is always with us—is the cabbage. Cabbage is about nine-tenths water, and it requires three-fourths of a pound of cabbage, or about one serving, to furnish one hundred calories of heat to the body, while it requires less than one ounce of sugar to furnish the same amount. This sounds bad for cabbage, doesn't it? But let us look at it from another angle before coming to conclusions.

This serving of cabbage furnishes nearly one-third of the time needed in the day's rations. Sugar furnishes none, and the body needs lime to build bones, to make strong teeth and for other equally important purposes.

This serving of cabbage also supplies nearly one-fourth of the iron required by the body each day. The body requires only a small amount of iron, but the work accomplished by that minute quantity is of exceeding importance. Without iron, red blood corpuscles can not be formed; and without red corpuscles, the blood does not function properly.

Not only does this serving of cabbage furnish one-third of the day's lime and nearly one-fourth of the iron needed, but it also supplies over half of the phosphorus required by the body for the day's work, and phosphorus also is very essential to the proper functioning of the human mechanism.

But these are not the only advantages of cabbage. It is what is known as a bulky vegetable, and this bulkiness and certain laxative properties, together with its high iron and water content, help to prevent conditions that may cause putrefaction in the intestines.

In addition to this, nearly all of the cabbage is edible; only fifteen per cent has to be discarded as waste. As vegetables go, this is a comparatively low percentage of waste. There are only three in which the loss is lower—String-beans, onions and okra—while in several the loss is higher, green corn having a wastage of over sixty per cent and green peas nearly fifty.

In addtion to this, cabbage is a valuable source of the much-talked-of vitamins. But in this connection it is well to remember that cooking cabbage either in the pressure cooker or in boiling water destroys a percentage of the Vitamin C, the one that prevents scurvy. Therefore, cabbage that is served raw in the form of salad is a more valuable source of this vitamin than cabbage that has been cooked.

FOOD CALENDAR FOR NOVEMBER

DON'T forget that the proper seasoning for your Thanksgiving menu is a genuine spirit of thankfulness.

Be sure there's cranberry, grape currant or tart-apple jelly for the roast turkey dinner.

While the cranberry season is on, remember to can sauce and make jelly for other days. Cranberries are as good with summer meals as winter.

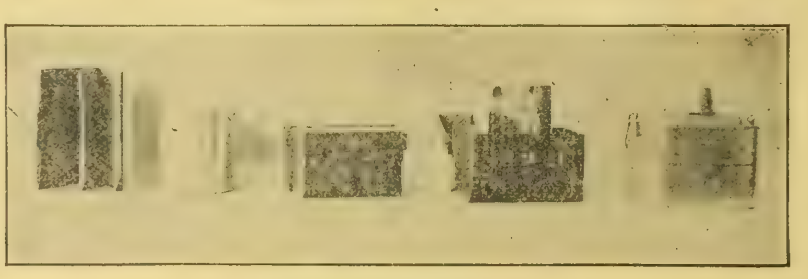
Start a jar of left-over slices of bread to have some ready for the turkey stuffing.

If you are so fortunate as to have partridge, pheasant or other game, you will need to use a stuffing rich in fat to relieve the dryness of these otherwise delicate meats.

For your Thanksgiving centerpiece tray a low Indian basket filled with fruits—oranges, pears, apples, bunches of grapes—and decorated with autumn leaves.

Another suitable centerpiece is a low bowl of oak leaves or short branches mixed with sprays of bittersweet.

Don't discard the fat from your Thanksgiving fowls. Clarified, it is an excellent shortening and may well be used in making white sauces to use with strong-flavored vegetables.



Good Bye, old Lunch Boxes!

Hot Lunch For Our Rural Schools

AS long as most of us remember the school lunch has been an incidental affair, I feel sure this article will have its appeal. There was an idea in cooking the meals that this and that would be left over and would be a good addition to the children's lunch. Often an unexpected guest or a hungry family would clean the platters and none of that wholesome appetizing food was left for our boys and girls and so again they had to take pot luck.

As one authority said recently:

"The installation of equipment for cooking something hot at noon in the rural schools is probably the greatest stride in maintaining public health that has ever been made.

"That sounds exaggerated, but it isn't. An examination of the children in several rural schools before the hot lunch was installed and again several months after it had been in operation revealed some startling facts.

"Before the hot lunch was put in, seven out of each ten children were in very poor physical condition, very susceptible to diseases and of low vitality, two out of ten were in fair condition and one was good. Then after several months of hot lunch, there were seven good, two fair and only one poor."

The hot lunch club has come to be recognized in many rural schools, as an essential part of the school program and a big step in this, the right direction, has been taken. In the city schools, where a great number come a long distance, they are serving regular hot meals at noon for a very small amount of money.

The hot lunch to be successful should have the co-operation and support of the entire community. The school board and the parents are most intimately concerned with this project, but such organizations as the Parent-Teachers' associations, the Grange, Farmers' Club, and the various Ladies' Aid Societies should be made to feel a vital interest in the undertaking.

If your school has no hot lunch system working for our boys' and girls' better health, why not invite the teacher and several of the mothers who are good at pushing things along and keep the telephone and the car busy until you get your school lined up and marching along by the side of the good ones for high standard of health.

I have some bulletins prepared by the Agricultural College that I will gladly send any of our readers who are interested enough to get this good work started. It tells just how to go about it and contains plans for inaugurating this important inovation and includes some receipes for meals.

The girls take turns at preparing the hot food.

MOTHER'S PROBLEMS

AS THE SCHOOL YEAR PROGRESSES

A GOOD start has been made on the school year. The novelty has all worn off; the children are settled down into the five days a week routine. It is not too early to ask yourself: "How are they standing up under school?"

Are colds becoming frequent occurrences? Is there a tired washed-out look to any of the little faces? Have you heard complaints of headaches? Viewing your children as an outsider, just how do they look to you, physically?

Perhaps you are fortunate enough to have a school-nurse or school-doctor who examines the children at intervals and reports their health condition to you; perhaps you must be the sole judge. Don't neglect any ill-health signs that may be appearing now. If there is a tendency to weariness, if weight has been noticeably dropped, endeavor to find out why.

Consider first of all the subject of sleep. Have the children been getting to bed early enough nights, considering that they can no longer sleep until they feel like getting up? Have there been too many parties and entertainments and evening trips to town for the little folks?

How about their food? Do they rush off without any breakfast, as I have known many children to do? Or do they eat for their morning meal such indigestible food as doughnuts and coffee and heavily greased potatoes or over-sweetened pancakes? Milk, toast, eggs and fruit, with a favorite cereal, should start their day for them. And if lunches are taken, they should contain nourishing bread and meat sandwiches, fruit and only a small proportion of sweets.

An abundance of sleep and of plain, simple, wholesome foods and of pure, fresh air, necessary for health at all times, is doubly essential when children are under the strain of school and of necessity must be "penned up" for hours with other children. Make sure that your children have all three!

WINTER GAMES

FOR mouths now there will be little time after school for outdoor playing. More and more the young folks will be in the house, and more and more will it become necessary to keep them occupied, and therefore, out of mischief. It is the season for indoor games. Are your children supplied with the most common ones?

Games are beneficial in many respects. Tiddledy-winks and jack-straws, those two old favorites, provide excellent training in judgment as well as muscle control. Dominoes and checkers are instructive as well as interesting. Old Maid and Authors sharpen the wits and quicken the memory. In even the most simple games there is real development made in the child's mind.

More important, however, than the mere educational value that games provide, is the moral training secured in friendly contests with other children. Sooner or later a child has to learn to accept defeat occasionly. Some children, to whom first place means very little, accept defeat too philosophically; others take their losses too hard. There is little to be done to help those in the first class, but a great deal can be done to help those who go down to defeat with tears in their eyes.

Usually that type of child derives the most benefit from the games he plays if he can play with a neighbor-child, rather than with his own brothers and sisters. If playing only with the children in his own family, he is too apt to give away to his emotions and create a scene because he didn't win—a performance detrimental, rather than beneficial, to him. But if playing with "outsiders" he will keep himself in control, will laugh at his defeat, and determine next time to win.

Watch should be kept over children at their indoor games. Cheating should be detected and severely reprimanded at once. Under proper supervision indoor games can teach generosity, fairness, determination, self-control and the ability to smile in the face of defeat.

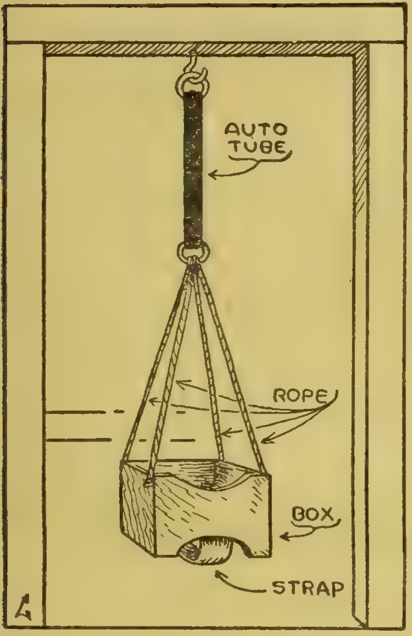
Personal Column

For the Lady who Knits Mittens.—Could you tell me if the lady (Celia Brennan) who knitted mittens last winter had her add in the M. B. F. is going to do so again? Would like some children's mittens knitted.

Helpful Handy Hints.—A long time ago I noticed a request for helpful suggestions so here are some things I have found helpful: A piece of wire clothes line with half a dozen spring clothes pins strung on and fastened behind the range, the small boy and big man will find it a good place to dry wet mittens and also to keep them where they can be found. The wife will not have to move them every time she sweeps. A short line with pins on is indespensible on the back porch, handy to hang dish towels and various small pieces on. A woodbox on casters with a piece of rope fastened to it is easily taken out on the porch to fill; saving several steps, it will take only a minute to wheel the box out. Of course a built-in box is better but we do not all have them.—A Subscriber.

Things Made at Home.—I put a screw hook in the top of door casing, for jumper.

I took a box the size I wanted, the box being twelve inches by fourteen inches wide and ten inches deep. The side I wanted for front I cut out and took off the bottom. I put a strap in the center so baby wouldn't slide out. I hollowed out front so it wouldn't be too high for baby to lean on. I took a rope and cut it in four pieces long enough to make jumper right height from floor; fastened these ropes to the corners of box and tied ropes in ring. On this ring I fastened an auto tube and on tube put another ring to hang in hook put in door casing. I also upholstered the box so it is comfortable for baby. She has a good time in her jumper.—Mrs. E. M. S.



RECIPES

THE THANKSGIVING DINNER

THANKSGIVING Day has long been called the first really American holiday. We all know it means giving thanks and is a day of feasting. All our crops are in and we have much to be thankful for.

I am giving you a Thanksgiving Day menu and some recipes of dishes that have always been great favorites with my family:

Celery Olives Relishes
Oyster or Fruit Cocktail
Roast Turkey, Giblet Gravy
Mashed Potatoes or
Candied Sweet Potatoes
Steamed Squash or Succotash
Cranberry Sauce
Jellied Vegetable Salad
Carrot Pudding or Pumpkin Pie
Coffee
Nuts and Raisins

OYSTER COCKTAIL

Eight small oysters, two drops Tabasco, one tabespoon tomato catsup, one teaspoon celery, finely chopped, one-half tablespoon vinegar or lemon juice, one-half teaspoon Worcestershire sauce.

Mix ingredients, chill thoroughly, and serve in cocktail glasses, or cases made from green peppers placed on a bed of lettuce.

ROAST TURKEY

DRESS, clean, stuff, and truss a ten-pound turkey. Place on its side or rack in a dripping pan or roaster. Rub entire surface with salt, and spread breast, legs, and

If every woman knew how good LILY WHITE FLOUR, *"The Flour the Best Cooks Use,"* really is, it would be impossible to sell any other flour *except* at a tremendous discount in price.

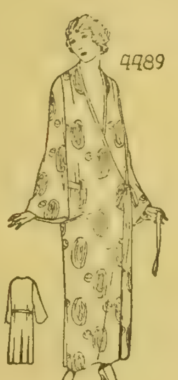
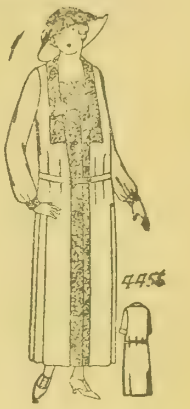
AIDS TO GOOD DRESSING

SEND IN YOUR SIZE

Lately some of you ladies have been sending for patterns without giving size. This means expense and delay for both of us. I hope you all realize the importance of sending in your size when asking for patterns.





4507. A Practical Play Dress for Tiny Tots.—Comfort and freedom are expressed in the style here illustrated. The model is good for gingham, seersucker, repp, pongee and kindergarten cloth. The bib and pocket, also the cuff may be omitted. The Pattern is cut in 3 Sizes: 6 months, 1 year and 2 years. A 1 year size requires 1⅞ yard of 36 inch material.

4456. A Slenderizing style for Women of Mature Figure.—Satin was used for this model. The revers collar, cuffs and panel fronts are braided in fine soutache. This style would be attractive in white or colored linen, with braiding or embroidery in a matched or contrasting color. The Pattern is cut in 7 Sizes: 36, 38, 40, 42, 44, 46 and 48 inches bust measure. A 38 inch size requires 5 yards of 40 inch material. The width at the foot of the dress is 2½ yards. To trim with contrasting material as illustrated, requires 1½ yards 40 inches wide.

4488. A House Dress "Neat and Trim"—The house dress of today has a very important place in the model wardrobe of every woman. The model here illustrated is suitable for the stout and slender figures. Gingham, crepe, ratine or printed cotton, as well as linen may be used for its development. The width at the foot is 2⅛ yards. The closing is at the left side in front. The Pattern is cut in 6 Sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38 inch size requires 4⅜ yards of 36 inch material.

4462. A Comfortable, Practical Style.—This is a good model for nainsook, crepe, crepe de chine or silk. The Pattern is cut in 4 Sizes: Small, 34-36; Medium, 38-40; Large, 42-44; Extra Large, 46-48 inches bust measure. A Medium size requires 2⅝ yards 36 inch material.

4489. A Model of Comfort and Grace.—Every woman appreciates the charm of a comfortable negligee such as here portrayed. The new figured, or embroidered silks are very smart for a garment of this kind, but silk or cotton crepe, corduroy, terry cloth, china silk or batiste, is also attractive. The Pattern is cut in 4 Sizes: Small 34-36; Medium, 38-40; Large, 42-44; Extra Large, 46-48 inches bust measure. A Medium size requires 6½ yards of 27 inch material.

4479. A Neat Apron for Many Occasions.—Lawn, batiste, dotted Swiss or silk could be used for this style. It is also attractive for cretonne, or chintz. The Pattern is cut in one Size: Medium, and requires 1½ yard of 36 inch material.

4505. A Youthful Stylish Design.—Here is a very pleasing model, with becoming lines and smart features. The style is suitable for the new figured silks, for moire satin, or jersey weaves. The Pattern is cut in 5 Sizes: 12, 14, 16, 18 and 20 years. A 16 year size requires 3⅝ yards of 40 inch material. To make belt and revers of contrasting material requires ⅝ yard of 40 inches wide.

4529. A Comfortable Suit for the "Little Man."—Flannel, jersey cloth, twill or serge could be used for this model. It is also good for wash fabrics. The blouse may be finished with the sleeve long, or in elbow length as illustrated. The Pattern is cut in 3 Sizes: 2, 4 and 6 years. A 4 year size requires 2¾ yards of 36 inch material. For collar and cuffs on long sleeves of contrasting material ⅝ yard is required, 27 inches wide.

4490. A Popular Practical Model.—Crepe, cambric, crossbar muslin and silk are suitable for this style. It is cut with comfortable fulness, and is good for slender and stout figures. The Pattern is in 4 Sizes: Small, 34-36; Medium, 38-40; Large, 42-44; and Extra Large, 44-48 inches bust measure. A Medium size requires 2½ yards of 36 inch material. For belt of elastic or webbing ⅝ yard 2½ inches wide. elastic or webbing ⅝ yard 2½ inches wide is required.

3575. Set of Garments for an Infant.—Pattern 3575 is here portrayed. It is cut in One Size and comprises a Dress, Barrie Coat, and Carriage Robe. The Dress will require 2½ yards of 36 inch material; the Barrie Coat 2¼ yards and the Robe 2¼ yards. Cambric, lawn and nainsook are appropriate for the Dress and Barrie Coat, and for the Robe eiderdown broad cloth, Bedford cord, silk, satin, or flannel may be used.

4472. A Pretty Apron for "Mother's Helper.—Figured percale in white and blue is here portrayed. The style is easy to develop and easy to adjust. The straps may be fastened to the belt with buttons or snap fasteners. The Pattern is cut in 5 Sizes: 6, 8, 10, 12, and 14 years. A 12 year size requires 2 yards of 27 inch material.

4452. A Unique and Stylish Model (for Slender Figures.)—Canton crepe in a pretty tan shade was used for this design, with bands of Persian embroidery for trimming. This is also a good model, for satin, taffeta, and moire. The Pattern is cut in 3 Sizes: 16, 18 and 20 years. An 18 year size requires 5¾ yards of 40 inch material. The width of the skirt at the foot is 2 yards.

Crossroads of Conversation

Could the telephone directory in the hands of each subscriber be revised from hour to hour, there would be no need for the information operator. But even during its printing and binding, thousands of changes take place in the telephone community. New subscribers are added to the list. Old ones move their places of business or of residence.

Though their names are not listed on the directory, these subscribers must be connected by the highways of speech with all others in the community. To supplement the printed page, there must be guides at the crossroads of conversation.

Such are the information operators, selected for their task because of quickness and accuracy, courtesy and intelligence. At their desks, connected with the switchboards in central offices, they relieve the regular operators from answering thousands of questions about telephone numbers that would otherwise impede the rendering of service. If they are unnecessarily asked for numbers already in the directory, service is retarded.

"Information" stands for the most complete utilization of telephone facilities.

wings with one-third cup butter, rubbed until creamy and mixed with one-fourth cup of flour. Dredge bottom of pan with flour. Place in a hot oven with enough water to start and when flour on turkey begins to brown, reduce heat, and baste every fifteen minutes until the turkey is cooked, which will require about three hours.

For basting use one-half cup of butter melted in one-half cup boiling water and after this is used baste with fat in pan. Pour water in pan during the cooking as needed to prevent flour from burning. During cooking turn turkey frequently that it may brown evenly. If turkey is browning too fast, cover with buttered paper to prevent burning. Remove string and skewers before serving. Garnish with parsley or celery tips or curled celery rings and disks of carrots strung on fine wire. One year I strung cranberries and fastened around legs and wings and crossed the breast of the turkey and using parsley for my green color.

Turkey is often roasted with chestnut stuffing, oyster stuffing, or turkey stuffing (Swedish style).

CHESTNUT STUFFING

Three cups large chestnuts, one-half cup butter, one teaspoon salt, one-eighth teaspoon pepper, one-fourth cup cream, one cup cracker crumbs.

Shell and blanch chestnuts. Cook in boiling water until soft. Drain and mash. Add one-half the butter, salt, pepper, and cream. Melt remaining butter, mix with cracker crumbs, combine with mixture.

OYSTER STUFFING

Three cups stale bread crumbs, one-half cup melted butter, salt and pepper, few drops onion juice and one pint of oysters.

Mix ingredients in order given, add oysters, cleaned and drained from liquor.

TURKEY STUFFING
(Swedish Style)

Two cups stale bread crumbs, two-thirds cup melted butter, one-half cup of raisins, seeded and cut in pieces, one-half cup English walnut meats broken in pieces, salt, pepper and sage.

Mix ingredients in order given.

GRAVY

Pour off liquid in pan in which turkey has been roasted. From the liquid skim off six tablespoons fat; return fat to pan and brown with six tablespoons flour; pour on gradually three cups stock in which the giblets, neck, and tips of wings have been cooked, or use liquor left in pan. Cook five minutes, season with salt and pepper. For giblet gravy add to the above giblets, heart, liver, and gizzard finely chopped.

CHESTNUT GRAVY

To two cups thin gravy add three-fourths cup cooked and mashed chestnuts.

CRANBERRY JELLY WITH CELERY

Pick over and wash four cups of cranberries. Put in a stew pan and add two cups sugar and one cup boiling water. Bring to the boiling point and let boil twenty minutes; then force through a strainer. When mixture begins to thicken, fold in one and one-half cups celery cut crosswise of stalks in one-eighth-inch slices. Turn into a mould or moulds and chill. Remove from moulds and garnish with curled celery.

JELLIED VEGETABLE SALAD

Soak one tablespoon granulated gelatine in one-fourth cup cold water and dissolve in one cup boiling water; then add one-fourth cup, each, sugar and vinegar, two tablespoons lemon juice and one teaspoon salt. Strain, cool, and when beginning to stiffen, add one cup celery, cut in small strips, one-half cup shredded cabbage, one-third cup small cucumber cubes, one-fourth cup cold cooked green peas, and one-fourth cup cold cooked beets (cut in thin slices; then in fancy shapes). Turn into ring mould and chill. Serve on lettuce leaf or any green and use horseradish cream dressing. One-half cup heavy cream, 3 tablespoons vinegar, one-fourth teaspoon salt, few grains pepper, 2 tablespoons grated horseradish root. Beat cream until it begins to thicken, then add gradually vinegar, while continuing the beating. When mixture is stiff, add seasonings and fold in grated horseradish.

PUMPKIN PIE

One and one-half cup steamed and strained pumpkin, two-thirds cup brown sugar, one teaspoon cinnamon, one-half teaspoon ginger, one-half teaspoon salt, two eggs, one and one-half cups milk and one-half cup cream.

Mix ingredients in order given and bake in one crust.

CARROT PUDDING

One cup of raw carrots and one cup of raw potatoes, grated fine, one and one-half cup flour, one cup sugar, one cup raisins one cup currants or Sultana raisins, one tablespoon molasses, one teaspoon soda, one salt spoon each of cinnamon, nutmeg and allspice.

Steam three hours. Will serve ten or twelve persons.

Soup Recipe.—Two of our readers sent in the soup recipe for Mrs. Cronin and I hope you will all enjoy it: One-half bushel tomatoes, 14 stalks of celery, leaves and all; twelve stalks of parsley, leaves and all; eight bay leaves; twelve teaspoons salt; two tablespoons mixed spices; one-half teaspoon red pepper; one cup white sugar; boil until tender, then take seven onions fried in one cup of butter till tender and add to the mixture. Then take one and one-half cups flour stirred smooth in a little water, add to the whole. when thoroughly scalded and put through collander, heat and can.—Mrs. M. L. S.

—if you are well bred!

What to Avoid in Social Conversation.—Do not manifest impatience. Do not engage in argument. Do not interrupt another when speaking. Do not find fault, though you may gently criticise.

The Runner's Bible

(Copyright by Houghton Mifflin Co.)

Offer unto God thanksgiving; and pay thy vows unto the most high. And call upon me in the day of trouble; I will deliver thee, and thou shalt glorify me. —Ps. 50:14-15.

And one of them when he saw that he was healed, turned back, with a loud voice glorifying God; and he fell upon his face at His feet, giving Him thanks, and He was a samaritan. And Jesus answering said, Were not the ten cleansed? But where are the nine? Were there none found that returned to give glory to God, save this stranger?—Luke 17:15-18.

The world, and that includes those who call themselves Christians,—seem sadly lacking in gratitude. Even when it is felt, some are unwilling to humble themselves enough to express it; or what is worse, they are reluctant to give pleasure by such expression. Thanks, sincerely and humbly given, may be just the encouragement the receipient needs,—true, spiritual food. At least it will let in a little of God's sunshine upon a very dark world.

OH MONEY! MONEY!

(Continued from page 6.)

from babyhood, Mellicent never had her rattles till she wanted blocks, nor her blocks till she wanted dolls, nor her dolls till she was big enough for beaus! And that's what made the poor child always look so wall-eyed and hungry. She was hungry—even if she did get enough to eat."

"Mrs. Blaisdell probably believed in—er—economy," hazarded Mr. Smith.

"Economy! My stars, I should think she did! But, there, I ought not to have said anything, of course. It's a good trait. I only wish some other folks I could mention had more of it. There's Jim's wife, for instance. Now, if she's got ten cents, she'll spend fifteen—and five more to show how she spent it. She and Jane ought to be shaken up in a bag together. Why, Mr. Smith, Jane doesn't let herself enjoy anything. She's always keeping it for a better time. Though sometimes I think she does enjoy just seeing how far she can make a dollar go. But Mellicent don't, nor Frank; and it's hard on them."

"I should say it might be." Mr. Smith was looking at the wistful eyes under the long lashes.

" 'Tis; and 't ain't right, I believe. There is such a thing as being too economical. I tell Jane she'll be like a story I read once about a man who pinched and saved all his life, not even buying peanuts, though he just doted on 'em And when he did get rich, so he could buy the peanuts, he bought a big bag the first thing. But he didn't eat 'em. He hadn't got any teeth left to chew 'em with."

"Well, that was a catastrophe!" laughed Mr. Smith, as he pocketed his notebook and rose to his feet. "And now I thank you very much, Miss Blaisdell, for the help you've been to me."

"Oh, you're quite welcome. indeed you are, Mr. Smith," beamed Miss Blaisdell. "It's done me good, just to talk to you about all these folks and pictures. I've enjoyed it. I do get lonesome sometimes, all alone, so! and I ain't so busy as I wish I was, always. But I'm afraid I haven't helped you much—just this."

"Oh, yes, you have—perhaps more than you think," smiled the man, with an odd look in his eyes.

"Have I? Well, I'm glad. I'm sure. And don't forget to go to Maggie's now. She'll have a lot to tell you. Poor Maggie! And she'll be so glad to show you!"

"All right, thank you; I'll surely interview—Miss Maggie," smiled the man in good-bye.

He had almost said "poor" Maggie himself, though why should she be poor

PHILIPSBORN'S
DEPARTMENT 528 - CHICAGO

Maggie had come to be an all-absorbing question with him. He had been tempted once to ask Miss Fora, but something had held him back. That evening at the supper table, however, in talking with Mrs. Jane Blaisdell, the question came again to his lips; and this time it found utterance.

Mrs. Jane herself had introduced Miss Maggie's name, and had said an inconsequential something about her when Mr. Smith asked:—

"Mrs. Blaisdell, please,—may I ask? I must confess to a great curiosity as to why Miss Duff is always 'poor Maggie.'"

Mrs. Blaisdell laughed pleasantly.

"Why, really, I don't know," she answered, "only it just comes natural, that's all. Poor Maggie's been so unfortunate. There! I did it again, didn't I? That only goes to show how we all do it, unconsciously."

Frank Blaisdell, across the table, gave a sudden emphatic sniff.

"Humph! Well, I guess if you had to live with Father Duff, Jane, it would be 'poor Jane' with you, all right!"

"Yes, I know." His wife sighed complacently. "Father Duff's a trial, and no mistake. But Maggie doesn't seem to mind."

"Mind! Aunt Maggie's a saint—that's what she is!" It was Mellicent who spoke, her young voice vibrant with suppressed feeling. "She's the dearest thing ever! There couldn't be anybody better than Aunt Maggie!"

Nothing more was said just then, but in the evening, later, after Mellicent had gone to walk with young Pennock, and her father had gone back down to the store, Mrs. Blaisdell took up the matter of "Poor Maggie" again.

"I've been thinking what you said," she began, "about our calling her 'poor Maggie,' and I've made up my mind it's because we're all sorry for her. You see, she's been so unfortunate, as I said. Poor Maggie! I've often wished there was something I could do for her. Of course, if we only had money—but we haven't; so I can't. And even the money wouldn't take away her father, either. Oh, mercy! I didn't mean that, really—not the way it sounded," broke off Mrs. Blaisdell, in shocked apology. "I only meant that she'd have her father to care for, just the same."

"He's something of a trial, I take it, eh? smiled Mr. Smith.

"Trial! I should say he was. Poor Maggie! How ever she endures it, I can't imagine. Of course, we call him Father Duff, but he's really not any relation to us—I mean to Frank and the rest. But their mother married him when they were children, and they never knew their own father much, so he's the only father they know. When their mother died, Maggie had just entered college. She was eighteen, and such a pretty girl! I knew the family even then. Frank was just beginning to court me.

"Well, of course Maggie had to come home right away. None of the rest wanted to take care of him, and Maggie had to. There was another Duff sister then—a married sister (she's died since), but she wouldn't take him, so Maggie had to. Of course, none of the Blaisdells wanted the care of him—and he wasn't their father, anyway. Frank was wanting to marry me, and Jim and Flora were in school and wanted to stay there, of course. So Maggie came. Poor girl! It was real hard for her. She was so ambitious, and so fond of books. But she came and went right into the home and kept it so Frank and Jim and Flora could live there just the same as when their mother was alive. And she had to do all the work, too. They were too poor to keep a girl. Kind of hard, wasn't it? and Maggie only eighteen!"

WASHTENAW CLUB MEMBERS BIG WINNERS AT FAIR

(Continued from Page 8)

judging. For the third time in as many consecutive years the team Washtenaw walked away with first prize in grain and corn judging at the State Fair this year. As a reward the winning members will have their expenses paid by the State Fair to the National Hay and Grain Show to be held in conjunction with the International Livestock Exposition. In garment making the girls from Washtenaw won third place. Also in the milking contest this county was represented and won second place. All seven trips offered at the State Fair to the International Livestock Exposition and National Hay and Grain Show at Chicago in December were won by boys and girls from this county. And their total cash winnings from state and county fairs this year amounts to $1,440.85.

Most important to the maintenance of prosperity is a fair day's work.

Red Squirrel Enemy of Useful Birds

IT is hard to believe that the handsome, agile, graceful red squirrel which adds such a picturesque note to our lawns and parks is an inveterate destroyer of the eggs and young of useful birds and spends much of his time in searching out nests among the trees. Such however are his habits and naturalists and sportsmen class him as one of the most vicious of all game destroying animals. In many places war has been declared on him by sportsmen who are particularly interested in ridding their neighborhood of "vermin," as the birds and animals are called which prey on useful species. A great mass of evidence has been collected against the red squirrel showing that his depredations are such as to make it necessary to keep down his number if insectivorous birds are to be allowed to flourish and help out in their useful work.

The late John Burroughs wrote of the red squirrel: "Nearly all the birds look upon it as their enemy and attack and annoy it when it appears near their breeding haunts. Thus I have seen the pewee, the cuckoo, the robin and the wood thrush pursuing it with angry voice and gestures. If you wish the birds to breed and thrive in your orchards and groves, kill every red squirrel that infests the place."

Dr. B. H. Warren of West Chester, Pennsylvania, formerly State Ornithologist of Pennsylvania and a naturalist of repute stated that some years ago when Thomas J. Edge was Secretary of Pennsylvania Department of Agriculture, he received complaints from a dozen or more farmers in different sections of Pennsylvania about red or pine squirrels destroying young chickens. Several also wrote Secretary Edge that this squirrel killed the young of domestic pigeons.

Prof. N. F. Davis, teacher of biology at Bucknell College, Lewisburg, Pa., had so much trouble with red squirrels killing nesting birds and eating their eggs about the lawn of the college campus where lots of trees flourish, that he shot some twenty of the nimble little red-coated murderers to end their depredations. One day six of the squirrels attacked and pursued a large gray squirrel and before Prof. Davis could save it, the vicious creatures cornered their victim and literally cut it to pieces.

The presence of the red squirrel is by common consent among many naturalists, dangerous to useful birds for the protection of which there is such an insistant demand at this time.

Dr. C. Hart Merriam, who for many years was chief of the Biological Survey, Washington, D. C., and who ranks as one of the foremost authorities in the United States on birds and animals writes: "The propensity to suck the eggs and destroy the young of our smaller birds is the worst trait of the red squirrel and is in itself sufficient reason for its extermination, at least about the habitations of man. I have myself known him to rob the nests of the red-eyed vireo, chipping sparrow, robin, Wilson's thrush and ruffed grouse, and doubt not that thousands of eggs are annually sacrificed in the Adirondack region alone, to gratify his appetite. Therefore, where abundant, as he always is during springs that follow nut years, his influence in checking the increase of our insectivorous birds can hardly be over estimated. Dr. A. K. Fisher informs me that on three occasions he has known these squirrels to destroy young robins. I have long been aware that this animal was on occasional depredator of the poultry yard, and find in a journal written twelve years ago, a note to the effect that a case had come to my knowledge where one was caught in the act of killing both chickens and ducks."

The late Arthur Chapman, former Game Commissioner of Pennsylvania wrote: "Reliable farmers and poulterers tell me red squirrels sometimes, but rarely, will attack and kill little chickens and they have been known to catch and devour small ruffed grouse."

Mr. August Koch a noted naturalist of Williamsport, Pa., who died several years ago wrote as follows: "Red squirrels, decidedly smaller in size than grey squirrels are much quicker. The red species is bold, impudent and aggressive. He is fearless and loquacious and does not hesitate to go out and battle to death with the gray.

"Red squirrels, two or more together often attack the gray and they generally kill or seriously main the grey opponent.

"The reds sometimes go to the homes of the grays, attack and drive off the old grays and then drag their helpless little ones out of the nest, tear them to bits and eat, with great gusto, the quivering and bloody remains."

Red squirrels destroy many green apples and pears by cutting the fruit to eat the seeds.

In some states the red squirrel has been protected by law but the mass of evidence proves him to be a destroyer of the worst kind, of game and useful birds and also injurious to the other interests of farmers.

Most sportsmen add him to the list of their enemies and he has been put on the black list of the New York Conservation Commission.

WHEN A MINK PLAYED 'POSSUM

A TRAPPER sent a shipment of seven skunk, two opossum and one mink skin to a fur house in a distant city. He failed, however, to enclose a note with his furs listing all the furs sent. The fur grader in going over the furs, sorted out and classified the skunk and because a glance at the two opossum skins told him that they both classed as fine, large prime skins, he tossed them into a big pile of other furs and went on with the next shipment awaiting his attention.

He had seen no mink skin along with the skunk and opossum skins. Of course, the trapper at that time refused to ship any more furs to that receiving house.

Some weeks later a large collection of opossum skins were being piled up for sale, when one of the men engaged in stacking up the skins noticed a handsome, dark, furry tail sticking out of a big prime opossum skin which had probably brought the trapper between one and two dollars, the missing mink skin which was worth at least four times that much.

This is not an isolated instance of this sort of error on the part of trappers in shipping furs; it happens time and time again. No furs should ever be placed inside of other furs. Place your furs flat, one on top of the other, with heads all pointing in one direction, on the heavy paper or burlay in which you are going to ship them; enclose an inside tag bearing your name and address and list the furs you are enclosing, then wrap your bundle securely. When packed in this way you may be sure that each and every fur will meet the fur graders attention and there can be no misunderstanding regarding the number of furs you ship.

"Jimmie," said the teacher, " why don't you wash your face? I can see what you had for breakfast this morning."

Little Boy—"What was it?"

Teacher—"Eggs."

Little Boy—"Wrong, teacher; that was yesterday."—Capper's News.

INVENTS NEW LAMP

Said to be Whiter and Cheaper Light than Electric or Gas.

WASHINGTON. Patents have been granted by the Government to a lighting engineer by the name of Johnson, on a new lamp for burning ordinary kerosene oil. This lamp produces a vapor from the oil which makes a blue flame that incandesces a mantel, and thus creates a very strong, soft, pure white light. As it consumes only 6% oil mixed with 94% air, it is exceedingly economical. Said to be very simple to operate, odorless, noisless, and dangerless.

F. H. Johnson, 60? W. Lake Street, Chicago, Ill. He also wants local distributors and has a very unique selling plan to offer agents. He is even offering to give one free to the first user in each locality who will help introduce this new light.—(Adv.)

GRANGE APPROVES OF PRISONERS BUILDING ROADS

(Continued from Page 4)

exemption of $4,000, and beginning with a 5 per cent tax on all income above the $4000. It is also provided that the revenue derived from this income tax shall be used to replace the general property tax.

The delegates heartily appraved the wish of Mr. Cook that conditions speedily improve so that every farmer in Michigan will make more than $4000 per year and thus be allowed to pay an income tax. "Nothing would suit us better," declared Mr. Cook.

The Farm Bureau and the Michigan Federation of Labor have both promised their support in securing this amendment so there is considerable confidence that the movement will soon be successfully completed.

Petitions were distributed to the delegates and the task of securing the 60,000 signatures necessary has already begun.

Report by Mrs. Dora Stockman

The State Grange listened with special interest to the report presented by their State Lecturer, Mrs. Dora H. Stockman. As a member of the State Board of Agriculture, Mrs. Stockman felt it her duty to place the facts of the present situation squarely before the Grange. Clearly and frankly she outlined the development of the controversy which began with the dismissal of Pres. Friday from the Mich. Agrl. College. "Mr. Friday frankly admitted that he did not know much about agricultural economics. When we hired him we hoped he could analyse the farm problems and do for the farmer what economists were doing for other lines of business. But after 14 months of administration, Dr. Friday himself felt that he was in the wrong place," said Mrs. Stockman.

Mrs. Stockman stated that the State Board of Agriculture will stand by its rights. She further stated that, "It is time that the people of the state know whether the constitution is still effective or whether it is a scrap of paper to be juggled or annulled. I do not believe that the legislature has the right to nullify our fundamental law. If the people decide that the State Board of Agriculture is unnecessary and desire the entire control of state affairs in the Administrative Board, with the veto powers in the hands of one man, the constitional boards should be abolished and the administrative board created by constitutional amendment."

Speaking of the charge of "politics," Mrs. Stockman declared, "The statement that the Administrative Board must lift M. A. C. out of politics makes one smile. The truth is that some members of the Board of Agriculture, and probably some of the County Agents, got in wrong by standing for the income tax and the gas tax, which were measures that the farmers wanted. County Agents are not a political machine, but if they were they would be working for the farmers." "The Grange and members of the Board of Agriculture, prior to the Administrative Board's action, decided it would be better to continue the County Agent work solely with public money just as soon as sufficient funds were available."

Mrs. Stockman refuted the charges of inefficiency in the matter of spending appropriation funds for the Agricultural College and stated that M. A. C. is the leading agricultural college in the country and is ready to serve the farmers of the state.

Private Peat Starts Something

One of the "high lights" of State Grange week was the address given by Private Peat on Wednesday afternoon. Private Peat is a young Canadian veteran of the World War. He come so closely in contact with the horrors of war that he decided to devote his life to advancing the cause of world peace.

In brief, Private Peat's argument is that war develops so easily because the youth of the nation is taught to glorify war. He described how statues, memorials, history books, lecturers, and the like, all glorify war, hold it up as a splendid thing, and talk only of victory, glorious victory.

The young soldier then gave some vivid descriptions of war as he experienced it in the trenches of France. He asked that youth be taught what war really is. "For every Victoria Cross, and the honor of receiving it, our youth should be taught that there are ten thousand wooden crosses and the tears of ten thousand heart broken mothers," declared Private Peat.

"There will be little war in the world for the next ten or more years," said Private Peat, "because the young men who are needed to make up the armies know what war really is," "You must wait until another generation of young men has grown up, before you can again recruit armies who are eager to get into war."

His "Plan of Peace" was well received by the Grange delegates who pledged themselves, by resolution, to work for glorifying the work of peace and for unmasking the realities of war.

Wide Range of Questions Discussed

Among the more important of the various resolutions adopted favorably by the State Grange were the following:

To prohibit hunting, trapping, or fishing on posted land without the written consent of the owner. A exemption of $4,000, and beginning fine of $10 to be imposed for each offense.

Against the further propogation of Chinese pheasants.

That only taxpayers shall vote on bond issues. This resolution was amended to read that all electors shall be allowed to vote on bond issues but that 60 per cent of the qualified electors of the bonding district must vote in favor of the band issue before it shall be authorized. This was still further amended to allow the issuance of school bonds on the approval of a majority vote providing that the affirmative vote includes not less than 40 per cent of the total number of electors.

That all voters must be able to read and write the English language.

No Tax Exempt Bonds

The State Grange went on record very emphatically as opposing the issuance of any tax exempt bonds. Efforts to amend this resolution so as to make exceptions in the case of various types of bonds, were consistantly voted down.

The Grange was also just as emphatic regarding reapportioning the state in legislative district. By resolution, they insisted that the moiety clause be retained to apply to the smaller counties and groups of counties. It was also decided that only citizens, rather than total population, should be made the basis of the count for apportionment.

Various Contract Firms Were Heard From

The State Grange has a contract system whereby the subordinate Granges can purchase various comodities at reduced prices. The list includes coal, automobile tires, paints, day-old chicks, and canned goods. A connection, made recently, allows the purchase of harvester machinery made by the state of Minnesota.

Other Resolutions were

Condemning the false reports made concerning child labor in the beet fields.

That the state ferry, plying across the Straits of Mackinac, should be self supporting.

Endorsing the proposition of a state-owned fertilizer plant.

Requesting the establishment of a state-owned cement plant.

Recommending the adoption of the short-form ritual where desired.

Recommending the establishment of a system of uniform text books.

Endorsing the Meggison system for the distribution of primary school funds.

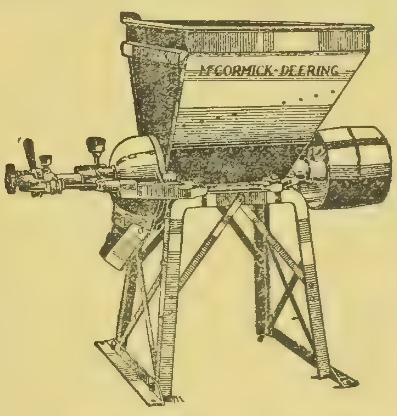
Grange Favors Consolidated Schools

A real controversy developed over the proposition of endorsing the establishment of consolidated schools. After numerous votes, amendments, tabling the motions, and recommendations, the convention finally voted to endorse school consolidation providing that the proposed district had an assessed valuation of not less than two and one-half millions.

Want Electricity on the Farms

The proposition to develop a super-power electrical system by combining various power units in the state was received with much interest by the Grange delegates. A representative of the Public Utilities

(Continued on Page 27)



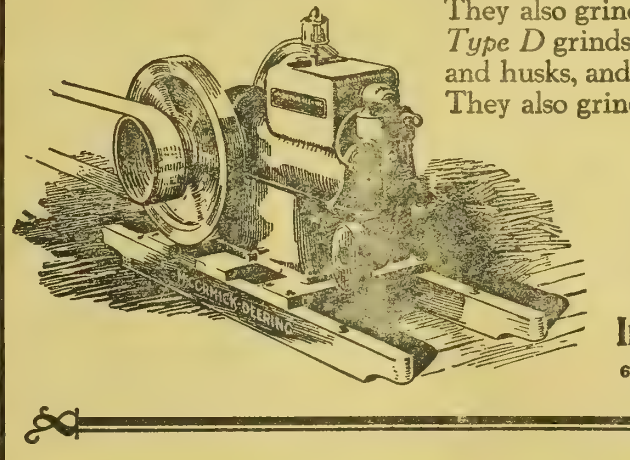
Feed Your *Low-Grade* Wheat

ON the advice of the best authorities, wheat is now being fed to make pork. Wheat at 75 cents a bushel [or less when it is low-grade, shrunken, and unsalable] has a hog-feeding value of $1.00 a bushel—and it is from 8 to 10% more valuable than corn as a pork builder. It is nutritious and palatable and has more mineral matter and protein. Two objects are gained by wheat feeding—the low-grade surplus is turned into good money on the farm, and the price of No. 1 wheat will be pushed higher.

McCORMICK-DEERING—*the grinder with double-faced, self-sharpening grinding plates. Ask for a demonstration at your dealer's store.*

All authorities agree that, because of its hardness, wheat must be ground for feeding. Coarse grinding releases 10 to 22% more feeding value. Here McCormick-Deering Feed Grinders are especially well fitted to come to the aid of the farmer. Famous for years for their fast, many-sided work in small grain grinding, they are ideal for handling surplus wheat just as desired.

There are three types and sizes of McCormick-Deering Feed Grinders. The *Type C* handles small grains and shelled corn or a mixture of both. The *Type B* mills are for ear corn. They crush the cobs and grind cobs and corn together. They also grind small grains and shelled corn. The *Type D* grinds corn in the husk, pulverizes the cobs and husks, and makes a fine meal of the whole mass. They also grind corn on the cob and small grains.

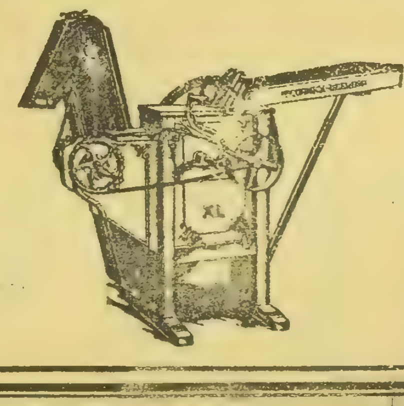


Ask for a demonstration of these general-purpose grinders at the store of the McCormick-Deering dealer. See what they will do for wheat or any other grain, or for corn in any shape. Let them show you how to get maximum food value out of grain when run by the most economical power—McCormick-Deering Kerosene Engines.

INTERNATIONAL HARVESTER COMPANY
606 S. Michigan Ave. of America (Incorporated) Chicago, Ill.

McCormick-Deering Corn Shellers

DO not forget that now is the time to prepare for your corn shelling. McCormick-Deering shellers have made excellent records for clean work and durability. They are made in seven sizes and styles, covering hand shellers, hand and power shellers, and large cylinder shellers for single farms or custom use. Capacities range from 20 bushels up to 400 bushels per hour. Here again McCormick-Deering engines and McCormick-Deering Tractors provide the most satisfactory power.



Does Contagious Abortion Threaten Your Profits?

Hundreds of stock-raisers have found that the Bowman Remedy is a positive cure for Contagious Abortion. They have cleaned up their herds which, in many cases, were on fire with the disease.

The Bowman Abortion Remedy will do the same for your herd. Don't suffer any more losses from this terrible disease. The thing to do is

Get Rid of It NOW

I guarantee the Bowman Remedy will absolutely cure Contagious Abortion in cattle and hogs. It also stamps out such attendant trouble as retention of placenta, white scours, calf pneumonia. If your herd is attacked by Abortion, get in touch with me at once.

Write me today

I will be glad to send you full details immediately: Get all the facts. See what the Bowman Remedy has done: Judge for yourself: Just send me a postal now.

Guarantee

I guarantee to bring every cow or sow that is a breeder back to normal, healthy delivery if treated with Bowman's Remedy according to directions. In exceptional cases, where additional treatments are needed, I will furnish these free, except for shipping cost. For every animal Bowman's Remedy does not cure of Contagious Abortion, I will refund the cost of treatment.

DAIRY and LIVESTOCK

BREEDS OF DAIRY CATTLE
No. 2—Jersey

THE island of Jersey, the largest of the Channel Islands, is the native home of the Jersey breed of cattle. Except for immediate no cattle have been landed on the island since 1779, so that ever since that time the purity of the breed has been preserved. It seems probable that the foundation stock is the same as the Guernsey, namely, from Brittany and Normandy, in near-by northwestern France. Conditions in Jersey are similar to those in Guernsey. The breeders on the island have developed cattle that, in addition to productive ability, have uniformity of type and natural beauty, while in America the breeders have developed greater size and production, with less refinement of features.

Importations and Distribution

Jerseys were first imported into the United States about the middle of the last century, and since that time importations have been made practically every year. The breed probably has the largest numbers and widest distribution of all the dairy breeds in this country. Large numbers of Jerseys may be found throughout New England, the Middle West, the South, and the Southwest.

Characteristics

Jerseys very considerably in color. The solid-colored animals are preferred by many breeders. Various shades of fawn, squirrel gray, mouse color, and very dark brown are common colors, and in the broken-colored animals white is mixed with these colors.

The muzzles and tongues are usually black or lead colored, and it is very common for animals to have a light or mealy ring around the muzzle. A black switch is also a desirable feature. Next to the Guernsey the Jersey has the yellowest skin secretion of all the dairy breeds. The horns are small, waxy, and frequently tipped with black.

Jerseys have a distinctly nervous disposition and are usually somewhat excitable. Their highly organized nervous system causes them to respond quickly to good treatment and abundant feed. The udders are symmetrical and have sufficiently large teats.

Jerseys are the smallest of the dairy breeds. Mature cows range from 700 to 1,300 pounds in weight (average about 900 pounds); bulls vary from 1,400 to 2,000 pounds (average about 1,500 pounds). Compared with the Guernsey, the Jersey is smaller, and has finer features and more refinement throughout.

The birth weight of calves ranges from 45 to 75 pounds. Animals of the breed mature very early, in this respect excelling all other dairy breeds.

Production

In natural yellow color the milk of the Jersey cow ranks next to that of Guernsey cows and is usually slightly richer in butterfat. The large fat gobules cause the cream to rise readily upon standing. Jerseys, like Guernseys, are adapted to the production of butterfat.

Families

A considerable number of families have been developed, and it is difficult to determine which are the most prominent, but probably the following are among the best known. Combination, Eminent, Financial King, Gamboge Knight, Golden Glow's Chief, Golden Maid's Prince, Jap-Sayda, Majesty, Noble, Olga Lad, Owl-Interest, Oxford You'll Do, Raleigh, St. Lambert, St. Mawes, and Sophie Tormentor.

WASHTENAW COMPLETES TEST OF 43000 HEAD OF CATTLE

WASHTENAW County has just completed their tuberculosis campaign. 43936 head of cattle were tested and 1059 reactors found. The total percent of reactors for the county was 2.4 per cent. Ypsilanti township had the most reactors, 8 per cent. Several of the townships went under 1 per cent. Infection seemed to be worse around Ypsilanti and Ann Arbor which is the principle dairy section.

Work in the county started about fourteen months ago. Dr. F. W. High was detailed by the State Department of Agriculture to take care of the work in the county. The efficient way in which he has handled the work has met with the general approval of the livestock breeders of the county.

Six townships have had two complete tests. On the first test in these six townships the total number of cattle tested were 8980. 229 reactors were found or 2.5 per cent. On the second test in these same townships 7826 cattle were tested and 31 reactors found which is .4 per cent. These tests show that if the work is continued infection can be greatly reduced if not practically eliminated.

The Board of Supervisors at their October session appropriated funds for the second drive which will take place in September, 1924. Livestock breeders of the county expect to reduce infection below one-half of one percent so that Washtenaw County can become an accredited area.—H. S. Osler, County Agricultural Agent.

NOT GOOD FEED FOR CATTLE OR SHEEP

Is buckwheat hay a good feed for cattle and sheep?—V. D. S., Custer, Michigan.

—Buckwheat hay is not a satisfactory feed for either cattle or sheep, and its growth for this purpose is not to be advised.

Where one has the buckwheat on hand to utilize, it might be fed in small quantities to either cattle or sheep and thus disposed of, but to use it as the sole roughage for either cattle or sheep would not at any time be desirable.

I would not advise using over one-third buckwheat in connection with some good quality of roughage, such as clover or alfalfa hay.—Geo. A. Brown, Professor of Animal Husbandry, M. A. C.

A Jersey that is a credit to the breed.

GRANGE APPROVES OF PRISONERS BUILDING ROADS

(Continued from Page 4)

Ownership League of America described the development of electrical systems in Ontario whereby the farmers get power and light for their farms at a cost which is less than the rates charged in the United States.

The water power of Michigan has already passed out of the reach of the public to a large extent and is owned by private corporations. The Grange went on record as favoring the development of all available sources of power for the public good and started a movement looking to the formation of a super-power system for the state.

Annual Banquet Largest Ever

The Annual Banquet was the largest ever held, a total of 658 taking part. It was necessary to divide the banqueters, some of them eating in the Elks temple while the remainder help their affair in the Masonic temple. Practically the same program was presented at each place.

Prominent among the banquet speakers were L. Whitney Watkins, State Commissioner of Agriculture and Clark L. Brody, Secy.-Manager of the Michigan State Farm Bureau.

Commissioner Watkins declared that the crying need in Michigan today is law enforcement and deplored the undue emphasis being placed on the so-called efficiency of centralized government.

Secretary Brody praised the work which the Grange has carried on in Michigan for the last fifty years and asserted that the Grange is "the father of the father of the Farm Bureau. Both Mr. Brody and Toastmaster Cook told of the cordial relations existing between the Grange and the Farm Bureau and of the results being secured by this close cooperation.

A class of 64 took the fifth degree, the degree of Pomono, while 116 were initiated into the degree of Flora, the sixth degree.

State Master Cook reported that Michigan leads all of the other states this year, with a total of twenty-two new or reorganized Granges. He outlined an extension organization which, it is hoped, will bring greatly increased results.

At present the state is divided into eight districts, each under the supervision of a Regional Deputy who acts as a Deputy State Master. The plan is to have a County Deputy, appointed in each county by the Regional Deputy and responsible to him for Grange activity in his respective county. It is proposed to finance this system principally through the dues of the county Pomono grange.

A very impressive memorial service was held on Thursday afternoon. The memory of the Grangers who had passed into the Great Beyond during the year, was thus honored. A special eulogy was given of the life and work of Mrs. Cora Ketcham, who was very active in Grange circles, especially during the time that her husband, Cong. John C. Ketcham, was Master of the State Grange.

The election of three members for the State Executive Committee resulted in N. P. Hull, A. W. Thompson, and J. W. Helme, being chosen to succeed themselves.

The vote to determine the place of meeting for 1924 resulted in the selection of Petoskey by a small margin over Grand Rapids. Big Rapids also bid for the 1924 meeting. It was decided to hold the 1924 meeting one week later in October, that is, on the last Tuesday of the month.

Was Hard Working Convention

This was probably one of the hardest working convention which Michigan has ever seen. The general sessions began early in the forenoon and lasted until late in the evening. And, somehow or other, the delegates managed to find time to crowd in committee meetings galore.

No one who attended the sessions could fail to be impressed with the earnestness of this body of men and women from the farms of Michigan who gathered to discuss their common problems and to find solutions if possible. There was enthusiasm in abundance. Enthusiasm over the achievements of the past year and especially over the program of work laid out for 1924.

Without doubt, if Grange spirit and Grange organization count for anything, this coming year will see splendid progress made in Grange affairs.

From GRASS to DRY FEED

Now, the pasture field and range must give way
—to the stall and manger, the feed lot and self-feeder, the barnyard and fodder rack.

Include

DR. HESS STOCK TONIC
in the ration

You have often noticed stocking of the legs, roughness in the hair, highly colored urine—all on account of the change from grass to dry feed.

Not so where Dr. Hess Stock Tonic is fed. The Tonics, the Laxatives, the Diuretics, take care of all that. No worms; the Vermifuges settle them.

Then you are all set for heavy feeding, a good yield of flesh and milk throughout the winter.

Tell your dealer what stock you have. He has a package to suit. GUARANTEED.

25 lb. Pail $2.25 100 lb. Drum $8.00
Except in the far West, South and Canada.

Honest goods—honest price—why pay more?

CARE OF YOUNG PULLETS IN EARLY WINTER

YOUNG pullets kept for laying purposes should all be laying early in December. Pullets hatched as late as May in the heavier breeds should be laying by February 1st and Leghorns hatched even the last of May will generally be laying by the first ten days of December. This is, of course, presuming that they have been handled carefully during the growing period and have been developed properly, or in accordance with the suggestions which we have published in these columns from time to time.

If they seem to be under-developed and it looks as if it will be midwinter before they will round into laying form, the most economical plan would be to cull the flock severely and get the laggards to market without delay. This is the last call and all found to be non-producers should be weeded out at once. The laggards and culs are likely to prove a source of loss in more directions than one. For one thing, they are generally where disease epidemics get their start. By removing them from the flock the chances of loss in this directions are materially reduced.

The pullets that are found to be well-developed and practically matured must now be given the best of attention and care in order to bring out the eggs so much desired. It is best to have them in a flock to themselves; either in a separate laying house of their own, or at least in a separate pen. Where layers of different ages are kept together, the tendency is for the yearlings or older fowls to dominate the situation and worry the young pullets. This does not make for the best performance on their part. It is always best to have your pens or flocks of practically the same age.

Have a house where the pullets can be confined with sufficient room until the weather is settled in the spring. Allow three or four square feet of floor space per bird and keep plenty of straw litter on the floor. This should average about one foot in depth. Feed all grain in this litter, so that they will have to exercise for it. Fowls with this amount of floor space and plenty of clean litter on the floor confined all the time will lay more eggs than fowls kept under any other plan, fed the same ration. If you doubt this, divide your flock and keep one one way and another the other way. It will prove the truth of the above assertion.

Select a good laying ration, and commence to feed it gradually so that in ten days or two weeks the pullets are on full ration. A number of rations may be used, either the Cornell laying ration, which we have published a number of times, or the New Jersey ration, the Ames ration, or commercial rations purchased on the open market. Probably the New Jersey ration will be the simplest for farm usage. It is made of the following ingredients: Grain, 100 pounds each of cracked corn, wheat and oats; mash, 100 pounds each of wheat bran, ground oats, corn meal and beef scraps. It is easy to keep these ingredients and amounts in mind, and all of them may be had on the farm with a feed grinder, with the exception of the beef scraps and, possibly, the bran.

As soon as the pullets are on full mash feed, keep it before them all the time in open hoppers. Do not worry because they seem to eat a lot of it. The more a pullet lays, the more she will have to eat in order to keep pace with her manufacturing process. Hens that "eat their heads off" are more likely the most profitable ones you have. The sluggards are satisfied early in the day and spend the rest of the time sunning themselves or on the roosts.

The grain is fed twice a day, morning and midafternoon, about one-third of the day's total in the morning, the balance at night. At noon, is the proper time to feed the green food, which is most economically produced in the form of sprouted oats. Feed one ounce to each pullet, and feed when the sprouts are one inch long. Don't neglect the green feed; it is one of the most important elements in the laying rations and brings more eggs than any other single ingredient.

Plenty of fresh water all day long is another secret of winter eggs, whether with the yearlings or the pullets. Over two-thirds of the egg is made up of water and unless they have this in abundance, you need not look for very many eggs. We have known flocks to stop laying following bitterly cold days for no other reason than that their water had frozen up so quickly the day before and they didn't get enough. Cold weather don't interfere with the laying, else they would not have laid on the cold days. It will pay to get non-freezing founts or heaters which will prevent the ones you have from freezing. See to it that the water doesn't freeze and explode this old notion right in your own henhouse. Your hens or pullets will keep right on laying, no matter how cold it is.

See to it that your houses are well ventilated, but free from drafts. This is important, especially where large numbers are kept in the same flock, or where the roosting room is somewhat crowded.

Gather the eggs several times a day to prevent freezing. This is important, especially if they are intended for market. Keep the nests clean by changing the nesting material frequently. The droppings must be removed at least once a week from the dropping boards for the same reason. Allowed to accumulate, the pullets or hens will be working in it on days when there are thaws, and with dirty feet they foul the eggs in the nest when they get on to lay. That means a lower price on the market. You can't beat the market by washing them, either. Washing eggs are spotted by the candlers and classed as "dirties."

Pullet eggs are invariably smaller than those laid by yearlings. This means that they should not be mixed with the latter, because that will lower the price the larger eggs will bring. Grade your own eggs, packing pullet eggs in a separate case.

Boys' and girls' club work is very popular in the Upper Peninsula and the leaders are expecting things from some of the members. The above shows some of the boys judging livestock.

The Agricultural and Business Situation

Revised Monthly by the Department of Research of the American Farm Bureau Federation.

WHEAT:

There promises to be a scarcity of wheat east of the Rocky Mountains and mainly to prohibitive freight rates from the Pacific Coast the thirty cent tariff on wheat stands a good chance of being effective. Without any further exports east of the Rockies, the supply would not be excessive. Table No. 2 below shows the details of this situation. The price of wheat at Chicago is six cents higher than a month ago and ten cents above three months ago, but five cents under the same date last year.

CORN:

The corn production forecast is a trifle over three billion bushels. About one-fifth of this will be sold as corn. The price at Chicago is now fourteen cents higher than last month and thirty-one cents above the corresponding date a year ago. The average price for this crop year promises to be enough above last year to yield at least one hundred million dollars additional income.

COTTON.

The October government forecast indicates an increase in cotton output of one and one quarter million bales. This is higher than private estimates. Cotton prices are running about four cents a pound above last year and may average this increase for the season. On the basis of this price and the government forecast farmers would receive around three hundred and fifty million dollars more for their cotton this year than last.

EXPORTS:

In July, cotton exports were only about half as much as in the same month last year. In August they were only slightly less than in August, 1922, while in September they were almost double the September exports of a year ago. This is one time when large exports are coinciding with high prices. A study by this Department of the relation of exports and prices indicated that cotton usually went abroad in large quantities when prices were low but not when they were high.

Wheat shipments abroad, since July 1, are 40 per cent less than the same period in 1922. Further exports during the balance of this crop year ending next July, as already shown, must come from west of the Rockies or cut deeply into consumption and reserves east of the Mountains. Forty-five million bushels of Durum wheat produced east of the Rockies and grown for export to be used in making macaroni has not yet gone abroad in quantities. Foreign demand yet to be exerted, coupled with low supply and the tariff previously mentioned, give hope for a rising wheat market.

INDUSTRIAL SITUATION:

Manufacturing output showed an almost continuous upward trend from May 1921, to May 1923. From that point there has been a slight decline and there is yet no indication of further upward movement. Manufacturers and merchants are acting with great caution. Purchases by consumers, however, show no let-up.

Transportation of all groups of commodities with the exception of grain and grain products is in excess of last year. The railroads have been handling freight without congestion.

Building expenditures in the second quarter this year were larger than in the first or third quarters and were smallest in the third. Prices of building materials were highest in the second quarter but do not account entirely for the decline. Compared with the corresponding periods a year ago, the third quarter also makes the poorest showing in gain in expenditures.

PRICES:

Central market prices of farm products show a gain of 3½ per cent over previous month and 8 per cent over previous year, according to the latest figures of the U. S. Department of Labor. Of the nine groups of products including some four hundred commodities, the farm, food, clothing, and chemical groups show increases over previous month. Metals, building materials, fuel and miscellaneous declined. The index numbers of prices for building materials, on the 1913 base as 100, were 193 for first quarter of this year, 200 second quarter and 186 the third quarter.

Under date of October 23, out of 24 farm commodities, 9 are above a year ago in price and 15 are below. Compared with last month, 13 are higher, 9 are lower, and 2 remain unchanged. Cattle, hogs and sheep are under last month and last year. Corn is the only grain above a year ago. Dairy and poultry products are running much the same in price compared with both the month and year previous.

I. Production and Trade.

1. Agriculture: U. S. Production—000,000 omitted.

Butter	145	136	124
Wool	221	229	189

4. Relative Purchasing Power of Farm Products:

(U. S. Bureau of Agricultural Economics)

The quantity of various commodities which a given amount of each farm product would purchase at prices prevailing in 1913 is put equal to 100. The figures given represent the percentage of this quantity which the same amount of farm products would purchase in August, 1922. Prices at the farm are used for agricultural products, and wholesale prices at central markets for other commodities.

	All Commodities	Cloths, etc.	Fuel, etc.	Metals, etc.	Building Mtls.	House Furn'gs
Cotton	129	100	109	134	104	[illegible]

MARKET FLASHES

MARKET SUMMARY

Demand for wheat and corn quiet. Oats and rye unchanged. Beans steady after recent price advance. Potatoes easy. Butter and eggs steady to firm. Cattle steady to low. Hogs active. Sheep dull and lower in price.

(Note: The above summarized information was received AFTER the balance of the market page was set in type. It contains last minute information up to within one-half hour of going to press —Editor.)

FOOTE'S MARKET LETTER

BY W. W. FOOTE

Business is Better

ALL reports agree that business has undergone marked improvement throughout the country, the Chicago mail-order houses having made a new high record for the year to date. In the same tenor is a statement by Walter Cravens, president of the Kansas City Joir Stock Land Bank, that farmers of Kansas, Missouri, and Oklahoma are paying interest regularly on borrowings of $40,000,000, and that there is no reason for reports that the agricultural industry of the central west has collapsed.

What Farmers Are Doing

A new record has been set for the number of silos on Wisconsin farms an official state report showing a total of 100,060 silos. The assessors report shows that 5,636 silos were added in 1922. Based upon the census figures for 1920, there are now 53 silos to every 100 farms in the state.

The Hinegardner orchard about six miles west of Toledo, Iowa, one of the best in Tama County, is bearing a remarkable crop of winter apples, consisting of Genetons, Johnathans, Northwestern Greenings, Grimes, Golden and others of fine quality. The yield is around 1,000 bushels, and it has been hard to get them picked and marketed. A great part is being sold at the orchard at $1 a bushel.

Wheat Prices Uncertain

Traders in wheat have been in a state of uncertainty, not knowing whether government aid would come to the rescue, and the result was fluctuations in prices within rather narrow limits. "Short" traders felt afraid to sell, while the bulls were timid about loading up. Virtually the surroundings of the market are unchanged, with excessive supplies in exporting countries and lack of large buying most of the time, although recently much increased exports from North America have taken place, including both wheat and flour. The Chicago Federal Reserve Bank reports activity in fall wheat sowing throughout the country. According to reports from 159 agents representing 181,155 farmers, the acreage devoted to wheat in that district is only 78.2 per cent of that of a year ago. In many districts corn and late potatoes grown on low lands failed to mature before frosts, and this reduced the supply of choice seed corn. The quality of the corn crop was affected by frosts in practically all north central and northeastern states. Wheat prices are affected noticeably by the late puchases of Canadian wheat by American mills, as well as by considerable marketing of wheat by American farmers. Exports of corn and oats are mostly insignificant, little old corn being left in the country. Corn still sells well above prices paid a year ago, but prices have had quite a fall during recent weeks, and farmers are anxious to market their surplus before further declines. Less rye is being exported than a year ago, although prices are far lower than at that period, making it a good purchase, it would seem. The visible wheat supply in the United States is growing rather fast, and a short time ago it aggregated 68,000,000 bushels, or twice as much as a year ago. The rye visible supply aggregates 16,600,000 bushels, or twice as much as last year; while that of oats aggregates 20,127,000 bushels, or comparing with 35,464,000 bushels a year ago. Much is published regarding feeding wheat to stock on the farms where grown, and it has been stated that this will approximate 7 per cent of the total crop, comparing with a normal of 2 per cent. Such feeding is estimated at 50,000,000 to 60,000,000 bushels.

December wheat sells on the Chicage market up to $1.08, comparing with $1.15½ a year ago; December corn at 74½ cents, comparing with 68 cents yast year; December oats at 42 cents, comparing with 42½ cents last year; and December rye at 69½ cents, comparing with 83½ cents a year ago.

World's Grain Crops

World's wheat crop in thirty-five countries this year is 3,283,000,000 bu. or 344,000,000 bu. more than last year. Rye in twenty-five countries, 928,390,000 bu. against 605,202, 000 bu. last year. Germany raised 273,301,000 bu. of rye this year, against 206,000,000 bu. last year. It also raised 411,681,000 bu. of oats, against 276,643,000 bu. last year, while 27 countries of the world raised 3,539,566,000 bu. compared with 3,069,757,000 bu. last year.

A Cattle Contrast

A live stock paper called attention a short time ago to the fact that two car loads of cattle were sold recently in the Chicago market at $12.35 per 100 pounds, having been purchased a year ago for $7.25 as feeders. The year's care and feed gave them the finish required. It also calls attention to the fact that on the same day two loads of cattle were sold at $7.50, having been brought two months previously for $9. They lacked high finish, of course, and were only meaty feeders. The reason why the range of prices for beef cattle is so wide is that too many half-fat cattle are offered and only a moderate supply of finished beeves.

Although the movement of cattle from ranges and farms this year to markets shows large gains, plenty are left in feeding districts, and considerable numbers of stockers and feeders are going out from Chicago. The annual marketing of ordinary cattle has been in progress for several weeks, and many of these have to compete with western rangers, but the range season is nearly over, and this will help the market for natives of middling quality. Recently the best demand has been for well fattened light steers and fat yearlings and these have been quicker to advance than heavy steers. This is a good time for buying stockers and feeders, prices ruling low for very good kinds. Beef steers are selling in the Chicago market largely at $8.25 to $11.60, the best heavy steers going at $11 to $12 and the best yearlings at $12 to $12.40, while inferior little steers go as low as $6.25 to 7.25, with pretty good steers taken at $9.50 to $9.75. Heavy steers have had a big decline in prices, and are bad sellers. Stockers and feeders sell mostly at $5.50 to $6.50, with common lots as low as $3.50 to $4.50 and choice feeders at $7 to $7.50 to a limited extent. Cows and heifers sell at $3.25 to $9.50.

Large Consumption of Provisions

Ordinarily, the enormous consumption of lard and fresh and cured hog meats would lift prices for hogs to a high level, but the huge marketing of hogs at packing points, large and small, has stood in the way of advancing values, save at times when the receipts are smaller than usual. A short time ago a curtailed buying of hogs in the Chicago Stock Yards for shipment to eastern packing points was an important factor in putting hogs on a cheaper basis, but later this demand arrived and helped to advance prices. However, the usual trend of the hog market is on the down grade, as it is no easy matter to dispose of such enormous receipts. Owing to the large proportion of light hogs and pigs, these had to sell at quite a discount, with choice heavy butchers market toppers.

Stocks of cut meats at western packing points, decreased 42,213,000 pounds in October, compared with 35,347,000 pounds last year. Lard stocks were reduced over 29,000,000 pounds and are nearly 1,000,000 pounds less than last year.

Enormous Hog Marketing

Combined receipts of hogs this year aggreate in twenty markets 34,938,000 head, comparing with 27,152,000 for the same time last year. The Chicago market is getting the largest supplies since February, and prices are lower, late sales being made at $6.40 to $7.50. The top is paid for heavy butchers, with the best bacon weights at $7.15. Inferior light lots predominate.

The Sheep Industry

Marked improvement is seen in various parts of the country in the breeding of sheep, as well as in the preparation of lambs for the market. The "bucky" lamb is being eliminated in many farming districts, and especial progress has been made in Kentucky. A short time ago it was estimated by the Department of Agriculture that more than 200,000 docked weather and ewe lambs were marketed from that state this year. This has been a great year for the sheepmen of the United States, far larger numbers of sheep and lambs being marketed than last year, and while prices varied greatly, as usual, the industry has on the whole been very profitable to those who understand just what methods to follow. The range shipping season is closing, and large numbers of these lambs have been slaughtered, as well as large supplies of lambs and sheep **from feeding districts of the middle west and south. Feeding sections will winter large number of lambs, most farmers having completed refilling their sheep sheds, and there is still a large demand for high-grade breeding ewes for shipment to Michigan and other near-by states, as high as $11 to $12 per 100 pounds being paid for the best yearling ewes, and nowhere near enough offered to go around. Of late the quality of the range thin feeding lambs offered in the Chicago market has greatly fallen off, and lower prices were paid. Lambs sell in Chicago at $9 to $13.25, feeders going at $11.75 to $12.85.**

BEANS

Prices in the bean market are quoted lower at some points, and the demand is said to be better than expected giving a steady tone to the market. Dealers are waiting for cold weather to put more life into the market. Consumption increases with the beginning of cold weather but whether the demand will be sufficient to cause prices to advance very much is a question.

POTATOES

Receipts have increased during the past fortnight and the market is easy. Market students declare the prices are low enough to encourage speculation, but the larger speculators are holding off, claiming that crop reports are so encouraging for large supplies this winter that they see no reason for paying current prices.

QUOTATIONS

Wheat

Detroit—Cash No. 1 red, $1.14½; No. 2 white, $1.14; No. 2 mixed, $1.13.

Cut Fence Bills in Half

Be sure to ask your dealer for "Galvannealed"—not the ordinary galvanized fence wire.

"Galvannealed" (the newly discovered high-test, rust-proof Square Deal fence wire) is GUARANTEED to last 2 to 3 times longer in any recognized standard test and to have a 2 to 3 times heavier zinc coating than ordinary galvanized fence wire.

That's why it is sure to last much longer in actual use and, therefore, cost much less than ordinary galvanized fence.

Specify "Galvannealed" Square Deal Fence or the regular type will be furnished.

FREE—to land owners—Ropp's New Calculator. Figures wages, interest, live stock and grain profits; gives commercial law, parcel post rates; shows capacities of cribs and barns. It is the most complete and reliable book published. Every farmer should have one. Write for it and ask for—

SQUARE DEAL FENCE

catalog. Tells all about "Galvannealed," the new rust-proof fence wire, and why Square Deal never bags or sags; why the Square Deal Lock is guaranteed never to break or slip. How Square Deal always stands tight and trim. Why careful buyers save money by choosing this long-wearing fence. Write for these 2 Free Books.

PRITCHARD'S WEATHER FORECAST
INTERPRETED BY THE STARS

Week of November 11

FOR the week of N[illegible]ber 11th the temperature in Michigan is expected to average cold for the season. The latter days of the week are scheduled for the most sunshine.

A rain or snow and wind storm will probably effect this state at very beginning of week with a change to colder by Monday, at the latest.

A day or so of fair weather will then be followed by more severe weather when rain, snow, blizzards and strong winds will cover most of Michigan. Then will come a cold period that will drop temperatures to a minimum of 25 to 28 degrees.

During the last two days of the week the sky is expected to be generally clear.

Week of November 18

Temperatures during the first three days of this week will rise decidedly in Michigan but before the end of the week [illegible] have fallen below freezing again.

During early part of this period winds will be southerly, skies will cloud up and light rain will fall generally. This condition will continue for the greater part of the week with the exception that rain is likely to turn to snow in sections, especially about Friday.

As this week comes to an end the sky will be clear in most counties and the temperature low for the season.

November Normal Month

An average of all storms we believe will effect Michigan this month leads us to predict a normal month. Precipitation will probably be a little above normal and the temperature will be a little above the average. However, we expect a number of cold spells that will help to take down any high extremes for the month as a whole. We are also looking for a moderately warm but wet December.

OWOSSO FARMER MAKES $1,500 FROM ACRE MICHIGAN BEANS

(Continued from Page 3)

esting to note the delusion under which some of the protestors who claimed Robust beans to be wrinkled labored. When tested in identification with known samples called all wrinkled beans Roberts regardless of their true identity.

The Michigan plant breeder in 1922 brought out a new strain of Robust beans which showed even a marked improvement over the very desirable earlier selections released in 1915.

Farmers fully convinced of their productivity are demanding Robust beans for seed. They get their pure stock from growers of the Michigan Crop Improvement Association, who grow Robust beans under an inspection supervised by the Michigan Agricultural College and all seed meeting association requirements is certified as to purity, quality and vitality. The inspection, both in the field and after harvest is the safest assurance that the beans are genuine Robusts, pure, and true to varietal characteristics.

Statistics show that 26,000,000 Americans, nearly one-fourth of the nation's population, have savings accounts in the state and national banks.

Gas industry is now adding new customers to its gas mains at the rate of 350,000 a year.

GET YOUR COAL FREE

Special offer to Michigan Business Farmer readers. A large successful 16-year old coal company, The Peoples Coal Company, 1120 W. 35th St., Dept. 713, Chicago, Ill., shipping direct from mine to user, is offering this unusual opportunity to one coal user in every neighborhood who has a few hours spare time each month. This is its method of quickly introducing the finest grade, freshly mined, free burning coal, which is being sold from mine direct to user, thereby saving the profits of all middle men. Man of good standing and well known in his community can get his coal free. We suggest that you write this firm today.—Adv.

Why dont you buy "Scrubs"?

WHEN you set out to buy cows for your herd, why don't you buy scrubs? They don't cost as much as good ones.

Of course, the reason you don't is that there's more profit in the good ones.

It's the same with buying feed. LARRO is worth more than other rations for the same reason that good cows are worth more than scrubs.

The reason lies in highest quality ingredients—in the standardizing of these ingredients before mixing—the removal of all foreign material, such as tags, lumps, bits of wood, nails and every particle of iron and steel—in the perfect proportioning of each ingredient according to a formula adequate for every requirement of safety, condition, health and milk.

LARRO will make you more money over cost than any other ration. ***We guarantee that—absolutely.***

The Larrowe Milling Company, Detroit

Cured His Rupture

I was badly ruptured while lifting a trunk several years ago. Doctors said my only hope of cure was an operation. Trusses did me no good. Finally I got hold of something that quickly and completely cured me. Years have passed and the rupture has never returned, although I am doing hard work as a carpenter. There was no operation, no lost time, no trouble. I have nothing to sell, but will give full information about how you may find a complete cure without operation, if you write to me, Eugene M. Pullen, Carpenter, 59-K Marcellus Avenue, Manasquan, N. J. Better cut out this notice and show it to any others who are ruptured—you may save a life or at least stop the misery of rupture and the worry and danger of an operation.

(A statement by the publisher who personally inspected the plant, product and plan of the Home Profit Hosiery Co., at Rochester appears on page 15 this issue.)

Left With Two Babies And No Income

At first it was pretty hard to manage—now I keep my pocketbook comfortably filled

By Bessie English

WHEN my husband died, two years ago, it seemed the end of the world to me. There I was with two small children—one only six weeks old—and no income.

My husband's long sickness had taken every dollar of our savings. Baby's coming had brought another expense. The insurance was barely enough to meet all the bills. I was left almost destitute.

I was totally unprepared for the responsiblity of being the family breadwinner. The only thing I knew how to do was housework. The outlook was anything but cheerful.

I Wouldn't Hear of It

Everybody was very kind. There were many offers of help. But I had too much pride to be willing to accept charity, even from relatives. My folks urged me at least to let them take the children, so I would have only myself to provide for, instead of three. But I wouldn't hear of it. My babies were all I had in the world, and I was determined that nothing should take them from me.

But how was I to manage? I couldn't sleep thinking about it. Both children, and especially the baby were at an age where they needed a mother's constant care. I couldn't leave them alone to go out working. Yet I faced the necessity of somehow earning enough to provide food and clothing and a home.

I live in a small town. At best there aren't many ways here for a woman to earn a living. And I had to find something that wouldn't take me away from the children. That didn't leave much choice. I would have to take in washing or starve.

I was none too strong. It was a hard grind. At times both my back and my courage were ready to break. But always the thought of my two children kept me going.

It was terribly discouraging. The children, of course, required quite a bit of my time. No matter how long or how hard I slaved over the washtubs, what I earned was barely enough to keep body and soul together. Even with sewing added, the amount I earned was still pitifully small.

Worst of all, the hard work was gradually wearing me down. I lost twenty pounds. I began to fear I couldn't hold out much longer. The strain and worry of it had me almost in despair.

Mrs. Bessie English
97 Pitman St.,
Pennsgrove, N. J.

Just What I Had Been Hoping For

One Sunday I was so tired and discouraged that I was about ready to give up. Trying to get my mind off my struggle, I picked up a paper which a neighbor had brought over. As good luck would have it, the first thing that caught my eye was a way to earn money at home. Exactly what I had long been hoping for but never expecting to find—good pay for work I could do entirely at my own convenience, without stepping out of the house, without any tax on my strength, without set hours, without having to leave or neglect the children.

I read it from beginning to end. It told how a Mrs. Himburg in Brooklyn, New York, had averaged about $12 a week for nearly two years—in her spare time. How hundreds of other home workers each earned all the way from $5 to $25 or more every week—the amount depending on how much time is given to the work.

I made up my mind I could do as well as anyone else. The work looked easy and interesting—knitting socks for the Home Profit Hosiery Company. I didn't know a thing about knitting, but it said no experience was necessary. I immediately wrote for full information about the plan.

The mere thought that perhaps my drudgery at the washtubs would soon be over put me in better spirits than I had been for weeks. The more I found out about the plan and the money others were earning, the more convinced I became that here was my chance. So I sent in my application. In due time I received my Knitter, a supply of free yarn, and a book of simple and clear instructions that made everything plain and easy. Honestly, I fell in love with my Knitter as soon as I saw it—it looked so clever and capable. After a little practice, I could knit socks fine enough for any millionaire. It is no trick at all on this skillful little Home Profit Knitter. And I can sit down at my machine and earn a good day's pay while watching the children.

My First Check

My first check from the Home Profit Hosiery Company made me happier than any other money I had ever received—for it meant that at last I had found a way to be self-supporting without making a slave and drudge of myself. Since then practically every dollar I have had has been earned on my Home Profit Knitter—I call it the family breadwinner. And I have done this without tiring myself or neglecting the children or housework. Compared with washing or sewing, the work is actually restful. I have regained all the weight and strength I had lost—and have regained my old cheerfulness and self-respect. I am able to give my children all the necessaries and some of the comforts of life. I am gradually putting a little money aside. Above all I can face the future with full confidence that I will always know where the money for the things we need is coming from because the Home Profit Hosiery Company has signed a life contract with me to take all the socks I can knit. It was a lucky day for me when I read about the Home Profit Work Plan.

Mrs. Bessie English
97 Pitman St., Pennsgrove, N. J.

* * * * *

It Is Helping Fill Hundreds of Pocketbooks

The Home Profit plan is putting easily earned extra money into the pockets of people all over America—helping them pay for homes, helping them put money in the bank, helping them pay debts, helping them buy furniture and automobiles, helping them dress better and live better, helping them in all the ways that money can be used for.

Some earn $5, $10 or $15 extra every week; a few as high as $25 to $30 or more—in the privacy of their own homes, and without any interference with their other duties.

How much one can earn in this way all depends on how much spare time can be given to the work. You are always your own boss—can start and stop knitting whenever you like—any time of the day or evening. You can knit as many or as few socks each day or each week as you choose. Whether few or many, the Home Profit Hosiery Company guarantees to take every pair of socks you can knit for them, in accordance with their simple specifications, and to give you good pay for every pair you send them. They also supply free yarn for all the socks you send them. (But if you prefer, you can buy your yarn from the company at wholesale price and sell the finished hose at your own price to local stores, neighbors, etc.) You can also knit sweaters and many other articles on the Home Profit Knitter, either for your own use or to sell.

There is an enormous demand for the fine quality of wool hose so easily knitted on the skillful little Home Profit Knitter, and the Home Profit Hosiery Company is ready to make guaranteed arrangements with spare time home workers anywhere. It doesn't matter where you live. You don't need to know anything whatever about knitting at the start—the simple and clear instruction book quickly shows you how. All you need is a Home Profit Knitter, a little spare time, and the willingness to use it. No matter what you need money for, it will pay you to send for free information about the Home Profit guaranteed plan. Simply tear out and mail the coupon—now, while it is in your mind. That takes only a minute, but it can easily make a difference of hundreds of dollars a year to you.

Even as a Grain of Mustard Seed—

Long ago it was written that faith, even tho small as a grain of mustard seed, could remove mountains.

Henry Ford, with unbounded confidence, has labored for more than twenty years to remove the mountain of difficulty standing in the way of modern transportation. He has sought always to give the world practical transportation at low cost.

Many have wondered why Ford products, whose remarkable value time and use have proved, can be produced, sold and serviced for so little.

It is because from forest and mine to finished product there exists a marvelous coordination of every phase of manufacture. From scores of widely scattered Ford-owned sources the raw materials are brought by Ford transportation units to Ford plants, moulded, machined and assembled into cars, trucks and tractors.

At no time is the high quality of manufacture or workmanship beyond the supervision of the builders. Unhindered by changing market conditions, Ford products are built uniformly sturdy and dependable year after vear.

This unusual development of industrial economy delivers your Ford car, truck or tractor at the lowest possible cost.

Boy Wins Grand Prize at Gaylord Potato Show

Highest Award Won by Seventeen Year Old Boy---Directors Plan to Make "Top O' Michigan Potato Show" Annual Event

By E. J. LEENHOUTS

"IT is the best display of potatoes that I have ever seen," said F. C. Gaylord, of Purdue University, judge of the exhibits at the Top O' Michigan Potato Show, held at Gaylord, November 7th, 8th, and 9th, relative to the tuber entries at the Gaylord show. In the opinion of the Indiana potato expert, Northeastern Michigan sees its most important proof as to the success of its first All-Northeastern Michigan potato show.

Undoubtedly, the headlight of the tuber exhibit was the winning of the grand sweepstake by a seventeen year old boy, Edward Domke, Jr., of Ocqueoc in Presque Isle County. The youthful aspirant to state potato honors won the championship of boys' club work at the Grand Rapids' apple and potato show in 1922 which included a scholarship to the Michigan Agricultural College. He is of a retiring nature and radiates the sincerity which characterises the progressive farmers in the northern counties. His heart and soul are in the better potato work; he knows potatoes intimately. His goal is the knowledge which will enable him to raise perfect tubers year after year—to gain a state and national reputation as a prize-winner in potato exhibitions.

The boy's 32 potato display which won first honors was an exhibit which comprised perfect, clean, typy, and uniform tubers. The potatoes were probably more nearly free from blemishes and minor imperfections than those in any other single display. The popularity which attended the decree of judge Gaylord in awarding the boy's exhibit first place attested to its favorable acceptance by the potato growers and visitors.

Professor Gaylord spoke of the superiority of northern grown certified seed at the opening program sponsored by the Michigan Potato producers' association Thursday afternoon. He claimed that through the use of Michigan seed it was possible to increase the yield per acre. His statement, that good hardy seed had made it possible to extend the growing of tubers over a larger area in the Hoosier state, was accepted by the northern potato growers as proof of the quality of their product.

Potato Warehouse Problems

At the same meeting, in an interesting discussion of potato warehouse problems, Floyd E. Fogle, of the farm mechanics department at the Michigan Agricultural College, stressed the importance of admitting plenty of air to the potatoes, the air to be cooled in warm weather and warmed in cold weather by proper ventilating processes, such as flues, intakes, and basement ventilating channels. Two successful systems of potato warehouse ventilation were demonstrated. The Ruthford system, according to Mr. Fogle, is a more complicated system than the King plan inasmuch as the former is constructed so as to allow for control of the incoming and outgoing air by dampers. He recommended either system as being adapted to northern potato storage conditions.

J. E. Kotila, potato specialist at the Michigan Agricultural College, whose work on potato cultural methods has excited national recognition, explained the physiological reactions which take place when a potato breaks down, or rots. He claimed that practically the entire number of incidents where potatoes have deteriorated in storage trace back to a lack of oxygen. His talk was a follow-up on the one given previously by F. E. Fogle, inasmuch as proper ventilation, according to Professor Kotila, eliminates most of the rotting caused by lack of air at the right temperature.

An inspiring talk of fifteen minutes duration given by William C. Hartman, Director of the Bureau of Foods and Standards of the Michigan State Department of Agriculture, laid particular emphasis on the necessity for the growers and potato buyers cooperating with the state agricultural department in enforcing the new potato grades as established and promulgated by the department. He claimed that it was absolutely essential for growers to market graded tubers if the Michigan product was to avoid its present day discrimination on the eastern and mid-western markets.

Advantages of the grading campaign, which has been started by the state agricultural department, were mentioned by Mr. Hartman as reasons which proved, conclusively, the value of potato grading. He declared that it was immaterial whether the consumers saw the benefit of the new plan or not, saying that the grower was the country's first charge; although he claimed that the results of the campaign would take care of the consumer by giving him a better grade product.

Sponsored Banquet Meeting

The Top O' Michigan Potato Show Association sponsored a banquet meeting on the second day of the show at the Knights of Pythias hall which started at 6:30 and lasted until close to ten o'clock. It was without a question, the binding feature of the three days' show. Here the discussion of marketing problems, growers' problems, and buyers' problems was entered into without formality. It was purely a sociable gathering where business difficulties were settled over a table spread with a bounteous supply of foods—chief among the vegetables being the all-important potato.

Professor F. C. Gaylord, of Purdue University, H. C. Moore, of the Michigan Agricultural College, Elmer Smith, of Gaylord, W. H. Hill, of the New York Central Lines, T. F. Marston, of the North Eastern Michigan Development Bureau, R. A. Turner, of the M. A. C., Robert Wylie, of the Michigan Potato Growers' Exchange, C. S. Bender, of Andrews Brothers, Detroit, and W. C. Hartman, of the State Department of Agriculture, were introduced by F. J. Shipp, president of the Top O' Michigan Potato Show Association, who acted as toast master at the banquet.

In the speech given by C. S. Bender, who buys potatoes for the large Detroit house of Andrews Bros., the speaker declared that any buyer in a large city was willing to pay preminum prices on fancy, graded tubers, and that he was sure the average consumer was willing to pay the extra price if he could be assured of good potatoes in return for his money.

Entries Total 155

There were 155 entries at the show, among which were a number entered in either the Detroit Special, the Consumers' Special, or the Detroit News' Special classes. These three special entry features created a great deal of interest in the selling of graded potatoes, since they were classes representing field competition rather than plot competition. The exhibitor who won the first, second, or third prize was given the privilege of selling a certain quantity of his potatoes, which must conform to those he exhibited, in Detroit markets, to the Detroit Board of Commerce, business institutions and the Detroit News cafeteria at a premium price per bushel. Crowley Milner & Company, Newcomb-Endicott Co., and the Detroit Board of Commerce offered $2.00 a bushel; the Union News offered $1.80; and, the Detroit News Cafeteria offered, as an inducement to sponser grading, a price of fifty per cent above the prevailing market price, which totals eighty cents.

The attendance at the show was estimated as being from 1,500 to 2,000. Over three hundred attended the lectures given on the second afternoon of the fair in the large auditorium. Visitors were passing through the building in a steady flow during the three days. Those who had exhibits of the Michigan Agricultural College, the state department of agriculture, Armour & Company, and the American Chemical Company in charge said that the attendance was much greater than had been expected. All booth exhibitor spoke of the interest which the spectators manisfested in the exhibits prepared by them and claimed that the first Northeastern Michigan potato show had proved itself as being worthy to be ranked among the top-notchers in the country.

Credit Due Agent Lytle

A. C. Lytle, county agent of Otsego county, to whom, possibly, more credit is due for the successful tuber show than any other single individual, expressed his sincerest thanks at the banquet meeting Thursday night to the sponsers and co-operators who had helped with the financing, publicity, and judging of the Top O' Michigan Potato Show.

He publicly thanked the supervisors of the potato growing counties who had voted an appropriation for the show, the Michigan Central Railroad, the State Department of Agriculture, the Northeastern Michigan Development Bureau, the Michigan Potato Growers' Exchange, and the various companies and the Michigan Agricultural College, who had booth exhibits, for helping the first Pinnacle City potato exhibit over the trials and tribulations which go with all new ventures. He expressed a desire that the show be made a permanent institution in Northeastern Michigan, saying that it was absolutely essential to the territory which ranked the lowly spud as one of its staple crops.

The concensus of opinion is that the Top O' Michigan Potato Show achieved its three-fold purpose, i. e., first, the education of the growers as to types, varieties, and quality demanded by the market; the proper method of grading and care; the results of proper cultivation and fertilization; secondly, that of developing a medium for securing publicity for Northeastern Michigan and thusly attracting the attention and interest of the buyer and consumer to this area and its product; thirdly, that of developing a medium for direct sales contract between the buyer an dgrower of table stock and certified seed potatoes.

Some excellent critics go further and say that the Northeastern Michigan Potato Show, in reality, went beyond its previously outlined scope and exceeded, as far as benefits are concerned, the hopes of its most enthusiastic backers. It was, undoubtedly, the greatest contribution which Northeastern Michigan has made towards the education of its potato growers, and the greatest single factor in the annals of northern Michigan agriculture making for more efficient production and the attendant rural prosperity.

"It is the sincerest statement," said F. J. Shipp, prominent northern Michigan business man and President of the Top O' Michigan Potato Show, "which I can make when I say that the Top O' Michigan Potato Show has proved that it is so invaluable to northern Michigan, both as to its business and potato interests, that it is essential to retain it as a permanent institution in Northeastern Michigan if our potato growers are to be made to feel that the consuming public and the potato buyers are directly behind them in their fight for better prices as a result of delivering better products."

Prize Winners

The winners in the several different classes as announced by the Top O' Michigan Potato Show Association is as follows:

Class A, Late Varieties

Russett Rural — first, Edward Domke, Ocqueoc; second, Walter Barlow, Spratt; third, Charles Herron, Alpena; fourth, Frank Rotter, Alanson; fifth, J. Fred Brudy, Wolverine; sixth, Frank Wyrick, Alanson; seventh C. G. Brudy, Wolverine; eighth, Willian Shann, Wolverine.

White Rural—First, Morrell Fox, Gaylord; second, Michael Smilowski, Gaylord; third, E. S. Brewer, Onaway.

Irish Cobbler—First, John Mosser, Weadock; second, R. C. Campbell, Hetherton; third, John Allen, Hubbard Lake; fourth, Steven Hartman, Alpena.

Any other Variety—First, C. G. Brudy, Wolverine with Bliss Triumph; second, Nellie Feldhauser, Frederic, Early Northern; third, Wilber Broadbent, Gaylord, White Wonder.

Class B

County Exhibits—First, Otsego; second, Cheboygan; third, Presque Isle; fourth, Alpena; fifth, Crawford.

Class C

Certified Seed—100 pound lots—First, Frank Wyrick, Alanson; second, Jacob Weiss, Alanson; third, Charles Herron, Alpena; fourth, W. Barlow, Alpena; awards of merit, H. L. Molineaux, Wolverine; Harold Bailey, Gaylord; John Spreeman, Vanderbilt; Harold Bonnett, Levering; Ernest Pettifor, Gaylord; Fred Brudy, Wolverine.

Class D

Club Exhibit — First, Sunnyside Potato Club, Cheboygan.

Rural Russett—First, F. J. Wester, Cheboygan; second, John A. Wester, Cheboygan; third, Rudolph Redman, Cheboygan; fourth, Jack McArthur, Cheboygan.

White Rural—First, J. A. Wester, Cheboygan.

Class E

Detroit Special—First, J. H. D. Myers, Levering; second, Charles Herron, Alpena; third, Ernest Pettifor, Gaylord; fourth, George Coultes, Gaylord.

Class F

Detroit News Special—First, C. Herron, Alpena; second, William Feldhauser, Frederic.

Class G

Consumers' Special—First, Chas. H. Shaub, Elmira; second, Charles Herron, Alpena; third, J. H. D. Myers, Levering; fourth, Valentine Mankowski, Gaylord.

Sweepstakes

Best Peck in Show—Edw. Domke, Ocqueoc.

Dad and Mother Can Go to School At Hartland

Livingston County Consolidated School Increases Its Value to Community by Maintcining Night Classes in Soils and Economics for the Farmer and His Wife

By **W. D. WHITE**

Superintendent of Hartland Consolidated School

DURING the year 1920 ten districts of Hartland township, Livingston County, that were maintaining one room schools, voted to organize the Hartland Consolidated Schools and locate the school plant at Hartland, Michigan, a village of about 100 inhabitants, situated about the center of the Consolidated district, where also was located a building which with a small outlay could be made to house the first six grades.

A new $65,000 building was erected to house the upper six grades which are divided into Junior and Senior High schools. The new building was completed in October, 1921, and Hartland Consolidated School was on its way, cheered by many, kicked by a goodly number, while many more said it just couldn't be done.

The first year saw 272 enrolled in school, with 15 tuitioners.

The school offers three courses, College Preparatory, Agriculture, and Home Economics or Household Arts, all full four year courses.

The school is on the University Accredited List, and also the Federal Smith-Hughes list.

School Tax Rate Tripled

The year that the districts were run under Consolidated before the new building was done the school tax rate for the year was $6.05. The first year, 1921, that we were in the new building our school tax was $20.00 per $1000; last year, 1922, the rate per $1000 was $22.00 and that same rate will prevail this year (1923).

With such a jump, from $6.05 to $20.00 and $22.00 per $1,000 tax payers to be shown—they were all from Missouri. This $22.00 rate takes care of all expenses, interest on bonds, retirement of bonds, etc., together with $4,600 state aid which we receive. This year we shall receive $500 federal aid and next year $1,000 making a total of $5,600 federal and state aid.

Naturally where so much school money was involved in place of so small amount of the past years, a program that would demonstrate to the tax payers that the sums paid for the new venture were real dividend paying investments instead of the burden which most prophesied that would have to be established. Consequently no one is allowed to fool away his or her time. Every boy and girl is made to do his or her work. They are not allowed to fall down if mentally capable and in this district we find mighty few of the mentally weak.

Many boys and girls receiving high school training now in our schools never would have entered a high school as students had they not been blessed with the establishment of one at home. We have a half dozen all the way from twenty to twenty-three years of age who have been in high school during the last two years and have entered again this year.

The Hartland Consolidated School at Hartland, Michigan.

Last year a man who has worked at the carpenter trade for a number of years came and asked to take arithmetic with the 8th grade class so as to enable him to figure bills of lumber and make measuration calculations which he had never been able to do. He also learned to fit his own saws, a problem which he had never been able to solve before.

The manual training shop under the very capable supervision of E. A. Rewalt, trains the boys in carpentry, architectural design, both barn and houses, mechanical drawing, woodwork and cabinet making. The 24-foot cabinet shown in the agricultural laboratory cut was made by the boys in the manual training courses. The boys are taught cement mixing and cement form construction. Wagon boxes, hay racks, self-feeders of all kinds, whiffletrees, neck yokes, and repair work of all kinds is done, the only charge being for the material if the school furnishes it. If the farmer brings his material, the work is done gratis. A charge of 35 cents is made for filing crosscut saws for farmers.

Boys do all carpenter and repair work about the school plant. They are taught the art of saw filing and tool fitting which is a part of the manual training course.

Night School for Farmers

Probably the one feature of the consolidated school that has done more to help the tax payer realize an investment instead of a burden, is the night school for the farmers and their wives. Not to overdo the matter for the first time last year three courses: arithmetic, economics and soil chemistry were offered for a twelve weeks' course. There were 43 farmers and wives enrolled. It was not an experiment, it seemed as if this work should be done, and so worked out our problems together. In the mathematics class we were fortunate in securing the services of Mr. Frank Dodds, a tax-payer farmer in the district also the father of two girls, one in high school and one in the grades. Not but a few years ago Mr. Dodds was considered one of the best teachers in Livingston This arithmetic class caught young men 20 to 27 years old who had left school when in the early grades. The mathematics of every day life is what the school tried to get across to these young men.

The significant thing in this arithmetic class is the fact that we find a farmer who is capable and willing to co-operate to make the school function 100 per cent both night and day. Many other farmers might be named.

Study Marketing

The Economic Class stressed the marketing, transportation, standardization of farm products. The middle man, cooperation, farm bureau, agricultural finance, federal aid and most interesting of all, the relation of these subjects to each other.

The members of the Soils Chemistry class brought samples of soil from the different parts of fields which they were to plant in the spring to corn, potatoes, oats, barley, alfalfa, clover, etc., to the laboratory, and under the supervision of A. F. Monroe, head of the agricultural department, analyzed the samples for lime and humus content, also texture and plasticity of soil. After chemical analysis of samples of soil each farmer put several crocks of soil onto the test racks and planted some kind of grain or potatoes in each of 5 crocks, all crocks being planted to the same kind of seed at the same time. One crock is kept as a check and another subjected to treatment with lime only, another with lime and manure, another with nitrate, perhaps another with manure and phosphate, and so on, until the soil from a field was treated with all combinations and barnyard manure and commercial fertilizers. The class watched the experiments and after contents of crocks had grown for a length of time contents of crops were weighed on balances and conclusions drawn. The farmers report that the time spent in night classes is the best investment they could have made last winter and are asking for more this winter.

The school maintains what is called an exchange department. A large bulletin board with "Wanted" and "For Sale" columns is placed at one end of the assembly room. Any farmer of the district or outside the district may advertise anything for sale which he has on this board. Or if a man or housewife wants to buy something word is sent to school. The "Wanted" and "For Sale" bulletin board and nine bus loads of boys and girls do the rest.

The exchange department handles eggs, chickens, calves, pigs, cows, sows and pigs, horses and young cattle, seed potatoes, oats, corn, etc.

Registered Seed at Wholesale

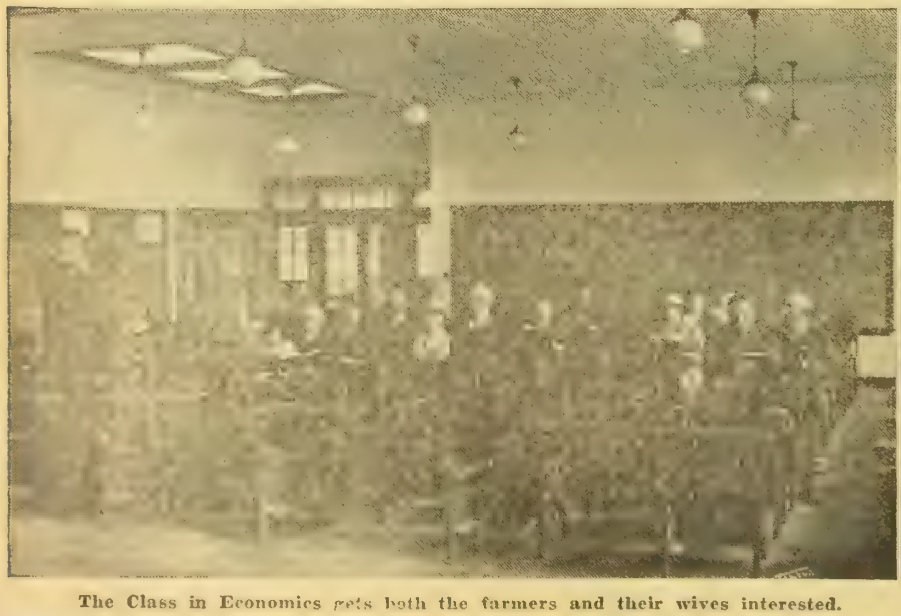
The school maintains a working agreement with the Michigan State Farm Bureau whereby any farmer in our district may obtain an order from the Schools Exchange Department and secure State Farm Bureau certified and registered seed at wholesale. Hundreds of dollars are saved to the farmers in money, but the value of certified and registered seed cannot be computed. The above narrative illustrates in a small way what a consolidated school should do for the community in which it is located.

The school holds an agricultural fair each year, and the fair just held October 25th and 26th showed a keen desire on the part of the exhibitors to want the best in seed and products.

With the two days fair is held a series of five lectures which with the exhibits make the fair an educational institution. Last week, B. J. Ford of the State Department gave an address on Rural Education, and E. E. Gallup an address on cooperation of all organizations, Alexander MacVittie, State Farm Bureau, an address, "Accomplishments of the Farm Bureau," E. C. Forman, Head of Poultry Department, M. A. C., poultry culling demonstration and lecture. The last evening, Friday, F. A. Butterworth of Chicago, Assistant General Freight Agent of P. M. system, gave an address on "Freight Rates as they affect the Farmer."

A lecture course of five numbers has been maintained each year. This year the senior class has sold more than enough tickets to pay for the course.

The school is high school, college, workshop, information bureau, commodity exchange, wholesaler, social center, agricultural exhibition, and milk testing station, all under one roof, and it is hoped that it will contribute its quota toward making consolidated schools an investment which shall pay the largest dividends in good American citizenship.



The Class in Economics gets both the farmers and their wives interested.

Farmers Class in Soils studying lime sulphur and Bordeaux mixture

PICTURES FROM FAR AND NEAR

LATEST IN HATS.—This hat is modeled after the huge dirigible, ZR-1, or Shenandoah. Cute, isn't it?

SCION OF WEALTHY FAMILY TURNS CABBY.—Having lost all of his money Francis O. French, former wealthy New York broker, is getting another start by driving a taxicab.

BIG NEWSPAPER OWNER.—Lord Beaverbrook is rapidly becoming one of England's leading newspaper owners.

CANINE MUSIC LOVER.—Ernest Ladovitch, well known violinist of Washington, D. C., is playing for his Russian wolf hound, Nicolai, once owned by the ex-Czar of Russia.

PATICYCLING.—Paticycling is the newest mode of transportation in France. These men are racing from Paris to Versailles for a prize of 1500 francs. Photo shows the racers passing through Paris.

PAYS DOCTOR TO KEEP HIM WELL.—Samuel M. Vauclain, pays a doctor a flat annual fee to keep him well. When he is sick the doctor gets no pay.

TRIPLETS SCORE AT BABY SHOW.—Here are the Creegan triplets from Alliston, Massachusetts, who were features of the baby show held recently in Boston, Mass. They are fine healthy looking specimens, and received honorable mention as well as looks of admiration.

FRANCE HONORS FOUR DEAD AVIATORS.—A unique monument showing four shrouded forms, has just been dedicated at Trevol, near Moulin, France. It is to honor four French aeronauts who were killed, September 25, 1909, when the huge dirigible, Republic, burned.

FIRST BOTTLE NOSE WHALE EVER CAUGHT.—It weighs about five tons and is twenty three feet in length. It was caught at Ten Pond Island and brought to Gloucester, Mass.

HERO OF OUR BOYHOOD DAYS.—Burt L. Standish, known in private life as Gilbert Patten, wrote the "Frank Merriwell" stories, enjoyed by all boys.

BOYS LEARN TELEGRAPHY.—A continuation school, run by the Board of Education, New York, for Western Union boys, is teaching them to be telegraphers. The boys are shown taking dictation from a "keyboard."

(Copyright, Keystone View Co.)

Dairy Cows Help Farmers Stage "Come Back"

After Two Crop Failures Arenac County Farmers Turned to Dairying and Are Succeeding With Help of Business Men

By E. J. LEENHOUTS

IT was a sad-faced group of men which met in the rooms of the Standish Chamber of Commerce last November to discuss "ways and means" of improving the common weal of their fair city and citizens. During the past three years they had heard nothing but "deficits," "back-dues," "hard times," and other hard luck stories. Several attempt at interesting manufacturing concerns in locating in the city of Standish had failed, one of these failures taking with it a large sum of money donated by the business men. Being a town of only 1,000 people, its interests were entirely bound up with those of the farming community surrounding it (altho not all of the urban population appreciated that fact), and the farmers had suffered two crop failures and were in very bad straits.

It was at this meeting that Mr. H. A. Chamberlain, the banker arose and said, "Gentlemen, we are facing a crisis. Unless something is done very speedily, three-fourths of our farmers will lose their farms thru foreclosures and most of us will face bankruptcy. The farmers' interests and ours are mutual and it is only by co-operating with them that we can "save our own skins," as well as possibly helping them out. Let us forget these dreams about factories with large pay-rolls and develop some practical plans for helping ourselves. I believe the best way to do this is to assist the surrounding farmers toward a greater degree of prosperity because I have noticed that when they are making money, we are also getting along fairly well." In the discussion that followed, he pointed out that the one-crop farmers were losing money thruout the entire country but that the dairy-farmers were fairly prosperous; that Arenac County had been relying on beans and beets entirely too much and should be depending upon the dairy-cow more; that many organizations of business men in other communities had assisted materially in getting their farmers to change their system of farming to the mutual advantage of both; and that closer co-operation between rural and urban folks would work wonders for Standish and Arenac County. Among those members who gave enthusiastic support were the President of the Chamber of Commerce, a clothier, Mr. Bernthal, and the local newspaper editor, Mr. Perlberg. The latter offered his newspaper medium for use in this work and plans were formulated which called for three large projects: (1) a series of educational meetings at which authorities on agriculture should appear and explain the advantages of dairying and give general instructions on how to proceed to produce milk more efficiently; (2) financing all worthy farmers who wished to purchase purebred or good grade cows; (3) take full advantage of the assistance which is being offered free-of-charge by the state, the Agricultural College, the Development Bureaus, the Michigan Central R. R., etc.

Held Series of Meetings

The story of the development which has taken place in Arenac County during the past year shows how closely these men "have hewed to the line." All thru the winter months, a joint meeting of the Chamber of Commerce and farmers was held every two weeks and the attendance mounted from a mere handful to over 250 people. Leading authorities from the Agricultural College on dairying, farm crops, poultry, and farm organization appeared before these meetings in turn and the business men became about as enthusiastic about farming as did the farmers themselves. At each one of these meetings the President announcd that the banker was ready to advance money for the purchase of better stock to any farmer who wished to buy, payments to be made monthly out of the milk-check. The newspaper carried large head-lines announcing the meetings and, later, gave complete accounts of the speeches. The editor also prevailed upon the Agricultural Department of the N. Y. C. Lines to prepare a series of articles on the advantages of dairying, the selection of cattle, feeding and care of cows, etc. Every week for three months, one of these articles occupied a half-page of this newspaper, often illustrated with pictures. Long before spring arrived, everybody was talking and thinking about the dairy-cow and many purchases had been made. A carload of purebred and grade cows were brought into the County in March by the banker. The Chamber of Commerce had enlisted the active co-operation of the Extension forces from the college and the Agricultural Department of the N. Y. C. Lines and they were all working hand in hand.

"Better Dairy Day" at Standish, June 25, 1923. A carload of purebred Holstein cattle was sold to Arenac county farmers on that day.

Lease Purebred Sires

Appreciating the need for better breeding, the M. C. R. R. leased three purebred Holstein sires to three groups of dairy-farmers near Standish. Altho leased free of charge, the railroad has the option of taking them away in case they are not well cared for. One of these sires was made grand champion at the fair and all of them are well-bred animals of excellent type. The leasing of these three bulls started the movement which resulted in the introduction of over 30 pure-bred dairy sires into Arenac County in the short period of six months.

Hire County Agent

The business men realized, however, that there were so many things to be done to bring about more efficient farming that they began to consider the matter of employing an expert to take care of the educational and organization work. They found that the Federal and State Government would pay half of the salary of such an "expert," commonly called "County Agent," and so they proceeded to hire one. The banker and the editor took the lead in this matter and they employed a young college graduate. Before he arrived, however, the President of the Chamber of Commerce had succeeded in organizing a Cow-test Association of 26 members and had employed a young man to make tests and keep the records on the cows belonging to these 26 farmers. With these two young men on the job to look after the details and to carry on the educational work, the development has been proceeding at a good rate and the business men have been left free to look after other matters, particularly that of financing the worthy farmers.

"Better Dairy Day"

Dairying without proper feed is impossible. The best dairy-feed is alfalfa but it is almost impossible to raise alfalfa without limestone and a large share of Arenac's soil requires limestone, Reasoning along these lines, the Agricultural Agent of the M. C. R. R. offered the County Agent a carload of limestone for demonstration purposes. As a result, the County Agent has established 20 one-acre demonstrations thruout his county and the farmers will soon be convinced that the use of limestone is the best insurance against crop-failure in alfalfa, the best dairy feed.

During the summer, a "Better Dairy Day" celebration was arranged for the county thru the co-operation of the Chamber of Commerce, the County Agent, the Livingston County Breeders' Association, and the Agricultural Department of the M. C. R. R. A carload of purebred Holstein cattle were supplied by the Livingston Association at very reasonable prices and a big program was arranged for the day when the cattle arrived at Standish. The main speaker of the day was Mr. H. E. Dennison, Dairy Extension Leader from M. A. C., who used one of the cows to illustrate his points. Old Bossy shared the platform with all of the speakers. Over 500 farmers were present and the cows were disposed of to the farmers at bargain prices.

A year has gone by since that meeting of the C. of C. at Standish when it was decided to launch this agricultural campaign. Has it been worth the candle? The records show that over 200 grade and purebred cows have been shipped into the county; 30 purebred bulls have been placed in the same county and should make a wonderful change in the cows of the next generation; one Cow-test Association has been formed and is fast weeding out the unprofitable cows; a Boys' and Girls' Club of ten members has been formed and is making real efficient dairymen out of these youths, saying nothing about the effect it may have on the fathers; the milk receipts at the local creamery have increased from a daily average of 18,000 to over 40,000 pounds; production per farm has increased over 30 per cent in spite of the fact that many herds have been reduced this year on the books of the local creamery; instead of the milk-checks aggregating $300 as they did last year, they now average $800 per day; and, best of all, the farmer and the business man are no longer distrusting each other but are working together toward a common end.

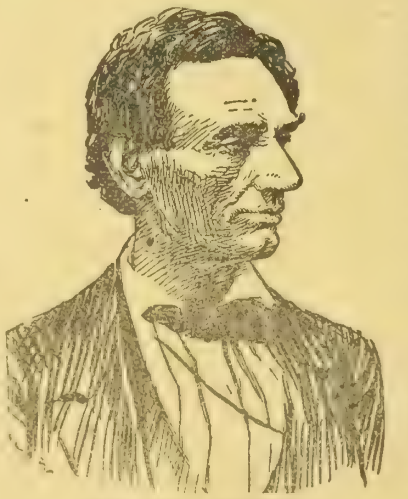
All Will Be Benefited

Someone may ask, "What does that development do for the business-men of Standish? I can see how it benefits the farmer but I do not see what the business man or the railroad gets out of it?" Six months after the first joint meeting was held, six prominent business men were asked what they thought of the dairy business and the reply was the same substance from each. It was, "We can feel the difference in our business right now. Our farmer-patrons have money to spend and they are spending it with us. It is the best thing that has ever struck our county, looking at it from the selfish standpoint." As for the M. C. R. R., its prosperity depends upon the prosperity of the folks along its right-of-way, and it already has had enough increase of business from this county to prove that dairying has made Arenac County more prosperous.

When farmer, business man, educational institution, railroad, breed association, etc., all co-operate with the dairy cow, it is extremely improbable that prosperity and the farmer will be very far separated.

The First Thanksgiving Proclamation

IT has pleased Almighty God to prolong our national life another year, defending us with his guardian care against unfriendly designs from abroad, and vouchsafing to us in His mercy many and signal victories over the enemy, who is of our own household. It has also pleased our Heavenly Father to favor as well our citizens in their homes, as our soldiers in their camps and our sailors on the rivers and seas, with unusual health. He has largely augmented our free population by emancipation and immigration, while He has opened to us new resources of wealth, and has crowned the labor of our working men in every department of industry with abundant rewards. Moreover, He has been pleased to animate and inspire our minds and hearts with fortitude, courage and resolution sufficient for the great trial of Civil War into which we have been brought by our adherence as a nation to the cause of freedom of humanity, and to afford to us reasonable hopes of an ultimate and happy deliverance from all our dangers and afflictions.



The Great President

Now, therefore, I, Abraham Lincoln, president of the United States, do hereby appoint and set apart the last Thursday of November, next, as a day which I desire to be observed by all my fellow-citizens, wherever they may be, as a day of thanksgiving and praise to Almighty God, the beneficent Creator and Ruler of the Universe. And I do further recommend to my fellow-citizens aforesaid, that, on that occasion they do reverently humble themselves in the dust and from thence offer up penitent and fervent prayers and supplications to the Great Dispenser of events for a return of the inestimable blessings of peace, union and harmony throughout the land which it has pleased Him to assign as a dwelling place for ourselves and our posterity throughout all generations.

In testimony whereof, I have hereunto set my hand and caused the seal of the United States to be affixed.

Done at the city of Washington this twentieth day of October, in the year of our Lord, one thousand eight hundred and sixty-four, and of the independence of the United States the eighty-ninth..

ABRAHAM LINCOLN.

By the President:

WILLIAM H. SEWARD, Secretary of State.

Previous to the issuance of the foregoing proclamation, several New England states governors had proclaimed state holidays known as Thanksgiving days. The proclamation by President Lincoln was the first directing the people of the entire nation to observe a common day of thanksgiving.

THINGS YOU NEED RIGHT NOW Send No Money LOWEST PRICES IN AMERICA

Yes, here are the very things you need at the lowest prices in America. You can order as many of the items shown on this page as you wish. What the Neighbors Say

TOO MUCH "POLITICS" AT M. A. C.

DEAR Editor:—I am enclosing a one dollar bill for which please send me the M. B. F. for two years.

I was very much interested in your editorial on Michigan beans. this "idea" has been in my mind for a long time. I graduated from M. A. C. in '22 and since that time have been in the marketing game. For a while I was with J. P. Burroughs & Son, of Flint. I have been with the Wolverine Grain Co. since last March. I have decided to devote my life to help solve the farmer's marketing problems. There is a great chance for service here, I believe. However, the job you outline would take a lot of experience and knowledge of marketing. Anyone who didn't have these qualifications would make an awful fizzle of it. So I have decided to fit myself for just such a job. Then if the job doesn't show up, I'll either make it or put my effort into private enterprise.

One of the biggest hinderances in the way of the organization you outline is the fact that the farmer is not educated to it. The letter you reproduce in your editorial column is proof of that. However, the outlook is not entirely hopeless and I think that you are to be commended for the work you are doing in educating the farmer.

It is to be regretted that politics is so rampant and is cutting down the efficiency of my alma mater. I don't know your views—but I am heartily with the Governer in the present "squabble." I haven't had an opportunity to make a careful study of the facts, if indeed such a thing were possible, but my life at the college for three or four years leads me in that direction. I have noted the "plank" of the Grange in the issue you sent us and it is evident that they don't agree with my views.

If I ever get the time I hope to write for your paper. I think that the problems of the Michigan farmer are such as to be worthy of the effort of the best minds in the state.

It is my sincere hope that I haven't tired you with this lengthy letter and that I may have the pleasure of meeting you some time. Unbiased minds are so rare it is refreshing to come in contact with one.—W. H. Kaltenbach.

BETTER CONDITIONS FOR THE FARMER

TO the Editor:—A great deal has been said but not much done for the benefit or for improving the condition of the farmer.

During the war the administration declared that the manufacturer must have a reasonable profit and he received a very reasonable profit. Has the administration ever said to the farmer you must have a reasonable profit? Have they as a class ever received a reasonable profit on all crops? In times past when any one of the farmer's productions sold so there was ten or fifteen per cent profit what did the government do? Simply showed their deep concern by sending out circulars and in every way try to induce the farmer to raise that particular commodity and the farmer always patriotic turned in and raised that particular crop. What was the result? In the fall there being an over production the crop went back to starvation prices. Just a short time ago the President and his Cabinet met for a conference to see if something could be done to improve the condition of the farmer. After carefully going over every theory presented at the meeting they finally concluded to advise the farmer to go into raising sugar beets. (Sugar is high you know.) Such advice always leads to reduce the cost to the consumer and lessen and reduce the price of that article in the market and lessen the financial opportunities to the farmer. I am told several manufacturers make from 50 to 300 per cent profit. Has the government ever said anything against that or even given them advice that would give them a set back? I think not. The farmer loan system is a good thing for the farmers that are economical but a damage to those that are extravagant, but on the whole I think it a good thing. In conclusion I would like to present several ideas that I think would improve the farmers' condition more than anything that has been done.

First pay the governments debts with the farmers' produce. That is, let each government we owe order all the farmers' produce they wish, giving them credit for that much on their debt to us and pay the farmer thus, creating a demand for farmers' produce.

Second: Establish public bonded warehouses in every large city in the United States making a direct outlet for all the farmers' produce.

Third: Lessen the taxes by re-establishing the excess of profits tax at from one per cent for the lowest up to 25 per cent for the highest. This for the safety of the whole country as well as the farmer.

Farmers let's wake up and fight harder for bettering our condition. Elect men in congress and even a president who will work for the interest of the farmer.—M. S. Howes.

MINING MARL FOR MUSKEGON COUNTY FARMS

PRACTICALLY every farm in Muskegon county has two important soil needs—more lime and more humus. Through years of steady cropping the lime originally in the soil has been removed in the crops and by constant leaching while the humus has been nearly all worn out.

Fortunately for some sections of the county nature has stored up some of this leached-out lime in the form of marl. Now marl is simply lime which has been deposited from solution in water. In some cases the lime seems to settle to the bottom while in other cases small plants, or even animals with their shells take the lime from the water. Then they die and settle to the bottom, they help build up the marl beds.

And now comes Chapter two "Mining the Marl." Dr. Hornung of Muskegon is as much a farm enthusiast as an extractor of molars. His extensive holding in Cedar Creek township include a large portion of Duck and Mud lakes. And these lakes contain extensive marl deposits. Analysis of this marl shows it to contain over 90 per cent of calcium carbonate, which is the technical name for lime.

The next problem is to get this marl out onto higher ground where it can be reached and hauled away. Dr. Hornung seems to have solved the problem with the aid of an engineering company of Goshen, Ind. This company makes a specialty of excavating outfits and after looking over the Duck Lake proposition, recommeded a drag-line outfit. This equipment has been purchased by Dr. Hornung and will be set up soon, probably this month. It is hoped to get the excavator in action so that enough marl for the winter needs of that section can be secured.

In co-operation with the Agricultural Agents of Muskegon and Newago counties, Dr. Hornung plans to hold a special demonstration meeting as soon as the outfit is in working order. Soil testing outfits will be on hand for this meeting and it is planned to make it of unusual interest to every farmer in these two counties.

The high freight rates on ground limestone make that commodity a rather expensive article when delivered in Muskegon county. Farmers within hauling distance of Dr. Hornung marl pile will appreciate securing lime so near at hand and at such a reasonable cost. Dr. Hornung plans to charge only a moderate amount per yard of marl, sufficient to cover the cost of excavating.

NO DAMAGE DONE

After much excitement the Smiths had at last managed to catch the train.

Now, when they could sit quietly for a while, they began to wonder if they had left anything behind.

Mrs Smith gave a shriek.

"Oh, Harry," she gasped, "I forgot to turn off the electric-iron!"

"Don't worry, darling," he replied, nothing will burn. I forgot to turn off the shower-bath."—The Christian Advocate (New York).

Farmers Service Bureau

(A Clearing Department for farmers' every day troubles. Prompt, careful attention given to all complaints or requests for information addressed to this department. We are here to serve you. All inquiries must be accompanied by full n ame and address. Name not used if so requested.)

TAKING OVER OLD TURNPIKE

I would like some information on some legal questions. Has the government the right to take over the old turn pike road that has been closed for over thirty years without buying or paying for damages? As this road runs through my farm and has been farmed and buildings thereon. Would State have to buy this property? If not as I have a warranty deed would the man deeded the property to me have to make it good?—W. G., Portland, Michigan.

—In this state a highway or any portion of it can be lost by non-user. Gregory vs. Knight 50-64. Lyle vs. Leslia 64-16. Whether or not a particular highway would be lost to the public by reason of non-user must be determined from the particular facts of each case and believe that it would be more appropriate for you to consult some private attorney who will be able to ascertain all of the facts surrounding the case and the history of it and thereby give a more definite reply than we can.—H. Victor Spike, Assistant Attorney General of Michigan.

FULL CREW ON TRAIN

Is a railroad company allowed to run a train without a full crew of men?—J. W. M., Tawas City, Mich.

—For your information, there is no law in the State of Michigan stipulating the number of men that shall be maintained on a train. The law does not even specify that an engineer and fireman should be maintained on a locomotive, say nothing of the number of the train crew.—Michigan Public Utilities Commission.

WIFE HAS CLAIM ON PROPERTY

I am a reader of the Business Farmer and would like to know through your paper if a wife that has lived only one month after her marriage with the man of her choice, and then deserts him, and not returned for over a year, can she have any claim on the man's property if the man is not divorced, and wishes to sell his property?—W. J. A., Alpena, Mich.

—If you have not been divorced from your wife she has the same rights in your property as she would have had, had she lived with you continuously. Before you can dispose of your real property it would be necessary for her to sign the conveyance in order to release her right of dower in such property.—Asst. Legal Editor.

LICENSE TO PEDDLE GROCERIES

Does a person have the right, without a license, to sell groceries from their home in country, and can they deliver in the adjoining towns?—M. V. B., Grand Ledge, Michigan.

—A person can peddle groceries without a license if they have been conducting a grocery store for one year or more but if they have not then a license is required. This license is good anywhere in the State of Michigan.—Hoyt Woodman, Deputy State Treasurer.

LIEN ON FURNITURE

Can you give me some advice on the following matter: We have rented my farmhouse to A as a summer cottage ($5.00 per month). A brings some furniture such as one bed and spring, no mattress, one table, 4 chairs, some dishes, ice box and some bedding, but has never occupied the house. A has not paid rent, except the first $5.00, and left their furniture here. Then we told them to vacate as we were going to move in ourself. A said "we'll come sometime," but for more than two years A didn't come for the things. Now we fixed up the furniture, cleaned, varnished it, used the dishes which most are broken now, and bedding burned when we had a fire in the attic. Now A comes and wants their things. Can we make them pay for 8 months rent and 22 months storage? Then A and his wife had parted, and he told us to keep the things, two years ago last spring, now they are together again and want their things. Can they make us pay for bedding which burned and dishes that are broke? Can we keep the furniture if they refuse to pay storage or rent? Would like to have your legal advice on this subject.—Mrs. G. G., Hesperia.

—I am of the opinion you would have a lien on the furniture, and could hold it, for rent due you during the time you were deprived from the use of the house. You could also make a reasonable charge for storage which you could set off against the value of the furniture. —Asst. Legal Editor.

PRUNING

Can you give me some information regarding the pruning of different kinds of fruit trees and the proper season to prune and spray, and can some of it be done in the fall?—F. P. B., Mancelona, Michigan.

—A great many of our fruit growers make the mistake of pruning young fruit trees too severely. When these trees are heavily pruned, they are late in coming into bearing and are somewhat dwarfed in size. On the other hand, if they are not pruned at all, they are apt to form a number of weak crotches and to develop into trees that will be unable to support heavy loads of fruit in later years. Pruning, then, during the unbearing age of the tree, is mainly for the purpose of developing a strong frame-work, and should be only severe enough to gain this end.

Bearing apple trees should be thinned to admit some light, to permit a free circulation of air, and make thorough spraying possible and thus aid in the development of high quality fruit. To get this result in pruning it is necessary that the pruning be confined almost exclusively to the removal of small branches, and by this I mean branches that have a diameter at the point of removal of not more than an inch. The removal of a number of weak crotches and to bearing trees is not advisable unless they are diseased.

Peaches, in Michigan, are generally pruned too lightly. You should thin out last season's growth by removing as much as perhaps 50 to 60 per cent of it, and then head back the remaining branches severely enough to remove from 25 to 60 per cent of the growth, depending upon the vigor of the tree. Again, peach trees should be kept quite open in the center so as to expose the fruit as much as possible.

Cherries, plums and pears are handled in much the same manner as apples. The Experiment Station Special Bulletin 118 gives more detailed information with regard to pruning each of these fruits.

The pruning may be done any time from the time the leaves drop in the fall until the trees blossom the following spring, except in the very coldest days when the wood is frozen and is apt to split.—Roy E. Marshall, Department of Horticulture, M. A. C.

SCHOOL CHILDREN SWING ON FENCE

I would like a little information. I have land right across the road from schoolhouse, and there is a ditch on my side with a fence close to the bank of the ditch. Now, do the children have any right to play on the bank and slide and fill the ditch and swing on the fence?—A. D. A., Milan, Mich.

—In right to the question, I would say the children have no right to swing on the fence as this fence belongs to the owner of the land and he can forbid their climbing on the fence. He can hardly forbid the children playing on the bank outside his fence. If the children fill up the ditch he should file his complaint with the township highway commissioner. The children should of course not be allowed to fill up the ditch.—G. N. Otwell, Dept, of Public Instruction.

The Law and the Railroads

Railroad recovery in Michigan—the "Better Service" you hear about and enjoy—is being provided you despite the severe handicaps imposed by a multitude of special laws.

Such laws have established certain governmental bodies entirely separate and without co-ordination. These bodies fix our rates for carrying freight and passengers—pass judgment on all of our security issues and other financing—specify the working hours of our employes and the wages we must pay them—limit our profits, when there ARE profits, to a small and definite maximum—have full jurisdiction over our tax assessments—restrict rigidly our methods of competition—hedge about, with a multitude of restrictions, every department of our operations.

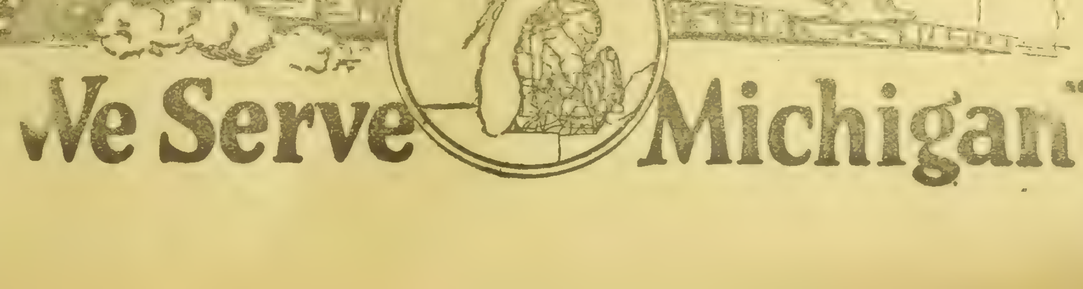
Michigan's 24 steam railroads honestly try to obey every one of these laws. We do not even ask for a lightening of this load. But we do maintain that this present burden should NOT be INCREASED.

We are furnishing you today the best transportation you have ever had. With conditions unchanged, we can see our way clear to still further improving our service.

Give us a square deal—an honest chance.

And let this Association know you consider this a reasonable request.

Michigan Railroad Association
508 Railway Exchange Bldg., Detroit, Mich.



$10,000.00 DAMAGE CASE

SUED WHILE TOURING IN OREGON

Boyne City, Michigan,
October 20, 1923.

**Citizens' Mutual Auto Insurance Co.,
Howell, Michigan.**

Gentlemen:

I have just been advised that the suit started against me for $10,000 as the result of an automobile accident which occurred the 4th day of August, near Salem, Oregon, in which Mrs. Alice Lenon was fatally injured, was adjusted and dismissed. I wish to say that my wife and I are greatly pleased that this matter has been disposed of.

We have lived in Michigan a long time and were taking a trip this summer, going to California. When this sad accident occurred in Oregon, it took the pleasure out of our trip. When they held the inquest and later started suit against us, we were very thankful that we had an automobile insurance policy. While we had been a member of your company for a number of years we had never needed this protection before. Your Secretary, Mr. Robb, came to Oregon to give his personal attention to this matter. From his large experience in handling personal injury claims and his knowledge as a lawyer, we found that he was able to cope with the attorneys who had been employed to try this case against us and now that the matter has been adjusted so that all parties are satisfied by the payment of a total expense of $1,961.00, we are greatly relieved. Any one who has ever been in an accident of this kind can appreciate the consolation of service.

We thank your company for the service rendered and for the able way in which this case was handled.

Sincerely yours,

(Signed) **S. B. Stackus.**

Oh Money! Money!

by ELEANOR H. PORTER

THE STORY TO DATE

MR. STANLEY G. FULTON, 50-year old bachelor and possessor of twenty million dollars, calls on his lawyer and they discuss the disposition of this large fortune after its owner's death. The lawyer is in favor of giving the money to colleges or charities while Fulton is opposed to these ideas. He remembers that he has some distant cousins and decides to leave the money to one of them, but first he determines to learn which one will use it to the best advantage. To find out who is the worthy one he, through his lawyer, gives, each cousin $100,000 to use as they will. Before giving them the money grows a beard and, using the name of Mr. John Smith, goes to the town where they live to find out what kind of people they are. Upon arriving in town he visits James Blaisdell, one of the cousins, where he tries to hire board and lodging. While there he meets Miss Flora Blaisdell, another cousin who is a dressmaker. They decide they cannot rent a room to him and supply him board and refer him to Frank Blaisdell's, the third cousin. He gets a room there and, passing as a writer gathering material for a book on the Blaisdell family in this country, he starts out.

(Continued from November 10th issue.)

"IT was, indeed!" Mr. Smith's lips came together a bit grimly.

"Well, after a time Frank and Jim married, and there was only Flora and Father Duff at home. Poor Maggie tried then to go to college again. She was over twenty-one, and supposed to be her own mistress, of course. She found a place where she could work and pay her way through college, and Flora said she'd keep the house and take care of Father Duff. But, dear me; it wasn't a month before that ended, and Maggie had to come home again. Flora wasn't strong, and the work fretted her. Besides, she never could get along with Father Duff, and she was trying to learn dressmaking, too. She stuck it out till she got sick, though, then of course Maggie had to come back."

"Well, by Jove!" ejaculated Mr. Smith.

"Yes, wasn't it too bad? Poor Maggie, she tried it twice again. She persuaded her father to get a girl. But that didn't work, either. The first girl and, her father fought like cats and dogs, and the last time she got one her father was taken sick, and she had to come home. Some way, it's always been that way with poor Maggie. No sooner does she reach out to take something than it's snatched away, just as she thinks she" got it. Why, there was her father's cousin George—he was going to help her once. But a streak of bad luck hit him at just that minute, and he gave out."

"And he never tried—again?"

"No. He went to Alaska then. Hasn't ever been back since. He's done well, too, they say, and I always thought he'd send back something; but he never has. There was trouble, I believe, between him and Father Duff at the time he went to Alaska, so that explains it, probably. Anyway, he's never done anything for them. Well, when he gave out, Maggie just gave up college then, and settled down to take care of her father, though I guess she's always studied some at home; and I know that for years she didn't give up hope but that she could go some time. But I guess she has now. Poor Maggie!"

"How old is she?"

"Why, let me see—forty-three, forty-four—yes, she's forty-five. She had her forty-third birthday here—I remember I gave her a handkerchief for a birthday present—when she was helping me take care of Mellicent through the pneumonia; and that was two years ago. She used to come here and to Jim's and Flora's days at a time; but she isn't quite so free as she was—Father Duff's worse now, and she don't like to leave him nights, much, so she can't come to us so often. See?"

"Yes, I—see." There was a queer something in Mr. Smith's voice. "And just what is the matter with Mr. Duff?"

"Matter!" Mrs. Jane Blaisdell gave a short laugh and shrugged her shoulders. "Everything's the matter—with Father Duff! Oh, it's nerves, mostly, the doctor says, and there are some other things—long names that I can't remember. But, as I said, everything's the matter with Father Duff. He's one of those men where there isn't anything quite right. Frank says he's got so he just objects to everything—on general principles. If it's blue, he says it ought to be black, you know. And, really, I don't know but Frank's right. How Maggie stands him I don't see; but she's devotion itself. Why, she even gave up her lovers years ago for him. She wouldn't leave her father, and, of course, nobody would think of taking him into the family, when he wasn't born into it, so the affair was broken off. I don't know, really, as Maggie cared much. Still, you can't tell. She never was one to carry her heart on her sleeve. Poor Maggie! I've always so wished I could do something for her!

"There, how I have run on! But then, you asked, and you're interested, I know, and that's what you're here for—to find out about the Blaisdells."

"To—to—f-find out—" stammered Mr. Smith, grown suddenly very red.

"Yes, for your book, I mean."

"Oh, yes—of course; for my book," agreed Mr. Smith, a bit hastily. He had the guilty air of a small boy who has almost been caught in a raid on the cooky jar.

"And although poor Maggie isn't really a Blaisdell herself, she's nearly one; and they've got lots of Blaisdell records down there—among Mother Blaisdell's things, you know. You'll want to see those."

"Yes; yes, indeed. I'll want to see those, of course," declared Mr. Smith, rising to his feet, preparatory to going to his own room.

CHAPTER VI

Poor Maggie

It was some days later that Mr. Smith asked Benny one afternoon to show him the way to Miss Maggie Duff's home.

"Sure I will," agreed Benny with alacrity. "You don't ever have ter do any teasin' ter get me ter go ter Aunt Maggie's."

"You're fond of Aunt Maggie, then, I take it."

Benny's eyes widened a little.

"Why of course! Everybody's fond of Aunt Maggie. Why, I don't know anybody that don't like Aunt Maggie."

"I'm sure that speaks well—for Aunt Maggie," smiled Mr. Smith.

"Yep! A feller can take some comfort at Aunt Maggie's" continued Benny, trudging along at Mr. Smith's side. "She don't have anythin' just for show, that you can't touch, like 't is at my house, and there ain't anythin' but what you can use without gettin' snarled up in a mess of covers an' tidies, like 't is at Aunt Jane's. But Aunt Maggie don't save anythin', Aunt Jane says, an' she'll die some day in the poorhouse, bein so extravagant. But I don't believe she will. Do you, Mr. Smith?"

"Well, really, Benny, I—er—" hesitated the man.

"Well, I don't believe she will," repeated Benny. "I hope she won't, anyhow. Poorhouses ain't very nice, are they?"

"I—I don't think I know very much about them, Benny."

"Well, I don't believe they are, from what Aunt Jane says. And if they ain't I don't want Aunt Maggie ter go. She hadn't ought ter have anythin'—but Heaven—after Grandpa Duff. Do you know Grandpa Duff?"

"No, my b-boy." Mr. Smith was choking over a cough.

"He's sick. He's got a chronic grouch, ma says. Do you know what that is?"

"I have heard of them."

"What are they? Anything like chronic rheumatism? I know what chronic means. It means it keeps goin' without stoppin' —the rheumatism, I mean, not the folks that's got it. They don't go at all, sometimes. Old Dr. Cole don't, and that's what he's got. But when I asked ma what a grouch was, she said little boys should be seen and not heard. Ma always says that when she don't want to answer my questions. Do you? Have you got any little boys, Mr. Smith?

"No Benny. I'm a poor old bachelor."

"Oh, are you poor, too? That's too bad."

"Well, that is, I—I—"

"Ma was wonderin' yesterday what you lived on. Haven't you got any money, Mr. Smith?"

"Oh, yes, Benny, I've got enough—to live on." Mr. Smith spoke promptly, and with confidence this time.

"Oh, that's nice. You're glad, then, ain't you? Ma says we haven't—got enough ter live on, I mean but pa says we have, if we didn't try ter live like everybody else lives what's got more."

Mr. Smith bit his lips, and looked down a little apprehensively at the small boy at his side.

"I—I'm not sure, Benny, but that I shall have to say little boys should be seen and not—" He stopped abruptly. Benny, with a stentorian shout, had run ahead to a gate before a small white cottage. On the cozy, vine-shaded porch sat a white-haired old man leaning forward on his cane.

"Hi, there, Grandpa Duff, I've brought somebody ter see ye!" The gate was open now, and Benny was halfway up the short walk. "It's Mr. Smith. Come in, Mr. Smith. Here's grandpa right here."

With a pleasant smile Mr. Smith doffed his hat and came forward.

"Thank you, Benny. How do you do, Mr. Duff?"

The man on the porch looked up sharply from beneath heavy brows.

"Humph! Your name's Smith, is it?"

"That's what they call me." The corners of Mr. Smith's mouth twitched a little.

"Humph! Yes, I've heard of you."

"You flatter me!" Mr. Smith, on the topmost step, hesitated. "Is your—er—daughter in, Mr. Duff?" He was still smiling cheerfully.

Mr. Duff was not smiling. His somewhat unfriendly gaze was still bent upon the newcomer.

"Just what do you want of my daughter?

"Why, I—I—" Plainly nonplused, the man paused uncertainly. Then, with a resumption of his jaunty cheerfulness, he smiled straight into the unfriendly eyes.' "I'm after some records, Mr. Duff, —records of the Blaisdell family. I'm compiling a book on—"

"Humph! I thought as much," interrupted Mr. Duff curtly, settling back in his chair. "As I said, I've heard of you. But you needn't come here asking your silly questions. I shan't tell you a thing, anyway if you do. It's none of your business who lived and died and what they did before you were born. If the Lord had wanted you to know he'd 'a' put you here then instead of now!"

Looking very much as if he had received a blow in the face, Mr. Smith fell back.

"Aw, grandpa"—began Benny, in grieved expostulation. But a cheery voice interrupted, and Mr. Smith turned to see Miss Maggie Duff emerging from the doorway.

"Oh, Mr. Smith, how do you do?" she greeted him, extending a cordial hand. "Come up and sit down."

For only the briefest of minutes he hesitated. Had she heard? Could she have heard, and yet speak so unconcernedly? It seemed impossible. And yet—He took the chair she offered—but with a furtive glance toward the old man. He had only a moment to wait.

Sharply Mr. Duff turned to his daughter.

"This Mr. Smith tells me he has come to see those records. Now, I'm—"

"Oh, father, dear, you couldn't!" interrupted his daughter with admonishing earnestness. "You mustn't go and get all of those down!" (Mr. Smith almost gasped aloud in his amazement, but Miss Maggie did not seem to notice him at all.) "Why, father, you couldn't—they're too heavy for you! There are the Bible, and all those papers. They're too heavy, father. I couldn't let you. Besides, I shouldn't think you'd want to get them!"

If Mr. Smith, hearing this, almost gasped aloud in his amazement, he quite did so at what happened. His mouth actually fell open as he saw the old man rise to his feet with stern dignity.

"That will do, Maggie. I'm not quite in my dotage yet. I guess I'm still able to fetch downstairs a book and a bundle of papers." With his thumping cane a resolute emphasis to every other step, the old man hobbled into the house.

"There, grandpa, that's the talk!" crowed Benny. "But you said—"

Er—Benny, dear," interposed Miss Maggie, in a haste so precipitate that it looked almost like alarm, "run into the pantry and see what you can find in the cooky jar." The last of her sentence was addressed to Benny's flying heels as they disappeared through the doorway.

Left together, Mr. Smith searched the woman's face for some hint, some sign that this extraordinary shift-about was recognized and understood; but Miss Maggie, with a countenance serenely expressing only cheerful interest, was over by the little stand, re-arranging the pile of books and newspapers on it.

"I think, after all," she began thoughtfully, pausing in her work, "that it will be better indoors. It blows so out here that you'll be bothered in your copying, I am afraid."

She was still standing at the table, chatting about the papers, however, when at the door, a few minutes later, appeared her father, in his arms a big Bible, and a sizable pasteboard box.

"Right here, father, please," she said then, to Mr. Smith's dumfounded amazement. "Just set them down right here."

The old man frowned and cast disapproving eyes on his daughter and the table.

"There isn't room. I don't want them there," he observed coldly. "I shall put them in here." With the words he turned back into the house.

Once again Mr. Smith's bewilderer eyes searched Miss Maggie's face, and once again they found nothing but serene unconcern. She was already at the door.

"This way, please," she directed cheerily. And still marveling, he followed her into the house.

Mr. Smith thought he had never seen so charming a living-room. A comfortable chair invited him, and he sat down. He felt suddenly rested and at home, and at peace with the world. Realizing that, in some way, the room had produced this effect, he looked curiously about him, trying to solve the secret of it.

Reluctantly to himself he confessed that it was a very ordinary room. The carpet was poor, and was badly worn. The chairs, while comfortable looking, were manifestly not expensive, and had seen long service. Simple curtains were at the windows, and a few fair prints were on the walls. Two or three vases, of good lines but cheap material, held flowers, and there was a plain but roomy set of shelves with books—not immaculate, leather-backed, gilt-lettered "sets," but rows of dingy, worn volumes, whose very shabbiness was at once an invitation and a promise. Nowhere, however, could Mr. Smith see protecting cover, mat, or tidy. He decided then that this must be

(Continued on page 17.)

WORLD EMANCIPATION

A SERMON BY REV. DAVID F. WARNER

TEXT: "That they may all be one * * * that the world may know that thou didst send me." John 17:21.

"CHRIST or Chaos," a recent book; Bok's world peace prize offer; World Court week among the churches; Lloyd George's warning voice among us; and the German mark at 150,000,000,000; all these signal a world on fire.

But, hasn't the Law and the Prophets sketched a saved world? And isn't this the design in the Gospel? We do not question. In truth, this is a deduction from creation. All men are God-imaged thru their creation. They are living witnesses of a Divine Fatherhood. This establishes their kinship and the ideal of human brotherhood. Malachi says: "Have we not all one Father? Hath not one God created us? Why do we deal treacherously every man with his brother?" Paul declares, "God made of one every nation of men to dwell on the earth." And said Burns, "poet of the plain man,"

"What tho on homely fare we dine,
  Wear hodden-gray and a' that;
Gie fools their silk and knaves their wine,
  A man's a man for a' that."

And because "a man's a man," God-imaged, Jesus came to redeem him.

Christ came not to condemn the world but to save it. And to this end we hear him praying passionately for unity (Jno. 17:20-23). Are the words "that they all may be one" more than a hope? Do they confirm the prophecy of that great Isaian regeneration when "the wolf shall dwell with the lamb," etc.? Is the great pulsing heart of this world beating in that direction now? Do the proposals for international arbitration of difficulties have any bearing on Christ's world aim? And do the words of Lloyd George, "If the churches of Christ thruout Europe and America allow another war to fructify, they had better close their doors," mean anything to the churches?

Recently, at the Foreign Missions Conference of North America, a prominent speaker uttered these words: "Our little systems have their day, but unfortunately they have not ceased to be." Another, at the annual meeting of the Federal Council of Churches said: "I hope to live to see the day when a whole denomination will seek first the kingdom of God, even at the loss of its own life." Are we to understand, therefore, that the restoration of social Christianity demands a united church? At least a worked-out cooperation in terms of denominational comity and friendship? And do you know that weeks before the Washington Disarmament Conference, President Harding called upon the "Federal Council of Churches in America" to develop the sentiment for the same? What bearing have these events on a world salvation? And should the churches now challenge the world thru a united front?

But we can not do this. Christendom is not united. And why? When Jesus came to earth, he found the viper of social injustice, inhumanity to man and unbrotherliness raising its cruel head everywhere. Palestine was torn by various political factions. And why these things? There was no common ground in religion. This always makes a difference in heart and destroys love, unity, church, and country. Some one has said, "Religion is the great state-guiding principle." Therefore Constantine espouses the Christian's God, and the Kaiser throws out the sop to his people: "Me and Gott." So it does seem that any great moral and political advance awaits religious unity. That "the meek shall inherit the earth" is not yet visible in any large way.

So, today, we ought evermore to be praying Christ's prayer for spiritual unity and purpose among the churches. But, in practice, we find ourselves shot thru with denominational ambitions and handicapping factions. Here the Pharisee comes in for Jesus' vehement reproof. And here the Pope is reaching out for control. But what about our Protestant sects? Is any one of these the sole channel thru which God would pour his healing grace upon the world? What arrogance and pride is camouflaged behind some professions of church loyalty and devotion! I wonder if this might be the root cause of disunion? But the ceaseless purpose of God rolls on thru the impact of his Spirit, released nineteen hundred years ago. "Unto him that sitteth upon the throne and unto the lamb" is rendered the universal chorus of the ages. And some day, by the fiat of God, every tongue shall confess, not my church first or infallible, but that "Jesus Christ is Lord (first) to the glory of the Father."

What will unite Christendom? Will polity, methods, or organization? Certainly, here is but one cementing impulse, that of loving the world into Christ, even Matt. 28:19, 20. It is love that caroled from the clouds on that great birthnight of the world: "On earth peace and good-will to men." It is the new commandment to love one another. It is the principle of love with a two-fold sweep: to God and to neighbor. God so loved that he gave, and he whom he gave rendered to the world an unwearied service in love. Service in love is the only guarantee of Christian unity and cooperation in behalf of a world salvation. And here, the church that would be greatest must become servant of all.

"The love of Christ constraineth me," says Paul. "One can hardly conceive that Paul had any time for human bickerings and divisions. He could not sit around home nor confine his service to his own country. He must claim the Roman world for Christ. This love transcends that of home and country, and thru Christian cooperation, pushes its emmisaries out to the four corners of the earth to claim humanity for a universal family in God. America and the church for the world! But until we have arisen above mere nationalism, above the spirit expressed in "Deutchland uber Alles," or "America first," and above a selfish denominationalism, we have not come into the New Testament

"The Farm Paper of Service"

THE GASOLINE TAX AGAIN

GOVERNOR GROESBECK has practically gone on record as being willing to compromise on the gasoline tax measure which he vetoed last spring. The Governor insists, however, that the gasoline tax be so prepared that it will include a weight tax which will reduce the license plate fee to a nominal figure, and also a provision for doing away with horsepower as a factor in computing taxes on cars and trucks, claiming that weight should be the main factor.

Representative Joseph E. Warner, Ypsilanti, who introduced the gasoline tax bill in the House, early this year, said recently: "I agree with the Governor that something should be done at the special session to work out a better way for financing road construction and maintenance and for guaranteeing highway bond interest and sinking fund requirements, and am giving study as to how it can best be done."

This means that one of the first measures to be taken up by the legislature will doubtless be the gasoline tax issue, and it will be a pretty fight, because the Detroit Automobile Club has gone on record that they will secure the necessary twenty-nine thousand signatures to a petition which will hold up the bill until a referendum is had on it a year hence, and under this plan there is no way in which the legislature could put a tax bill into effect until after the next general election.

Just why the Automobile Club should be opposed to the gasoline tax we have never been able to figure out. Perhaps we are dense, but a tax which has been so generally accepted by so many states since it was passed and vetoed this spring surely must have some of the merits which it proponents claim for it. It is obvious, that something must be done to keep the good roads we are building with bonds in good condition. with taxes which meet the repair costs as they accrue. A tax of two cents on every gallon of gasoline consumed in Michigan would go a long way toward this end.

HELP FOR GERMANY

THERE is a bill pigeon-holed in Congress known as the Newton Bill, providing for an appropriation of $70,000,000 for the purchase in this country of food supplies for the famine-stricken people in Germany and Austria, to be distributed by the American Red Cross, with the co-operation of the German and Austrian Red Cross.

It is stated on high authority that conditions in Germany are rapidly approaching the famine state which was so nobly relieved in southern Russia by generous America.

There are, of course, those so embittered toward our former enemies that they would give them no comfort, but we think even these would be softened by the unlifted arms of a mother or the plaintiff wail of a tiny child without nourishment.

One of the great problems before the American farmer is to find a market for a portion of his surplus food products. American granaries are bulging and there are ample supplies so that the entire amount of this $70,000,000 could and would be spent directly for American farm products.

We would like to offer the suggestion that these purchases of farm products might be made without profit from the various growers organizations throughout the country. For instance, the Michigan Bean Growers Association would doubtless be glad to load cars at all points in Michigan of a sufficient quantity to supply this particular staple in the food purchases for the American Red Cross and we believe that there is not a bean grower in Michigan who would not be glad to supply his quota at a price even lower than that offered on his local market. He would not be entirely charitable in this because every pound of beans that leaves United States for export removes its share of the competition on the American market which forces the price downward.

Seventy million dollars sounds like a lot of money until you start talking about battleships, and there you could drop it without hardly making a splash. It would be an object lesson for all the world if America would put the Newton Bill in effect immediately Congress has convened. We have often thought lately that we would hate to be a missionary in a heathen land trying to teach Christianity with the sorry spectacle of so-called Christian nations grinding their heels of hate into their conquered Christian brothers.

SCALPING BEANS

THERE seems to be ample proof that the bean market is the eternal football of interests who are determined only to force prices up and down with the idea of scalping an extra profit.

The bean growers of Michigan, as we pointed out on this page in our last issue, ought to be handling their own beans and delivering them to the markets of the United States at their own profit.

We repeat that we hope some man will step forward ready to take on the task of organizing the bean growers and of handling their products. There is a wideopen opportunity here for some man who knows enough about selling beans and is favorably enough known in the trade to command the respect of the wholesale grocer with whom he must deal and the confidence of the growers for whom he must act.

Michigan fell down on its share of an advertising campaign which was designed to tell the great consuming public of the United States to "eat-more-beans," and the reasons for doing so, just as the many growers' associations out in California have so successfully done in the past few years. Michigan fell down because of the shortsightedness of some of her jobbers, and although Michigan's share of this campaign was to have been only $16,000 out of a $50,000 campaign, the amount was not raised.

One bean broker has come forward with the suggestion that a popular subscription be made up by bean growers and others interested in the industry and has offered to start it off with a $50 contribution, this THE BUSINESS FARMER will be glad to match if there is any interest in such a proposition from the grower and broker. It is our frank opinion, however, that this is a difficult way in which to raise a perfectly obviously needed fund for promotion purposes.

Some of you larger growers of beans call a meeting to talk this thing over and see if something cannot be started. There is a man somewhere for the job. Now it's up to you to help find him!

ELECTRICITY THE MODERN GENII

ALADDIN, the famous hero of the lamp in the "Arabian Nights," who with a single rub of his thumb on the coveted lamp produced a genii to do his bidding, had nothing on the modern farmer who has electricity and the power it represents at the touch of his thumb on a button.

No place in industry does electricity fit in more completely to lift the labor of men and women than it does on the farm. Electricity turns the chores and hardships of the farm and the farm home into pleasure.

Michigan is fortunately situated. We have a great number of rivers ready to be harnessed and thus supply for all time this mysterious power direct to our farms.

A beginning in harnessing the power available in Michigan has been made, but until every farmer can have electricity for his use by running wires out to the roadside, it will not be meeting the full demands of our citizens.

Michigan has no greater resource to be conserved and made the most of, than the power which runs to waste in her rivers. Probably the next great development in electricity will be the abolition of transmitting wires.

The possibilities of wireless have only been touched and our best authorities tell us that there is ample proof already that the next great invention will be the transmission of electric energy without wires. That will bring power and light and with it, continuous water under pressure and heat for cooking, to every home and to every farm, no matter how isolated.

You say you are too late to make a great discovery or a great invention young man! Why, the age of invention has only begun. We have only lifted a corner of the great tapestry which hides the gifts of God from mankind.

MELLON URGES TAX CUT

SECRETARY of the Treasury Mellon made a hit with the people of the United States when he issued a formal statement last week advising a huge cut in the governmental taxes, but whether he made himself equally popular with the administration is yet to be decided.

Mr. Mellon's recommendations included a 25 per cent reduction in the taxes on earned income; reduction of the normal taxes on incomes from 4 per cent and 8 per cent to 3 per cent and 6 per cent respectively. Application of the surtax at $10,000 instead of $6,000, and scaling progressively upwards to 25 per cent on incomes of $100,000 and repeal of the taxes on admissions and on telegrams, telephone messages, and leased wires.

Mr. Mellon figures that these recommendations, including some increases in corporation tax, would reduce the total assessment by $323,000,000 next year, but he wisely concludes his communication with this observation: "A soldiers' bonus would postpone reduction, not for one, but many years to come."

Business has been good throughout the United States during the past twelve months and government receipts have been largely augumented by this prosperity. It is quite possible that to foist a soldiers' bonus on the already tax-ridden country at this time would force a depression in industry through a curtailment of buying power which would leave little profit to the individual soldier.

We have never talked to a hard-working farmer boy who saw service either on this side or in France who was as rabid for a soldiers' bonus as the American Legion officials would lead us to believe. The sentiment of the boys we have talked to seems to be: "Take care of those who were injured, even those who were slightly injured; give them the best care possible. See that they are provided for throughout life and that dependents are provided for. For us who fought for a cause and came back unscathed, we ask nothing save the honor which every man gets for serving his country and his flag!"

The voice of the Secretary of the Treasury calling for a reduction in taxes is indeed welcome news to the farmers of this country, but we shall indeed be lucky if, with the presidential campaign just in the offing, we are not burdened with a soldiers' bonus which will be rushed through in the opening days of the new Congress to build up political fences at home.

ONE KIND ACT EVERY DAY!

IT was just before supper time on a blustery evening when ones chief ambition is to get home and as near as possible to the stove. Mother was waiting on the corner for an interurban car which seemed as though it would never come. Suddenly a gentle tap on her shoulder and a cheery voice, "On your way home, Mrs.——? An affirmative answer and then "I saw you standing here waiting for the car, so I found a place there to park my automobile and came back to get you!" The man was a neighbor who lived a half-mile or more from our home.

It was a simple thing to do and yet how easily he could have gone selfishly past mother and on home without more than a passing thought. On the way he unfolded the reason and it seems to me that it is so well worth repeating that it ought to find a place in some form or other on this page at least once every year.

"I came from a family of five boys and two girls. My mother was a Scotch woman who believed in training her children from infancy the sterling principles which has made her own life a beautiful one. One of her mottoes was: At least one kind act every day! When we gathered about the supper table, each in our turn told mother what kind act we had done that day and received our approbation from her as it was merited. It became a fixed habit in my mind and to this day if noon comes and I have done no kind act, I begin to feel nervous and this increases until my kind act has been done, when I feel satisfied with myself and with the world. I have been very busy to-day and the first chance I had to practice my mothers precept was when I saw you standing there in the cold waiting for the car!"

Think, if you will, of the influence which this single family of five men and two women are having to-day, with each practicing this simple doctrine, on the world in which they live.

There is no need of pointing out the obvious moral. If all the world could have been brought up by the same sterling Scotch mother it would be so near like what we hope to see in Heaven that most of us would prefer to stay here!

PUBLISHER'S DESK

HOW TO CATCH FAKE STOCK SALESMEN

SOME STATE bankers' associations are distributing an investor's questionnaire with the idea of protecting purchasers of securities from fake stock salesmen.

The questionnaire pins the salesman down to answering the following questions:

Date.
Name of company.
Name of salesman.
Kind of stock offered.
Total issue of stock.
Stock given for property.
Stock given for good-will.
Stock given for patents.
Are you taking any Liberty Bonds?
If so, at what price?
Amount of cash needed.
Par value of stock.
Market price of stock.
Has the stock a ready market?
If so, where is it listed?
Is the stock accepted by banks as collateral for loans?
If so, what banks have accepted it to your knowledge?
What are the present net earnings?
Bank references.
Names of officers.
Former occupation.

This is worth cutting out and pinning up on the calander where it will come in handy some day when a stock-salesman calls at your front door. If he tells you he is "letting you in on the ground-floor" and so has no time to fill in the answers to these questions, my advice to you is to let him out on the same level.

CHEAP TIRES

WE have excluded from the columns of THE BUSINESS FARMER all advertising of any excepting brand new automobile tires. There are so many schemes afloat to sell tires at ridiculously low prices that it is not possible to separate the good from the bad.

One of the common schemes which we uncovered is a cheap tire with a guarantee which reads, "If not satisfied, send us 50 per cent of the original price of the tire and we will exchange for another rebuilt tire at any time." Then they guarantee some five or ten thousand miles use out of the so-called rebuilt tire.

Now it works out this way: A man orders a tire at a ridiculously low price and receives an old worn-out tire, puts it on the car, drives it a few miles, has a blow-out with all of its pleasures, takes it back home and looks up his guarantee from the company. He finds he can get another one just like it at 50 per cent of the amount he paid for the first tire. But it takes a mighty brave man to pay even half the original price for an article that has proven no good. So we presume their re-orders are a very small percentage of their first orders.

We have come to the conclusion that a good place to buy a tire is of a concern which will back the tire they are selling with their reputation.

A LOT ON DICKINSON ISLAND

"I am writing you asking a little advice. A little over a month ago my son was visiting in Detroit and in some way drew a ticket and they claimed he drew a lot on Dickinson Island, St. Clair Flats, and they got him to pay them $15 on it as a first payment. Then he heard it was a swindle as the lots were worthless and he asked them to give him back the money. They said they would but as the head man was not in and they could not until he was, but he never was in it seemed. Now is there any way to make them pay back the $15? The boy is only seventeen years old and I, his mother am trying to take this up for him. I am enclosing the ticket and receipts they gave him. Please let me know what you think of it and also if there is a chance of getting the money back."

IT is a dull issue indeed in which we cannot announce a new scheme being worked. We have never been on Dickinson Island but it is a safe bet that this land ought to have been sold by the quart instead of by the foot. This is a new scheme of selling real estate but it is an old one among a certain class of individuals who make easy money out of other people's hard earned money.

As this is the first complaint THE BUSINESS FARMER has had on this particular scheme it is probable that it is being worked among the suckers in the cities, of which there are, always were and always will be, a sufficient quantity.

We are looking up this scheme further to see if there is any possibility of getting the money back for our reader, who certainly has our sympathy. That is, our sympathy is for the mother and not the son who could afford to charge it up to experience; he will have plenty more to pay for before he gets along many years.

THE DETROIT FIDELITY AND SURETY COMPANY

I HAVE no idea how much of this company's stock was sold to the farmers of Michigan, but in answer to the inquiries which I have had I am pleased to print a report from a reliable source, which may be encouraging to some of our readers who hold stock. I am giving a full report which I believe is from a reliable source, as follows:

"The Detroit Fidelity and Surety Company was formed some two or three years ago with a capital of three million dollars, all of which is now outstanding, we are told.

"The company sold the stock at $100 per share, that is, $50 par and $50 surplus. We might add that all insurance stocks are sold on this basis in order to do away with double liability.

"The market on the stock at the present time is quoted $70 bid, $77 asked, at which prices we can either buy or sell.

"The company has been doing an exceptionally good business in surety bonds, but at best the proposition is a very speculative one and requires excellent management. Mr. Bunting, who was the former president of the company, died some few months ago and we have not been informed as to who his successor is. We believe, however, that the board of directors are capable and will probably find a fit successor.

"The company is not paying any dividends at the present time although there seems to be some dividend talk, but we believe it is simply good business form to build up a substantial surplus before any dividends are paid."

HOME WORK

"On account of sickness, high taxes, etc., I feel I must help along financially and am writing you for advice. I have tried fancywork but it is not steady and I am very much of a failure as a saleswoman.

"I am in receipt of circulars from the Auto Knitter, Gearhart Knitter, United Show Card Studios, 407 Gratiot Avenue, Detroit, Michigan; also Paris Art Works, West Haven, Connecticut, and would like to learn something about Fireside Industries.

"The prices of an outfit of knitters or show card writing course seem very high to me. Is there a chance to get steady employment with either?

"The Paris Art Works are offering beading purses, dress trimming, etc. It strikes me that would last only as long as the fad lasts. It would seem to me as if show cards would always be used. I am full of work but money is scarce or I would not be trying to get work."

YOUR request is thoroughly taken to heart and I wish I could recommend one of the companies you have mentioned. They are all based upon the proposition of getting something out of you and giving you very little in return.

Things are coming better on the farm now and if you will work hard in the regular farming endeavors I am sure you will be further ahead in the end. Eggs and butter have both brought high prices all this year, and there has been a steady market through the summer months. This would seem to be better than the kind of home work you mention.

First Mortgage Real Estate Gold Bonds

The safest and most profitable investment for savings is in Federal first mortgage real estate serial gold bonds—and every day more farmers are coming to that conviction.

The Greatest Clubbing Offer Ever Made

The Michigan Business Farmer
(Bi-Weekly)
AND
Detroit Times
(Daily Market Edition)

BOTH ONE FULL YEAR
$3.25
Regular Price $6.00

WE believe this to be the greatest offer ever made to residents of rural routes in Michigan. It gives you a great metropolitan daily, keeping you abreast of state and international news of the day and Michigan's only home-owned and edited farm magazine, to keep you posted on farm news, the trend of the markets and what farmers and farmers' organizations are doing. This is an offer that should appeal to all real business farmers and we are proud to be able to make it at this time.

GEO. M. SLOCUM, Publisher

This phenominal low price is made to R. F. D. addresses only. Use this order blank and send check, money order or registered letter to

The Farm Home
A Department for the Women

Edited by MRS. ANNIE TAYLOR

DEAR FOLKS:—Thanksgiving is with us again and I wish you all a happy one, with every member of your household present that it is possible to bring together. It is a lovely family day and I know you will all enjoy it. For those of us who have been more fortunate than others, say a prayer on that day to help give strength this coming year to guide them and put them right. I want you all to read my article about "Have you done your Share." In the Recipe Column are some good dishes that I make for my family and they might please you. I am anxious to know how some of you mothers handle "lunches" for the school children and would like to receive some letters telling of your ideas.

Your Friend,
Mrs Annie Taylor

Address letters: Mrs. Annie Taylor, care The Business Farmer, Mt. Clemens, Michigan.

THE WORKER'S THANKSGIVING

O GOD of those who labor on
From dawn till twilight hours are gone,
We thank Thee for the grace
That lets us know the rapture strong
Of working well and brave and long,
Each in his chosen place!

We thank Thee for the tasks that wait
For our glad coming, soon or late,
The splendor and the strain
That keep our working muscles true,
That glorify whate'er we do,
With hand or brain!

We thank Thee for the sun and shade
Of which this working world is made,
For water and the soil;
For joys that cling and griefs that fly,
For chance to live and chance to die—
O God of those who toil!

—Ethel Colson

ORIGIN OF THANKSGIVING DAY

THANKSGIVING Day has long been called the first really American holiday. President Lincoln established it as a national festival in 1864, and since that time it has been a legal holiday. But the day of Thanksgiving goes back to the Englishman, William Bradford, who led the Pilgrims to this new land. Back of him we find that Moses really instituted the first Thanksgiving Day by issuing this splendid proclamation: "After thou hast gathered in thy corn and thy wine thou shalt rejoice in thy feast, thou and thy son and thy daughter and the Levite and the stranger and the fatherless and the widow that are within thy gate."

Bradford, in 1633, called on the fifty-five surviving passengers of the "Mayflower" to hold a feast of gladness and thankfulness. He also followed the proclamation of Moses to the letter, for he asked ninety and one strangers, among them the good Indian, Massasoit, and others belonging to his famous tribe. So our hospitality, for which as a nation we have always been known, was established by good old William Bradford. History also tells us that he was a "good provider." The first Thanksgiving Day feast consisted of wild turkey, which comes down into history as the mainstay of our Thanksgiving meal. Then there was a fish and succotash. The book tells us, too, that the Indians brought in nine deer as their contribution to the white man's feast. The origin of our thankful day is strictly biblical, as Bradford, the leader of those seeking after religious liberty and truth, was simply following in the footsteps of Moses, who was leader and lawgiver to a people in a strange land.

Six years after Lincoln issued his Thanksgiving Day edict nine Southern states adopted the holiday. In 1877 a general Thanksgiving Day was proclaimed in Scotland. It comes in the middle of November. When our housewives are dressing turkeys they should think of Alice Bradford and the three or four young women whom she had to assist her in preparing those first Thanksgiving Day birds. How glad she must have been when her blanketed and befeathered guests departed! The red men were a trial to our foremothers.

"HAVE YOU DONE YOUR SHARE"

I WONDER what "Have you done your share" stands for. It means a great deal to the Red Cross that gave such splendid help during the war and is still keeping up the good work. It is just like the "Widow's Mite" and is up to the individual to know what is your share.

This work was brought right home to me this last week, when I was asked to help in getting a small town started and work with the local folks who realized the need of this organization.

It cost $1.00 to join the Red Cross each year, and that was what we went after, trying to renew the old members and bring in new ones. A great many people think this money is spent outside their local community. The Red Cross is trying to establish and help a Red Cross nurse in every county in the country, to help in sickness and in any of the many trials and unfortunate accidents that come to every household sometime or other during the year. One-half or fifty cents of every dollar is used for local work and during my experience this last week, I found a new idea used, at least it was to me, in raising funds to take care of this great and noble work.

I went to Wayne and Belleville, and in the little town of Belleville the folks who felt they could not give a dollar in cash (which is mightly hard for a lot of us to do) hit upon the idea of giving food stuffs. One family gave a bushel of potatoes, another a fat chicken, and some gave canned fruit. The local organization held a bazaar and sold these things and raised $309.00, more money than they could have collected by just asking for cash donations.

I am wondering if in some of our communities, where the ladies are active with clubs, they could not do something similar and help in this great and wonderful charitable work that helps us all when we really need it.

I think the Red Cross of the United States of America has done more to help Russia and their starving children to create a love for this nation and its people, than all the treaties ever written. They know America means "bread" and it is a great step in the right direction. The great Japanese earthquake with all its attending misery was relieved by these same dollars that our nation gathers once every year.

Maybe this work has not reached you, but when it comes be prepared and do not turn a deaf ear to the call for help. Be thankful this Thanksgiving that we are able to help in this work if it is only like the "Widow's Mite."

TURKEY CONUNDRUMS

After the dinner has been served and one wonders what to do to make fun for the family, it is a good plan to have some game to fall back on.

The conundrums I am giving you can be played by every member of your household.

They are simple and can easily be guessed by anyone at all familiar with the turkey.

You can use the fun-maker with a group of folks just like a spell-down and a great deal of mirth and laughter is the result.

1. What part of a turkey assists my lady in making her toilet?
2. What part of the turkey opens the front door?
3. What part of the turkey will appear on the day after Thanksgiving?
4. What part of a turkey is part of a sentence?
5. What part of a turkey is used for cleaning purposes?
6. What part of a turkey does the farmer watch with anxiety?
7. Why is the man who eats too fast like a turkey?
8. What part of the turkey is an Oriental?
9. Why ought the turkey to be ashamed when he is being served?
10. What color gets its name from the turkey ?
11. What feathers find place on my lady's dresser?
12. When the turkey is cooking, in what country is it?
13. What part of a turkey is a story?
14. What part of the turkey appears on the battlefield?
15. Why has the turkey five reasons for being sad?

1. Comb. 2. Last part of turkey, k-e-y. 3. Bill. 4. Claws (clause). 5. Wings for dusters. 6. The crop. 7. Both are gobblers. 8. The first part, T-u-r-k. 9. Because we see the turkey dressing. 10. Turkey red. 11. Pin feathers. 12. In Greece. 13. Tail (tale). 14. Drum Stick. 15. He got it in the neck. He was bled. He got a roasting. He was terribly cut up. Finally, he is in the soup.

MOTHER'S PROBLEMS

A RECORD OF BEHAVIOR

HAVE you ever been in a schoolroom and noticed on the blackboard a list of pupil's names, each name followed by stars in red or blue or yellow chalk? The teacher, if asked, would tell you that the stars indicated perfection in some particular line—perfect lessons, perfect attendance or, perhaps, perfect behavior. She would tell you, also, that the star record displayed where all might see, was the cause of a great deal of friendly rivalry among the children; that it did increase greatly their childish efforts.

The same idea brought home in a family where there are two or more children will bring equally as good results. Children easily drop into careless habits of personal appearance; they grow lax about their chores, they become too accustomed to mother and her orders to respect them at once. They need a bit of prodding up at times — and it is difficult to find the right prod. The star record provides an exceedingly inexpensive, but nevertheless, highly efficient prod.

If a small blackboard cannot be used with colored chalk, a large strip of wrapping paper tacked conspiciously on the kitchen wall, with the names written in large black letters, and the earned stars marked with bright crayons, will serve the same purpose. For a few cents there can be purchased at stationary stores small boxes of gummed stars in gilt or red. These may be used instead of crayon-made stars, to the delight of the children.

The record in plain sight on the wall of the kitchen awakens in each child a pride he would not otherwise feel. Though he might lose his feeling of rivalry with the other children in the family, the thought of the chart for everyone to see and ask about, will hold him long to his chores or his daily good behavior. It will be a prod but an extremely softly padded one!

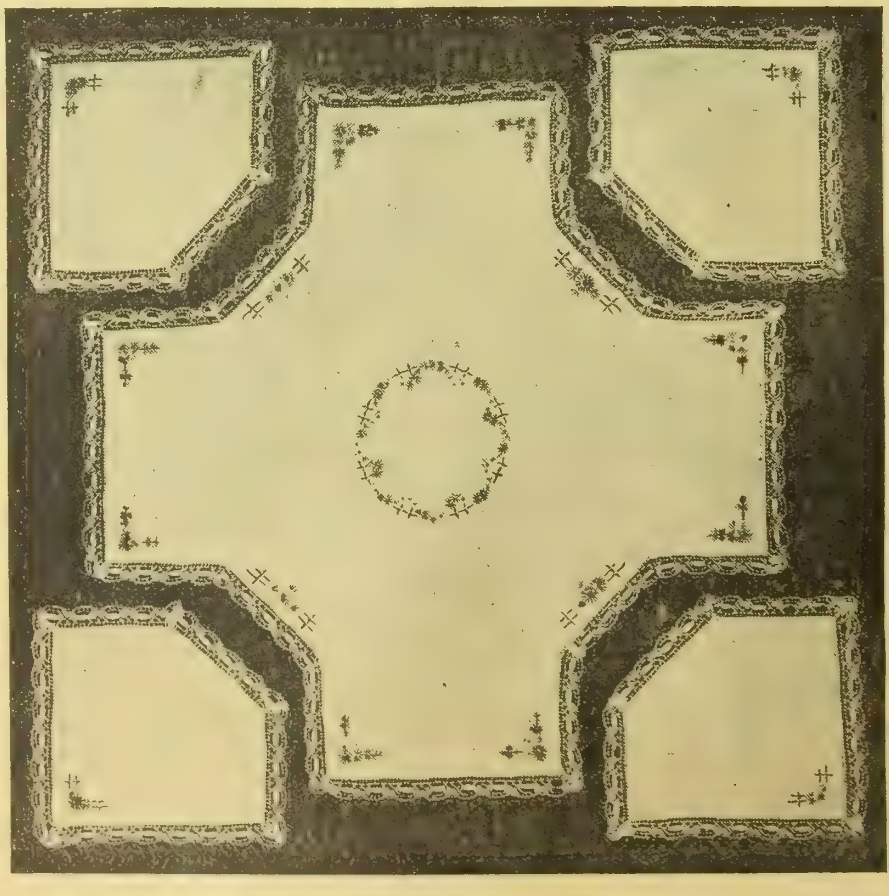
Personal Column

"Birth Control"—Will you please publish in the personal column where I can get a book on birth control. Please publish as soon as possible.—A subscriber.
—This article was published in October 13th issue of M. B. F. and is called "Women's Morality and Birth Control," is twenty cents and can be purchased thru the New York Women's Publishing Co., 104 5th Avenue, New York City.

Where to Find Mendets.—Am sending address of the company where the soft lead mendets can be bought. They are 10 cents a box and 25 or more in a box, all sizes; sent post paid to any address for ten cents in stamps or coin. They are just fine. The address is: E. E. Peck & Company, Batavia, New York.—Mrs. J. S., Holton, Michigan.

Superfluous Flesh.—I am an interested reader of the M. B. F. especially the Home Department. I want to send in a few suggestions to our friends. Also would like to have you ask, through the Home Department, for a remedy for overfatness, or superfluous flesh. There might be some reader that knows something for reducing. Some simple home remedy. It is disgusting to get stout and fat. Hope we fleshy ones will get some help. I have tried everything, but to no avail, so please dear Mrs. Taylor, come to our help and let the home friends send in their answers to the Home Department.—Mrs. F.
—My one word of advice is to watch your diet. This seems to be the only safe way

The Luncheon Set For Christmas



Can you imagine how pleased you would be if one of your Christmas packages contained the lovely luncheon set. One's table could be made very attractive with a set like this to eat from. Somehow the food tastes better when served from these individual doilies. It is not a great deal of work, and not expensive.

The set can be had stamped on Linen Finished Suiting, price $1.00, or on Oyster Linen, price $1.25. With sufficient lace to finish edges and floss to start the work we can furnish the set on Linen Finished Suiting for $1.50 or on Oyster Linen for $1.75. In ordering set send in for "Pattern No. 404", enclosing stamps, money order, or check to cover the purchase price, to the Pattern Dept. of Michigan Business Farmer, Mt. Clemens, Mich.

and still retain your health. I have a friend who tried taking salts every morning and right now she is under a physician's care with a run down condition and boils coming and an abcessed ear, that is most painful. The doctor said it was caused by her violent abuse of her system in trying to reduce. There are a great many books on "Eat and grow thin." I am trying this rule of eating only one good meal a day and trying to avoid fattening foods. I know it is hard, especially when you are the cook, and have to plan meals for the rest of the family. I really feel so much better when I eat less. Maybe some of our readers have had this same trouble and will be glad to help the rest of us. I would like very much to know if any of you women have had any success in reducing. It is a known fact that the folks who are slight in build have a better chance for health and old age than our fat people.

Nail Wounds.—When a rusty nail is run into the foot or is cut with a rusty instrument, mix flour and sweet milk together until like a biscuit dough and bind on wound.

Chapped Hands.—Equal parts of aqua ammonia and glycerine, rubbed on the hands after washing is an excellent remedy for sunburn, poison ivy, and chapped hands. If there are any open places it will find them, and sting for a second, but it does a lot of good.

Falling Hair.—A solution of salt and water is good for falling hair. Use twice a week.

Farmers' Liniment.—Two fresh eggs well beaten, poured into a bottle, with one cup each of vinegar and turpentine. It is the best liniment for all purposes, and it is just fine for taking out the lump or swelling which sometimes comes under the jaw of a cow.—Mrs. P. F.

Has Any Reader This Poem?—I wonder if some reader of the M. B. F. could send me the poem, "The Eagle's Rock"? The first verse reads: "It was the Golden Eagle's rock, Cragged and wild and lone; Where he sat in state with his royal mate, On his undisputed throne."—Mrs. H. M. Rickard, Deerfield, Michigan, R. 1.

Share Our Home With Us.—Do you think that possibly there would be an old couple of 55 or 60 years, who would like a home on the farm with a young couple? We have no children and we would like a kind old couple to live with us. If you think anyone would care to write I will leave my address with you. —A subscriber.

—if you are well bred!

General Suggestions About Introductions.—Ladies being introduced should never bow hastily, but with slow and measured dignity. The younger to the older, the gentleman to the lady. It is the lady's privilege to recognize the gentleman after an introduction, and his duty to return the bow. Introductions on the streets or in public should be made so quietly as not to attract public attention.

Perfect ease and self-possession are the essentials to the making and receiving of graceful and happy introductions.

Etiquette requires that a gentleman always raise his hat when introduced to either lady or gentleman, on the street.

Introduce to each other only those who may find acquaintance agreeable. If any doubt exists on the subject, inquire beforehand.

MY FAVORITE RECIPES

Thanksgiving Pudding.—One-third cup suet, one-half pound figs, finely chopped, two and one-half cups of stale bread crumbs, three-fourths cup milk, one cup brown sugar, one teaspoon salt, three-fourths teaspoon cinnamon, one-half teaspoon grated nutmeg, one-half cup English walnut meats, one-half cup raisins, seeded and cut in pieces, two tablespoons flour, four eggs, two teaspoons baking powder.

Chop suet and work with the hands until creamy, then add figs. Soak bread crumbs in milk, add eggs well beaten, sugar, salt, and spices. Combine mixtures, add nut meats and raisins dredged with flour. Sprinkle over baking powder and beat thoroughly. Turn into a buttered mould, steam three hours and serve with yellow sauce.

Yellow Sauce.—Two eggs, one cup of powdered sugar, three tablespoons wine or any flavoring. Beat yolks of eggs until thick, add one-half the sugar gradually; beat whites of eggs until stiff, add gradually remaining sugar; combine the mixtures and add wine.

RECIPES

Hollandaise Sauce.—One-half cup of butter, yolks of two eggs, one-half tablespoon vinegar, or one tablespoon lemon juice, one-fourth teaspoon salt, few grains of cayanne, one-third cup of boiling water.

Put butter in a bowl, cover with cold water and wash, using spoon. Divide in three pieces; put one piece in a sauce pan, with yolks of eggs and vinegar or lemon juice, place sauce-pan in a larger

(Continued on page 17.)

"The Flour the Best Cooks Use," is what they all say about **LILY WHITE FLOUR,** which description is particularly apt.

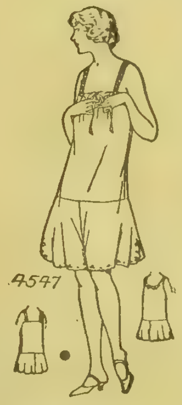
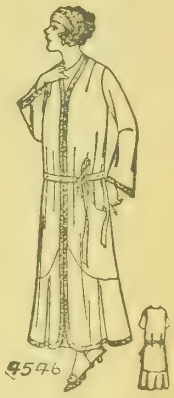
SEND IN YOUR SIZE

Lately some of you ladies have been sending for patterns without giving size. This means expense and delay for both of us. I hope you all realize the importance of sending in your size when asking for patterns.



4547



4546

4568. A Practical Garment for Young Children.—Here is a style that will appeal to the busy mother of little children, especially those of the "creeper" age. This design provides a convenient closing at the inner seam, which is very practical for children below 2 years of age. The garment may also be made with this seam closed, for the back is in drop style. The Pattern is cut in 3 Sizes: 6 months, 1 and 2 years. A 6 months size requires 1 ⅝ yard of 36 inch material.

4558. A New Coat Style for the Growing Girl.—Polo cloth, velours, caracul and other pile fabrics may be used for this model. The collar may be rolled in choker style or turned back together with the fronts. The Pattern is cut in 5 Sizes: 6, 8, 10, 12, and 14 years. A 10 year size requires 2 ¼ yards of 54 inch material.

4564. A New and Stylish Blouse.—Velveteen or satin with bands of embroidery would be attractive for this design. Crepe or crepe de chine would also be appropriate. One could omit the trimming bands and the collar. The neck edge may be in square outline, as illustrated in the small view. The Pattern is cut in 6 Sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38 inch size requires 2 ⅝ yards of 40 inch material.

4546. A Comfortable Rest Garment.—Satin, velveteen, crepe or corduroy, as well as batiste, crepe de chine and dimity are suitable material for this style. The circular flounce is a new style feature. The Pattern is cut in 4 Sizes: Small, 34-36; Medium, 38-40; Large, 42-44; Extra Large, 46-48 inches bust measure. A medium size requires 5 ½ yards of 32 inch material. The width of the flounce at the foot is 2 ¾ yards.

4548. A Popular Apron Style.—Percale with bias binding in white or in a contrasting color would be good for this design. Gingham, linen, cambric and sateen are also desirable. The Pattern is cut in 4 Sizes: Small, Medium, Large and Extra Large. A Medium size requires 3 yards of 27 inch material.

4555. One of the Season's Youthful Models.—Jersey, wool crepe or kaska cloth could be used for this style. It has the new flare fulness in plait effect at the sides, and smart useful pockets topping the plaits. The Pattern is cut in 5 Sizes: 12, 14, 16, 18 and 20 years. A 16 year size requires 3 ½ yards of 40 inch material. For vest of contrasting material ⅛ yard 24 inches wide is required. The width of the skirt at lower edge is 2 ⅜ yards.

4552. A Neat and Simple House Frock in "Slip On" Style.—Printed cotton, figured percale, dimity, ratine, linen and other wash fabrics may be used for this model. It is also good for wool crepe or jersey cloth. The Pattern is cut in 7 Sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38 inch size requires 4 ¾ yards of 36 inch material. The width at the foot is 2 yards. For facing and collar of contrasting material as illustrated ½ yard of 36 inch material is required.

4556. A Practical Model for School Wear.—Wool crepe and plaid suiting are here combined. The long lines of the waist are pleasing and the plaited skirt, affords comfort and freedom in moving. The Pattern is cut in 4 Sizes: 8, 10, 12, and 14 years. A 12 year size requires 2 yards of plaid or check material, and 1 ⅞ yard of plain material. If one material is used 3 ⅞ yards 40 inches wide will be required.

4551. A Smart One Piece Dress for Mature Figures.—Figured and plain silk could be combined in this model, or, one could have moire and satin. Broad cloth or kasha with embroidery for vest and sleeve bands would also be attractive. The Pattern is cut in 7 Sizes: 36, 38, 40, 42, 44, 46 and 48 inches bust measure. A 38 inch size requires 5 ¾ yards of 40 inch material. The width at the foot is 2 yards. For panel of contrasting material 1 ⅝ yard 27 inches wide or wider is required.

4569. A Pretty Coat and Cap Set.—This coat model is comfortable and simple. The cape may be omitted, and the coat may be finished without a collar. As here shown, white flannel was used with bandings of white grosgrain silk, and embroidery for decoration. The cap is of white faille with scallops embroidered. The Pattern is cut in One Size: It requires 3 ½ yards of 40 inch material. The cap alone will require ⅝ yard.

4547. A Practical Undergarment.—This style of "combination" comprises circular drawers portions, joined to a long vest. The top may be finished with the shaped shoulder, or in camisole style. The Pattern is cut in 4 Sizes: Small, 34-36; Medium, 38-40; Large, 42-44; Extra Large, 46-48 inches bust measure. A Medium size requires 2 ⅝ yards of 36 inch material.

4566. A Popular Suit for Small Boys.—Wool jersey, serge velveteen or corduroy could be used for this model. It is also suitable for wash materials. The Pattern is cut in 3 Sizes: 2, 4, and 6 years. A 4 year size requires 2 ⅝ yards of 36 inch material.

RHEUMATISM

A Remarkable Home Treatment Given by One Who Had It.

In the year of 1893 I was attacked by Muscular and Sub-acute Rheumatism. I suffered as only those who are thus afflicted know, for over three years. I tried remedy after remedy, but such relief as I obtained was only temporary. Finally, I found a treatment that cured me completely, and such a pitiful condition has never returned. I have given it to a number who were terribly afflicted, even bedridden, some of them seventy to eighty years old, and the results were the same as in my own case.

I want every sufferer from any form of muscular and sub-acute (swelling at the joints) rheumatsim, to try the great value of my improved "Home Treatment" for its remarkable healing power. Do not send a cent; simply mail your name and address and I will send it free to try. After you have used it and it has proven itself to be that long-looked-for means of getting rid of such forms of rheumatism, you may send the price of it, one dollar, but understand, I do not want your money unless you are perfectly satisfied to send it. Isn't that fair? Why suffer any longer when relief is thus offered you free? Don't delay. Write today.

MARK H. JACKSON
No. 265-K Durston Bldg.
SYRACUSE, N. Y.

Mr. Jackson is responsible. Above statement true.

The Children's Hour

DEAR girls and boys:—So many are interested in riddles and puzzles that I have decided to make a puzzle a regular part of our page each issue. The first one appears on this page and I hope you find it interesting. The answer will appear in our December 8th along with a new puzzle. After two or three have appeared let me know what you think of them.

I have many other features I intend to use as soon as space permits so be on the lookout. One or more may appear in the very next issue.

And now I want to warn you not to eat too much Thanksgiving dinner next Thursday. If you do you will not be able to go to school the following Monday. Ha! Ha!—UNCLE NED.

THE FLY AND THE COACH

UPON a mountain road in the Alps a heavy coach was climbing. An importunate fly buzzed around and alighted first on the ear of one horse, then on the flanks of another, and finally settled on the coachman's nose.

"See," she said, "not only do I have to stir up the horses, but I have even to help the coachman drive his team!"

Arrived at the top, she spoke vaingloriously to the Coachman.

"See how we got up the hill!"

But the Coachman, with a smart slap killed the Fly.

"There are too many like you in this world," he said, "who only annoy others and then try to take the credit for the work!"

Be sure your services will be of assistance, before giving them unasked.

OUR BOYS AND GIRLS

Dear Uncle Ned:—May I join your merry circle? My father takes the M. B. F. and likes it very much. I enjoy reading the Children's Hour. This is the first time I have ever written. I hope it does not hit the waste paper basket like lots of boys and girls letters do. Tell it to run fast and jump over the top. Ha! Ha! Well I guess I had better describe myself. I am twelve years of age. My birthday is the twenty-seventh day of February. I have light curly hair and am light complexioned and have blue eyes. we live on a farm two miles from town and one mile from school. I have three sisters. We have seven cows, three horses, and two dogs. Well I guess I will close hoping some of the girls will write to me as it is very lonesome. I am your loving niece,—Loraine Spatezel, Tyre, Michigan, R. 2, Box 2.

Dear Uncle Ned:—Apple picking time again, isn't it Uncle Ned? My but the summer goes fast, especially when you don't want it to. But I have had a good time this summer. I went to the lake with some girls, besides going to Grand Rapids and I think I ought to work hard now, don't you Uncle Ned? Do you ever have a vacation Uncle Ned? I should think you would get awfully tired. I have been digging potatoes this week, had two hundred and thirty eight bushels off from about two acres. I also have been picking apples. My sister wrote to the M. B. F. a short time ago. We saw her letter in print and she has received several letters. I wish some of the children of this circle would write to me. I like to write letters, also to receive them. I am in the ninth grade this year and I go to the Lake City High School. I like to go to school. I am planning to be a teacher some day. It is raining this morning and it makes things look dull, doesn't it Uncle Ned? How many of the girls can crochet? I am just beginning and I wish some of the girls would send me some easy patterns. Hope to hear from some of the boys and girls. Your niece,—Thersa Lamb, Lake City, Michigan, R. 3, Box 79.

Dearest Uncle Ned:—Well, well, how long it has been since you last heard from me, dear Uncle? I sure did want to join your drawing contest but my, so much work to do without a dear mamma. Sure do miss her. It looks real sad around here without her. Well I have taken a lot of pictures as I have my own camera now. Say Uncle do you want a song called "Uncle Ned"? Well as I have written so many times and never described myself I will do so. I am a girl five feet two inches tall, have light brown bobbed hair, blue eyes and light complexion. And how I do wish I really could go to school. I am now 16 years of age and will be 17 on the eighteenth day of November. It is real lonesome at home all alone, so I hope I will receive letters from all of the cousins. Well I have been to Detroit and Saginaw recently. My Uncle Norman of Detroit came over and I went home with him in his auto. Sure enjoyed the nice long trip. I never got tired riding. I also had a nice time in Detroit and Belle Isle with my Uncle and two Aunties. Coming back with my aunt Rose from Detroit to Saginaw on the street car and from Saginaw to Elkton my Uncle Harry brought us in his auto. I sure wish I could take another trip soon. Say I have received two letters without names signed. Hope they write again and sign their names. As my letter is taking up too much space I will say good luck to all. From your affectionate niece,—Miss Betty Kliedo, R. 3, Box 9, Elkton, Michigan.

P. S.—Say how do you like my name of Betty instead of Elizabeth? And also I have a nice song which I will send the next time for those that have no dear mamma.

—I am very sorry for you Betty, because your mother has died and because you cannot attend school. I hope the girls and boys take time to write to you and I am sure many will. Yes, I would like a song called "Uncle Ned." Have you one or can you compose one? I think Betty sounds so friendly and sweet, a lot more than Elizabeth. Come again.

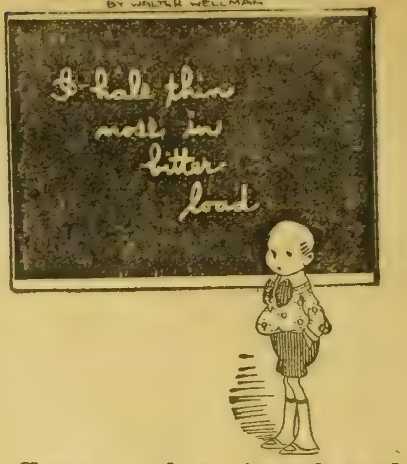
Dear Uncle Ned:—I think I have been on the outside looking in at the cousins long enough, so if you and Mr. (I'll be polite maybe it will help me) Waste basket will let me I'll join the merry circle. I suppose you want a description of me as this is my first letter. I am, or will be fifteen years old this week. I am five feet five inches tall, have black hair, which for a wonder isn't bobbed, and I have black eyes. I live a short distance from Walloon Lake which is a resort and considered one of the prettiest places in Michigan. And as Michigan is the prettiest state in the Union it is one of the prettiest places in the U. S. A. I think so anyway. As this is my first letter I will close. Will some of the cousins please write to me as I like to write letters and will answer all I get. Your niece,—Beatrice Ecker, R. 3, Boyne City, Michigan.

Dear Uncle Ned:—It is raining today so I am writing to you. I read Elsie L. Mahler's and Selden C. Fowler's letters and they both live somewhere near where my mother was born. That was in Boyne Falls, and she has been to Little Traverse Bay, Petoskey, Roaring Brook, Wequetonsing, and all the other places around there and she says that the shore road is the prettiest road she has ever seen. I live on a farm 200 miles from Detroit and would like to go there as I have a lot of relatives in Detroit and Grosse Isle and Wyandotte. My cousin from Wyandotte is here with us now. Do you like to go swimming in the lakes Uncle Ned? I live three and one-half miles from Eight Point Lake and it is the safest lake around here for bathing. It has many cottages on its shores. And the prettiest beach I have ever seen. I am 11 years old and in the 7th grade at school. I go to the Maple Grove school. It is 80 rods from our place. I would like to have some of the cousins write to me please. Well I see the waste basket eyeing this letter, so must close. Your niece,—Mildred M. Monthei, R. 2, Lake, Michigan.

Dear Uncle Ned:—As I have never written before, I made up my mind that I would write for the first time. And I would like to see my first letter in print. My father takes the M. B. F. and I like it real well. I am a farmer's daughter, and live on a farm. I live close to the school house. It is only 20 rods from the house. I would like to have some of the boys and girls guess my age. I am between 11 and 16 years of age. The one who guesses my age will receive a nice long letter. Now I will describe myself. I have light brown bobbed hair, blue eyes, light complexion, and I am 5 feet and 5 inches tall and I weigh 115 pounds. I would like to hear from some of the girls and will answer all who write. Well I guess I will give some room for the others to write. Good bye. Your niece,—Agnes Anna Yarabek, R. 2, Oakley, Michigan.

A PROVERB

BY WALTER WELLMAN



Change one letter in each word and then arrange the new words to form a well-known proverb. What is it?

Dear Uncle Ned:—I have been a reader of the Children's Hour for some time now and I always thought I would like to write. I am 5 feet 3 inches tall, have dark hair and blue eyes. I was 17 years old the 10th of August. Have I a twin? I live on a farm of 80 acres, 3 miles from a small village and 5 miles from town. We have 3 horses, 7 cows, 10 pigs and 5 calves. I have 2 sisters and 3 brothers. My sister and I went visiting this summer and we sure had a good time. The name of the place we went to was Pittsford. We went to see my married sister. We used to live in Idaho. Then we went to Wisconsin and didn't like it there so we moved to Michigan. We certainly saw some beautiful scenery out west. Were you ever out there, Uncle Ned? We intend to go west in May.—Florence Ray, Paris Mich., Route 1.

Dear Uncle Ned:—May I join your merry circle? I have written before but my letter did not escape the waste paper basket. But I decided to try again. "If at first you don't succeed, try, try again." My birthday is the 31st of May. My age is between 13 and 16. The one that guesses my age correctly will receive a letter from me. I am 5 feet 4 inches tall, have light brown hair and blue eyes. I have one brother and two sisters. We have quite nice weather at present altho it has been rather cold. As my letter is getting rather long I will close. I wish some of the cousins would write to me. Your want-to-be niece,—Helen Lemmer, R. 1, Sterling, Michigan.

A BIT OF THIS AND THAT

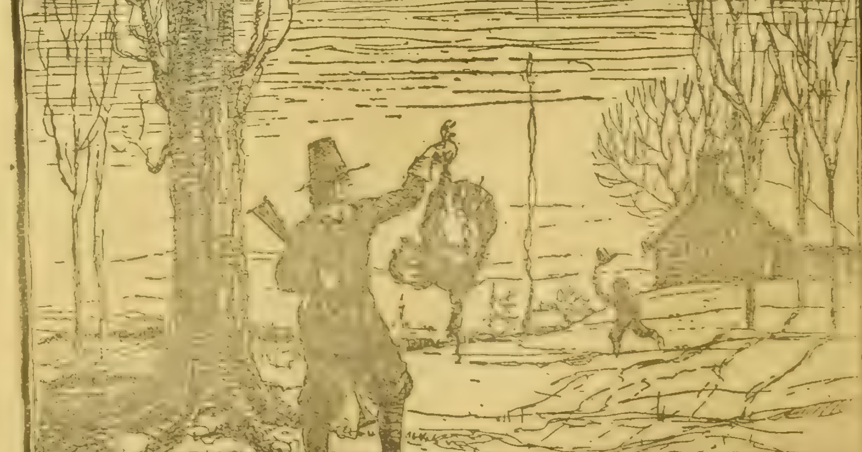
"Your money or your life!" cried the highway robber.

"Take my life," said Mike, "I'm saving my money for my old age."

If a room with eight corners had a cat in each corner, seven cats before each cat, and a cat on each cat's tail, how many cats would there be in the room? (Ans.) Eight.

Perhaps the most curious difinition of a net was that of an Irish lad who called it "a lot of holes tied together with strings."

Neatness is a good thing, but a Boston boy who copied all the autograph signatures in an autograph album and then threw away the originals, was going a little too far.



Thanksgiving morning in the days of our forefathers

RECIPES

(Continued from page 15.)

one containing boiling water, and stir constantly with a fork or wire whisk until butter is melted; then add second piece of butter, and as it thickens, add the third piece. Add water, cook one minute, and season with salt and cayanne. If mixture curdles, add two tablespoon of heavy cream.

Onions in Cream.—Put onions in cold water and remove skins while under water, drain, put in sauce-pan, and cover with boiling water; boil five minutes, drain, and cover again with boiling salted water. Cook one hour or until soft, but not broken. Drain and add a thin white sauce or cream seasoned with salt, pepper, and butter. This makes a nice vegetable to go with the Thanksgiving dinner.

Creamed Cauliflower.—Remove leaves, cut off stalks, and soak thirty minutes (head down) in cold water to cover. Cook (head up) twenty minutes or until soft in boiling salted water; drain and separate flowerets, and reheat in cream sauce.

Cauliflower a la Hollandaise.—Prepare as for creamed cauliflower, using Hollandaise Sauce instead of cream sauce.

Baked Onions.—Twelve good sized onions, one tablespoonful of margerine, one tablespoonful salt, one-eighth teaspoon paprika, two teaspoonfuls honey or brown sugar, toast strips, parsley.

Peel the onions, cut in halves crosswise, and place in a buttered casserole. Add the seasonings (no water) and bake one and one-half hours, in a moderate oven at 400 F. Serve with strips of hot, buttered toast to absorb any gravy and garnish with parsley dipped in vinegar. Enough to serve four.

The Runner's Bible

Let us come before His presence with thanksgiving.—Ps. 95:2.

Enter into His gates with thanksgiving, and into His courts with praise. Give thanks unto Him, and bless His name. For the Lord, is good; His mercy endureth forever; and His faithfulness unto all generations.—Ps. 100:4.

In all thy ways acknowledge Him and He will always make plain thy paths. —Prov. 3:6.

—The ever grateful heart is in harmony with the activity of good, and its needs are always supplied. The remark is often heard, concerning those in perpetual want, "You need not expect gratitude from that class", the truth is "that class" is composed of the habitually unthankful who ignoring God and his laws are adrift and ever in want.

WORLD EMANCIPATION

(Continued from Page 11)

conception of a world for Christ.

But the answer is in the making. Such statesmen as Wilson, Taft, Herrick, and others, are reading our constitution in the international spirit. And churchmen are reading the church's charter anew. Formerly, we were wont to read it: "The world for Methodists," or "Baptists," or for another of two-hundred different sects. But now it is, "The world for Christ." We have read out churchianity and read in Christianity. We have read out unfriendly sectarianism, and read in concerted action in a unity of purpose. Surely the time is here when "salvation will he appoint for walls and bulwarks" thruout the world if we will have it so.

Certainly, the day is here when we must see that discord, havoc, and tragedy are wrought because we are not answering Christ's prayer for unity and love. The day is here when a united Christendom should take on apostolic zeal for world prohibition, peace, purity, and brotherhood. This is "Thy Kingdom come on earth." This is Paul's "the liberty of the glory of the children of God." And would we dare to believe that this is possible of achievement in the next generation, if we will pay the price in money and men thru allied action of the churches? But all this awaits a renewal of the vision and leadership after Christ's own prayer and purpose.

OH MONEY! MONEY!

(Continued from page 10.)

why he felt su[illegible] rested and at peace with all mankin[illegible] ven as the conviction came to him. however he was suddenly aware that everything was not, after all, peaceful and harmonious.

At the table Mr Duff and his daughter were arranging the Bible and the papers. Miss Maggie suggested piles in a certain order: her father promptly objected, and arranged them otherwise. Miss Maggie placed the papers first for perusal: her father said "Absurd!" and substituted the Bible. Miss Maggie started to draw up a chair to the table: her father derisively asked her if she expected a man to sit in that—and drew up a different one. Yet Mr. Smith, when he was finally invited to take a seat at the table, found everything quite the most convenient and comfortable possible.

Once more into Miss Maggie's face he sent a sharply inquiring glance, and once more he encountered nothing but unruffled cheerfulness.

With a really genuine interest in the records before him, Mr. Smith fell to work then. The Bible had been in the Blaisdell family for generations, and it was full of valuable names and dates. He began at once to copy them.

Mr. Duff, on the other side of the table, was arranging into piles the papers before him. He complained of the draft, and Miss Maggie shut the window. He said then that he didn't mean he wanted to suffocate, and she opened the one on the other side. The clock had hardly struck three when he accused her of having forgotten his medicine. Yet when she brought it he refused to take it. She had not brought the right kind of spoon, he said, and she knew perfectly well he never took it out of that narrow-bowl kind. He complained of the light, and she lowered the curtain; but he told her that he didn't mean he didn't want to see at all, so she put it up halfway. He said his coat was too warm, and she brought another one. He put it on grudgingly, but he declared that it was as much too thin as the other was too thick.

RADIO DEPARTMENT

FARM BUREAU RADIO PROGRAM

Station KYW, Chicago, Central Time
8:01 P. M. Wave Length, 536

Nov. 27—"Co-operative Marketing of Wheat" by Walton Peteet, director of Co-operative Marketing, American Farm Bureau Federation, "Farm Films", by D. O. Thompson, president, Homestead Films, Inc.

Dec. 4—"The Farm Problem an International Problem" by C. T. Crofton, State Speaker Illinois Farmers' Institute.

"Farm Bureau Service to a Community" by J. W. Coverdale, secretary, American Farm Bureau Federation.

M. A. C. WILL TALK TO FARMERS BY RADIO

RADIO as an agent of the Michigan Agricultural College extension service will be tried out this winter, according to plans of a committee recently appointed by Acting-President R. J. Shaw. The arrangements contemplate the use of the college station, WKAR as an integral part of the institution's educational service.

To make certain that the radio gives good service , it has been especially equipped, and its sending radius extended to 2,000 miles.

The incomplete plans provided for the broadcasting on specified nights of extension talks, covering matters of particular interest to Michigan farmers. Talks on engineering and matters of general interest also will be given. No decision has been reached on the question of providing entertainment with the extension talks.

Station WKAR now is used at noon each week day for the sending of market and weather news.

WILL BROADCAST FROM WRC WASHINGTON, D. C.

ARRANGEMENTS have been completed for broadcasting farm bureau programs one night each week from Washington, D. C. The Washington station WRC will broadcast on Monday night at 8 o'clock, Washington time.

The Washington programs will begin on November 26 with a fifteen minute talk by Edwy. B. Reid, assistant Washington Representative of the farm bureau.

The opening of the Washington radio program is a second step in the plan of the farm bureau to have the farmer's voice on the air each night of the week. It is hoped that one more eastern and two western radio stations will soon be broadcasting one night each week a farmer's story.

New Radio Set Has No Outside Wires or Storage Batteries

The new Trans-Continental Radiophone, which is the most simple, and the clearest toned radio set you have ever listened to, is the invention of Mr. A. D. Coats, of Chicago. This radio outfit is entirely new and different from all others. No outside wires needed. No troublesome storage batteries. It comes to you complete, in a beautiful mahogany cabinet (console type) and a loud speaker built right in so the entire family can listen to it just like a phonograph. It is guaranteed to have a range of 1000 miles and will pick up market reports and all musical concerts loud and clear at that distance. Mr. Coats wants to place one of his amazing new radio outfits in each locality and is now making a special reduction of 32% in price for the first outfit placed in each community. Write Mr. A. D. Coats, 334 West 47th St., Chicago, for his special low price offer and be the first in your locality.—(Adv.)

If Ruptured Try This Free

Apply it to Any Rupture, Old or Recent, Large or Small and You are on the Road That Has Convinced Thousands

Sent Free to Prove This

Anyone ruptured, man, woman or child, should write at once to W. S. Rice, 529C Main St., Adams, N. Y., for a free trial of his wonderful stimulating application. Just put it on the rupture and the muscles begin to tighten; they begin to bind together so that the opening closes naturally and the need of a support or truss or appliance is then done away with. Don't neglect to send for this free trial. Even if your rupture doesn't bother you what is the use of wearing supports all your life? Why suffer this nuisance? Why run the risk of gangrene and such dangers for a small and innocent little rupture, the kind that has thrown thousands on the operating table? A host of men and women are daily running such risk just because their ruptures do not hurt nor prevent them from getting around. Write at once for this free trial, as it is certainly a wonderful thing and has aided in the cure of ruptures that were as big as a man's two fists. Try and write at once, using the coupon below.

Free for Rupture

FUR DEPARTMENT

MAKING "NOBODY'S FOOL" OF YOUR SON

GIVE a little attention to this business of trapping and you will see how it holds a liberal business education for that boy of yours—the apple of your eye! He will be getting his training in such a fascinating way that he will never realize that he's being taught; and do you know of any better way of teaching?

Watch the way he sails into this business venture of his. He is out on the big job before and after school with an enthusiasm that will warm your heart. Who ever saw a red-blooded youngster without a down-right itch for nature—the woods and its inhabitants?

Think it over, a little, and you will see it broaden him and at the same time make him a real fan for the country:

That boy is embarking on an honest-to-goodness business of his own; so his chest swells a bit—as is proper and healthful—when he realizes this. He studies the fur lists from the big St. Louis fur houses, figuring out in his own way where is the best market for his product—which firm looks like the squarest deal for him. Developing a little competitive alertness right there, you see.

The thing fascinates him. Imposing checks are made out in his name. He needs more traps and bait—he orders them by mail and he takes care of his income, appreciates it and makes it work for him.

He now has an interesting market to study, just as his Dad has. He's a producer. Progressive, to be reckoned with! His affairs are bringing him in touch with the outer business world in a way that will be invaluable to him when he takes over the farm and has to watch his step every day as you do now.

His fur houses keep in touch with him instructing him not only in every marketing advantage but in the conservation of his assets. He learns that he can't expect to have any business left if he doesn't look ahead—use sense in the matters of how and when he traps and how to guard and stimulate the increase of the fur bearers that his business relies on. He not only acquires foresight, but in this phase of the business is wrapped up a lot of sound, manly principle.

Give him his start this way: Lend him enough to buy the few essentials necessary for a start. Let him exercise his ingenuity to get more complete equipment as his needs become greater. See that he gets in touch with the reliable fur houses that advertise in your own farm paper. Watch the gleam in his eye when you tell him you expect him to take up that note promptly when due.

He'll never grow up a piker!

ONE WAY TO FOOL MR. SKUNK

NOBODY loves a skunk. He is an industrious advertiser, and sometimes when he has been advertising too energetically, no one cares to have anything to do with him.

Under certain favorable circumstances, however, it is easily possible to get around that. One requirement is that the trap must be set within reasonable distance of a stream or other body of water. Here is the way a forest ranger used to operate under those conditions:

In setting a trap for skunk he always attached to it a stout wire about twelve feet long. The length of the wire can be increased according to the timidity of the trapper, or his reluctance to associate too closely with his quarry.

In making his rounds, this ranger always carried a weight to which was fastened a wire loop two or three inches in diameter. When he came to a catch which—as sometimes happens—had failed to perform up to expectations, Bud would get the end of the long wire and carefully drag skunk, trap and all to the nearest water. Usually the skunk behaves himself under these circumstances. When he was all set with Mr. Skunk right alongside the bank of the water, Bud would slip the wire loop of the weight over the end of the long wire which he had in his hand, and let it run down the wire to the trap. Then by a bit of engineering he would trip his outfit off into the river. Of course the weight drowned the skunk, and under those circumstances he doesn't enter the usual protests.

On one occasion one of these drowned skunks froze so hard that it was impossible to skin him; and when he was brought into the house and put where he would thaw, there wasn't a suspicion of an odor in the room. It's not nearly the job skinning a skunk so treated.

UNCLE RUBE SPINACH SAYS

JUST GIRLS AN' US

SOMETIMES we wonder why nice girls git to be ol' maids. Again we wonder why girls not so nice git married an' divorced all inside of one little year—365 days—for lots of 'em fix the time.

Good friends, why is this thus? Now the question has been asked an' as I ans'er all questions, I'll ans'er this. Girls don't git married jest 'cause a feller don't know what he's goin' to meet up with next mornin'.

You know how 'tis—girls put so darned much paint, or what ever it is, onto their faces that nobody knows what they look like in the nat'ral, an' so the young fellers are kinda shy—they don't want to grab a pig in a sack—other wise speakin' they kinda wanta know what they're gittin'. The marriage game, in some cases is kinda serious—some folks take it that way at least an' so I say young fellers show purty good judgement when they turn down a painted female. Why don't you know you can paint an old house or barn or even a Ford an' make it look like new. It ain't new—its shattered in places, the feller 'at buyes it is stung. So with our painted women—they put the enamel on to make 'em look like new. But after years an' years we git to see through the paint—we know women for jest what they are an' let me say right here an' now, God made woman perfect. He didn't paint her, no not at all.

An' when our young woman puts the paint on they try to improve God's handiwork. It can't be did, young folks. He made us all perfect as He saw it and you can't improve it any more'n you can improve the beauties of Yellowstone Park or any other of God's own handiwork.

I read jest a few days ago of a nurse 'at got somethin' like ten thousand dollars from a doctor jest 'cuse he kissed her. Now kisses at that price are way out of my reach. Still an' all, without paint on 'em they might be worth the money.

But you see, our girls protect 'emselves. Fresh paint should be hung onto the lips of two-thirds of our girls an' jest open for business onto the rest of 'em.

Oh yes, sure they're fine girls—the Lord never made any finer but most of 'em paint an' powder jest the same. An' taken altogether, that's that. Cordially yours.—UNCLE RUBE

NEW LAMP BURNS 94% AIR

Beats Electric [illegible]

A new oil lamp that gives an amazingly brilliant, soft, [illegible] better than gas or [illegible] tested by the [illegible] leading universities and [illegible] superior to 10 ordinary oil [illegible] without odor, [illegible] or noise [illegible] pumping up is simple, clean, [illegible] burns 94% air and [illegible] common kerosene (coal oil).

The inventor, [illegible], 609 W. Lake St., Chicago, Ill., [illegible] to send a lamp on a 10 day's FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him to-day for full particulars. Also ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month. (Adv.)

Poultry for Profit

FEEDING FOR EGG FERTILITY

This year I have not had any luck at all with my geese. I have two layers and a gander. Geese laid about forty eggs and only three fertile. Can you tell me what is wrong, as eggs were all taken care of? I don't know how old the geese or gander are and would like to have you give me all the information available.—Mr. E. M., Munith, Mich.

—Our expert water fowl breeders claim that low fertility and hatchability of geese eggs can in most cases be attributed to methods of feeding. They consider heavy feeding of cracked corn detrimental from the standpoint of breeding, and usually recommend eliminating most of the cracked corn about two weeks prior to the breeding season. Wheat and oats should form the basis of the ration for geese if high fertility and hatchability is desired.

Usually infertility is charged back to the male whereas the hatching quality of fertile eggs is accredited to the female. This might indicate that the gander referred to is not particularly strong as a breeder and probably it would be advisable to introduce new blood. Access to water of course, usually improves the hatching quality of the eggs but heavy corn feeding is considered a distinct detriment, in the case of breeding stock.—E. C. Foreman, Professor of Poultry Husbandry, M. A. C.

CAUSED BY OVERCROWDED CONDITIONS

Can you give me any information in regard to the disease amongst my poultry? The springers seem to lose control of their legs, and wings droop, they fall on their backs and cannot get up for some time, yet they eat all they can reach. At least six have it, starting with one. They are fat in general. I feed corn, oats, rye and wheat, ground and have them on range.—A. D., Lupton, Michigan.

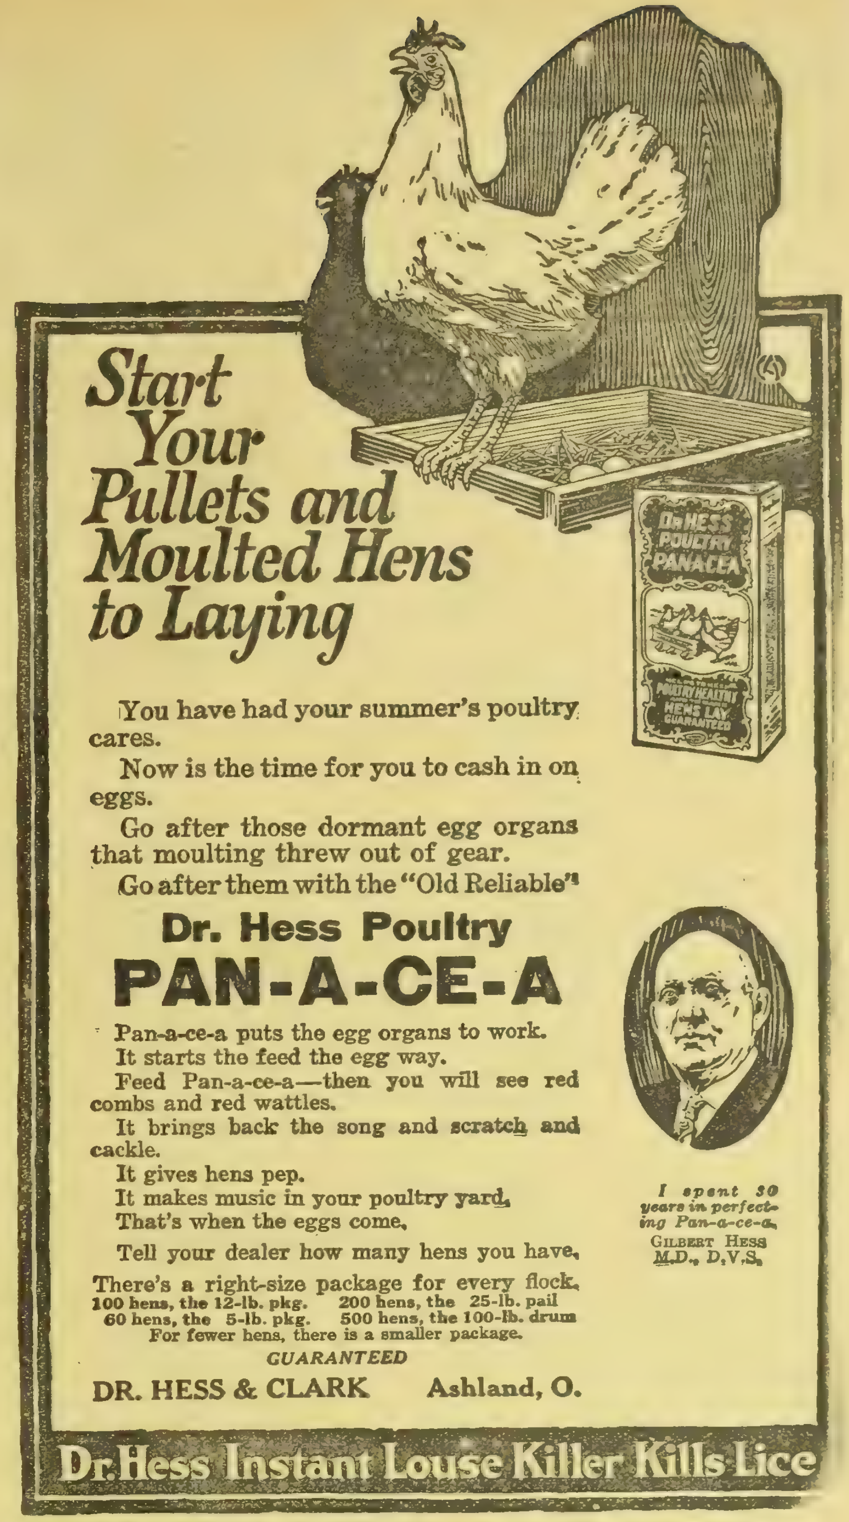
—The leg weakness which is now prevalent in the flock of springers is typical of an overcrowded condition, especially where the chicks have not been induced to roost, at an early age. In the artificial brooding of chicks it is highly important that the colony or brooder house be well ventilated and maintained in a clean sanitary condition. Where the chicks are permitted to huddle on the floor, a number of the members of the flock will develop a weakened condition which is reflected in leg weakness, drooping wings, and emaciation, and an apparently run down condition. These birds usually have good appetites and respond to better methods of management. They do not, however, make very economical gains.

In this particular flock I would suggest segregating all light weight specimens giving them a fattening mash consisting of 50 per cent corn meal, 20 per cent middlings, 20 per cent ground oats and 10 per cent bran. This should be moistened with skim milk and the chicks fed all they will consume in fifteen minutes, three times daily. These birds should be marketed when they have fleshed sufficiently for roasters, and should not be used for breeding purposes. The other members of the flock should be placed in permanent winter quarters with ample roosting room in addition to the other requirements of a satisfactory laying house which includes dryness, light and ventilation.—E. C. Foreman, Professor of Poultry Husbandry, M. A. C.

FINE BUTTER PRODUCTION RECORD

AN exceptional record for butter production was made recently by Wabeek Fancy 2d of J. B. Jones herd, of Romeo, according to the advanced registry office of The Holstein - Friesian Association of America. At the age of five years this cow produced 548.1 pounds milk containing 21.289 pounds butterfat equal to 26.61 pounds butter in seven days.

Breeders of dairy cattle who are in a position to put time and special attention on testing work have enhanced the value of their animals greatly by the official records they have made. Dairymen whose facilities for record making are somewhat limited are given an opportuntiy by the advanced registry department to determine the production of their cows through the farmers' and dairymen's classes.



Dr. Hess Poultry Panacea
Poultry Health Hens Lay Guaranteed

Start Your Pullets and Moulted Hens to Laying

You have had your summer's poultry cares.

Now is the time for you to cash in on eggs.

Go after those dormant egg organs that moulting threw out of gear.

Go after them with the "Old Reliable"

TREATING BEANS TO KEEP BUGS OUT

Please give me the formula for treating beans to keep bugs out of them.—S. V. C., Litchfield, Mich.

—I would say that there is no preventative measure so far as I know that looks at all good to me. Beans kept at a very low temperature will, of course, not be attacked, at least the insect will become dormant as long as the beans are kept very cold, but if there happens to be any bugs present they will start working as soon as it warms up.

It has also been suggested that for seed beans they may be packed in air-slaked lime. I have never tried this and do not think much of it.

I would put the beans in a cold place and then watch them, examining them from time to time for insects and if the weevils do appear then I would fumigate in the orthodox manner with carbon disulphide, relying on the destruction of the bugs when they appear, rather than on the prevention of injury. The method of treatment is as follows:

The treatment for beans containing weevils or other insects is comparatively easy, providing the beans are in tight bins or barrels, capable of being tightly and quickly closed. Old carpets, blankets, etc., often will be found useful in helping to make the bins tight.

Measure the inside of the bin, counting in the air space above the beans if the bin is not entirely full, and place some old pans or plates on top of the beans. Then put in the pans two drams of liquid carbon disulphide for every cubic foot of space in the bin, and quickly close the bin. Thus a pound of the liquid will suffice for about fifty cubic feet, or a little more, of space, or for about fifty bushels of grain. This treatment is far more effective during warm weather than in cold. During severe cold weather, the insects are dormant and resist the action of the fumes quite successfully.

The bin should remain tightly closed from twenty-four to forty-eight hours, a longer exposure being likely to injure the germinative power of the beans.

The liquid carbon disulphide, on being liberated, will be quickly transformed into gas, which, being heavier than air, settles to the bottom and fills all the air spaces between the seeds. The liquid costs about sixty cents for a single pound, if purchased at retail. The work must be done in the day time, away from lamps, stoves or fire of any sort. No fire must be allowed to come near until everything has been thoroughly aired out, for the gas fumes are very explosive when mixed with the air. The beans should be shoveled over several times. Great care must be observed to breathe as little as possible of the fumes, as they are very poisonous and will produce death as easily among men as among insects.

Carbon disulphide may be obtained of the makers at about six cents a pound in fifty pound drums. It is also useful for killing woodchucks, gophers, and other vermin. The work should be done away from other farm buildings, since the insurance is likely to lapse during the operation.—R. H. Pettit, Professor of Entomology, M. A. C.

BREEDS OF DAIRY CATTLE

No. 3—Guernsey

THE GUERNSEY breed had its early development on the Channel Islands of Guernsey and Alderney, and at present cattle from either island are eligible to registry in the herd book of the American Guernsey Cattle Club. The origin of the breed is obscure, but it is probable that the parent stock came from Normandy, France, which is adjacent to the islands. Early livestock laws of the islands prevented the importation of livestock for any purpose except slaughter, and under these conditions, in the course of the last century, the cattle developed into a distinct breed.

The climate of the Channel Islands, being mild throughout the year, allows a long grazing season.

Although they come from the same parent stock, Guernseys are larger than their companion breed, the Jerseys, and are unlike them in some other respects, having been developed by men with different ideals.

Importations and Distribution

The first representatives of the breed were imported in the early part of the nineteenth century, but not until 1878 were efforts made to keep the breeding pure in this country by the establishment of a herd register. Since that time there have been importations almost every year, and the breed has maintained a steady growth in numbers and popularity. About 50 per cent of their numbers are found east of the Alleghanies, but they are spreading westward.

Characteristics

The characteristic colors of Guernseys are some shade of fawn and white. The farmer varies from a very light orange fawn to a deep reddish or brownish fawn. An orange fawn with white markings, the fawn predominating, is perhaps the most common. The under parts of the body, legs, and switch of tail are usually white. A buff nose and amber-colored horns of medium size are typical of the breed. A rich yellow secretion of the skin is most highly thought of by breeders and is considered as an indication of the quality of the milk, which is rich in fat and highly colored.

Guernseys possess a nervous temperment, but are quiet and gentle if properly handled and are not easily excited.

A lack of uniformity among Guernseys is perhaps the most serious criticism that can be made, but this defect is being remedied rapidly through the efforts of the breeders, and during the last few years a great improvement in this respect has been noted.

Guernseys are medium in size. The cows vary in weight from 900 to 1,400 pounds (average about 1,050 pounds); the bulls range from 1,400 to 2,200 pounds (average about 1,600 pounds). There is some resemblance between the Guernsey and the Jersey, but the former is larger and slightly coarser boned, with a deeper and more "rangy" body. The head also is somewhat longer and more narrow than that of the Jersey.

The birth weight of calves ranges from 60 to 85 pounds. Heifers reach maturity a little later than Jerseys and earlier than the other breeds.

Production

Milk from Guernsey cows is noted for its extremely yellow color and high percentage of butterfat. The fat globules are larger than those in milk from either Holstein or Ayrshire cows, and consequently the cream rises more rapidly upon setting. Guernseys are particularly adapted for the production of butterfat or cream or for rich milk at a special price.

Families

There are a number of well-developed families of Guernseys, of which the following are among the more widely known: May Rose, Glenwood, Masher's Sequel, Governor of the Chene, Yeksa, Tricksey, and Sheet Anchor.

VETERINARY DEPARTMENT

HAVE EXAMINATION BY VETERINARIAN

I have two Holstein heifers 18 months old that fail to come in heat. What can be done?—R. L. C., Hopkins, Mich.

—Occasionally one finds a heifer in which the external signs of heat are so obscure that they are overlooked by the herdsman. Rectal examination of the ovaries by a qualified veterinarian will reveal whether the animal is ovulating or not. If this is the condition in these two heifers, they might become pregnant by running with a bull. Occasionally failure to come in heat is due to lack of development of some one or more of the reproductive organs. This condition cannot be determined except by an examination by a qualified veterinarian.—E. T. Hollman, Associate Prof. of Animal Pathology, M. A. C.

LIKES M. B. F.

Enclosed you will find $1.00 to pay for the M. B. F. for two years. I thank you very much because you are working for the farmers' interest. There are not very many working for the good of the farmer now days. It seems as if almost everybody is working against them. Yours for success.--Wm. Jorgenson, Montcalm County, Michigan.

Poland China Ton Litter Makes High Weight

THE heaviest litter yet reported in the Michigan Ton Litter Contest was produced by V. J. Brown & Son, of Jonesville, Michigan, and weighed 2840½ pounds when they were 180 days old, October 18th. As most of the strong contenders for high honors in the contest have been weighed in, this litter is expected to win their producers the $50.00 cash first prize donated to the Michigan Ton Litter Club by Packing Companies of Detroit, and the $200.00 cash prizes offered by the Poland China Breed Promotion Committee. The pigs are pure-bred Poland Chinas and eligible to registration and have proven the efficiency of an improved pork machine, or well-bred pig, for converting feed into pork.

The litter represents practical pork production, as no unusual or uneconomic labor and methods were used on them. Their owners operate a large stock farm, feeding several carloads of hogs and lambs each year, and do most of the work themselves, leaving no time for labor that they did not think would pay for itself without any uncertain prizes. A carload of lambs were sheeping down corn in an adjoining field at the time the pigs were weighed.

The dam of the litter is "one of the largest sows in Michigan," says F. E. Haynes, a prominent Poland China breeder and owner of the litter's sire. She is of rugged medium type showing strong constitution and feeding capacity, an active disposition and easy movement. In fact, her owner admits she is a good fence jumper. She is four years old and had raised three previous litters, ranging from six to nine pigs raised.

She ran in the barn yard all winter, following dairy cows and picking most of her feed from their droppings. She received some ear corn and middlings and a little tankage with the other sows about six weeks before farrowing. Mr. Brown says he uses tankage to prevent the desire of sows to eat pigs and to make the pigs stronger at birth.

The litter of fourteen pigs was farrowed April 21st in a thoroughly cleaned farrowing pen where the straw was changed often. Four of the larger pigs were killed before they were a week old, leaving the two runts and eight larger pigs uniform in sizes. At the close of the contest the two weighed only 223½ lbs. a piece, while the eight averaged 229.2 lbs. each, The heaviest pig weighed 326 pounds.

During the suckling period the sow received corn, skimmed milk, tankage and middlings. The pigs began eating with their mother when about three weeks old. A creep was soon supplied where the pigs were fed a slop of skimmed milk, middlings and hominy separately from the sow. The sow and litter were kept separate from the other hogs in a small orchard on mixed pasture of alfalfa, sweet clover and blue grass. The pigs ran with their mother until ten or eleven weeks old.

A self-feeder was used from weaning time on, supplied at first with about equal parts of hominy and middlings, with 5 per cent of tankage added. Mr. Brown said the pigs seemed to especially care for the hominy. They received a limited amount of skimmed milk throughout except two weeks in early September when they had none. Some ear corn was fed after three months of age.

After harvest about the middle of July, no more hominy was fed. The feeder was filled with a ground mixture of rye, oats and a little wheat. the ear corn was increased and soaked shelled corn was used the last two weeks.

A mineral mixture of ground bone, lime and salt, as recommended by the Michigan Agricultural College, was kept before the pigs. They also had access to ashes and charcoal.

When the litter was four months old on August 21st, they weighed 1,493 pounds. During the remaining fifty-eight days, they nearly doubled their weight, gaining 1,347½ pounds, or an average of 2.32 lbs. per head per day. However, the pigs carried their weight well and though well finished were not over fat at the end of the contest.—V. A. Freeman, Extension Specialist in Animal Husbandry, M. A. C.

PRICE OF SILAGE PER TON

Could you give me the price per ton of silage in a silo?—C. D., Sandusky, Mich.

—Ordinarily we consider the price of good corn silage in the silo as worth approximately one-third the price of good mixed or clover hay. —O. E. Reed, Professor of Dairy Husbandry, M. A. C.

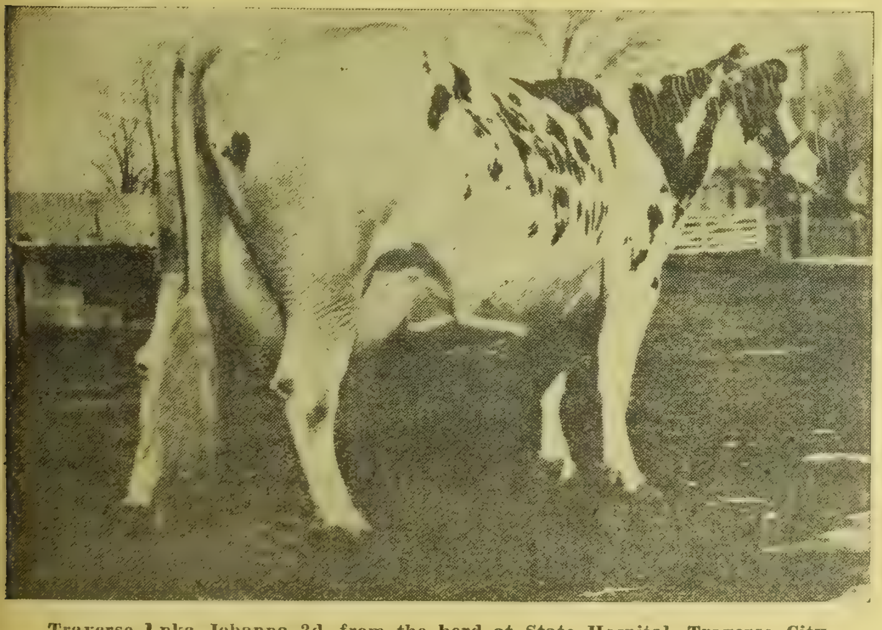
PAYS TO ADVERTISE

The "unprepared" speaker arose before the audience. He was to speak on the lives of Washington, Jefferson and Lincoln. Being somewhat forgetful, he had pinned their names on the inside of his coat on the right.

"Dear friends," he said, "I am about to speak of three great men whose names are indelibly printed on our minds; no true American can forget them."

Then, opening the left side of his coat instead of the right, and peeping in, he said: "I speak of Hart, Schaffner and Marx."

New Champion Holstein Butter Producer



Traverse Inka Johanna 2d, from the herd at State Hospital, Traverse City.

MICHIGAN has two new Holstein state butter producing champions, according to an announcement from the advanced registry department of The Holstein-Friesian Association of America. Both cows are in the herd of the State Hospital at Traverse City. Traverse Colantha Walker is the new state leader for ten months' production as a full age cow. Her record is 22,048.9 pounds milk containing 864.32 pounds butterfat, equivalent to 1,080.4 pounds butter. This record makes her the second highest producer of butter in her class in the United States. Her barn-mate, Traverse Inka Johanna 2d, is the new state champion in the junior four-year-old class for ten months' production. Her record is 22,400.2 pounds milk and 764.61 pounds butterfat—equal to 980.7 pounds butter.

Does Your Herd Suffer From *Contagious Abortion?*

Then you're the man I want to talk to. You've probably heard Contagious Abortion is incurable. Forget that, because it's no longer true.

Maybe you've tried to beat the disease in every way you knew of, but with no luck. Don't let that worry you. Just consider this fact:

Hundreds of breeders have stamped Contagious Abortion out of their herds with the aid of the Bowman Abortion Remedy. You may have heard about it, because it has saved thousands of dollars for dairymen and stockmen.

Bowman's Abortion Remedy will *Stop Your Losses*

The Bowman Abortion Remedy isn't one of those things that work wonders for the other fellow, but not for you. No, sir. I guarantee that the Bowman Remedy will rid YOUR herd of Abortion. It also eliminates retention of placenta, white scours and calf pneumonia. It is effective with either cattle or hogs.

Write me today

If Abortion is eating up your profits, investigate the Bowman Remedy now. Get all the facts about it--and detailed experience of men who have used it: Write me at once.

Guarantee

I guarantee to bring every cow or sow that is a breeder back to normal, healthy delivery if treated with Bowman's Remedy according to directions. In exceptional cases, where additional treatments are needed, I will furnish these free, except for shipping cost. For every animal Bowman's Remedy does not cure of Contagious Abortion, I will refund the cost of treatment.

MARKET FLASHES

MARKET SUMMARY

Bearish news fails to weaken grain market. Beans easy. Large supply of potatoes. Good demand for turkeys and supply moderate. Butter and eggs in demand and scarce. Cattle and hogs active and higher. Sheep lower although active.

(Note: The above summarized information was received AFTER the balance of the market page was set in type. It contains last minute information up to within one-half hour of going to press —Editor.)

FOOTE'S MARKET LETTER

BY W. W. FOOTE

Preparing for Winter

FARMERS have prepared for the long winter season, and corn husking is the last real hard work, this going forward where the weather permitted. Of course, some of the corn is wet, but this is belived to be of much smaller proportions than was at first reported. There is a fine large corn crop in the corn belt states, and undoubtedly it will be mainly used for stock feeding on the farms where grown. Farmers have cut their wood for the winter, and those living in parts of the country where wood lots abound are not worrying about the dearness of coal in the cities. The apples have been gathered and put away for family consumption all these cold months, and so have the potatoes and other vegetables, while all kinds of preserves and canned goods are stored in the cellar. Thank heaven, the farmers are not going to starve, even if the wheat crop turned out so large as to make the prices unsatisfactory. Hogs, too, are selling lower than they should, because too many were bred, but they are not a dead loss, and in many farming districts farmers are getting back to the old-time practice of killing a few hogs for fresh meats and cured hams and bacon. Some farmers, but not a great many, perhaps, are owners of hives of bees, and this is a side issue that helps out a lot at very small expense, except to the bees, furnishing some pocket money as well as furnishing the table with a delicious sweet for placing on hot biscuits. The farm implements are carefully stored away, the manure pile has been put where it will do the most good, and in the evenings after the chores are done the farmer and his family may plan for the new farm house or barns to be built next year, getting plenty of ideas from the architectural designs.

What About Wheat

That is the question which wheat growers everywhere are asking, and so far as can be seen now, about all that can be done is to see what cooperation can be accomplished in marketing the big crop harvested this year and to cut down the acreage for next year. A reduction in wheat lands from 62,000,000 to 50,000,000 acres is one of the changes urged by the production committee of the Wheat Council of the United States, during the recent meeting in Chicago. The lower acreage, it is claimed, would be sufficient to meet the requirements of the country and should be brought about as soon as the farmers can arrange about diversifying their crops. At the same time the committee decided that steps should be taken to broaden the domestic demand for wheat by increasing consumption of bread and other wheat products. "It would be to the advantage of every wheat farmer," the report said, "to produce sufficient milk, butter, poultry, and meats to feed his own family and to provide for other necessary living expenses, instead of relying on the wheat crop alone to provide for them." In a statement giving the cause of this action, Sidney Anderson, president of the council, said: "At present the potential profitable market for our wheat is limited by domestic requirements and it is probable that this condition has come to stay as long as we maintain a standard of living ligher than in any other country and expect our farmers to share that standard. Our chances for successful competition in the world wheat market with other countries with a vast expansion of new land, pioneer populations, and low standards of living are very slight. December wheat has fallen to $1.01½, comparing with $1.20¼ a year ago. December corn sells in Chicago at 74¼ cents, comparing with 71¾ cents a year ago; December oats at 41 cents, comparing with 44½ cents last year; and December rye at 67½ cents, comparing with 90¼ cents a year ago.

"There is a pretty good movement of corn as it is shucked on the farms," said H. I. Baldwin of Decatur, Ill. "It demonstrates that quite an amount of corn is for sale at present prices. One should watch the weather. If favorable, you can expect more corn loadings from this section shortly. Should guess that the moisture content of corn on the stalk today is from 20 to 25 per cent in different sections. After excess moisture now in 1923 corn crop is accounted for the dry matter yield will be considerably reduced."

Views of a Bear

Arthur W. Cutten, who has been bearish on grains and stocks for some time, in a statement issued referring to grains said: "The American wheat producer is practically losing his foreign market by the competition of other exporting countries. Foreign wheat and other products are entering the country in competition with American products, despite the tariff.

"Farmers are feeding 70 to 80 cent corn to 6 cent hogs and incurring steady losses thereby, and American manufacturers and producers are threatened with a tariff barrier by our most prosperious and largest customers, with retaliatory measures against us under consideration by other nations who have been good customers in the past.

"The political and financial condition of Europe continues in a state of chaos, with their monetary system becoming further hopelessly demoralized, their credits exhausted, their textile and shipbuilding industries dormant, and unemployment steadily increasing. These pertinent facts may prove of slight moment, but a careful survey of world's conditions fails to disclose any sudden or marked improvement in either its economic or political condition and it is questionable whether capital will accept seriously the superficial expressions of opinion so widely disseminated."

Outlook for Cattle

Were it not for the extremely large consumption of meats throughout the country due to the employment of labor at extremely high wages, prices for beef cattle would not be so high as they are, for extremely large supplies have been marketed this fall from feeding districts and the ranges. The range season is closing now, however, and there will be fewer cattle marketed from now on, enabling owners to get better prices, particularly for the native grassy cattle which have competed with range cattle for summer and autumn months. The Chicago market has shown activity so far as desirable offerings were concerned quite recently, with buyers showing a marked preference for well fattened light weight steers, yearlings continuing to sell much higher than heavy long-fed steers. Low grade little killing steers are especially poor sellers, and there is an extremely wide range of prices for butcher stock, choice cows and heifers greatly outselling poorly fed lots. Regarding the future, many stockmen are in doubt, some of them believing there is a risk with prices for corn so high; but enough farmers have taken what appears to be a rather small risk in restocking their feed lots to insure a normal future supply of beef. And what is highly important, most of these cattle have been bought at a low scale of prices, many having been obtained as low as $4 to $5 per 100 pounds. These cattle are now headed in an upward direction, but bargains are still obtainable. Present sales are largely at $5 to $6.50 for stockers and feeders, while the better ones sell at $6.75 to $7.25. Beef steers sell in the Chicago market largely at $8.25 to $11.75. The best heavy cattle sell at $10.50 to $11.75, common lots selling as low as $5.75 to $6.

Yearling Cattle Booming

While the great bulk of the cattle marketed in Chicago sell far below top figures, a few prime little yearlings sell at a big premium. The other day a buyer paid $12.65 for 21 yearlings which averaged 1173 pounds. On the same day the best heavy steers, which averaged 1510 pounds, sold at $10.90. The best heavy steers marketed during the week averaged 1518 pounds and brought $11.75. Farmers should make more of the course of events and aim to market cattle light in weight and good in quality. It is a very irregular market, and while prime young cattle have advanced sharply, other cattle have sold lower.

Too Many Hogs

It is simply a case of overproduction, and until the marketings become much smaller it is useless to look for any material improvement in prices. While it is obviously impossible to say just what the future will bring forth, the chances are for low markets for the remainder of the year. According to the recent report of the Department of Agriculture, the number of stock hogs in the United States on the first day of September this year was three tenths of one per cent larger than a year earlier, while in the corn belt states it was 4.3 per cent larger. Hogs coming on the Chicago market of late average 233 pounds in weight, and choice heavy lots sell at a liberal premium over the best light bacon lots. The enormous marketing may be inferred from the fact that on a recent Monday 74,237 hogs arrived in Chicago, followed by 52,000 on the following day. Severe declines in prices have been unavoidable, and pigs sold very badly. It seems to be advisable to breed at least one-fourth fewer sows for another year; but no one can tell just what will happen. At any rate it is best to breed fair numbers. Recent receipts of hogs were overwhelmingly large, and prices were the lowest since June, sales ranging at $5.60 to $6.95, the top being 70 cents lower than a week earlier and comparing with $8.25 a year ago. Combined receipts in twenty markets for the year to late date amount to 36,930,000 hogs, comparing with 28,701,000 a year ago.

Improved Outlook for Sheep

With the close of the range shipping season, the marketing of sheep and lambs begins to show a marked falling off in numbers, and the sheepmen who had the courage to wait for better times will be rewarded, as prices will naturally go higher. Michigan farmers are largely interested in the sheep industry, and they know from experience that when properly conducted, it pays. Not many sheep are reaching the Chicago market, lambs predominating. Experienced Michigan farmers do not need to be reminded to send none but well fattened lambs to market, but many poorly finished flocks are arriving and sold at a big discount. Lambs sell in Chicago at $9 to $13.10 and feeders at $10.50 to $12.75.

Forced Marketing of Horses

A few days ago four Russian farmers who settled several years ago in North Dakota were compelled to market 18 horses in Chicago to get money to buy seed, their wheat crop having failed. The horses sold at $27.50 to $100 per head.

WHEAT

Several declines have taken place in the Detroit wheat market during the last two weeks, the price of No. 2 red declining to $1.08 per bushel. There were several bearish factors at work in the market that caused it to weaken. The most important was the revised estimate of the wheat crop of Canada, making the total 500 million bushels considerable larger than previous estimates and a record production. News of both bearish and bullish nature came from Russia. The foreign demand is practically at a standstill and receipts are larger than the demand at most points. Millers are out of the market at Detroit and dealers find it difficult to dispose of the modest receipts from day to day. There are reports that have a tendency to bull the market, which holds the prices from declining rapidly.

CORN

Corn is coming to market a little more freely now but the quality is poor, as it contains considerable moisture. Buying is slow. Should prices go any lower farmers are not expected to sell as the feeling is that they should secure good prices for this year's crop.

OATS

Oats have declined slightly in sympathy with other grains although there is a steady tone to the market. Shipping demand is reported to be slow.

RYE

Rye is off three cents from what it was a week ago. This decline was due to lower prices in other grains as there is little, if any, change in the conditions governing this market.

BEANS

Continuation of weakness in the Detroit bean market caused prices to decline further during the past fortnight. Indications are that there has been no change in consequence in the Michigan market during the last couple of weeks. Elevators that are paying $5 per cwt. are doing a good business but those bidding less are not very busy. Demand is reported to be just heavy enough to keep up with the state's ability to handpick. It is believed that any increase in demand would strengthen the market to considerable extent.

POTATOES

According to November estimates, this year's potato crop will be the fourth largest ever produced in the United States. The report shows a total of 416,722,000 bushels, an increase of about 15,000,000 over the October forecast. Assuming that is this year's population in the United States is approximately 110,000,000 the per capita production of potatoes is nearly 3.8 bushels or about the same as in 1920 when many growers who held their crop until spring suffered severe losses. Last season's output averaged 4.16 bushels per capita, and prices to growers were low. Experience of recent seasons indicates that, when the per capita production exceeds 3.6 bushels, the spring price of main-crop potatoes often is lower than that of the previous autumn. This is the opinion of leading market experts.

Vita Gland-Tablets

Starts Hens Laying in 24 Hours

Hens have glands just like humans and also require vitamines. Because they directly stimulate the organs involved in egg production the mysterious newly discovered VITA GLAND tablets, crushed into hens' drinking water, turn winter loafers into busy layers almost over-night. Science has discovered how to control egg production with essential vitamines, and gland extract that works directly on the OVARIAN or EGG producing gland of the hen. The wonderful effect of gland stimulation is shown by a simple test. Gov't experiment stations report that hens properly fed vitamines etc. lay 300 eggs as against the sixty of the average hen. "Leg weakness of baby chicks due to insufficient Vitamine B" says The Official Bulletin. Also says: "Hens start laying at an average age of 139 days when fed vitamines."

TRY THIS FREE BOX

EGGS, EGGS, EGGS and fine healthy chicks, prosperous flocks without fuss or bother or drugs or expensive feeds can be had. Just drop these tablets into drinking water. So simple to double your profits. Chickens now full of pep and life. Nests full of eggs. Summer production at winter prices. So confident are the Alexander Laboratories, the manufacturer of the original and genuine VITA GLAND tablets, that you will be amazed at results that they offer to send a free box for your own use. This is how. Send no money, just name. They will mail two boxes, each regular, one dollar size, six months supply. When they arrive deposit only a few cents postage and one dollar with postman. When your neighbor sees the wonderful increase of eggs in your nests let him have one box for a dollar, and thus your box has cost nothing. $5000 in big Kansas City bank guarantees your satisfaction or money back without question, so write today and get dozens of extra eggs this simple easy way. Write ALEXANDER LABORATORIES, 9035 Gateway Station, Kansas City, Mo.—(Adv.)

PRITCHARD'S
WEATHER
FORECAST
INTERPRETED BY THE STARS

Week of November 25

DURING first three days of this week the weather is expected to be very severe both on land and water. During Sunday temperatures will be rising in most parts of the state and the weather will be threatening if not actually raining. Winds will rapidly increase in force and rain become heavier. Monday and Tuesday will be critical days from a storm standpoint.

About middle of week temperatures will rapidly fall to much lower readings followed by several days of unseasonably cool weather.

Close to Friday the weather will again become unsettled, with brisk winds and scattered showers or snow flurries but by end of week the skies will be clearing and the temperature falling again.

Week of December 2

Brisk winds and generally high barometer may be expected in Michigan during first half of this week which generally means fair weather but local snow flurries or showers may also be expected.

Not later than Thursday winds will increase to near gales and there will be an increase in the amount of rain or snow to the state in general. By Friday the temperature will have dropped to much lower readings, a condition that will run into next week at which time it will probably intensify considerably.

Mild Winter in Michigan

The average weather conditions to expect for the first three months of 1924 point to a mild winter in Michigan. Temperatures for this period will average above the seasonal normal. Rain or snow fall, speaking in general terms, will not be as heavy as usual.

MEET AT M. A. C., DEC. 4-5

THE Annual Meeting of the Michigan State Association of Farmers Clubs will be held at the Michigan Agricultural College in Agricultural Building, Room 402, on Tuesday and Wednesday, December 4th and 5th, 1923. All clubs are invited and urged to send delegates to this meeting as matters of vital importance will be discussed. Plans are being made for the accommodation of all that attend. Let this be the greatest meeting that Michigan State Association of Farmers Clubs has ever held.—Mrs. I. R. Johnson, Secretary.

Dad Smith was fond of trying to catch little Johnny in spelling long words, but Johnny was usually able to hold his own, so Dad decided to try a few monosyllables for a change.

"Johnny," he said, "I'm going to give you some easy ones this evening. Spell dumb"

"D-u-m."

"Ha, I caught you that time. It's d-u-m-b"

"Well didn't I say that?"

"I didn't hear the b, Johnny."

"You're not supposed to hear it, Dad; teacher said the b was silent in that word."—Judge.

MICHIGAN POULTRYMEN PLAN MARKETING EXCHANGE

ONE more step in the movement to form a state cooperative organization for selling of poultry and eggs was accomplished last week at the Michigan Poultry Exposition, Grand Rapids, when a committee was named to draft a plan which will be presented to local groups.

Those on the committee are O. L. Miner, of Dowagiac; Alex Klooster, of Byron Center; J. B. Devereaux, of Hastings; Charles Highbach, of Big Rapids; Mrs. Dale Jenkins, of Clinton; W. C. Eckard, of Paw Paw, and George Cabell, of Hudsonville, president of the Michigan Poultry Producers' Association.

This action followed addresses by Hale Tennant, director of markets for the Michigan Agricultural College; E. B. Heaton, dairy marketing specialist with the American Farm Bureau Federation, and Gifford, of the college's market department, and on open discussion in which the feasibility of various plans was considered.

The poultry men realize that their position is difficult. Any organization which is effective must include a fair proportion both of the farmers with poultry flocks and of the commercial growers. The plan presented by Mr. Patch calls for the signing by members of a contract to sell all poultry and eggs, except those needed for home consumption and for hatching and breeding purposes, through the exchange, for a period of four years.

WASHTENAW COUNTY HORTICULTURAL ASS'N. FORMING

ABOUT one hundred of the leading fruit growers of the county gathered Thursday noon, November 23rd, at the Chamber of Commerce, Ann Arbor, and partook of a substantial dinner which was followed by remarks on the formation of a horticultural association for Washtenaw county; also remarks were made regarding spraying, packing, cold storage, etc.

The following officers were elected: President, Thomas Applegate, Milan; Secretary, L. A. Seamans. Ypsilanti. A committe on constitution and by-laws was appointed by chairman as follows: B. W. Manwaring, Ann Arbor; George English, Chelsea; A. G. Stein, Ann Arbor.

The chairman appointed a committee consisting of Henry Bredernitz, Saline; A. C. Stein, Ann Arbor; F. J. Simons, Ypsilanti; George English, Chelsea; Arthur Intz, Saline, to report on a list of nine directors. The following were recommended and accepted:

Thomas Applegate, Milan; Howard Boyd, Chelsea; B. W. Manwaring, Ann Arbor; William Austin, Saline; F. J. Simons, Ypsilanti; D. A. Biker, Chelsea; Bruce Rorabacher, Saline; A. C. Stein, Ann Arbor, and Gustave Uphans, Manchester.

The time and place for holding the next meeting was left to chairman Applegate who indicated it would be in about three weeks when another banquet will be held and that he would try and have a state speaker present. Prof. Gardner was to have been present at this meeting but another engagement prevented.
—J. W. Sanders.

FARMERS ESTABLISH BEAN PICKING PLANT

THE Michigan Elevator exchange made public last week the fact that it has established a bean-picking elevator and warehouse at Port Huron capable of handling a carload of beans daily affording warehouse and picking facilities for the bean-handling cooperative elevator associations of its string of some 150 local organizations which have not had such service heretofore.

The plant, which has been leased by the elevator exchange and which will operate under the name of the Michelex Elevator and Warehouse Co., is equipped with the latest devices for economical and efficient handling of beans. The equipment consists of automatic loaders and unloaders, a polisher, three giant pickers, a dryer and about 100 hand pickers which will enable the exchange to add the "finishing touches" to its product.

Arrangements have been perfected for picking 130 cars of picking stock within the next 90 days, the exchange declared.

The plant has a storage capacity of 60,000 bushels with a warehouse capable of holding 10 or 15 cars of beans in storage.

HUSKS 149 BUSHELS OF CORN IN NINE HOURS

Thomas Monroe, of Pana, Illinois, broke all Central Illinois records for corn husking on the John Butcher farm near Blue Mound. recently when in nine hours he husked 149 bushels and 50 pounds.

CHURCH SERVICE BY RADIO

SINCE the story about the parish in Shiawassee county receiving service by radio appeared in the columns of THE BUSINESS FARMER the editor has read several articles regarding various churches following their example. The latest one to come to my attention is a Presbyterian church at Woodhull, Illinois. There is a regular pastor at this church but he was called to Davenport, Iowa, to deliver a sermon. Not wanting to miss the sermon they placed a receiving set on the pulpit, the congregation assembled as usual, and a loud speaker amplified the voice so that every word could be understood in the furtherest corner of the church.

MILK FOR BABIES IN GERMANY

Dear Mr. Slocum:—Your editorial on page 12 of November 24, has appealed to me. I too, believe even the embittered would be softened by the uplifted arms of a mother and the plaintiff wail of a tiny child without nourishment.

I am glad to contribute my little mite of Ten Dollars on this happy Thanksgiving day to help feed the starving children of Germany, just as cheerfully as if the shoe was on the other foot, and the contribution was to starving children in Russia or France.

I think your editorial so ably covers the situation. I think contributions not only save suffering and starving of children, but also the bread cast upon the waters return to this country directly and indirectly. It helps find a market for our surplus food.

So much can be said I will not try to say it. I believe if The Business Farmer would start a fund for the Red Cross and accept contributions for the specific purpose as outlined in your editorial you would start something and it probably would attain national proportions.

I hope the Newton Bill (now pigeon-holed) will pass in the next Congress. —A subscriber of B. F.—Edwin P. Harms, Wayne County.

ALL right, brother Harms, I will match the ten dollar bill you enclosed with my own check for $10 and I am reprinting this with the thought that there are other readers of THE BUSINESS FARMER who will be glad to contribute some amount, any amount, big or little, on or before December 20th, so we can turn this amount over to the American Red Cross for the specific purpose of BUYING MILK FOR GERMAN BABIES and send it as a Christmas message of Good Will and Peace on Earth to Germany. If you care to lend a hand send your remittance of any amount to me, a list of contributors to this fund will be published in the December 22nd issue.
—GEORGE M. SLOCUM, Publisher, Mt. Clemens, Mich.

State Fruit Growers Hold 53rd Annual Meeting

Striking Results Secured Through Investigational Work During Past Year and Common Sense Analysis of Marketing Situation are Outstanding Things at Convention

By CARL H. KNOPF

(Special Correspondent of The Business Farmer.)

A PIONEER must be a trail blazer. He must ever be in advance, finding the best route to travel and marking it for the benefit of those who are to follow him. This has been the mission of Michigan's pioneer organization of fruit growers, the State Horticultural Society, which held its 53rd Annual Convention at Grand Rapids, November 20-22, 1923. During its more than half-century of activity this Society has shown the great advantages of Michigan as a fruit growing state, has championed everything which would develop the fruit industry, and has been the guiding force behind the Horticultural Department of the Michigan Agricultural College with its wealth of experimental and investigational work.

Two outstanding things characterized this 53rd annual meeting. One was the clear and common sense analysis of the marketing situation. The second was the striking results secured through the investigational work carried on this year, under the direction of the M. A. C. Horticultural Department.

Raspberry Results at South Haven

S. E. Johnston, Supt, of the South Haven Experiment Station, reported on the work done there with black and red raspberries this season. Ordinarily the results of experimental work are not made public until confirmed by several years' tests but the 1923 information was so conclusive that it seemed best to give it to the growers at once.

The work with black raspberries was to determine how many canes should be left per hill and also just how the lateral branches should be handled. In some plots the lateral branches were trimmed back to 4 buds each, in others the laterals were left full length but some were thinned out, and both of these were compared with plants where all of the laterals were left full length.

To show how carefully and painstakingly the work was done, each cane and each branch was divided into sections of five buds each and the divisions were marked with strings. A record was kept of the kind of buds which developed in each section and also the number and weight of berries produced on each section. Work done as carefully as this gives both accurate and dependable information.

Two plots outyielded all of the others, one where the laterals had been cut back to four buds each and the other where the laterals were left full length but had been thinned out. The comparative yield of these two plots to an acre basis was as follows;

Four-bud laterals—210 cases containing 1,819,727 berries.

Full-length, thinned laterals—220 cases containing 2,372,241 berries. While the full length laterals yielded the most cases and the most berries yet the berries were much smaller and it was found that a person would earn only three-fourths of a cent for picking each extra quart from these canes. The conclusion was that the most practical method of handling the lateral branches is to cut them back to four or more buds. This method results in better berries, earlier berries, and easier picking.

A great difference in yield was noticed between the canes with different sizes of stems. Careful measurements were taken, which, when compared with yield, showed plainly that with large canes more canes can be left per hill and more buds can be left per lateral branch.

Supt. Johnson also recommended that the main canes be allowed to reach 24 to 30 inches in length before being pinched back. This is recommended because it was found that the buds on the stalks of the canes and the lateral branch buds which were nearest the canes, produced the largest yields of berries.

Prune Reds Higher

As red raspberries have only about one-third as many buds per root length of cane as do the blacks, Supt. Johnson recommended leaving the red raspberry canes quite long. It was found that the yield per acre increased with the length per cane but that the limit was reached at about shoulder height. Canes which are too tall break over more easily and another difficulty was found in the fact that the berries on the top laterals have a tendency to run small.

Mr. Johnson stated that the first five buds nearest the cane on the red raspberry lateral branches are usually vegetative buds and for that reason any laterals on such canes should be left at least twelve buds in length.

Supplementary Cash Crops for the Grower of Small Fruits was the topic discussed by Prof. Geo. E. Starr of the M. A. C. Prof. Starr recommended, among others, sweet corn, asparagus, chicory, and melons.

Cherry Spraying for 1924

These recommendations were presented by Prof. H. M. Wells, also of the M. A. C. Horticultural Dept. who has been carrying on the work with the assistance of Prof. Dutton.

To date they have found lime sulfur to be about equal with Bordeaux mixture as a spray to control the cherry leaf spot. Their observation has been that more leaf injury is caused by the Bordeaux spray and also that it tends to reduce the size of the cherries. Special warning was given not to attempt alternating the lime sulfur and Bordeaux sprays during the season. Pyrox sprays during the 1923 season gave considerable foliage injury.

The results to date indicate that lime sulfur, used at the rate of 1¼ gallons to 50 gallons of water, is the most satisfactory spray for cherries Applications of this spray are recommended as follows;

First application, just as the petals fall. Second, 10 days later. Third, after another 10 days. Fourth, just after harvest.

For the poison, 1 pound of powdered arsenate of lead should be used for each 50 gallon of spray mixture.

Discussing the effects of the leaf spot infection which defoliated so many cherry orchards in 1922, Prof. Wells said that in the yields on the experimental blocks in Grand Traverse county had been reduced from 4½ crates on the protected trees to 2½ crates per tree in the check block which was defoliated by the disease.

Michigan fruit grading laws were discussed by Director Wm. P. Hartman, Bureau of Standards, State Department of Agriculture. Mr. Hartman stated that Michigan's standards for apples have received widespread recognition and cited, as proof, the fact that 17 states now use the Michigan apple grades.

Mr Hartman stressed the importance of standardizing as being fully as important as advertising. He stated that two billions of dollars spent in this country every year for advertising would be of little value unless the advertisers followed it up with a constant supply of standard products. He stated that the practice of dumping an ungraded product on the market is causing Michigan potato growers a loss of at least $1,000,000.00 annually.

Mr. Hartman exhibited four full-page ads taken from a single issue of the "Ladies Home Journal." These ads from cooperative organizations in California, advertised California fruits and canned goods, in colors, to the American public. The cost of a single month's insertion of each of these ads. in colors was given as $11,000. These four pages three in colors and one in black, therefore cost $39,000. By reason of having a large quantity of standard goods to follow up these advertisements, Mr. Hartman stated that the California growers were able to realize a profit, even from an advertising bill of nearly 40,000 per month per magazine.

It was stated that the raisin growers alone, spent over two million dollars in advertising in 1922. With the increased market for their product they are able to realize a profit on their advertising investment.

Everbearing Strawberries

This subject was discussed by A. L. Watson, of Grand Rapids, who has become widely known throughout the state as the proprieter of Strawberry Acres.

The everbearing variety, according to Mr. Watson, was a sport from the Bismark variety and was first known as the Pan American. It was discovered and propagated by a Mr. Cooper in New York state, in 1898.

There are two distinct types of everbearers, the Superb and the Progressive. The former has the larger size but the latter has the superior flavor and sweetness and so is becoming the most popular market variety.

Michigan marketing problems were discussed at length by F. L. Granger of Benton Harbor. Mr. Granger stated that he had become convinced that production, and not advertising, is Michigan's first marketing problem. For example, apples should be in cold storage within 72 hours after being picked from the tree. Under the present system several weeks may elapse before the fruit reaches cold storage.

Mr. Granger advocated selling

(Continued on Page 23)

Michigan "Going Strong" At International

CHICAGO, Dec. 3.—Michigan has always been a big winner of prizes at the International Hay and Grain Show held during the International Live Stock Exposition each year at Chicago and this year our farmers are going to try to/win more than ever. They started off by winning two prizes on their hard red winter wheat, and this is the first year they have ever exhibited in this class. Only two samples were entered from Michigan and they won twentieth and twenty-first places in a field of eighty entries from the wheat belt of the United States and Canada. Arnold Callan, Caro, won twentieth place and John Shoemaker, Hudsonville, was the other exhibitor. The samples shown were of Berkeley Rock, the new variety developed by Prof. Frank Spragg of the M. A. C., by mixing Red Rock and Berkeley Rock.

The Michigan growers who placed in the soft red winter wheat class are: First, A. W. Jewett, Jr., Mason; second, L. H. Laylin, Mason; third, John C. Wilk, Alma; fourth, D. C. Seaman, Jackson; fifth, A. F. Hilliard, Mason; sixth, C. D. Finkbeiner, Clinton; eighth, L. T. Lasenby, Mason; eleventh, T. J. Wilk, Alma; twelfth, J. A. Wilk, Alma; fourteenth, J. I. Hazelitt, Ionia; sixteenth, Ralph Jewett, Mason; twenty-third, F. L. Houghton, Alto.

For the first time Michigan made a strong showing in field peas when, in the class other than yellow, Martin Peterson, of Bruce Crossing, took first; Adolph Trousil, of Ewen, took second, and L. H. Laylin, of Mason, third. The first two are members of a group of Ontonagon county farmers whom W. N. Clark, county agricultural agent, has organized for intensive seed work.

In field beans, Arthur W. Jewett, Jr., of Mason, took first; Melvin J. Smith, of Springport, second, and L. T. Lasenby, of Mason, third.

Six out of ten places in yellow soy beans went to Michigan men. G. C. Wilk, of Alma, was fourth; Charles Laughlin, Danville, fifth; Charles N. Able, Danville, sixth; Charles Ashbaugh, Luther, seventh; L. H. Laylin, Mason, eighth, and H. C. Owen, Ovid, ninth.

In soy beans and other variety, Arthur W. Jewett, Jr., of Mason, was fifth, Lynn Jewett, of Leslie, ninth, and L. H. Layin, of Mason, tenth.

Harold Goetz, of Blissfield, was second in the junior class in yellow corn. In the collegiate live stock judging contest, held Saturday, the M. A. C. team placed eighteenth.

Judging in the other crop classes and live stock is going on as we go to press and a list of the winners will appear in our next issue.

Michigan Stock At Show

Exhibitors from Michigan in the live stock show are Carr Bros. & Co., of Bad Axe, with Shorthorn cattle; C. H. Prescott & Sons, of Tawas, also with Shorthorns; Woodcote Stock Farm, Ionia, with Aberdeen Angus cattle and carcass entries; Willian E. Scripps, of Orion, with Aberdeen Angus cattle and Belgian horses; Dwight Cutler, of Ionia, with Aberdeen Angus cattle; Harold J. Harwood, of Ionia, with grades and crossbreds; Cliff Middleton, of Clayton, with Shropshire sheep; Harry T. Crandall, of Cass City, with Oxford, Lincoln and Cotswold sheep and Chester White hogs; Detroit Creamery Farm, of Mt. Clemens, with Poland China, Duroc Jersey and Chester White hogs; Fred B. Hill, of Flat Rock, with Duroc Jersey hogs; Andrew Adams, of Litchfield, with Chester White hogs and swine carcasses; W. F. Adams, of Litchfield, with Tamworth hogs and swine carcasses, and J. L. Miller, of Caledonia, with Percheron horses.

The Michigan Agricultural College is exhibiting Herefords and Aberdeen Angus cattle, Hampshire, Shropshire, Oxford, Cotswold, Dorset, Southdown and Rambougiller sheep, Berkshire, Poland China, Duroc Jersey, Chester White, Hampshire, Tamworth and Yorkshire hogs, Clydesdale, Percheron and Belgian horses and swine, sheep and cattle carcasses.

Selling Your Apples At a Profit

Make Money On Large Apple Crop by Making Into Cider and Then Converting Into Vinegar

By F. W. FABIAN

Associate Professor Bacteriology and Hygiene, Michigan Agricultural College

(Written Exclusively for The Business Farmer.)

Aren't They Beauties?

WITH a large apple crop in many sections of the state farmers are wondering how they can market them to the best advantage. Considering the prevailing price of apples, the scarcity of labor and also the high price of labor when it is possible to get it and finally the high freight rates where they have to be shipped by freignt, makes the apple crop a mighty poor paying one this year.

However, there is a way of turning your apples into a real profit with a minimum returns. The way that is described in this article, doubtless, is familiar to most farmers only they have not realized its possibilities.

It takes about eight bushels of good juicy apples (ten or more bushels if they are dry) to make a barrel of cider. This cider then can be fermented by yeast and bacteria and changed into acetic acid. When it has reached this stage, we call it vinegar. Vinegar can be sold any time of the year for from thirty to fifty cents per gallon. To take a concrete example, say that apples are selling for one dollar a bushel and it takes eight bushels to make a thirty-two gallon barrel of cider. The cider when converted into vinegar will sell at say forty cents per gallon. The eight bushels of apples if sold on the market would bring eight dollars and the vinegar made from those apples would sell for one and one-half times as much or about thirteen dollars. The actual profit on the whole orchard would be a great deal more than this for apples picked for cider need not have near the care in picking and handling as those sold on the market. Furthermore all the cull apples can also be turned into a profit in this way while in many cases they are allowed to lay on the ground and rot.

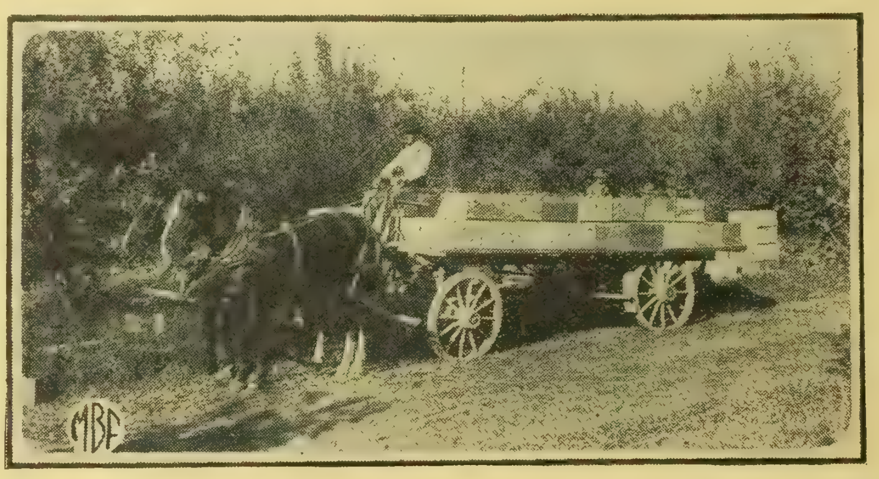
Vinegar a Long Time Investment

One of the chief objections that the farmer has to making vinegar is the length of time it takes to convert the cider into vinegar. He places the cider in the cellar at a low temperature and allows it to remain there until spring or the following summer before it turns into vinegar and is ready to sell. It takes so long when nature, unaided, is allowed to take her course that the farmer would rather sell the apples for a great deal less in the fall and realize on them quickly. Then too when spring or the next summer comes around he often finds that the cider has not turned into vinegar and in some cases has spoiled so that his apples are a total loss. This uncertainty together with the long wait for the money has reduced the amount of vinegar made on the farm to a minimum. In most cases the farmer only makes enough for home consumption and in many cases actually buys vinegar.

Making Vinegar Scientifically

However, by making vinegar scientifically all the trouble and objections usually encountered could be avoided. Furthermore the cider could be converted into vinegar, sold and the money in the bank inside of two to three months. All this is made possible by the use of pure cultures of yeast and bacteria isolated and grown in sterile cider. These cultures are added to the cider as soon as possible after making and does the work quickly and well. The Bacteriological Laboratory of the Michigan Agricultural College, East Lansing, Michigan, has been sending out these cultures for years to the farmers of not only Michigan but all over the United States and Canada and in fact to all parts of the world. It is one of the few places in this country where these cultures can be obtained and as a result the demand is yearly increasing. Not only farmers, but many people living in the cities liking the flavor of good cider vinegar buy cider when possible and send for the cultures and make their own vinegar. Many vinegar factories, also, send for pure cultures with which to start their initial fermentation. The cultures are furnished at cost, twenty-five cents, and is done not as a money-making scheme but as a real service to the people of the state.

In the scientific process of making vinegar, two cultures are necessary. The first culture used is a yeast, (Saccharomyces ellipsoideus) which converts the sugar present in apples into alcohol. The cider is then known as "hard cider." The second culture necessary is a bacterium, (Bacterium aceti) which converts the alcohol made by the yeast into acetic acid. The cider is then called "vinegar." The first process takes about two weeks and the second process about six weeks or more so that in about two months or four at the most, it is possible by using pure cultures to produce a good saleable vinegar. This is quite different from six months or a year. In addition to this you are always sure of getting vinegar.



When labor is plentiful and one has the time the most profitable way to market the apple crop is to grade the apples and sell according to grade, using the culls for cider vinegar. But when labor is scarce and wages high and there is an abundance of fruit by making your whole crop of apples into cider vinegar you can market the crop at a profit where you could not otherwise.

Specific Directions for Making

1. Use good clean juicy apples.
2. Wash and scald the cider barrel thoroughly.
3. Fill the barrel about three-fourths full of cider.
4. Inoculate with vinegar yeast as soon as possible.
5. Store the cider at a temperature of 65 to 75 degrees F.
6. Allow it to ferment until no more gas is given off.
7. Inoculate with vinegar bacteria.
8. Allow to ferment until 4 per cent or more of acetic acid is produced.
9. It is now ready for sale. If you keep it for home use, fill the barrel full, cork tightly, and store in cool place.

What Is Vinegar?

"Vinegar is a condiment produced by the successive alcoholic and acetic fermentation of a watery solution of sugary or starchy substances by certain yeasts and bacteria."

The Michigan Dairy and Food Laws (1917) define vinegar as follows: (Act No. 384, Session Laws 1913), paragraph 67, section 2: "The word 'vinegar' as used herein is limited to a water solution of acetic acid derived by the alcoholic and subsequent acetous fermentations of fruits, grain, vegetables, sugar or syrups, and if not distilled must carry in solution the extractive matter derived solely from the substances indicated on the label as its source."

Law on Sale of Cider Vinegar

Paragraph 68, Section 3 of Act No. 384: "No vinegar shall be sold or exposed for sale as apple or cider vinegar which is not the legitimate product of pure apple juice. The term 'cider vinegar' as used herein, shall be construed to mean vinegar derived by the alcoholic and subsequent acetous fermentation of the expressed juice of apples, and which contains not less than four per cent of absolute acetic acid. Cider vinegar which during the course of manufacture has developed in excess

1923 Apple and Potato Show Finest Exhibition of Kind Ever Held in State

By CARL KNOPF

(Special Correspondent of The Business Farmer.)

KING Apple and his royal concort Potato held undisputed sway at Grand Rapids during the week of November 20 to 23, when the Second Annual Apple and Potato Show was held in the Klingman building. With the leading growers of apples and potatoes in keen competition for state honors the 1923 Show proved to be the largest and finest exhibition of its kind ever held in the state.

Some two hundred exhibitors entered displays, making the Show considerably larger than last year. There was also a marked increase in the quality of exhibits, thus proving that the Show is filling its mission of teaching quality and selection.

Apples were shown in all quantities from the five-apples-per-plate exhibit up to the big fifty-bushels exhibit. All sections of Michigan were represented by their choicest fruit and it is difficult to say just which classes afforded the most competition. One large room was nearly filled with tables bearing the plate exhibits while the tray exhibits were banked along the side of that same room. Apples packed in bushels and barrels occupied over half of the display space alloted to fruit, with the seven fifty-bushel exhibits predominating.

A feature of the Show was the fifty-bushel exhibit of apples which won first prize. This was grown by Wm. Weckler, of Ludington, Mason county. Composed of Northern Spies, Snows, Johnathans, Grimes Golden, Wagners, and Canada Reds, with fruit of wonderful size and coloring, and skillfully packed, this exhibit made a picture which alone was worth a trip to the Show.

Second prize in this same class was won by W. H. Roach & Co., of Hart, while third and fourth honors, respectively, went to Crystal Lake Orchards of Beulah and to the Benzie county exhibit.

The South Haven Fruit Exchange won first place in the fifty-bushel exhibit, commercial pack, with a display showing remarkable uniformity and excellent skill in packing.

Prizes for the best barrels of the different varieties were awarded as follows: Greenings, Jesse Pickett of Dutton; Johnathans, H. Schaefer & Sons of Sparta; Wealthys, L. F. Waid of Byron Center; Wagners, A. J. Dowd of Hartford; Snows, H. Schaefer & Sons of Sparta; Grimes Golden, Friday Bros. of Coloma; McIntosh, W. H. Roach & Co. of Hart; Northern Spies, Oscar Braman of Grand Rapids; Steele Reds, Farley Bros. of Albion.

Son Beats Out His Dad

The individual bushel classes brought out splendid displays of the various varieties. Very sharp competition marked every class and the placings were close.

Those following the judging were much amused when competition in the Northern Spy section narrowed down to a contest between Oscar Braman, well known representative from Kent county, and his son, Russell. The bushel selected by the son was finally awarded first place and the dad had to be content with the second prize. When all of the premiums were totalled it was very certain who had done the most careful work, as Russell won a total of 27 prizes while all Mr. Braman could muster was 7.

For purposes of competition in the plate displays the state is divided into four sections. The Upper Peninsula was not represented this year but the sweepstakes winners for the best plates of apples from the other sections were: Southwestern Michigan, Steele Reds exhibited by Farley Bros. of Albion; Northern Michigan, McIntosh exhibited by R. Roobothen of Beulah.

The plate of Delicious shown by Pickford Bros. was finally awarded the championship ribbon.

Other exhibits worthy of mention were as follows: Individual plate display, won by L. A. Spencer of Kibbie with 105 different varieties in the collection; Best collection of pears, shown by Taylor and Jager of Douglas; Ten bushel exhibit of apples, won by H. Schaefer & Sons of Sparta; Five bushel apple exhibit, by Russell Braman of Grand Rapids.

Some comment was heard through the show rooms that an exhibit from a single orchard which contained over 100 different varieties demonstrated very clearly the need in Michigan of standardizing on a few varieties.

"Wonder Show" of Potatoes

The potato exhibit vied with the apple display in extent, quality, and in interest. Probably thousands of people who thought they knew all about potatoes, learned for the first time, at the Show, what potatoes really are. Long lines of tables, each bearing piles of uniform and smooth tubers, was a revelation of what "quality" means in the potato game. From the long slender Bur-

PICTURES FROM FAR AND NEAR

MADE FROM DRIED APPLES.—Types taken from the southern mountain district and immortalized in these dried apple dolls by Isabel Million of Knoxville, Tennessee. Every type of mountaineer is found in her collection which is the most unique in the world.

AMERICAN CROSSES ATLANTIC OCEAN ON YACHT.—Dr. Paul Morgan, an intrepid young American who was snapped upon his arrival in Budapest from New York. Dr. Morgan braved unheard of perils crossing the Atlantic in his small yacht "Beatrice" and his successful negotiation of the "drink of water" may lead other adventurous souls in following his trail. He plans to sail down the Danube into the Black Sea.

NO REASON FOR DYING OF DIABETES.—Prof. Ralph H. McKee of Columbia University, N. Y., says a remedy for sufferers of diabetes is within reach of all. Through the new discovery, Intravin, relief can be had at about $3 a week, and in some cases the cost is less.

EDUCATORS RECEIVED BY PRESIDENT AT WHITE HOUSE.—Left to right is Chief Justice Wm. H. Taft, President Coolidge and Wm. Mather Lewis, new president of the George Washington University, Washington, D. C. A large gathering of Educators assembled at the White House before the inauguration of Mr. Lewis.

GERMAN MARKS RISE.—In direct contradiction of the statements that the German mark is daily falling comes this one showing that the mark is rising. However, we hasten to explain that the German boys find it cheaper to make kites from the currency than to buy them—and in this way is sending the mark flying skyward.

"ADOLPHUS" SMOKES A PIPE.—Hundreds of pipes have been sold by the suggestiveness of this clever machine nicknamed "Adolphus", and used in the shop of a London tobacconist, who invented it some years ago. It is not merely a toy but a working member of his staff for it puts a pipe into condition.

WORLD'S LARGEST FLAG.—This flag, 90x150 feet, was unfurled on the front of the building of J. L. Hudson Co., Detroit, November 11th, Armistice Day. It weighs 600 pounds.

BEATS THE LADIES AT THEIR OWN WORK.—John Myers, aged 19, of Blackburn, England, who engaged in the "clock, click" clash which animated London. Ranged against him were seven of the cleverest women knitters, but they were vanished in the semifinals. The contest took place in Selfridge's, London's biggest department store.

Loans For Farmers' Marketing Associations

Agricultural Credit Act is Connecting Link Between Short Time and Long Time Loans

By JOHN H. KRAFFT

THIS is the third of a series of four articles by John H. Krafft on financing the farmer. In the first article Mr. Krafft discusses rural credit conditions in general; in the second, short time loans; and in this article he takes up Intermediate Credit Loans. The fourth article will appear in the near future.

THE Agricultural Credit Act of 1923, passed by our last Congress, supplies a very necessary credit link between short time loans necessary to farmers and the long time loans made under the Federal Farm Loan Act. It has been stated by those not quite familiar with agriculture and agricultural financing that this Act would be instrumental in bringing the farmer further into debt. This is not the case; as a matter of fact, this Act provided instrumentalities to be used by the farmer in pulling himself out of debt. Through the banks established by this Act the country banks are furnished with the necessary capital for economical and successful crop production and can furnish to cooperative organizations the credits needed to orderly market the farm products of their membership.

The Senate in February passed two bills, known as the Leroot and the Capper bills. The House, about the same time, passed a bill known as the Stone Bill. Later, the principal feature of these bills were combined, some few additions made and passed as the Agricultural Credit Act of March 4th, 1923. This Act created the Federal Intermediate Banks and National Agricultural Credit Corporations.

The purpose of these two types of institutions is the same. The methods of organization and operation differ somewhat, however.

The National Agricultural Credit Corporations are privately owned and are limited in profits to a point where it is very doubtful as to whether any of these institutions will ever be chartered by the National Government.

The limitations placed by the Act are such that an investment in these institutions would not look at all attractive to an investor. The business transacted under this Act will undoubtedly be transacted thru the Federal Intermediate Credit Banks.

I will give a brief digest of the organization and powers of these Banks:

The Act provides for the establishing of twelve Intermediate Credit Banks. One to be located in each of the twelve Federal Land Bank Districts in the United States. The capital stock of these banks is all owned by the United States Government. Each bank has an authorized capital of Five Millions of Dollars on which there has been paid up to date One Million dollars. These banks are authorized to discount paper, or purchase paper, from any national bank, any bank or other financial institution or agricultural marketing association, organized under the state laws or any other Intermediate Credit Bank, provided the original loans were made for agricultural purposes including the raising, breeding, fattening or marketing of live stock. The credit banks may also loan directly to cooperative associations composed of persons engaged in producing or marketing agricultural products—such loans are to be secured by shipping documents, warehouse receipts or mortgages on live stock and may not exceed 75 per cent of the market value of the product, or of the live stock. There must be made provisions for maintaining this margin.

The law provides limitations on the amount of paper which can be purchased from or discounted for any individual organization. The loans made must have a maturity at the time of purchase or discount of not less than 6 months or more than three years. For the present the Federal Farm Loan Board has made a ruling not to accept loans with a maturity of over nine months. However, as these banks progress this time limit undoubtedly will be extended materially.

The Federal Farm Loan Board sets the interest rate to be charged on these loans. The interest rate, however, may not exceed by more than one per cent the interest rate on the last bonds issued by the bank. These banks are not allowed to purchase loans where the rate charged to the borrower is in excess of one and one-half of one per cent of the rate charged by the bank. At the present time the rate charged by the Intermediate Credit Banks is 5½ per cent, so the bank will not discount any paper where the borrower has been charged above 7 per cent.

The banks or cooperative marketing organizations rediscounting notes with the Intermediate Credit Banks must guarantee these notes. Intermediate Credit banks are authorized, subject to the approval of the Federal Farm Loan Board, to issue debentures or bonds which are to be secured by an equal amount of cash or obligations held by the bank. Each bank may issue bonds up to a total of ten times its capital and surplus.

This makes the combined credit facilities of all these Intermediate Credit Banks Six Hundred Sixty Million Dollars. The Bonds of these banks may run from six months to five years. The rate of interest is subject to the approval of the Federal Farm Loan Board, but may not exceed 6 per cent per annum. There is no Government obligations on these bonds. However, all of the banks in the system are liable for the bonds issued by other banks of the system.

The whole system is based upon the same general plan as are the Federal Land Banks. The Intermediate Credit Banks will go into the open market of the Country for their money and will obtain this money through the sale of bonds just as the Federal and the Joint Stock Land Banks do. The security against these debentures or bonds will be the notes given by farmers and which have been guaranteed by Banks, a cooperative marketing organization or a live stock corporation. This gives the farmers an organization through which they can go into the money market and obtain funds. The bonds or debentures issued by these banks are by the Act declared instrumentalities of the United States Government and are exempt from all Federal, State or Municipal taxation. The capital of these banks is not taxable, however, any real estate owned by these banks is taxable the same as any other real estate within the same jurisdiction.

In order to help these banks properly function, the comptroller of the currency of the United States is directed to furnish to such banks for their confidential use reports regarding the financial condition of national banks with which the Credit Banks contemplate dealing, and also to make examination of organizations through which the Credit Banks are contemplating making loans or expecting discount. These examinations may, however, only be made with the consent of the organization which is examined. The law provides that with the exception of banks, trust companies and savings associations organized under State laws, any organization, before securing rediscount privilages with the Credit Banks, must file written consent to an examination by Land Bank examiners. State bank and trust companies may also be required to pass this examination. This gives the Intermediate Credit Bank ample opportunity to ascertain from official sources the financial ability of the organization with which they contemplate doing business. Each one of these banks must be examined by the Federal Farm Loan Board at least once every year and the results of such examination shall be made public. In addition, each Credit Bank must furnish at least three times a year a detailed statement of its financial activities and condition. These reports are to be published in the local papers. Land Bank appraisers at the request of the Credit Bank and with approval of the Federal Farm Loan Board are authorized to inspect the condition of products or live stock which serve as a basis for loans or discount with a Credit Bank. There are heavy penalties provided for in the Act for embezzlements, for making false reports for the purpose of securing credit, or for accepting fees except as provided for in the law.

The Intermediate Credit Banks give a service similar to that of the Federal Reserve Bank on agricultural paper with a maturity of not over nine months and are in addition allowed to make loans on paper with a maturity up to three years. They are also allowed to make loans to cooperative, marketing and live stock companies and in a general

Highest Honor In Michigan Ton Litter Contest Won By Poland Chinas

By V. A. FREEMAN

Extension Specialist in Animal Husbandry, Michigan Agricultural College

SIXTEEN litters weighed above the ton mark at 180 days age in the Michigan 1923 Ton Litter Contest. They were all fed for practical economical production without using any expensive methods to induce rapid growth so that the lessons brought out by their records are of practical value to every swine grower in the state.

A summary of the records of the winners show in nearly every case—

1. The dams received either some protein supplementary feed such as skimmed milk, tankage, middlings, oil meal or legume hay, along with a limited amount of corn during the gestation period or else the ration was made up of a very small proportion of corn, barley or rye for several weeks before farrowing. This supplementary protein feed was considered especially important the last 5 or 6 weeks.

2. The dams were managed so as to require them to take considerable exercise every day during the gestation period.

3. A careful record of the breeding date was kept so that special attention could be given at farrowing time to provide a warm, clean, dry pen and to be on hand to care for the new pigs.

4. The sows were fed lightly for two days to one week after farrowing, but as soon as the pigs could use more milk, the feed was gradually increased until the sows were receiving all they could consume after the first month.

5. The pigs were encouraged to take feed by themselves at ages of three to five weeks and were well started on feed by the time they were weaned at 8 to 10 weeks old.

6. Feeds rich in protin like skimmed milk, butter milk, middlings and tankage were used for the pigs before and at weaning time, along with tempting foods such as corn, hominy, or ground barley, wheat and oats.

7. Alfalfa or clover pasture was used for the sow and litter and for the pigs after weaning.

8. Several of the litters were fed on self-feeder from before weaning time throughout the period while others were required to use more pasture the first three or four months, but were full fed during the last two or three months. The litters making the highest average weight per pig were full fed throughout the period.

9. The dams of the litters were larger than the average sow, but of a medium type, showing plenty of constitution, feeding capacity and great length and depth of body, and showed an active temperament.

The position, weight and breed of the winning litters are given in the chart at the foot of the two center columns. The number of pigs in each littler and complete names and addresses of owners are also given.

The first five will win in addition to the gold medal to be awarded each of the sixteen, the cash prizes made possible by the contributions of packing companies of Detroit, which are $50.00, $40.00, $30.00, $20.00 and $10.00 respectively.

The heaviest litter in the contest also wins their producers, V. J. Brown & Son of Jonesville, the $200.00 offered by The Poland China Breed Promotion Committee. The heaviest Duroc Jersey litter, produced by H. M. McIlwain of Bath, wins the $100.00 offered by the National Duroc Jersey Record Association. The heaviest Chester White litter, produced by Fritz Mantey of Fairgrove, wins the $100 offered by the Chester White Record Association. Ray Harold of Gladwin, wins the $50 offered by the American Duroc Jersey Ass'n.

It is interesting to note that while a Poland China litter won high honors both in litter weight and average weight per pig, a Duroc Jersey litter stood second, and a Chester White litter stood near the top. Every litter was sired by a pure bred and three-fourths of the dams were pure breds. Seven of the sixteen litters were sired by a Duroc Jersey, five by a Chester White, three by a Poland China, and one by a Berkshire. Of the dams, five were Durocs, three Chesters, three Polands, one Berkshire, and four grade Durocs, Polands and Chesters.

Fordson

"To put the farmer on a par with the city manufacturer. To put his produce factory—for that is what a farm is—on an efficient production basis."

Spurred by this ideal, Henry Ford brought the Fordson Tractor into being.

Himself a farm boy, who had followed the plow for many a weary mile, no one knew better the need for quicker and easier farm power.

Producers in other fields were harnessing steam, gas and water power to drive wonderful machines which multiplied many fold the day's work of the individual.

But the farm was at a disadvantage. This power machinery which brought such rewards in the form of bigger profits and better working conditions in the cities was lacking. A smaller income was returned in proportion to the work done.

That the Fordson should never falter in making possible a better day on the farm, a score of years of patient work preceded it. Today on hundreds of thousands of farms it increases the daily work done, adds to the farm income and allows a more pleasant farm life.

What the Neighbors Say

FOREIGNERS USE CHILDREN IN BEET FIELDS

IN the editorial of your issue of Oct. 27, entitled, "Child Labor in the Beet Fields," is certainly food for thought.

It is an accepted fact that contract labor brings the whole family into the beet field from the time the blocking and thinning start until the last beet is topped in the field.

However, in our opinion this use of child labor is not in any way comparable to the employment of child labor in the cotton mills of the south because the season for blocking and thinning beets usually starts just about the time the district schools let out for summer vacation and in most cases the harvesting is completed not later than two months after school starts in the fall. This leaves about seven months of school for these children and in most cases that have come under observation they are eager to make the most of their opportunity, sometimes excelling their more fortunate class-mates whose parents never think of keeping their children home to work. Thus these children of contract laborers cannot be classed as illiterate. However, we have found from experience that their presence in the fields is objectionable from quite a different standpoint.

In about nine cases out of ten their work is unsatisfactory. Handling beets is too heavy work for many of them and as their parents are bound to keep them going the work is done in a very poor manner.

It seems to us that this contract labor is being paid enough that they can make a living wage without driving their children to the very limit of their endurance and I believe it is time that the beet growers of Michigan who employ contract labor should say emphatically enough to be heard by every labor family that no children shall be brought in the beet fields to work. —A. J. Davis, Shiawassee County, Mich.

APPLAUDS LABOR ORGANIZATION

EDITOR of M. B. F.:—That Big Business should try to set farmers and workingmen by the ears is "Very natural" as neighbor Pecksniff used to say. That certain so-called farm editors should fall for its propaganda is not surprising, but to find it on your editorial page is nauseating. If labor gets more than we do because it had the good sense to organize efficiently before we began to wake up, whose fault is it? Instead of being jealous, why not profit by their example?

To sneer at radicalism is easy and fashionable, but radicalism varies. There is not only the careless radicalism of the puppy who digs up the pansy bed for fun, and the selfish radicalism of the pig who roots up everything in hope of immediate personal gain. There is also the constructive radicalism of the gardener who goes to the roots of things in transplanting and cultivating. There are puppies and pigs among all classes, not excepting farmers. Every class, including organized labor, has some who try to follow the teachings of Jesus and many capable of following intelligent self-interest. On these depends the solution of our problem. Most of them are farmers or workingmen, not because these classes are morally superior, but because they are most numerous and feel most keenly the enlightening pinch of circumstances.

The interests of farmers and workingmen are not all identical. Even among farmers each commodity group has interests and problems of its own. So also has each industrial group of workingmen. No human being can fully and fairly represent all these interests. Yet our present representative system requires one person to represent not only all these, but also all the various groups of manufacturers, bankers, etc., in his district or state. Here, I believe, is one great source of trouble. Give every interest its own representative and let no congressman or legislator try to represent more than one interest, and our legislative bodies will for the first time in history really represent the whole people. But just now we must use the system we have, which requires political parties.

The strongest argument against a new party just now is not the diversity of interests among progressive citizens, but the fact that neither farmers nor workingmen see clearly enough yet to know exactly what they want. This may cease to be a fact sooner than we think. Anyhow the time is ripe for earnest mutual discussion and criticism, not aimless sneers. To promote such criticism and discussion every farmer should read some good labor organ and every workingman some good farm paper. My choice would be THE BUSINESS FARMER and "Labor," the up-to-date weekly published at Washington, D. C., by the railroad brotherhoods. "Labor" costs $2.00 a year because it carries no advertisements. If you can't afford to subscribe for both, take THE BUSINESS FARMER anyhow and exchange with some member of any railway union. But subscribe if you can and get some union man to subscribe for M. B. F.—Stacy Brown, Ionia County, Mich.

DOING BUSINESS WITH BANK CREDIT

DEAR Sir:—Some time ago business was done with personal notes sent thru the mails. Now banks say that 95% of our business is done with bank credit. That is, business men take their 30, 60, or 90 day notes to the bank and the bank, for a fee of 6 to 10 per cent, passes on these notes and pretends they are money on deposit. Of course the notes and the collateral are the personality and property of the borrower so it is his credit—not bank credit, at all. But it seems odd to me that the business man does not take his note to the Chamber of Commerce and for a fee of one per cent let them pass on his credit and draw checks on the Chamber of Commerce and clear or swap them thru the Chamber of Commerce clearing house. Then by making public improvements by spreading a tax levy and issuing public improvement scrip we will find our new methods get twice as much as interest bearing bonds. In addition to that we shall miss the periodic panics when bankers tell the people their borrowers notes are no good, and refuse to allow them to pretend to have money on deposit and mail out their checks to pay their debts. We are making progress, but of course slowly.

The farmer may well consider this idea, for his business is, not now, very profitable. — Ezra R. Averill, Grand Rapids, Mich.

SEARS, ROEBUCK PLAN TO GIVE FARMER AID

JULIUS Rosenwald, president of Sears, Roebuck & Co., has announced the establishment of the Sears, Roebuck Agricultural Research Foundation to determine essential facts relative to farming and to study every phase of agricultural economics.

Their findings will be presented to the public as well as the farmers in order to acquaint the laymen with the farmers' problems.

In announcing that the foundation will be headed by the most capable men available in the agricultural research field, who will have a large staff of economists and statisticians, Mr. Rosenwald says: 'As business men we feel a direct obligation to do everything we can to improve the farmers' condition. A careful survey has revealed to us that where the farmer needs help is in economies in marketing his product.

"We have, therefore, decided to establish an agricultural research foundation to deal exclusively with the economic problems of the farm. The task will be placed in the hands of fair-minded research men, and we expect to discover facts of vital interest to the farmers and the public."

Men in the trade consider this a far-sighted move inasmuch as it is designed to improve the purchasing power of the farmer, the mainstay of the mail order business.

SELL FURNITURE FOR STORAGE CHARGES

Want to ask a question. A woman moved her household goods here twelve years ago and nothing was said in regard to paying storage. She lives in another state. How can I proceed to get these goods for storage? She is keeping house and has bought furniture to furnish five rooms.—D. E., Hartford, Michigan.

—I would advise you to write a letter to the woman, notifying her that unless she removed the furniture, it would be sold for storage. If she does not remove it within a reasonable length of time you may sell it and deduct your storage charge from the proceeds.

Before proceeding to sell you should consult a lawyer as to the proper steps to be taken in the sale to comply with the statute.—Asst. Legal Editor.

THRESHING SWEET CLOVER

I wish some information concerning threshing sweet clover seed. It is next to impossible to get a regular clover huller on account of no other jobs and hilly roads. Can it be threshed with a grain separator and afterward sent somewhere and have prepared for market? I will thank you for any advice or information you can give.—A. B., Tustin, Mich.

—A grain separator is very frequently used in threshing sweet clover. When operated carefully no trouble should be experienced in removing the seed from the plants. If the hull is to be removed from the seed it is essential that the plants be thoroughly dry, otherwise it is impossible to remove the hull. Also it is advisable to make a few adjustments if the hull is to be removed. Alfalfa or red clover riddles should be used. The speed of the fan should be reduced about half so that the seed will not be blown over. Some operators set the concave teeth so that they run closer to the cylinder teeth than is customary when threshing grain. After these changes, only a very small percent of the pods will be removed if they are damp. If the plants have made a very rank growth, the machine may clog unless the number of rows of concave teeth are reduced. All of the larger seed companies have scarifying machines that are quite efficient in removing sweet clover hulls.—C. R. Megee, Associate Professor of Farm Crops, M. A. C.

HURT WHILE BLOWING STUMPS

I was unable to pay my taxes in 1922, they were payable in March 1922. Until what date must those taxes be paid to avoid consequences? I have rented my farm for one year to a neighbor farmer without asking any return whatsoever. I made the arrangement with him that I furnish the powder to blow out the stumps, paying his time and labor. Should any accident happen in storing or using the dynamite could I be held liable for the damages to health and property? Thanking you for your kind information.—O. P., Emigsville, Pa.

—As I do not have a copy of the Pennsylvania statutes, I would suggest you consult your county treasurer on the first question, regarding payment of taxes.

If you are hiring your tenant to blow out stumps on your farm for your benefit, and paying him wages to do the work, you would be liable for damages done by his negligence while doing the work. Your liability would depend upon the exact nature of the arrangement or agreement you had with your tenant, and inasmuch as I do not have the details of the agreement would not be able to definitely advise whether or not you would be liable in your case.—Asst. Legal Editor.

WHO IS LIABLE FOR DAMAGE?

I am writing you for advice as to hay rake? A buys new machinery who must stand good for damage to to do haying with. A hires man to help rake, hired man runs into a stump, gets mad and hits horse and makes it jump and breaks wheel so A has to order another wheel, before he can finish haying. Would like to know who is to blame when horse goes fast enough at all times so she doesn't need whip used on her at any time, and as it was only carelessness that caused the machine to be broken. Would appreciate any advice you can give me.—A subscriber to M. B. F. Lewiston, Mich.

—Liability for damages in a case like this would depend upon the negligence of the person who caused the damage. If the hired man was negligent in performing his duty thus causing the damage, he would be liable.—Asst. Legal Editor.

RIGHT TO BUY BOOKS

Has any two of the school board the right to purchase books or supplies without the knowledge of the third member?—J. S., Bloomingdale, Michigan,

—I would say that it is the duty of the director to purchase the necessary appendages for the schoolhouse and keep the same in good condition and repair. The necessary appendages shall include set of wall maps, the grand divisions of the United States and Michigan, a globe, dictionary, a reading chart, case for library books, looking glass, comb, towel, water pail, cup, ash pail, poker, stove shovel, broom, dust pan, duster, wash basin, and soap, and upon the order of the district board shall furnish the schoolhouse with such other apparatus and material as may be necessary in doing efficient work. The director shall keep an account of all expenses incurred by him as director and such accounts shall be audited by the moderator and treasurer and on their written order shall be paid.

No act authorized to be done by the district board shall be valid unless voted at a meeting of the board. A majority of the members of the board at a meeting thereof shall be necessary for the transaction of all business.—G. N. Otwell, Department of Public Instruction.

MUST HAVE COWS TESTED

Is there a state law to compel one to let a cow tester test his cattle?—G. K., Pinckney, Mich.

—From the address given it is assumed that you live in Livingston county. Livingston county is one of those counties in which Area Tuberculosis Eradication work is underway and the fact has been duly advertised.

Section 15A, which was added to Act 181 of the Public Acts of 1919 by the 1923 legislature, states in part that "Whenever the Commission shall have determined to test for tuberculosis all the cattle in any certain county where bovine tuberculosis eradication has been adopted, he shall give public notice of his determination by publishing a notice to that effect in one or more newspapers of general circulation in said county at least ten days before such testing shall commence. Cattle found to be reactors to such tests shall be branded, slaughtered when ordered by the Commissioner and the owners thereof entitled to such indemnities as in this act provided. It shall be unlawful for any person who owns, or who is in possession of, or controls any cattle, to prevent, hinder, obstruct or refuse to allow the Commissioner or authorized veterinarian to conduct such tests for tuberculosis on such cattle, provided that this section shall not apply to steers properly isolated from other cattle.—B. J. Killham, State Veterinarian.

RAFFLES

Will you please inform me if it is unlawful to raffle a car via tickets. Thanking you, I am, H. L. R., Newberry, Michigan.

—It is unlawful in Michigan to dispose of personal property by means of raffles, or lottery.—Asst. Legal Editor.

About Farm Machines *and the* McCormick-Deering Line

THE U. S. Department of Agriculture has shown that farm equipment is one of the smallest items in the cost of farming, the yearly average being only 4 to 8% of the total.

Farm machines are sold for less money, pound for pound and quality for quality, than any other similar manufactured article. Yet in profitable farming there is nothing more important than good equipment.

Check the cost of your farm machines against the rest of your investment—land, buildings, labor, live stock, etc.—and your figures will probably agree with the average.

Now is a good time to inspect the condition of your machines. Most of them have been used lately. Are any of them worn out? Are some of them so out of date that it does not pay to use them? Are there new methods on the market you should be adopting? Have you been getting along without certain machines that would save you money and labor?

To help you take an inventory of your needs, we are printing the full McCormick-Deering line.

The purpose of all McCormick-Deering machines is to make farming better, easier, and more profitable for their owners. They are all useful, modern, and efficient. The Harvester Company's work of standardization has simplified the variety of lines, combining many good features in fewer essential machines. Power farming is at its best where McCormick-Deering Tractors [15-30 and 10-20] are used with McCormick-Deering machines for drawbar and belt work. They are made to work together.

We will send you descriptive material, catalogs, details as to sizes and styles on any machine or line that may need attention on your farm. Write the address below. Call on the McCormick-Deering dealer; he will always be at your service.

INTERNATIONAL HARVESTER COMPANY
606 So. Michigan Ave. of America [Incorporated] Chicago, Ill.

McCORMICK-DEERING *Farm Operating Equipment*

GRAIN HARVESTING MACHINES
Binders, Headers, Push-Binders, Reapers, Rice Binders, Shockers, Power Drive Binders, Threshers, Harvester-Threshers.

BELT MACHINES
Ensilage Cutters, Corn Shellers, Huskers and Shredders, Cane Mills, Threshers, Huskers and Silo Fillers, Feed Grinders, Hay Presses, Stone Burr Mills.

BEET TOOLS
Seeders, Cultivators, Pullers.

HAYING MACHINES
Mowers, Rakes, Tedders, Loaders (all types), Stackers, Bunchers, Combination Side Rakes and Tedders, Sweep Rakes, Baling Presses, Combination Sweep Rakes and Stackers.

CORN MACHINES
Planters, Listers, Drills, Binders, Cultivators, Lister Cultivators, Pickers, Ensilage Cutters, Shellers, Huskers and Shredders, Huskers and Silo Fillers.

TILLAGE IMPLEMENTS
Tractor Plows, Walking Plows, Riding Plows, Disk Harrows, Tractor Harrows, Orchard Harrows, Spring-Tooth Harrows, Peg-Tooth Harrows, 1 and 2 Horse Cultivators, Culti-Packers.

POWER MACHINES
Kerosene Engines, Kerosene Tractors, Motor Trucks.

DAIRY EQUIPMENT
Cream Separators (Hand, Belted and Electric Driven), Kerosene Engines, Motor Trucks.

PLANTING AND SEEDING MACHINES
Corn Planters, Cotton Planters, Corn Drills, Listers, Grain Drills, Broadcast Seeders, Alfalfa and Grass Drills.

OTHER FARM EQUIPMENT
Farm Wagons and Trucks, Cane Mills, Manure Spreaders, Stalk Cutters, Knife Grinders, Syrup Evaporators, Potato Diggers, Binder Twine, Lime Sowers, Tractor Hitches, Straw Spreader Attachments.

Oh Money! Money!

by ELEANOR H. PORTER

THE STORY TO DATE

MR. STANLEY G. FULTON, 50-year old bachelor and possessor of twenty million dollars, calls on his lawyer and they discuss the disposition of this large fortune after its owner's death. The lawyer is in favor of giving the money to colleges or charities while Fulton is opposed to these ideas. He remembers that he has some distant cousins and decides to leave the money to one of them, but first he determines to learn which one will use it to the best advantage. To find out who is the worthy one he, through his lawyer, gives, each cousin $100,000 to use as they will. Before giving them the money grows a beard and, using the name of Mr. John Smith, goes to the town where they live to find out what kind of people they are. Upon arriving in town he visits James Blaisdell, one of the cousins, where he tries to hire board and lodging. While there he meets Miss Flora Blaisdell, another cousin who is a dressmaker. They decide they cannot rent a room to him and supply him board and refer him to Frank Blaisdell's, the third cousin. He gets a room there and, passing as a writer gathering material for a book on the Blaisdell family in this country, he starts out. He calls on all of the Blaisdells and as they all talk of a relative by the name of Miss Maggie Duff he decides to call on the lady. He finds her living with her father, an old man who seems to have soured on the world.

(Continued from Nov. 24th issue.)

MR. SMITH, in spite of his efforts to himself unable to confine his attention to birth, death and marriage notices. Once he almost uttered an explosive "Good Heavens, how do you stand it?" to his hostess. But he stopped himself just in time, and fiercely wrote with a very black mark that Submit Blaisdell was born in eighteen hundred and one. A little later he became aware that Mr. Duff's attention was frowningly turned across the table toward himself.

"If you will spend your time over such silly stuff, why don't you use a bigger book?" demanded the old man at last.

"Because it wouldn't fit my pocket," smiled Mr. Smith.

"Just what business of yours is it, anyhow, when these people lived and died?"

"None perhaps," still smiled good-humoredly.

"Why don't you let them alone, then? What do you expect to find?"

"Why, I—I" Mr. Smith was plainly non-plused.

"Well, I can tell you it's a silly business, whatever you find. If you find your grandfather's a bigger man than you are, you'll be proud of it, but you ought to be ashamed of it—'cause you aren't bigger yourself! On the other hand, if you find he isn't as big as you are, you'll be ashamed of that, when you ought to be proud of it—'cause you've gone him one better. But you won't. I know your kind. I've seen you before. But can't you do any real work?"

"He is doing work, real work, now, father," interrupted Miss Maggie quickly. "He's having a woeful time, too. If you'd only help him, now, and show him those papers."

A real terror came into Mr. Smith's eyes, but Mr. Duff was already on his feet.

"Well, I shan't," he observed tartly. "I'm not a fool if he is. I'm going out on the porch where I can get some air."

"There, work as long as you like, Mr. Smith. I knew you'd rather work by yourself," nodded Miss Maggie, moving the piles of papers nearer him.

"But, good Heavens, how do you stand—" exploded Mr. Smith before he realized that this time he had really said the words aloud. He blushed a painful red.

Miss Maggie, too, colored. Then, abruptly, she laughed.

"After all, it doesn't matter. Why shouldn't I be frank with you? You couldn't help seeing—how things were, of course, and I forgot, for a moment that you were a stranger. Everybody in Hillerton understands. You see, father is nervous, and not at all well. We have to humor him."

"But do you mean that you always have to tell him to do what you don't want, in order to—well—that is—" Mr. Smith, finding himself in very deep water, blushed again painfully.

Miss Maggie met his dismayed gaze with cheerful candor.

"Tell him to do what I don't want in order to get him to do what I do want him to? Yes, oh, yes. But I don't mind; really I don't. I'm used to it now. And when you know how, what does it matter? After all, where is the difference? To most of the world we say, 'Please do,' when we want a thing, while to him we have to say, 'Please don't.' That's all. You see, it's really very simple—when you know how."

"Simple! Great Scott!" muttered Mr. Smith. He wanted to say more; but Miss Maggie, with a smiling nod, turned away, so he went back to his work.

Benny, wandering in from the kitchen, with both hands full of cookies, plumped himself down on the cushioned window-seat, and drew a sigh of content.

"Say, Aunt Maggie."

"Yes, dear."

"Can I come ter live with you?"

"Certainly not!" The blithe voice and pleasant smile took all the sting from the prompt refusal. "What would father and mother do?"

"Oh, they wouldn't mind."

"Benny!"

"They wouldn't. Maybe pa would—a little; but Bess and ma wouldn't. And I'd like it."

"Nonsense, Benny!" Miss Maggie crossed to the little stand and picked up a small box. "Here's a new picture puzzle. See if you can do it."

Benny shifted his now depleted stock of cookies to one hand, dropped to his knees on the floor, and dumped the contents of the box upon the seat before him.

They won't let me eat cookies any more at home—in the house, I mean. Too many crumbs."

"But you know you have to pick up your crumbs here, dear."

"Yep. But I don't mind—after I've had the fun of eatin' first. But they won't let me drop 'em ter begin with, there, nor take any of the boys inter the house. Honest, Aunt Maggie, there ain't anything a feller can do, 'seems so, if ye live on the West Side," he persisted soberly.

Mr. Smith, copying dates at the table, was conscious of a slight apprehensive glance in his direction from Miss Maggie's eyes, as she murmured:—

"But you're forgetting your puzzle, Benny. You've put only five pieces together."

"I can't do puzzles there, either." Benny's voice was still mournful.

"All the more reason, then, why you should like to do them here. See, where does this dog's head go?"

Listlessly Benny took the bit of pictured wood in his fingers and began to fit it into the pattern before him.

"I used ter de 'em an' leave 'em 'round, but ma says I can't now. Callers might come and find 'em, an' what would they say—on the West Side! An' that's the way 'tis with everything. Ma an' Bess are always doin' things, or not doin' 'em, for those callers. An' I don't see why. They never come—not new ones."

"Yes, yes, dear, but they will, when they get acquainted. You haven't found where the dog's head goes yet."

"Pa says he don't want ter get acquainted. He'd rather have the old friends, what don't mind baked beans, an' shirt sleeves, an' doin' yer own work an' what thinks more of yer heart than they do of yer pocketbook. But Ma wants a hired girl. An' say, we have ter wash our hands every meal now—on the table, I mean—in those little glass wash-dishes. Ma went down an' bought some, an' she's usin' 'em every day, so's ter get used to 'em. She says everybody that is anybody has 'em nowadays. Bess thinks they're great, but I don't. I don't like 'em a mite."

"Oh, come, come, Benny! It doesn't matter—it doesn't really matter, does it, if you do have to use the little dishes? Come, you're not half doing the puzzle."

"I know it." Benny shifted his position, and picked up a three-cornored bit of wood carrying the picture of a dog's paw. "But I was just thinkin'. You see, things are so different—on the West Side. Why even pa—he's different. He isn't there hardly any now. He's got a new job."

"What?" Miss Maggie turned from the puzzle with a start.

"Oh, just evenin's. It's keepin' books for a man. It brings in quite a lot extry, ma says; but she wouldn't let me have some new roller skates when mine broke. She's savin' up for a chafin' dish. What's a chafin' dish? Do you know? You eat out of it, some way—I mean, it cooks things ter eat; an' Bess wants one. Gussie Pennock's got one. All our eatin' 's different, 'seems so, on the West Side. Ma has dinners nights now, instead of noons. She says the Pennocks do an' everybody does who is anybody. But I don't like it. Pa don't, either, an' half the time he can't get home in time for it, anyhow, on account of gettin' back to his new job, ye know, an'—"

"Oh, I've found where the dog's head goes," cried Miss Maggie. There was a hint of desperation in her voice. "I shall have your puzzle all done for you myself, if you don't look out, Benny. I don't believe you can do it, anyhow."

"I can too. You just see if I can't!" retorted Benny, with sudden spirit, falling to work in earnest. "I never saw a puzzle yet I couldn't do!"

Mr. Smith, bending assiduously over his work at the table, heard Miss Maggie's sigh of relief—and echoed it, from sympathy.

CHAPTER VII

Poor Maggie and Some Others

It was half an hour later, when Mr. Smith and Benny were walking across the common together, that Benny asked an abrupt question.

"Is Aunt Maggie goin' ter be put in your book, Mr. Smith?"

"Why—er—yes; her name will be entered as the daughter of the man who married the Widow Blaisdell, probably. Why?"

"Nothin'. I was only thinkin'. I hoped she was. Aunt Maggie don't have nothin' much, yer know, except her father an' housework—housework either for him or some of us. An' I guess she's had quite a lot of things ter bother her, an' make her feel bad, so I hoped she'd be in the book. Though if she wasn't she'd just laugh an' say it doesn't matter, of course. That's what she always says."

"Always says?" Mr. Smiths' voice was mildly puzzled.

"Yes, when things plague, an' somethin' don't go right. She says it helps a lot ter just remember that it doesn't matter. See?"

"Well, no,—I don't think I do see," frowned Mr. Smith.

"Oh, yes," plunged in Benny; " 'cause, you see, if yer stop ter think about it—this thing that's plaguin' ye—you'll see how really small an' no-account it is, an' how, when you put beside really big things, it doesn't matter at all—it doesn't really matter, ye know. Aunt Maggie says she's done it years an' years, ever since she was just a girl, an' somethin' bothered her; an' it's helped a lot."

"But there are lots of things that do matter," persisted Mr. Smith, still frowning.

"Oh, yes!" Benny swelled a bit importantly. "I know what you mean. Aunt Maggie says that, too; an' she says we must be very careful an' not get it wrong. It's only the little things that bother us, an' that we wish were different, that we must say 'It doesn't matter' about. It does matter whether we're good an' kind an' tell the truth an' shame the devil; but it doesn't matter whether we live on the West Side an' eat dinner nights instead of noons, an' not eat cookies any of the time in the house,—see?"

"Good for you, Benny,—and good for Aunt Maggie!" laughed Mr. Smith suddenly.

Aunt Maggie? Oh, you don't know Aunt Maggie, yet. She's always tryin' ter make people think things don't matter. You'll see!" crowed Benny.

A moment later he had turned down his own street, and Mr. Smith was left to go on alone.

Very often, in the days that followed, Mr. Smith thought of this speech of Benny's. He had opportunity to verify it, for he was seeing a good deal of Miss Maggie, and it seemed, indeed, to him that half the town was coming to her to learn that something "didn't matter"—though very seldom, except to Benny, did he hear her say the words themselves. It was merely that to her would come men, women and children, each with a sorry tale of discontent or disappointment. And it was always as if they left with her their burden, for when they turned away, head and shoulders were erect once more, eyes were bright, and the step was alert and eager.

He used to wonder how she did it. For that matter, he wondered how she did—a great many things.

Mr. Smith was, indeed seeing a good deal of Miss Maggie these days. He told himself that it was the records that attracted him. But he did not always copy records. Some times he just sat in one of the comfortable chairs and watched Miss Maggie, content if she gave him a word now and then.

He liked the way she carried her head, and the way her hair waved away from her shapely forehead. He liked the quiet strength of the way her capable hands lay motionless in her lap when their services were not required. He liked to watch for the twinkle in her eye, and for the dimple in her cheek that told a smile was coming. He liked to hear her talk to Benny. He even liked to hear her talk to her father—when he could control his temper sufficiently. Best of all he liked his own comfortable feeling of being quite at home, and at peace with all the world—the feeling that always came to him now whenever he entered the house, in spite of the fact that the welcome accorded him by Mr. Duff was hardly more friendly than at the first.

To Mr. Smith it was a matter of small moment whether Mr. Duff welcomed him cordially or not. He even indulged now and then in a bout of his own with the gentleman, chuckling inordinately when results showed that he had pitched his remark at just the right note of contrairiety to get what he wanted.

For the most part, however, Mr. Smith, at least nominally, spent his time at his legitimate task of studying and copying the Blaisdell family records, of which he was finding a great number. Rufus Blaisdell apparently had done no little "digging" himself in his own day, and Mr. Smith told Miss Maggie that it was all a great "find" for him.

Miss Maggie seemed pleased. She said that she was glad if she could be of any help to him, and she told him to come whenever he liked. She arranged the Bible and the big box of papers on a little table in the corner, and told him to make himself quite at home; and she showed so plainly that she regarded him as quite one of the family, that Mr. Smith might be pardoned for soon considering himself so.

(Continued in Dec. 22nd issue.)

THE PROPHET OF A NEW DAY

TEXT: "And he came into all the regions round about Jordan, preaching the baptism of repentance unto remission of sins; * * * * The voice of one crying in the wilderness, 'make ye ready the way of the Lord.' "—Luke 3:3f.

THIS prophet is John the Baptist. He makes his appearance as a new spokesman of God in wonderful days. A new King has been born. He receives the recognition of heaven and the attention of wise men. The angels are guarding his every movement. So he is taken to Egypt and returns to Nazareth, eluding the jealous and brutal Herod. John announces that a new, free day is at hand, and a new and gracious Ruler. This is the beginning of the great and continuing revolution of all time; even the democratising and spiritualizing of all peoples. This revolutionary movement is being hopefully felt today in its onward sweep. It is rolling up billows across the sea, submerging the tyrany of European Herods. But, how dangerous is all this spirit and movement unless guided by Christian impulses!

But let us look at this prophet. He says, "I am the voice of one crying in the wilderness." And, to think of it, we are yet in the wilderness of social, economic, and religious entanglement. But John is the last prophet of the old days of oppression. He is Elijah which was to come to announce the lifting of the ban upon religious freedom and social oppression. Jesus said so. In spirit, energy, looks, and manner, he is Elijah. He comes on to the stage so abruptly and right out of the desert like Elijah of old. In the wilderness we see him struggling and wrestling with God. From there, rough and ready, Heaven sends him as the courier of the new day. His proclamation is, "The Kingdom of Heaven is at hand." What a pity, yea tragedy, the world has been so long appreciating this! Let us hope that we are in the rebirth, of Kingdom sureties for this, our day.

But the key-note of John's message is repentance. It is the same olden call. But not having heard the prophetic voice for four centuries, his generation had grown indifferent and unbelieving. What would be our state were the churches closed and the Word unpreached for even a twelve-month? A literal hell. But into this day John comes with his rousing call to repentance for the day of the Lord is at hand. And to him this meant judgement. It meant cleansing the threshing-floor and burning the chaff with unquenchable fire. But to his Jewish listeners, it meant complete dominance of the Gentile world, and that they, the Jews, would come into partial inheritances. And many Jews covet this ideal yet. They are saying in this new epoch, "Now we shall soon return to our own Palestine and sit under our own vine and fig tree to enjoy an exclusive paradise on earth." Even John's conception, which is not completely Christian, would correct this notion. He says, "By the Kingdom, I mean that the King has come to establish his rule over your life; your thoughts and wills. Therefore repent. Your outward formal life has become nauseating, inviting judgement." The multitudes said, "What then must we do?" John said, Feed and clothe your needy neighbors." The publicans said, "What must we do?" The answer came "Lower the taxes and cease extorting from your neighbor." The soldiers asked him, "We, what must we do?" Said the prophet, "Cease violent and unjust oppression." (see Luke context). How pertinent for today! "One hundred and forty-five thousand men, women and children, expectant mothers and gray-haired patriarchs have been deported from the Ruhr." France, cease your oppression. Bring back evicted families to their homeland. Where do you get your right to starve and terrorize the working population of a whole nation, bringing on cicic strife and revolution? And, O, America, there are many working men yet in Leavenworth, and for no other reason than that they expressed an honest opinion against war. And who of us can say today that they were not more nearly right? "Sweet land of liberty," cease your opperssion. Hurry with your amnesty. And all Christendom, we need not so much religious garb and sacramental form, as a robe of purity, pentinence, and neighborly goodness.

Surely, this is the great need of our day. The church is called thru prayer and service to anchor the world safely to this heavenly ideal. Why has it not been done already? Because church formulas and dogmas are being idealized rather than the spirit of the Book. The spirit of the prophet would put social balance and self-denial into our lives. But we are self-complacent and refuse such a baptism. More Johns crying in the wilderness! Said Jesus, Jerusalem did not go out to hear a man who was clothed in "soft raiment." And no Christian today can move the hearts of one or many if he is given to hankering after the sensualities of life. There is no place in the world of social obligations for a kid gloved or soft-raiment religion. It is hypocricy and the ax lieth at the root of the tree.

But let us examine the scene more closely. Were there any church folks in the audience? Matthew says the Pharisees were there. Ah, the church leaders! But John hated them for their finely-woven and self-made religion. Worshipers of traditions and rules. Well, dare not the church have rules? Yes, but she dare not make rules. Her rules are already made and to a social outlook and end. This is the church that Jesus lived and died for; and this is the imperative of churchdom today. And the Sadducees, also were there. They treated religion lightly and were a fair sample of the morally clean and worldly-wise men of our day. When both of these classes asked for baptism, John says, "Ye offspring of vipers, who has warned you to flee from the wrath to come?" His words were rough and harsh. They had in them the hot sting of judgment. But the seared consciences of his audience needed just this. He was not "knocking," but in his vigorous way was just tearing off the mask of piety that they might see their sins and repent. John must have believed that honeyed words usually reveal no one's sin, and no fruit is brought meet for repentance.

Now, here is a teaching not to be put off. Judgment comes along with the new day of redemption. It is associated with the Kingdom age, even now. We are suffering under heavy judgment now because of a lack of social politics and righteous living. Does it seem that some of the chaff must be burned up to save the wheat? Well, this is the Baptist's principle in action. The Bible says this principle is eternal and history makes it world-wide in scope. So, if we, our homes, and our country would be saved, there must come into our living that day of sorrow for sin and an amendment of our ways.

So here is the prophet's call. It is the red lantern of warning against the spirit of ease, of sensual comforts, of dollar-chasing, and of social seclusion and parasitism. Here is his announcement: "All flesh shall see the salvation of God." Who will help made ready "the way of the Lord," the prophet's new day?

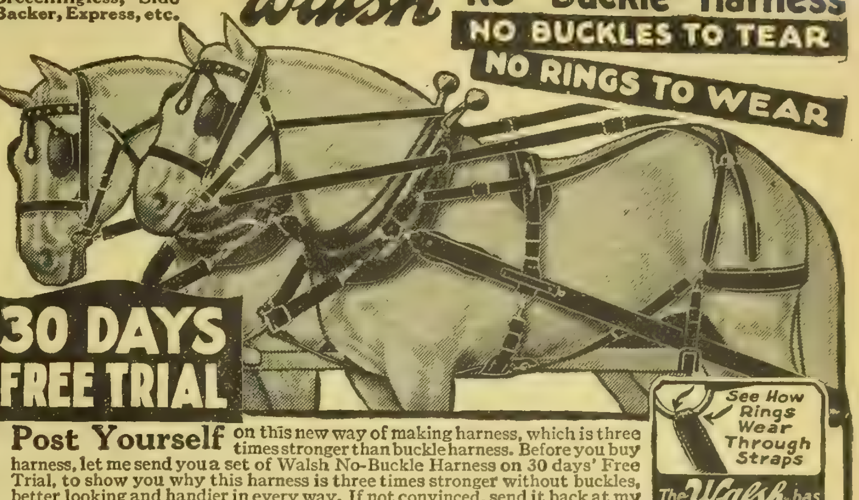
BIBLE THOUGHTS

BE KIND TO THE ERRING:—Brethen, if a man be overtaken in a fault, ye which are spiritual, restore such an one in the spirit of meekness: considering thyself, lest thou also be tempted.—Galatians 6:1.

THE WAY OF ESCAPE:—It shall come to pass in the day that the Lord shall give thee rest from thy sorrow, and from thy fear, and from thy hard bondage wherein thou wast made to serve.—Isaiah 14:3.

KEEP THE WORD:—Whoso keepeth the word, in him verily is the love of God perfected: hereby know we that we are in him.—1 John 2:5.

PRAYER FOR TODAY:—O Lord God, I pray thee, send me good speed this day.—Genesis 24:12.



Made in All Styles, Breechingless, Side Backer, Express, etc.

Walsh No-Buckle Harness
NO BUCKLES TO TEAR
NO RINGS TO WEAR

30 DAYS FREE TRIAL

Post Yourself on this new way of making harness, which is three times stronger than buckle harness. Before you buy harness, let me send you a set of Walsh No-Buckle Harness on 30 days' Free Trial, to show you why this harness is three times stronger without buckles, better looking and handier in every way. If not convinced, send it back at my expense. The Walsh is a proven success on thousands of farms for over 8 years.

Three Times Stronger Than Buckle Harness

Buckles weaken and tear straps. Walsh 1⅛-inch breeching strap holds over 1100 lbs. The same strap with buckles will break at the buckle at about 350 lbs. pull. Ordinary harness has 68 buckles. Walsh Harness has no buckles. Easy to see why Walsh is three times stronger than ordinary harness. Packer's Northern Steer Hide Leather—best that can be tanned.

COSTS LESS — LASTS TWICE AS LONG

The Walsh Harness costs less because it saves many a dollar in repairs. Users show average repair cost of only 9 cents per year. No patching, no mending, because no rings to wear straps in two, no buckles to weaken and tear straps. Greatest advance in harness making. Easily adjusted to fit any horse. Write today for new reduced prices.

$5 AFTER THIRTY DAYS' FREE TRIAL

Balance easy payments, or cash after trial if you wish. Write today for free book, prices, easy payments and thirty days' trial offer, also how to make money showing Walsh Harness to your neighbors,

James M. Walsh, Pres., WALSH HARNESS CO.

Thousands Praise Walsh Harness

"The Walsh is strongest, neatest, most convenient harness I ever put on a team." Geo. Heath, Penn Yan, N.Y.

Mr. C. G. Anderson, Aitken, Minn., who bought his first Walsh 5 years ago and bought 3 new sets since for his other teams says:—"Walsh has buckle harness beat a mile."

Mr. E. E. Ward, Seneca Falls, Wis., says: "Have used harness for over 40 years. The Walsh is the best yet."

See How Rings Wear Through Straps

The Walsh has No Buckles No Rings

See How Buckles Tear Straps

Endorsed by Agricultural Colleges, Government Experiment Stations, leading horsemen and thousands of users in every state.

RELIABLE ADVERTISERS

We will not knowingly accept the advertising of any person or firm who we do not believe to be thoroughly honest and reliable. Should any reader have any cause for complaint against any advertiser in these columns, the publisher would appreciate an immediate letter bringing all facts to light. In every case when writing say: "I saw your advertisement in The Michigan Business Farmer!" It will guarantee honest dealing.

"The Farm Paper of Service"

THE LONG LOOK AHEAD

"It seems to me that the long look ahead for agriculture was never so bright as it is at the present time. Increasing living standards are continually broadening the demand for the products of the farm. Our national population is increasing by more than two million mouths and backs annually. So it is true that urban population is growing more rapidly than rural. This is not necessarily a matter of alarm. Rather it is indicative of a healthful development. It means that our domestic markets are growing and that soon—probably within the next decade—home consumption will absorb out troublesome surpluses. Then should the business of farming be better than now and country life advance along lines of permanent well being.

"The present crisis has accomplished one result for agriculture which is well worth while. It has called the attention of the whole country to the farmer and his problems. It has brought a realization not only to the hard headed business man of the city but to the laborer and the housewives that their interest is closely identified with the welfare of the countryside."

THE man who delivered the above very sensible analysis of the present situation in which agriculture finds itself, is none other than Joseph R. Howard, former president of the American Farm Bureau, who made a good name for himself in a hard job.

His opinion has been confirmed by any number of clear thinkers who are not out for political position or some other juicy plum which they hope to reach by stepping on the backs of a depressed class.

"But farmers in my neck of the woods are still discouraged and many of them are selling out to go to work in the automobile factories!"

No one knows that betters than we do, neighbor! We don't argue for a moment that things are right—not by a long ways! But we do claim, and we can prove, that things are getting better for the farmer and to get discouraged now, throw up the sponge and sacrifice years of hard labor in building up a farm is the height of folly and most of the so-called "farmers" who are doing it, will be back looking for a job as "hired man" in the neighborhood which they left before many years have past. Clip this out, paste it in your scrap-book and look it up a year from now—then tell me how far we were wrong in this rather (we cheerfully admit) amazing prediction in the last month of the year of our Lord, 1923.

APPLE AND POTATO SHOW A SUCCESS

NO one who visited the Second Annual Apple and Potato Show in the Klingman Building at Grand Rapids last week could go away without being impressed with the progress which is being made in better preparation of our products for the market.

As we have so many times pointed out, Michigan is so located in proximity to the great consuming markets and to the center of population that it should be one of the most profitable farming states in the United States.

The way to profitable markets is through making products attractive for the market. This is today an unchallenged fact that has been proven by the more progressive farmers and orchardists from the great Northwest, where handicapped as they are by high freight rates, they have so prepared and graded their products that they command a fancy price from the consumer in the East which more than overcomes their handicap.

The directors of the Michigan exhibition may well be proud of what they are accomplishing, not only through the growing attendance at this annual show but also through its influence on the industry as a whole in our State. The leading growers in each division here meet in competition and place before the public the products of their handiwork and the accomplishment of their year's effort. So long as men compete with one another for supremacy there can be no stagnation and only an improvement in whatsoever line they may attempt.

WHY STOP IMMIGRATION?

IN our opinion the farming business in America would gain greatly by taking down the bars which limits immigration to the negligible number who are admitted today.

In our opinion an influx of labor from Europe of the right kind, would bring down the cost of manufactured goods which the farmer buys, and increase the local consumption of American grown farm products.

So far we have not seen any farm leaders or organizations stepping forward with such a program, which leads one to suspect that they are more under the domination of the labor unions than we would like to admit.

Obviously we believe in a selective system which selects the immigrants on the other side for his capabilities as a worker. We would let in the entire family of any man who could prove that he was a worker, in an industry beneficial to this country.

Europe is teeming with millions who would like to come to American. We need them here, at least, these who are of the type who immigrated in the early days, to this country, and pioneered its progress.

We believe that a wide open invitation to the right kind of immigration at the present time, would be helpful to American agriculture.

BR'ER RABBIT, HE AIN'T SAYIN' NOTHIN'

PROBABLY no president who has sat in the chair for many years, has been more in sympathy with or anxious to please the farmers of America, than Calvin Coolidge, and yet his record of achievement to date is, so far as we can see, nil.

It may be, however, that we are short-sighted, and as a matter of fact, the steady hand of a quiet man who makes his decisions slowly and will not be lead by radical demands made from isolated factions, is exactly what American agriculture needs to reestablish its equilibrium.

No one can accuse President Coolidge of not listening at least to their demands, whether or not he acquiesces to them. During October and November it is said that the President saw more than ten official delegations from the agricultural districts, covering the whole range of demands, from those presented officially by the American Farm Bureau to those laid down by Magnus Johnson.

Somehow or other Calvin Coolidge in the White House always reminds us of the old Uncle Remus story, we used to read in childhood days, and in which appeared the line we never forgot, "Br'er Rabbit, he just kept on sayin' nothin'!"

We cannot believe that our President is not capable of arriving at a decision. We do not believe that he is afraid, as some would have us believe because of the proximity to a presidential election. We know that he must make a record for himself of actual accomplishments if he hopes to win at next year's polls.

We do not happen to be numbered among those who believe that American agriculture is headed for the scrap heap. On the other hand we think it has been on the mend since June, 1923. The old pendulum is swinging the other way now, and the farmer is coming back into his own, but he is not going to do it with the help of the labor, or other political parties which have been riding on velvet while he took the hard knocks.

We look for the future adjustment to come from the reduction in the price being paid union labor for their manufacture of articles which the rural community of the United States must purchase, rather than a return of war-time prices for farm products.

The average union scale today is well over a dollar an hour, in many trades, and yet the price of farm products does not measure up to this level above the 1913 price of labor. It must be apparent where the readjustment in the future must come.

There is, as we have said, the possibility that the course pursued by our president is the best thing that could happen to agriculture, that natural conditions will adjust themselves and that any radical move, such as price fixing, or tariff raising, or financing exports, would only react as a boomerang to the farmer who accepted it as a solution of the present problem.

In the meantime, Br'er Rabbit he just keeps on sayin' nothin' and perhaps we would be better off if a lot of other would-be champions would adopt the same policy.

COOPERATION IS A SUCCESS

BECAUSE here or there a local or state cooperative marketing association makes a failure is no reason whatsoever for the individual farmer to lose confidence in the general principle of cooperative marketing as a solution to his present problems,

Recently a speaker before the Western New York Fruit Growers Cooperative Association at Rochester said: "Great strides have been made in cooperative marketing all over the country. Cotton growers last year sold cooperatively more than a quarter of a billion dollars worth of raw cotton. The tobacco growers are organized in the tobacco growing states from Connecticut to South Carolina, and a very active campaign is on to organize the wheat industry in the West. Plans are now being made to organize all of the fruit sections of the country. After these sections are organized locally, it is planned to federate them, so that each may know what the other is doing and plan its sales policies accordingly. It is hoped that with such an organization it will be possible for one to buy good apples in every section of the country just as readily as oranges can be purchased today."

Cooperation in America is a success, just as it is a success in every civilized country under the sun and our sons and daughters will scarcely remember the days when their dads and granddads, each made his own price and sold the products of his farm in competition with the whole world! Stand by your cooperative marketing association—even if it hurts sometimes. Stand by it or someday you'll be standing alone!

SELLING APPLES BY THE QUART

THE orchard is a department which ought to pay a profit on every farm in the State of Michigan because we are blessed with a climate and a geographical location which makes fruit growing one of the most profitable of our money crops.

Doubtless some of our readers will question this statement in view of the low prices paid for the run of Michigan apples this year, but we challenge them to prove that any apple-orchard owner who sprayed, cared for his orchard and properly graded his fruit for market this fall did not make a profit from his crop.

Most of the apples which are left to rot on the trees because the farmer does not think they are worth picking can be charged to the neglect of their owner rather than the condition of a market working against him.

That there is more than one way to sell even the ordinary run of the apple crop is proven by Prof. Fabian's article "Selling Your Apples at a Profit," which appears on page 4 of this issue. This should be read and preserved by every man who has an orchard on his place.

BABIES WERE NEVER OUR ENEMIES

BECAUSE God sees fit to have a human soul born on German soil does not make that morsel of humanity our enemy. We doubt if you could tell, if they were laid before you in a basket, with chubby hands and pink toes upturned, which of three was an American, English or German baby.

Hate is not born in babies. We teach hate, in the later years to children. So if today, when German babies are dying for want of proper nourishment, generous hearted America, comes once again to the rescue of stricken humanity, these same babies will be tought not hate, but love for this country by their grateful mothers.

A subscriber who read our editorial on this page in the last issue entitled "Help for Germany," sent a contribution with the suggestion that we start a fund for German babies. This we are doing, as you will note on page two of this issue.

THANK YOU, MR. GERKS!

I NOTICED in Wednesday's "Christian Science Monitor" part of your editorial of November 24th. More power to you. When you get a paper of the high standing of "The Monitor" to quote your articles in corroboration—you show that you are alert to the times when higher journalism is at the threshold and such has been my experience with you. May this policy continue to grow and prosper. Cordially, Benjamin Gerks, Rochester, N. Y.

PUBLISHER'S DESK

SHOW CARD SCHOOL

"Since we are not fortunate enough to live in the bean district of Michigan I am asking your advice on the West Angus Show Card Company of Toronto and their offer. Will you find out for me if this concern is trustworthy and their offer worthwhile for one who might have a few hours to spare each day? From a reader who greatly appreciates the 'farmers' friend.' "

I WOULD not send the show-card company any money because this is another scheme which I have never found to work out satisfactorily. If you are still interested after reading this, ask this company to tell you of a satisfied student in Michigan, then write or go and see this person and satisfy yourself before spending any money on such a scheme.
